and in Redlands (one of the principal centers), they "took the bit in their teeth" and actually went on strike. This strike of the unorganized—partly due to the agitation of a few "old-time" Wobblies—was finally lost, tho stubbornly fought. The cause of failure was the usual one,—**lack of solidarity among the slaves and perfect solidarity among the masters,**—here represented by the large orange growers and packing house corporations. But shortly after, due to the increasing scarcity of "help" they found it expedient to raise the rate by degrees until in 1920 it stood at $3.60 per day, or 40 cts. per hour. In the same year the pickers also insisted upon free transportation to and from work, and "made it stick". This is an item of importance, as many orchards are situated several miles away from the workers' "homes". Considering that the hours of labor have not been lowered, these gains were very small indeed. Now the wages have been cut to 35 cts per hour, even lower in some localities, and transportation has been discontinued. Add to this the fact that winter in South California is the "rainy season", much time being lost on this account, and it will be seen that the slaves in the orange growing district are now even in a worse position than they were before the war.

Concerning orange-picking as an occupation, it cannot be denied that for those who relish outdoor life in a generally pleasant climate it has its advantages. The surrounding scenery is often inspiring, and the golden fruit, vividly set off against the dark green of the trees, is a lovely sight. But orange-picking is an occupation requiring considerable strength and agility, which bars the employment of women and children. After a day's toil the "orange glommer" is usually "all in", and has not much stomach for romantic reflections. In picking a canvas sack is used, weighing, when full, about 50 lbs. It is carried suspended by a strap over the shoulder. Also, each picker carries a ladder, which has to be moved at least four times for each tree. The picking is done with a small clipper, and great care has to be exercised in order not to cut or bruise the fruit, thus leading to its deterioration in storage, and to this end the "bosses" watch with jealous care. There are many other drawbacks. For instance, early in the season, before the rains have commenced, the trees are often very dusty with black smut—an excretion of the black scale-insect which infests the groves—mingled with fertilizer, etc. As a result the unlucky "glommer" returns after his day's work as "black" as the proverbial "nigger", and badly needing a bath. This condition, however, is improved after the rains. In badly pruned trees the hands are often torn by brambles and dead-wood. Even the much-boasted California climate is not without its drawbacks. For example, in January—which is here the one month of real winter,—the morning temperature is often as low as 30 and 25 degrees above zero; while this may seem a mere trifle to the Easterner, here, where noon of the same day may show as high as 80 degrees, the effect is felt very keenly. A temperature of 30 degrees is near the "danger point" for oranges, and when it goes lower, as it sometimes does,—they freeze. Picking oranges on a morning when the temperature is, say, 30 degrees above, and everything is overlaid with a heavy hoar frost, is no joke. The yellow spheres are like ice-balls, and one's hands become paralyzed and "achy", until the sun climbs high

enough to warm things up a bit. The melting frost, dripping off the leaves as water, wets one to the skin. Finally, most orchards are planted in peas, vetch, etc., or allowed to grow up in rank weeds, as a cover-crop,—and this miniature "jungle", dripping with water, soaks one's feet and is a frequent cause of colds and rheumatic attacks. Again, in the latter end of the season—say, in April and May—the "orange-glommer" often swelters in a temperature of 100 degrees, and over, in the shade. Notwithstanding all these drawbacks, there is a charm about the orange country that attracts annually thousands of wage-slaves, and with the attainment of a "decent" standard of wages and working conditions—possibly only thru organization on the I. W. W. plan—it would, no doubt, furnish a pleasant change to many slum-bound workers, while waiting for the final end of capitalist misrule.

Organization has never yet been attained among the "gatherers of the golden fruit". Gompers and his "inner circle" of labor-fakirs, have not yet seen a way whereby to levy on "the orange-glommers" for their support; nor has the I. W. W. ever made a sustained and consistent effort to gather them under its banner. To be sure, in the "good old days" of the early I. W. W., there were, for a time, "mixed locals" maintained in Redlands, and one or two other localities. These organizations were, however, mere propaganda centers, kept alive by a few enthusiasts, and in form unfitted to cope with centralized capitalist control of the citrus industry; they never got much of a foothold among the slaves. This field, therefore, is practically a virgin one, and the Agricultural Workers' Industrial Union of the I. W. W. should not need to be told of the importance of "tackling the job"—and **soon.** With the present conditions and temper of the workers here, I feel safe in asserting that **a determined and persistent effort could not fail of bringing great results.** Let us remember that the "orange-glommer" during the "off season" works as a lumberjack, construction worker, or at gathering deciduous fruit, or vegetables, in other sections of California. Therefore, by getting him "on the inside" we will close a dangerous gap in our A. M. I. U. in the west. On the other hand, let us not forget that by organizing the citrus industry we will be "up against" the Earl Fruit Co., Armour and Co., et. al., and will thus be putting the axe to the root of the gigantic **food-trust,** which now monopolizes the nation's food-supply, thereby preparing ourselves to victualize the coming industrial revolution. Let us also recollect that "man liveth not by bread alone", but also by fruit, vegetables, esculent roots, peas, beans, etc., etc.—all of which are produced in California in the greatest abundance. Let us therefore not be content with the annual "harvest field drive", in the corn and wheat producing states of the Middle West. Let the Agricultural Workers' Industrial Union—as an organization—get behind this, and when the year's harvest drive ends up in North Dakota let the organizers and all other foot-loose Wobblies hie themselves to the orange groves of California, and continue there the good work. On the whole—especially as compared with the East, or Middle West—the California climate is pleasant in winter, and **the oranges are good to eat**—just as good for a Wobbly as for a bloated parasite.

The difficulties are many, it's true. Large numbers of Philippinos, Japanese and Mexicans—who are difficult to reach—complicate the problem. **But these difficulties must, and can, be overcome. It is a matter of urgent necessity for the A. W. I. U. of the Industrial Workers of the World to attend to this matter of organizing the California fruit pickers, and to do it soon.**

**By the time this article reaches the readers of "The Industrial Pioneer" the present orange-season will be nearly over, it will be high time to lay plans for a comprehensive campaign for next winter, and this is earnestly recommended for the favorable consideration of the next convention of the A. W. I. U. But whether the convention acts or not, let the call go out for all determined and foot-loose Wobblies "to make tracks" for California next fall; to arrive at Exeter, Lindsay or Porterville by Oct. 15th to Nov. 1st. Let us organize the orange-belt and get ready to "glom" the beautiful golden fruit for ourselves.**

TWO "GOOD" MEN AND — BLIND.

# Technique and Revolution

By G. Cannata

(Continued from the February Number.)

## CHAPTER III.

### INDUSTRIAL TECHNIQUE AND THE LABOR ORGANIZATIONS.

THE difficulties that the proletarian regime has met in Russia on the field of production have caused considerable discussion in revolutionary circles as to the future problems in the management of industry. It has been said "that the workers must develop their technical ability," and begin to exercise under capitalism a certain share in the control and management of the various industries. The Industrial Workers of the World has already established a Bureau of Industrial Research and many revolutionists have advised that the workers pay more attention to the technical functioning of the shops in which they work.

I believe I have demonstrated in the previous chapter that the industrial collapse which we have witnessed in Russia is due almost exclusively to causes of a local and particular nature which a proletarian regime will not be called upon to face in the home of modern capitalism—western Europe and America. If we are witnesses today to critical conditions in the economic life of these regions, such is the case because capitalism as a politico-economic system is disintegrating before our eyes; its underlying principles offer no way out of the morass in which the entire world has been thrust by its last and most monstrous crime—the World War.

Still this moral failure of capitalism is co-existent with the maximum technical development of its industries. During the war, industrial science has made notable advance in practically all the belligerent countries; splendidly equipped mechanical establishments have sprung into existence in new localities. Today, the healthiest part of the capitalist structure, the part which the revolutionary workers must inherit intact, is organized productive industry. To a communist world, which has different factors determining the rate of the productive process, a factory today in idleness has the same potential value as one in full function; for capitalism, it is a sign of crisis and bankruptcy.

Even tho the problems of industrial management which the workers' regime must face in the western countries are not as complicated or difficult as many people think, the fact remains that the subject is still of sufficient importance to merit the serious attention of the labor organizations today. The essential business of the fighting organs of labor is that of building up working-class power for the final overthrow of the capitalist system and for the exercise of **political domination** after the revolution in order that all measures taken may reflect the class interests of the proletariat. The problem of revolution is primarily a problem of power; it is merely as a secondary, but still very vital matter, that the revolutionary workers must consider the subject of future industrial management.

The revolutionary environment is at present infested with dilettanti literateurs and "philosophers"; it would be quite a calamity if the interest in industrial science should now produce a similar crop of technico-scientific "experts." Technicians are not made overnight by the reading of a book, or by a few months' course of study. Studies of this nature require a secondary school education as preparation, to be followed by at least a four-years' evening school course; the resultant "technician" will then be innocent as a new-born babe until he has had several years' assiduous practice in actual industrial work. It is practically out of the question, then, that any number of revolutionary workers should make a particular effort to become industrial engineers; in most cases, they do not have the necessary preparation, and the exhausting labor of the shops does not leave any surplus mental energy for evening study. It is not by measures of this kind that the problem must be met.

The industrial technicians in modern industrial countries are no longer a privileged caste; the popularization of university education brings scientific studies within the reach of the sons of the workers, as well as of the various bourgeois groups. Many technicians in the United States today are the sons of workingmen, and because of their superabundance, their social status is not far removed from that of the manual laborers. A recent circular of the American Association of Engineers, a very "respectable" organization of technicians counting over 25,000 members, makes the following comment on the present sorry plight of this category of producers:

> For a long time it has been generally known that engineering has been the least appreciated and poorest paid profession. A large part of the work of engineers has consisted of designing, constructing and operating projects for financiers who have taken most of the credit and practically all of the profits. Most engineers are employees and there is a tendency on the part of the general public to consider engineers as a whole as members of a technical trade rather than as members of a profession on a par with law and medicine.

This depreciation in the social prestige of the technicians has already given birth to several at-

tempts at professional unionization among them; the American Federation of Labor organized a National Local of Technicians over three years ago which today counts thousands of adherents. This in spite of the fact that trade unionism applied to the peculiar situation of the technician is a most ridiculous enterprise predestined to certain failure. A category of workers which totals only a very small per cent of the factory personnel, and whose work has no very immediate effect on production, is by itself absolutely impotent before the power of the employers.

The attempt to draw the technicians within the sphere of labor unionism must not, however, be abandoned; the proposition ought to be tentatively advanced even at this early stage, and it will certainly find fulfillment during the final phases of the workers' growing control over industry. This work can be efficiently accomplished only by the revolutionary industrial unions, which are already conscious of their historic function and are preparing "the new society within the shell of the old." In Italy, where the power of the workers' organizations is a social factor that practically overshadows all other centers of moral cohesion, the revolutionary labor unions are already in a position to talk very definite business on equal footing with the technicians, and are taking the necessary steps to assure their co-operation to an eventual proletarian control of industry following a revolution.

The industrial union that has developed power can really offer a valid help to the technician in his efforts to better his conditions, if the latter will place at the disposal of the union his extremely useful education and knowledge of industry. An understanding between the revolutionary proletariat and the industrial technicians is much to be desired in the pre-revolutionary period; to the extent that it is possible, the latter must be convinced that his place in the class-struggle is by the side of the manual workers with whose co-operation the functioning of modern industry is rendered possible.

The industrial unions that have reached a certain considerable development ought to create a literature covering in a descriptive way the history, development and technical functioning of the industry. This literature would serve to implant in the workers general notions on the industries in which they work and the problems thereof, and will render them competent to exercise their share of control in industry during the revolutionary period. With this object in view, I believe, the Industrial Workers of the World has established its Bureau of Industrial Research, and if the literature issued by this institution is compiled with competence, the I. W. W. will again have placed itself in the vanguard of all labor organizations in matters that affect the vital interests of the workers.

The labor organizations have another duty to perform in relation to the future exigencies of industrial technique, namely, they must make their organic structure conform to the structure of productive industry itself. In the amount of study and attention that has been given to this subject and in the perfection of the organization plans, the I. W. W. towers above all other labor bodies in the world.

The I. W. W. organizes the workers in **factory** and **job** units, in **industrial branches** and in **industrial unions**; each organization unit attempts to organize **all** the workers in a given industry, from the most inexpert laborer to the most famous technician. This autonomous organization of producers, in carrying out its anti-capitalist struggle, will gradually force from capitalism part of its profits and of its authority over industry, and prepare in its bosom the future forms of industrial management, to be applied when capitalism is overthrown.

The essential function of the labor organizations today is the preparation for the **capture** of capitalist industry; incidentally, they must study the problems of **management** and take the steps necessary to assure the continuance of production during and after the revolutionary period.

## CHAPTER IV.

## INDUSTRIAL TECHNIQUE UNDER COMMUNISM.

In spite of the fact that the capitalist era will stand out in history as the period in which the theoretical sciences and industrial technique have had their greatest development, there are characteristics and tendencies inherent in the present system of production which circumscribe and limit the application of science to industry with the object of reaching the maximum of perfection and efficiency.

The fact is that while the industrial specialists enjoy a certain amount of freedom and authority within the bounds of the productive unit, the more general and more important measures affecting industry as a whole are discussed and decided in the offices of the corporations by speculators, financiers and promoters, sometimes without even consulting competent engineers, and always from the viewpoint of prospective **profit** rather than the exigencies of production.

The capitalist system is essentially a system of production for **profit**; this is the original sin that corrupts the morale of modern industry. Such a system may to some extent fill the needs of humanity, but always with the accompaniment of enormous waste and losses in the productive economy; the markets are today glutted with useless and even harmful products which have only one all-sufficient merit: **they will sell.** Relatively inefficient industrial enterprises are able to continue operations solely because they function within a large margin of profit; new precesses, inventions and vast projects are often not applied because the immediate effect of their application would be damaging to some of the established industries. The profit-motive in industry acts like a deadly poison in demoralizing and

perverting production at the very source. Every far-sighted technician must realize that all his efforts towards efficiency and perfection in industry are often drawn by his employer into useless or even harmful channels.

Another obscure aspect of the present system of production is revealed by the attitude of the manual workers towards their daily task. A system based on oppressive authority in the factory must of necessity bring with it those manifestations of class antagonism which so often paralyze and demoralize industry. A worse factor, perhaps, than the incessant strikes and lockouts which characterize modern industrial warfare is the attitude of continuous indifference and hostility which the worker under capitalism displays.

The bourgeoisie, which was once able to inspire ingenuous and ambitious youths to prodigies of creative effort thru the mirage of success and riches, has to-day lost the faith of most workers, who are turning elsewhere for a new source of inspiration and enthusiasm. It is impossible to exaggerate this moral bankruptcy of capitalism which is so clearly observable in detail in these first years that follow the World War.

How can there ever be real efficiency or a fruitful application of industrial science to an economic world saturated with antagonism, disorder, confusion and indifference? Only a solution which will remove the causes of proletarian discontent and give birth to a new feeling of responsibility, co-operation and enthusiasm in the ranks of the workers will cure the ills of present-day society. This is the historical task of Industrial Communism.

Even in the direct utilization of the possibilities of industrial improvement, the bourgeoisie has not used excessive intelligence and competence. In its origin, the capitalist class was energetic, enterprising and even adventurous, ready for any speculation which promised profits. But in the subsequent phases of industrial development which brought about the establishment of the great productive enterprises, inexhaustible sources of rich earnings, the bourgeoisie assumed different psychological attitudes. A conservative and cautious spirit animated many of the industrial "nouveau riches," who were excessively proud of the methods which had made them rich. This species of "self-made" captain of industry, quite free from any scientific culture or technical competence, is quite common in new and rich countries like America; they could not exist in the environment of intensive and refined exploitation of western Europe.

Among the modern nations Germany is probably the only one which has elevated technical science to a primary asset in world eminence. In certain branches of the practical sciences, its accumulations of literature, knowledge, systems and personnel have no equals in the entire world. It was essentially this technical superiority that gave to Germany before and during the war that enormous productive power so notably out of all proportion to her visible resources.

There is no reason why the entire world should not be quickly brought up to the same standard of productive efficiency. To-day, however, technical knowledge is purposely monopolized and hidden, by nations as well as by companies and individuals; such are the deleterious effects of capitalist usances in relations to industrial technique.

What would be the probable attitude of the workers in power towards this factor? How would communism affect the application of modern industrial science to production?

First of all, communism in industry substitutes cooperation for competition; centralized management for individualistic and socially irresponsible control. Production would have as its motive the satisfaction of social needs, and not the gathering of profits; it would be logically ordered on the basis of scientific calculation and thru a system of universal accounting, in order to always maintain a perfect balance between production and consumption, avoiding the periodic crises of overproduction and starvation which travail capitalist society.

The productive organism will be pervaded by an ever-present sense of social responsibility, and in general the criteria that will inspire industry will be those of the revolutionary proletariat coming into power. This class is to-day animated by a bold experimental spirit on the politico-economic field which coincides well with the mental attitude of industrial technicians, essentially explorers and pioneers in the practical sciences.

We may well foretell that communism, which is the antithesis of capitalism in every respect, will solve all the problems raised by the present moral decadence of capitalism. Even in Russia, torn by a thousand difficulties of local character, communism already serves as the inspiration to a great healing effort of industrial reconstruction. This is what a hostile critic, Bertrand Russell, writes on the subject:

> "The third class in the bureaucracy consists of men who are not ardent Communists, who have rallied to the Government since it has proved itself stable, and who work for it either out of patriotism or because they enjoy the opportunity of developing their ideas freely without the obstacle of traditional institutions. Among this class are to be found men of the type of the successful business man, men with the same sort of ability as is found in the American self-made trust magnate, but working for success and power, not for money. There is no doubt that the Bolsheviki are successfully solving the problem of enlisting this kind of ability in the public service without permitting it to amass wealth as it does in capitalist communities. This is perhaps their greatest success so far outside the domain of war. It makes it possible to suppose that, if Russia is allowed to make peace, an amazing industrial development may take place, making Russia a rival of the United States. The Bolsheviki are industrialists in all their aims;

> they love everything in modern industry except the excessive rewards of the capitalists."
> (The Nation: July 31, 1920)

And this is what Robert Williams, a member of the English Trade Union and Labor Party Delegation to Russia, observed there:

> "I saw the great engineering works of Putiloff and Somora near Nijni Novgorod and observed the heartiest cooperation between the management and workers. In fact I found in all departments of industry, trade-unionists and their leaders cooperating with technicians and commissars. The truth is that while in capitalist Europe generally capital and labor are at death grips, in Russia the government and the people are cooperating and coordinating in a most remarkable manner. The world needs no further proof that men and women will make sacrifices for social and collective well-being, while they will hamper output and stultify organization under a capitalist regime where private profit is the only motive and rewards are for the privileged few."
> (The Liberator, August, 1920.)

In relation to production, then, communism may be considered as a liberating impulse which will bring into play in the great army of producers all the potential forces of hand and brain, today repressed by a system of discord and oppression.

In the new society of free producers, the industrial technicians working in full cooperation with the manual workers, and animated by a new enthusiasm, will accomplish that perfection in industry which will give to the world the material well-being, and the eternal splendor which distinguishes the civilizations of the Great Builders.

IN UNION THERE IS STRENGTH

# The Wastes of War

**By The I. W. W. Bureau of Industrial Research**

## INTRODUCTION

ONE of the major wastes attributable to the present industrial system is war, and the preparation for war. Such waste may be classified into the following main headings:

1. Men killed and wounded in battle.
2. Men withdrawn from production to serve in armies.
3. Men and women withdrawn from production of necessities to make war munitions, and carry on war services.
4. Property destroyed in battle—arable lands, live stock, ships, etc.
5. Raw material wasted in manufacture of war munitions—powder, guns, projectiles, battleships, tanks, aircraft, barbed wire, etc.
6. Death and disease among civilian population due to epidemics, starvation, shortage of doctors, nurses and medical supplies—caused by war.
7. Eugenic weakening of racial stocks due to fact that those most fitted to be vigorous fathers are at the front.

Thus in war, and to a less extent in preparation for war, a large fraction of the able-bodied population ceases to produce the things—the food, shelter, clothing, fuel, power, etc.—which society needs to maintain itself, and goes over to productive idleness in armies, or the production of munitions of war having no other purpose than to damage and destroy. As a result the remainder of the population, which is still producing, have to support not only themselves but this vast unproductive mass of fighters and war-workers.

**Diversion of Labor Due to War in the United States. ***

| Occupation. | Number. | 1918 Per Cent. of Male Producers |
|---|---|---|
| Men in France fighting | 1,400,000 | 4.7% |
| Men in France behind lines | 600,000 | 2.0 |
| Men in army in U. S. | 1,700,000 | 5.7 |
| Men in navy | 550,000 | 1.8 |
| Total men in army and navy | 4,250,000 | 14.2 |
| Men in war work in U. S. | 7,150,000 | 23.8 |
| Total unproductive men | 11,400,000 | 38.0 |
| Men in non-war work in U. S. | 18,600,000 | 62.0 |
| Total men of producing age | 30,000,000 | 100.0 |
| Old men and boys | 24,000,000 | |
| Total males in U. S. | 54,000,000 | |

From this table it is clear that during 1918, 38 per cent., or more than a third of all males of producing age, were either in the army or doing war work. It cannot be taken for granted that all of them were unproductive, for some war workers continued to produce, or at least to assist in the distribution of the necessities of life—food, clothing, etc.; but the great majority were absolutely unproductive, and had to be supported by the remaining productive workers. Thus the war brought about a waste of at least a third of the man-power of the United States. In the belligerent countries of Europe, the ratio is known to be very much larger, England, for instance, with a population of 46 millions, or less than half of ours, maintained 5 million men under arms, necessitating the withdrawal from civil life of over one-half of all producing males.

It is known that in 1917, 38 million men in the world were under arms, and it has been computed that for the four and one-half years of the great war, an average of 20 million men were constantly in the field, necessitating the non-productive work of at least 80 million men behind the lines (ratio 4 to 1)—a total of 100 millions of the world's able-bodied producers doing nothing more valuable than trying to kill each other, and destroy the earth's carefully constructed physical property—its farms, factories, cities, ships and raw material.

In the United States, in addition to the men engaged in war work, the War Department reports, for 1918, 2,250,000 women withdrawn from the ranks of producers to do war work.

## WAR CASUALTIES.

The most careful record yet available of the casualties of the great war has been compiled by Professor L. Bogart of the University of Illinois. His figures are as follows:

**Casualties of the Great World War.**

| | Known Dead | Seriously Wounded | Otherwise Wounded | Prisoners or Missing |
|---|---|---|---|---|
| All. Pow. | 6,938,519 | 3,437,740 | 8,516,497 | 4,653,522 |
| Cent. Pow. | 3,060,252 | 2,857,772 | 5,485,542 | 1,330,078 |
| Total | 9,998,771 | 6,295,512 | 14,002,039 | 5,983,600 |

Of the "prisoners and missing" it has been estimated that at least half must be added to the total of the dead—as modern warfare, among other things, has perfected the science of blowing the soldier into unrecognizable atoms with a high degree of efficiency. Making this allowance, and also classifying the wounded according to hospital averages of recovery, the total casualties (of combatants) may be restated thus:

* Report of Secretary of War 1919.

| | | |
|---|---|---|
| **Dead—** | | |
| Known dead | 9,998,771 | |
| Presumed dead (½ missing) | 2,991,800 | |
| | | 12,990,571 |
| **Wounded—** | | |
| Restored to normal 44.5 % | 9,032,410 | |
| Ability permanently reduced 52 % | 10,554,761 | |
| Totally disabled for life 35 % | 710,434 | |
| Total wounded | | 20,297,605 |
| Total easaulties so far as known | | 33,288,176 |

That the world war was infinitely more bloody than any previous wars, is well illustrated by the following table:

**Loss of Life in 19th Century Wars.**

| | Dead. |
|---|---|
| Napoleonic wars, 1790-1815 | 2,100,000 |
| Crimean, 1854-'56 | 785,000 |
| Prussian-Danish, 1864 | 3,500 |
| Prussian-Austrian, 1866 | 45,000 |
| American Civil War, 1861-'65 | 700,000 |
| Franco-Prussian, 1871 | 184,000 |
| English-Boer, 1899-1902 | 9,800 |
| Russian-Japanese, 1904 | 160,000 |
| Balkan, 1912-'13 | 462,000 |
| Total | 4,449,300 |

War tends to undermine the health of soldiers in a very serious way, quite apart from wounds. Thus mustard gas affects the eyes of 72 per cent. of its victims, rendering them permanently blind. Trench fever affeets permanently the heart-action of 20 per cent. of those suffering from it. Shell shock has wrecked many good men for life. It is reported that of 2,437,450 German soldiers in hospitals in June, 1916, 750,000 were suffering from pulmonary tubereulosis, 600,000 from heart and nerve diseases, and 500,000 from intestinal diseases. During the first year of the war 86,000 men were dismissed from the French army beeause of tubereulosis, tho they were physically sound when aeeepted. Cerebro-spinal fever raged in the British army (a trench disease) in 1915, and its survivors are reported in most eases as eomplete physical wrecks.

**Civilian Casualties.**

The Spanish influenza epidemic of 1918, was a direet outeome of the war. It killed 6 millions of people over the world, of whom 1,250,000 were in the United States.

Famine, disease and starvation exacted a toll estimated at 800,000 in Roumania. Serbian and Austrian eivilians killed by famine, "spotted typhus" and disease totalled 1,000,000. Two million eivilians perished in Russia during the war from war eauses, and of Poland in 1916, it was elaimed that "one-third of a generation, the youngest, has practieally eeased to exist due to famine, pestilence and starvation." At the end of the war, an American traveling thru Poland found that ehildren under six years of age had almost all perished. The loss of civilian life in Germany due to war causes has been placed at 813,000. Over 100,000 civilians died on the high seas because of mines, submarines, etc. Unknown thousands perished by reason of air raids.

In fact, it may be fairly estimated, according to Professor Bogart, that as many civilians lost their lives due to the war, as did soldiers in the field, thus bringing the total number of deaths for which the war was responsible up to about **25 millions.**

It has been estimated that to replace the numbers lost by war casualties in the male population between 20 and 44 years of age, will require 10 years for Great Britain, 12 years for Germany, 38 years for Italy, and 66 years for France.

**Money Costs of the Great War.**

The expenditures of the various governments for war purposes do not give more than a general picture of the wastes involved. Inflation of currency, failure to distinguish the physical quantities of material and plant diverted and destroyed, combine to render money costs unreliable as a true index of what the world has lost by reason of the war. Some idea of the staggering expenditures involved, however, can be gathered from the following table, which shows the money eost to the end of the war only. Since November, 1918, vast additional sums have been spent:

| | |
|---|---|
| Great Britain | $ 35,334,000,000 |
| France | 24,313,000,000 |
| United States | 22,625,000,000 |
| Russia | 22,594,000,000 |
| Italy | 12,414,000,000 |
| All other allies | 8,457,000,000 |
| Total Allied Powers | $125,737,000,000 |
| Germany | $ 37,775,000,000 |
| Austria | 20,623,000,000 |
| Turkey and Bulgaria | 2,245,000,000 |
| Total Central Powers | $60,643,000,000 |
| Grand Total | $186,380,000,000 |

The total war cost to November, 1918, is thus seen to be 186 billion dollars, and in the intervening two years to January, 1921, it is safe to assume that the grand total has reached considerably more than 200 billions of dollars. Of this almost inconceivable amount, perhaps half was expended for necessities—i. e., food and clothing for the army, shipbuilding, etc.—the other half (and perhaps more) was worse than wasted in powder, shot, dreadnaughts, poison gas, guns, tanks and submarines. One hundred billions of money, involving the labor of millions of men and women, and millions of tons of good raw material, hurled away in a blind chaos of futile destruction!

**Property Losses.**

Aecurate compilations of property losses are very difficult to make, and it is doubtful if the exaet losses will ever be known. Agricultural experts question whether vast areas of Belgium, France and Poland, which have been churned and riddled by trenehes and shell-holes, and saturated with nox-

ious gases, chemicals, liquid fire, and other substances which destroy the productive properties of the soil, can be made fertile for many years to come. Should time confirm this hypothesis, the loss will not be measurable.

Belgium covered 12,000 square miles, and practically the whole area save a strip along the west coast was invaded. Crops were taken, factories denuded of machinery, mines destroyed, cotton spindles wrecked, pillage and wanton destruction systematically carried out.

In France 8,000 square miles of agricultural lands were laid waste; 500,000 buildings damaged, of which 250,000 were completely destroyed. It is reported that 1,500 schools, 1,200 churches, 377 public buildings, and over 1,000 industrial plants were totally wrecked. Railroads, bridges, power plants and other public utilities were systematically put out of commission. The loss of agricultural implements in France is estimated at 2 billion dollars, and in addition, cattle were slain, fruit trees cut down, and 1,200,000 acres of forests laid waste. The coal mines in the Valenciennes basin, and the iron industry of Briey were seriously damaged in the retreat of the Germans.

Similarly the Russians in Poland destroyed mine shafts, crops, bridges, railroads, machinery, industrial plants and public utilities. Serbia, Roumania, East Prussia, Austria, Italy and the Ukraine, also, suffered disastrously.

Professor Bogart estimates the total property damage of this nature at about 30 billion dollars, as follows:

**Summary of Property Loss.**

| | |
|---|---|
| France | $10,000,000,000 |
| Belgium | 7,000,000,000 |
| Italy | 2,710,000,000 |
| Serbia, Albania, Montenegro | 2,000,000,000 |
| British Empire | 1,750,000,000 |
| Germany | 1,750,000,000 |
| Poland | 1,500,000,000 |
| Russia | 1,250,000,000 |
| East Prussia, Austria, Ukraine | 1,000,000,000 |
| Roumania | 1,000,000,000 |
| Total | $29,960,000,000 |

**Loss of Merchant Shipping.**

The gross tonnage of sea-going merchant vessels lost from August 1, 1914, to November 11, 1918, is officially stated as follows:

| | |
|---|---|
| Great Britain | 8,899,659 |
| Norway | 1,177,001 |
| France | 888,783 |
| Italy | 846,333 |
| United States | 825,417 |
| Greece | 345,516 |
| Denmark | 240,860 |
| Holland | 203,190 |
| Sweden | 200,820 |
| Russia | 182,933 |
| Spain | 167,865 |
| Japan | 120,176 |
| Other allied and neutral countries | 929,156 |
| Total, Allies and Neutrals | 15,027,718 |
| Central Powers | 370,674 |
| World Total | 15,398,392 |

—Baer in "Washington Labor."

**Is it any wonder that our school teachers and college professors are paid starvation wages, when only one per cent of our national appropriations is spent for education, and ninety-three times as much for our past and future wars?**

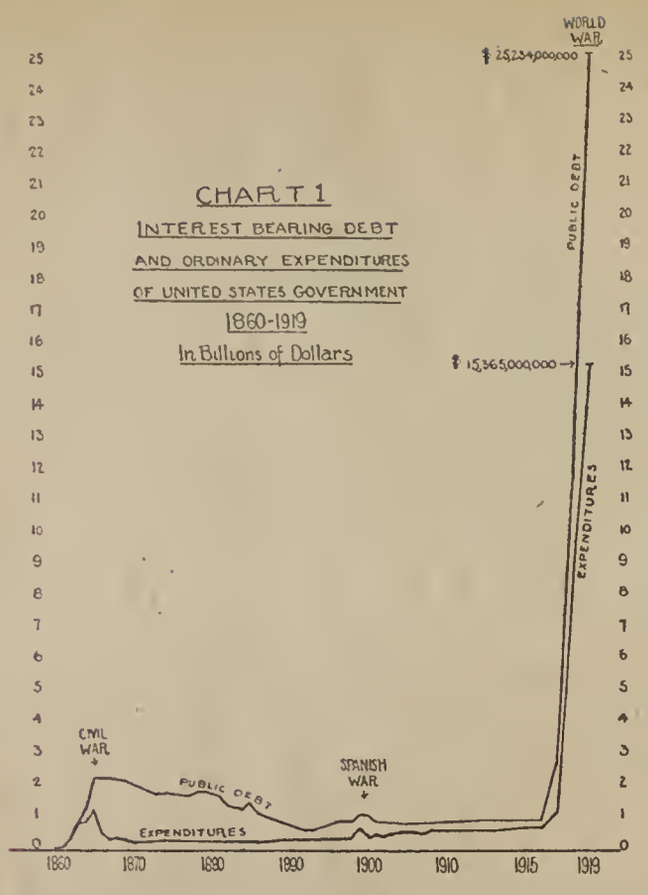
The actual number of ships sunk is not available, but estimating an average merchant ship at 5,000 tons (probably a high average) it would appear that at least 3,100 good vessels together with their rich cargoes now lie at the bottom of the sea, a total loss chargeable to war. The money value of this loss has been placed at $7,500,000,000.

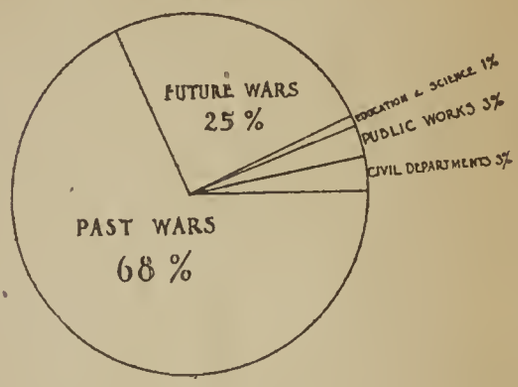
**War Relief.**

In addition to the losses in men and property above recited, the sums raised for war relief work must be classified as part of the wastes of war. While much of this money represented purchases of food, clothing, recreation, etc., and therefore not properly to be classified as waste, great sums went for medical supplies and for repairing the ravages of war damages. Had there been no war, expenditures of this nature would have been quite unnecessary. The following table shows the American war relief total:

| | |
|---|---|
| Red Cross | $250,000,000 |
| Y. M. C. A. | 55,000,000 |
| Jewish Welfare Board | 20,000,000 |
| War Camp Community Service | 15,000,000 |
| Knights of Columbus | 11,500,000 |
| Y. W. C. A. | 5,000,000 |
| Salvation Army | 2,500,000 |
| American Library Association | 1,000,000 |
| Total | $360,000,000 |
| United drive of 1918 | 203,000,000 |
| Rockefeller Foundation | 3,000,000 |
| Belgian Relief | 9,000,000 |
| Other contributions | 50,000,000 |
| Grand Total | $625,000,000 |

Other belligerent countries, also, raised great sums for war relief work, but the totals are not available. Canada, it is known, contributed 92 millions.





| | AMOUNT | PERCENT |
|---|---|---|
| PAST WARS | $3,855,482,586 | 68 |
| FUTURE WARS | 1,424,138,677 | 25 |
| TOTAL WARS | 5,279,621,263 | 93 |
| CIVIL DEPTS. | 181,087,225 | 3 |
| PUBLIC WORKS | 168,203,557 | 3 |
| EDUCATION & SCIENCE | 57,093,661 | 1 |
| GRAND TOTAL | 5,686,005,706 | 100 |

**Neutral Countries.**

Not only did the belligerent countries pay a staggering toll to the wastes of war, but many of the neutral countries suffered as well. Shipping losses for neutrals have already been exhibited, but in addition it has been estimated that the war cost neutrals 2 billions of dollars by reason of guarding frontiers, trading losses, interruption of manufacturing, and so forth.

**Eugenic Effect of War.**

Kellogg in his book on "Military Selection and Race Deterioration," published by the Carnegie Endowments, comments on this aspect of war waste as follows:

> An army * * * "is composed exclusively of men, its removal thus tending to disturb the sex equilibrium of the population and to prevent normal and advantageous sexual relations. Next, these men are both all of the age of greatest life expectancy after reaching maturity, and of greatest sexual vigor and fecundity. Finally, they are men none of whom fall below, and most of whom exceed, a certain standard of physical vigor and freedom from infirmity and disease. And for each of these men so removed from the general population, at least one other man falling below this standard, has been retained in the civil population. All this is, in effect, the establishment of a kind of selection, a military selection, whereby a most desirable element of the population is restrained from contributing its full and its particularly important influence in the determination, thru heredity, of the racial standard of the population."

The decrease in births during the period of the war down to the end of 1917, is stated to have been 500,000 in Great Britain, 1,100,000 in Austria, 1,500,000 in Hungary, 2,600,000 in Germany and 833,000 in France.

**United States Government Expenditures.**

The effect of the war on the annual expenditures of the United States government is strikingly shown in the accompanying chart (Chart 1). In the 60 years since 1860, such expenditures never crossed the billion mark, save in the Civil War (1865), and in the years of the great war. In 1919 "ordinary expenditures" according to the Statistical Abstract —not including special outlays, or the postal service—reached the phenomenal total of $15,365,000,000—which is as much as the aggregate of all expenditures during the 40 years from 1870 to 1910, or more than the aggregate of all expenditures during the first hundred years of the existence of the United States government from 1790 to 1890.

Appropriations of the government for 1920 are shown on Chart 2. Here it appears that of the grand total of $5,686,000,000, $5,280,000,000, or 93 per cent. is devoted to past and future wars—civil departments, public works, education and science only receiving 7 per cent. of the total. Thus a bare 7 per cent. of the resources and activities of the government are devoted to rendering the citizens of the country useful and constructive service, while 93 per cent. is devoted to the wastes of war.

OUR BENEVOLENT CAPITALIST.

# The Glass Industry

By Robert Grayson

THE MAKING of pottery marks the transition of the human race from savagery into barbarism. Second only in importance to pottery as a cultural advance is the discovery of glass, dating much later. While the exact period of this discovery is not known, there exist proofs that mankind had made it as early as 4000 B. C., and well-preserved specimens, estimated to be about three and one half thousand years old, have been found in the ancient tombs of Thebes. These consist chiefly of beads and of small containers. It is debatable as to what race made the discovery, both Egyptians and Syrians claiming the honor; moreover, the historian Pliny relates a story concerning the origin of glass which may hold some truth. He tells of a group of Phoenician mariners who camped one evening on a river bank in Palestine. Unable to find stones on the sand upon which to rest their cooking utensils, they pressed into service some lumps of soda from their cargo. The action of the heat fused the soda and the sand, the result being a viscous mass which became transparent after cooling.

The Greeks and Romans learned the art of glass making from their neighbors on the Nile, and as early as the reign of Nero clear or crystal drinking vessels, such as tumblers, cups and goblets, came into use and found high favor among the patrician class. The history of the workers in glass is unknown. We may read where a ruler or noble prized good works in the art, but everything concerning the craftsman has been obliterated.

After the Romans, the greatest masters in the art of glass manufacture are the Venetians and Muranians. The former so revolutionized its processes as to permit of much lower cost, thereby placing the article for the first time into extensive use. Furthermore, they are credited with having introduced glass into Western Europe. Jacob Verzelina, who migrated to England about 1550, made both window-panes and table ware until his death in 1606.

At Stourbridge, England, a factory for the making of window ware was erected in 1619. The close proximity of fire-clay mines accounts for this institution. This leads us to a description of the composition of glass and the technique of its manufacture.

## COMPOSITION.

Glass is a hard, brittle, viscous, non-crystalline substance, either transparent, opaque or translucent. It is the result of a fusion of silica and active mineral fluxes or solvents, including alkalies, earthy bases and oxides. Silica is found in a free natural state among flints, quartz and sand. Sometimes the first two are used by pulverizing them, but the latter is in most general use.

In this country many kinds of glass are made. Potash, lime, and soda are important ingredients. The war closed the commerce with Germany, where a practical monopoly of potash obtains, and as this is the most purifying element in the composition of glass ware the product has been since 1914 of an inferior grade so far as crystal ware is concerned. Various chemicals are fused with the silica and alkalies to effect coloring.

## TECHNIQUE.

It is said that ancient glass makers worked the molten mass around a core of sand, which was afterward removed. But eventually it dawned upon them that the use of a pipe with a hollow stem would permit the blowing of the glass. We will now treat of this phase of the industry; in passing we will remark that the container for the molten glass is a clay pot capable of resisting enormous heat, and that a glass factory furnace is usually a cylindrical form of brick with a number of apertures communicating with the various pots of molten glass within.

A "shop" is the group of workers necessary for the completion of certain glass patterns; at the head of each "shop" stands the blower. The first to come into contact with the glass is a semi-skilled worker called a "gatherer". By means of dipping the end of a long, hollow iron pipe into the glass and then turning it, any desired quantity of glass can be gathered. This is rapidly carried a few feet to a bench covered with a plate of smooth, hard metal, where the glass is rolled. The gatherer then elevates the pipe and blows into it, thus beginning the shape. It is then passed to a skilled mechanic, the blower. He stands about two or three feet above the floor lever on a small, movable platform called a "dummy". This "dummy" is equipped with the mold, and on each side of the mold are devices or pedals to open and close it.

Having placed the molten mass into the mold, the blower closes it and then blows into the pipe, turning it at the same time. When the glass has been blown to the limits of the mold confines it is removed, still on the pipe, in a bottle form, and handed to the boy who "cracks off". At intervals several of these "bottles" are taken by another boy and placed in the lehr, a long kiln where a tempering process follows. Finally it emerges to be finished by having the rough neck cut off by a machine, and the sharp edges slightly melted to make them smooth. The article is then ready for shipment. It should be observed that in all this

work there is but one fully skilled worker, who is assisted by a semi-skilled one and several unskilled juveniles. In many cases I have seen aged men, women and even imbeciles perform these unskilled tasks.

Besides this blowing into molds considerable work is done without the aid of molds. This is called working "off-hand". In this work the pipe is used and also callipers, seissors, and wooden blocks and sticks, to fashion the desired artiele. In all proecsses of glass blowing it is necessary to have air pipes under whieh the molten glass is somewhat cooled before being blown.

The largest department of flint glass manufacture (elear or crystal) is the press department. Here a lump of the glass is dropped into a mold, either plain or figured, and a lever releases a plunger whieh fits the mold and forms an artiele. The figured mold is one that has been arranged by a mold maker with a pattern, and glass pressed into it reeeives the pattern impression. Window glass is made of mueh harder material, and it is rolled on long, flat surfaces. For some years past attempts have been made to manufacture glass eoffins, but the eost of production is so high that this invention is as yet in the experimental stage.

## DECORATING.

For high worth in a decorative sense eut and engraved glass comes first. The eutting and engraving is done when the glass is cold, or in its natural finished state. Cut glass is made both from plain and figured blanks. In the first ease steel wheels ealled "mills", covered by a thin layer of wet sand, fine alundum or earborundum, impress the glass with the main cuts. This is ealled "roughing." The sand is then removed by various stones, both natural and artificial, with water running on them. The finer cuttings are added by the stones.

This is ealled "smoothing", and of all the skilled trades eonneeted with the glass industry it is eonsidered the most skilled. Wooden and felt wheels and rag buffs smooth the surfaee, and the article is then immersed into a eombination of powerful aeids whieh produee the brilliancy of heavy eut glassware. The proeess from the figured blank is the same exeepting the roughing, whieh is eliminated.

Engraved glass is done by skilled meehanies using either copper wheels or stones, and the finished produet eonsists ehiefly of scrolls, flowers and animals. It is highly artistie.

Etehing by means of acids, as well as by sand blast, are still other and eheaper ways to decorate the surfaee of glass-ware.

## FUEL.

The old Muranians used wood to produee the heat for melting a "bateh" of glass. It is still used in parts of Italy, but Bohemia, Germany, Belgium, Franee and England depend ehiefly on eoal for the heating units, and in this country natural gas belts have given rise to numerous glass plants, sueh as those existing in Pennsylvania, Ohio, West Virginia, Indiana, Illinois, Kansas and Oklahoma. Gas is the best fuel for the work, but in eertain places it has been exhausted, partieularly in parts of Maryland near West Virginia and in Central Kansas. Sometimes oil has been substituted with a measure of sueeess, but frequently a factory will move away to another spot where nature still has gas wells spouting. An interesting case of this sort eame to my notiee several years ago at North Baltimore, Ohio. I had oeeasion to visit a eemetery there one afternoon in the fall of the year, and going aeross a wide field I saw the furnaee of a glass house. But that was all. The holes were there, and the furnace was intaet, but long grass waved at its base, and no other trace of the industry was in sight. It was a large and prosperous plant some twenty years ago, but the stoppage of natural gas eaused the firm to remove to West Virginia. I cannot deseribe how I felt, and how lonely that furnace looked, where once the busy workers had fashioned all manner of glass, and then had departed, leaving this solitary ghost as a reminder of the past.

## SCIENTIFIC USES.

Most of the ware made for the use of surgeons and chemists is done by a braneh ealled "lamp working". Tiny pipes are used, and the heat is derived from gas rapidly driven thru a jet. As the progress of the seientist advanees so too must advance the art of the lamp worker, and all sorts of lenses, tubes, syringes, measuring glasses, thermometers and phials, unknown to the glass worker of other times, must be blown by these workers.

## MACHINE INVENTION.

The glass industry as a whole received its share of benefit from the diseovery of steam and elcetric power, but until 1903 the mechanical tasks of the glass worker were very mueh the same as they had been hundreds of years ago. In that year Miehael Owens of Toledo, Ohio, invented a machine to blow bottles. It now has been so improved that any bottle from a half-ounce eapaeity to a 12 gallon demijohn ean be automatieally blown. The invention was first scoffed at by those glass workers most eompetent to speak for their trade, but this eontempt was silenced in 1909 when 49 machines, eaeh with six arms and a produeing power of 111 gross every 24 hours, produced a grand total of 1,700,824 gross bottles. To aeeomplish the same amount of work by the former methods the service of 1320 skilled blowers would have been required.

As this maehinery is constantly being improved it is not too much to say that the entire ancient, highly skilled and very exclusive glass trade may soon be revolutionized, and the erstwhile aristocrats of pipe, dummy and seissors redueed to the unskilled stratum, inevitable to so many crafts, and uniformly dreaded by the craftsmen. The decorating trades requiring skill have been greatly

speeded up by the introduction of manufactured stones with qualities of abrasion, making for more work. The relative importance of machine inventions in this line is small, as it is rather of aesthetic value and cannot pretend to the primary social importance as the other branches of the industry.

## ORGANIZATION.

I believe that the remnants of the once strong Green Bottle Blowers' Association still command practically all of the blowers of bottles from its craft union vantage (?) point. There is no strong sentiment for a change in the form of unionism as far as the skilled workers are concerned. The hours are eight and one-half, with both day and night shifts. The wages are hardly in excess of one dollar an hour, with the general post-war tendency to decline. For many years this organization was in constant wrangling over jurisdiction rights with the American Flint Glass Workers' Union.

The window glass workers are without an organization, with the possible exception of a few company unions, where the factory manager is also the president of the union, and as such appoints the factory committees.

The American Flint Glass Workers' Union is the most powerful order of glass workers in this country. It grants charters to groups of seven or more employees. It is composed of glass workers of more than thirty departments of what is known as the flint glass industry. With most of its locals in the States it also has several in the Dominion. There are usually around one hundred and twenty locals, and the total membership hav never exceeded 11,000. At the present time it perhaps falls short by several thousand of this mark. About seven-eights of the members are workers in the hot metal departments. They work eight and one-half hours, with alternating night and day shifts, Saturday afternoons off.

The remaining eighth is composed of cutters and engravers who work nine hours for five days and five hours on Saturday forenoon. The president of the order recently published statistics as to wages for the entire trade for the past year, the average being $34.00 per week.

In 1916, at Toledo, a movement for industrial unionism reached its zenith and its failure, when the present head was elected by a big majority on a reactonary program, defeating a bulb blower who stood for industrial unionism.

At the time of the First Convention of the I. W. W. in 1905 the Flints, then at war with the A. F. of L., which had characteristically scabbed on them, sent two delegates to the convention. They had no power to act, but the active one, then president of the union, T. W. Rowe, made a revolutionary speech, and acted thruout with much zeal. His coleague, Wm. P. Clarke, since become president, also took part in this convention. They reported to their membership, but never affiliated, subsequently forgetting their grievances against the Gompersian horde and rejoining the fold of sheep.

This organization has in the past waged many strikes, but it is now avoiding them without regard to the condition of the members. It publishes a monthly journal, which might be a good medium of education, but is kept in check by the officialdom, and its pages recount chiefly the sports of the members, bewail the loss of beer, and frequently are filled with incitation to violence against the radicals.

The Union is somewhat in advance of the tactics of Mr. Gompers in that the various departments of any one plant support the others in case of a strike or lockout. The union at present assesses its members one per cent of their wages, but in cases of necessity it goes much higher. The initiation fee is three dollars to all but foreigners, who are penalized for not having had the good sense to be born in the U. S. to the extent of ten dollars. In case of strikes or lockouts the union pays weekly strike benefits of seven dollars after the expiration of the second week.

It holds an annual convention, and an annual joint conference with the organized employers of the National Association of Pressed and Blown Glass Ware Manufacturers at Atlantic City. The officials of the union, together with executive members of the various departments, represent the workers. On these occasions the heads of the Flints and the employers hold "unofficial" meetings and compare lists and blacklists of radicals and agitators.

From the Flint officialdom to the employer's side is but a short step, as is evidenced by the long list of Flint officials and executives who have become superintendents, factory managers, foremen, and officials of the Manufacturers' Association. At the present time there is not a trace of progress, and but little hope can be entertained that the union will become in the near future either industrial or revolutionary.

However, the Industrial Workers of the World need not view the glass factory as a place where all hope is dead, all opportunity for industrial unionism shackled; it should appeal directly to the vast numbers of unskilled who are unorganized and not eligible to membership in the Flints. When a firm employs a hundred skilled workers it probably has four hundred unskilled. No sympathetic bond exists between the craftsmen and the unskilled in a glass house, and when the boys strike the men not only work with scabs, but help to recruit them. Also, there are many non-union glass houses, such as the ones in Columbus, Ohio, Sand Springs, Okla., Dunbar, Okla., Mt. Pleasant, Pa., and elsewhere.

Child labor is widespread, which is especially appalling when one considers that many of these children work night shifts. Very small boys toil thru the weary watches of the night around infernos of molten glass, which drawfs their bodies and ruins their lives.

In the same way that many unskilled work

with the few skilled in the flint shops, do they work with them in bottle and window glass plants. The vast majority of them have only heard of the I. W. W. from the corrupt press, from craft unionists, and from all who denounce it. They regard the I. W. W. as a band of outlaws roaming about with torches of destruction, and as being confined to the wheat fields and lumber camps. They have never seen its literature, have never heard its speakers, and really dread it.

The glass worker should be taught the principles of revolutionary industrial unionism. He should be made to see the lines of class demarcation. He should be so educated that in every wage-earner he will recognize a fellow worker, a fellow sufferer, with the same master class over him, the same chains upon his limbs and the same shambles to rise from to industrial freedom.

It is reasonable to expect that our first appeal would find the greatest response among the unskilled, but the propaganda should not be confined to them alone. At the present time the I. W. W. can best function as a mighty machine for the dissemination of its ideas. To the great mass of divided, deluded, miserable wage slaves it should be the leaven of revolt. The wages of the unskilled slaves around glass houses being uniformly low, with speeding-up devices on all sides, the I. W. W. will find among them a fertile field for sowing the seeds of class solidarity.

At this time there is an industrial union of glass and pottery workers in the I. W. W. It must have a nucleus of active members, and therefore the fellow workers forming it should be welded together to more successfully and systematically foster the growth of industrial organization among the glass and pottery workers, for the furtherance of immediate demands as well as for the final drive against the citadels of power, pelf and place; for the consolidation of militant, class-conscious labor and the establishment of industrial democracy.

# To the Russian Red Guard

**Sons of the Dawn! No more shall you enslave**
**Nor lull them with your honied lies to sleep,**
**Nor lead them on like herds of human sheep**
**To hopeless slaughter for the loot you crave.**
**For now upon you, wave on mighty wave,**
**The iron-stern batallions rise and leap**
**To extirpate your breed and bury deep**
**And sow with salt the unlamented grave!**

**Accursed Monster—nightmare of the years—**
**Pause but a moment ere you pass away!**
**Pause and behold the earth made clean and pure—**
**Our earth—that you have drenched with blood and tears!**
**Then greet the crimson usherer of Day,**
**The mighty Proletarian Dictature!**

**Ralph Chaplin,**
**Federal Penitentiary,**
**Leavenworth.**

# The Story of the Sea

By Tom Barker

(Continued from the February Number.)

## CHAPTER 5.

### THE SHANGHAIERS.

ONE can hardly deal with the question of the marine transport industry without touching upon the old-fashioned business of "shanghai-ing." We are glad to say that it is now disappearing. Some years ago it was very prevalent in ports of the United States, England and South America, reaching its highest mark in the ports of the last-named continent. It really had its origin in runaway seamen who hid themselves away from the authorities while waiting to get another ship. The desire for freedom on the part of the seamen of the period really originated this vile and iniquitous system. In return for the services of the man who was accomodating him, and using his offices to supply him with another ship, the man signed an "advance note," which gave this individual the right to collect one or two months' wages belonging to the man after the ship had cleared the port. From these beginnings grew up that business of shanghai-ing, in which the shanghaier was involved with the captains. Sometimes the consuls were in the game; at times also officials of the various missions got their "whack" out of the proceedings. Even the sanctified "soldiers" of the Salvation Army have had their fingers in the pie. From efforts to protect and assist the runaway seamen was developed a monstrous system of blackmail, thru which these harpies stripped the seamen of their money before they had earned it.

#### Tommy Moore's Way.

Shanghai-ing reached its high mark in Buenos Aires, which is the largest port south of the Line, and the biggest sailing-ship port in the world. More men are shipped on foreign-going ships in that port than in all the other ports in South America combined. Owing to the fine climate and the amusements, which are unexcelled by any other city in the world, it is also a favorite port for paying off men. Let us suppose that a sailing ship arrives in the roads of the River Plate. The men will probably be taking in sails when Tommy Moore's motor launch comes alongside. Tommy has a body-guard of half a dozen big toughs with him. He climbs the rope-ladder, shakes hands with the waiting captain, and then the two clear down below into the captain's cabin, where Tommy's bottle of whiskey is opened up. After a conversation with the skipper Tommy comes out on deck and roars out to the men in the rigging who are just finishing stowing sails, "Come on, you fellows, you're all going to pay off." The crew meekly swing down to the deck, and within half an hour they have their bags packed, and pass into the waiting launch and the hands of Tommy's body-guard. In an hour or so the launch runs down the South Channel and across to the Boca, where the men land. Their traps are dumped in Tommy's boarding house —save the mark—in Calle La Madrid. This place, curiously enough, passed into the hands of the Marine Transport Workers in 1919, after Tommy went on that long voyage that both shanghaier and shanghaied alike must make. In this dump the bunks were placed closely against the wall, so that is was as much like a foc's'le as any place could be. The food was usually salt-horse, borrowed from Tommy's skipper friends.

Now, in all probability these men may have had six months' wages coming, but all that they were likely to see would be a ten peso bill—about $4.00—which they were free to spend on **"vino carajo,"** or on any other chained lightning or weed-killer that they fancied. The rest of the cash was cut up between Tommy and the skipper. You will observe, therefore, that there would be a good profit on Tommy's boarding-house. At times some of the men used to kick, but Tommy's body-guard was always on the spot, and the result was generally disastrous for the one who kicked. At times they emptied one of the men out on the street, which meant that his only way of getting a living was to go on the beach, or go to the "campo." The shanghaiers had the jobs in their hands. There was no organization at all. These men would stay at Tommy's "dump" until he got another ship for them.

A man might be married in New York, or have his home in Bergen, but that didn't count with Tommy. He would probably ship that man to Callao or Melbourne. A man had to stifle his desires and keep a quiet tongue, otherwise he was apt to get his hair combed with a piece of gas-pipe. When Tommy got you a ship you went, either voluntarily or insensible, and that was all there was to it.

Before a man went to sea he had to sign an advance note for one or two months' pay which went to the shanghaier and his clique. For this he would receive, if he was fortunate, a suit of dungarees, a pair of fine-looking, highly polished paper sea-boots, a bar of soap and a bottle of alleged whiskey or caña. There are men who have been thru Tommy's dump a dozen times, and can still be met here and there. The story of shanghai-ing is one of the most enthralling in the world.

#### Some of the "Heads" in S. A.

Tommy Moore is dead. He died in bed. He made a fortune out of the business, and his son has today a big contracting firm in Buenos Aires. Another great "identity" was "Black Jack" in Rio de Janeiro. After the union was organized in Beunos Aires in 1919, a bunch of Scandinavian seamen gave Jack a beating-up one night and put that gentleman on crutches. They made a thoro job of him, as Scandinavians usually do. Up to September, 1919, "Big Fred" Williams was the chief shanghaier in Rosaria de Santa Fe. When we started the union

and crippled his business he wanted to join the union, boasting that he had been a member for thirty years of Havelock Wilson's burial society. He is a Swede and stands about 6 ft. 1 in. His complexion is ruddy, and not from the sun, either. He was somewhat ruddier when three Finn sailors—whom he had once shanghaied—met him in Buenos Aires one night after the union started.

Until May, 1919, "Big Pete" Frederiksen was the big gun in Buenos Aires, after the departure of Tommy Moore for his last anchorage. Pete was "Big Fred's" brother-in-law. Denmark has the misfortune to own him as a citizen. After we had broken up his business, he and his colleagues attempted to start a scab union solely for "Scandinavians." The secretary resigned his job after he had received a slight concussion one dark night from a mysterious captain who interviwed him near the transporter bridge in the Boca.

The shipping for British ships was usually handled by an individual named Nelson, a Russian. This fellow was in good standing at the British vice-consulate in Calle San Juan. He was round the consulate far too much for its reputation. It is also true that the vice-consul preferred to ship men from him rather than from the Sailors' Home, altho he is a most disreputable character. While the war was on, the German officials in Buenos Aires were very anxious to repatriate their countrymen for military service. They gave this job over to a Dane named Bangtsen, who used to get the men berths in Scandinavian ships, from whence they arrived ultimately in Germany. But Señor Bangtsen was a clever man, in fact, he had the makings of a diplomat in him. He paid a visit to the British authorities and sold the information that the men in question were on such and such a ship. The result was that the ship was held up in the open sea, and the Germans taken off and interned. Bangtsen used to shanghai men on the American schooners. After the union started he ran into a big fist more than once.

"Stockholm Charley" was another well-known "identity", who had a reputation for swiping men about half his size and half-killing them. O. L. Kruse was once a waiter but found that shanghaiing was more lucrative. It is said that he used to make 25,000 pesos a month from fees, etc. He also owned a big bar near the "Green Corner," but the sailors smashed it up for him one Saturday evening in December, 1919.

### Some Stories of the Business.

Writing of shanghai-ing, reminds me of Tommy Moore once shipping a dead man. When he was thrown aboard a ship in the roads with the rest of the drunken sailors, the captain looked at him and said, "He looks pretty bad." "That's all right," replied Tommy, "he's only drunk. He'll be all right tomorrow morning." But when they tried to get him out, he wasn't all right, so they had to get a piece of old sail-cloth, and place him to rest in the waters of the River Plate.

There was once a conscientious skipper who hated the shanghaiers and who decided to pick his own crew. This didn't fit in with Tommy's requirements at all. When the captain was drinking in a bar one night, his drink was drugged. When he awoke three days later, he found himself on the high seas on a sailing-ship, signed on as an able seaman and bound for the other end of the earth.

"Big Pete" himself was once shanghaied, when he was a "runner"—he was learning the business—for Tommy Moore. Tommy and Pete took a crew of fifteen men out to a ship waiting in the Roads. Pete went aboard with the crew, and Tommy stayed on the boat. The captain counted up and found there was a man short. He bawled to Tommy, "Hey, Tommy, there's a man short." "Is that so?" replied Tommy. "Well, then, you'd better take the runner. He'll do." With that he pushed the launch away from the ship and left Pete aboard as a sailor. It took Pete two years to get back again.

### What It Meant to the Seamen.

The shanghaiers made their money from the unfortunate and unorganized seamen. They spent it like water. You could see them at the race meetings at Palermo every Sunday afternoon, where they used to literally wash the floor with champagne. Motor-cars, prostitutes, big hotels and plenty of high-priced booze were the results that these harpies got out of swindling the seamen. Jack the Sailor footed the bill for the lot.

Villainies were perpetrated upon him If he stood on his feet like a man he was driven to become a "beach-comber." A sailor was nothing in the scheme of things. He had no organization, no friends, and no one to assist him. The consuls despised him, the captains logged him to their heart's content, and the missions, as usual, worried more about his spiritual needs than his material comforts. He might be a union man in New York or London, but his union could not help him in South America, nor did it ever cross their fat heads that it was at all necessary. The native unions didn't speak his language, and he didn't speak theirs. The police authorities gave the shanghaiers carte blanche to follow their odious business.

In Europe and the States the shanghaier has changed his name to the more euphonious "shipping-master." His existence is not seriously attacked by some of the marine unions, which are notoriously short-sighted. The ports of the world are infested with "beach-combers." They are the cast-offs of the sea. Some are loafers, but many are good men and true. This army is growing, and hungry and unemployed sailors and firemen can be found everywhere. But they are waking up. The march of events and the drive of the machine process is compelling these outcasts to come together in the Great Brotherhood of the Sea. Their nationalities, their religions and their tongues may differ, but they suffer from the same privations, live the same lives, and die the same deaths. They have the same ruth-

less masters and the same grinding poverty.

**From all the corners of the Seven Seas they are coming together in One Army. The black night of disorganization and ignorance is clearing for ever from the face of the ocean. The bright sun of the Marine Transport Workers' Union, international and universal, is rising in the East. The sea is roseate with the coming day, and on the foc's'le head there are many watchers waiting to greet the Day of Emancipation.**

**Men of the Sea! Let us encircle the ocean routes and the docks with ONE UNION, ONE CARD and ONE OBJECTIVE. Long live the democracy of the stokehole, the engine-room and the galley!**

**All power to the Workers of the Sea! Long live the Industrial Republic of the Ocean!**

## CHAPTER 6.

## MARINE TRADE UNIONISM.

### The Old and the New.

In 1805 the navies of England and France fought the battle of Trafalgar. The ships were of wood, and were propelled by the wind. In their day these wooden walls were the pride of the sea. The hopes of mighty nations hung upon their old-fashioned guns, and their press-gang enlisted crews.

Time has flown and industry has changed. The one-time efficient ship, "H. M. S. Victory" lies in Portsmouth Harbor, while near her lie the battle cruisers and the furtive submarines, which today are the arbiters of naval supremacy. They are the results of inventive genius applied to the fiendish art of human destruction. They are scientific, speedy and dreadfully accurate. They are new, the "Victory" is old. One modern battle cruiser could sink a thousand "Victory"s in two hours. We live in a scientific age when the new triumphs over the old the iron ship over the wooden one, the steamer over the barque, and the oil-burner over the coal-burner. The international shipping trusts have annihilated the small national groups by swallowing them.

Old forms of organization have to give way to new. Forms of working class unionism of twenty years ago are now obsolete and useless. Marine trade unionism has outgrown its usefulness; it belongs to a dead age, that of the sailing ship. It was an organization of tradesmen united to protect their trade interests and to monopolize their skill. It believed then, and believes now, that the capitalist class has a right to exploit the working class. It perpetuates the idea that the skinners and the skinned have interests in common. By working hard and long, said the old trade union official, a worker is both helping himself and his employer. He attempted to make the workers believe that the more they produce the more will they receive for their labor in the form of wages.

Such notions have long ago been exploded by Karl Marx, the famous economist, upon whose teachings has been founded the new movement of the advanced workers of today. All the great triumphs in ship-building, and advances in ocean traffic have made but very little difference to the marine worker. On the contrary, there is more unemployment, more hunger and poverty among the toilers of the sea than ever before. The deck-hand on British ships works the same hours as he did in 1887, after the formation of the National Seamen's and Firemen's Union. It is true that wages have gone up since the war, but the rise does not compensate him for the rise in the cost of living. He has to pay three or four times as much for his clothes as formerly, and the quality is abominable. Very litte change for the better is to be found in the treatment accorded him, in his wages and accommodations, when compared with the improvements that have taken place for the officers and the saloon passengers. There are many ships afloat where the crew have to eat in the same quarters that they sleep in, and quite a large percentage where there are no baths for the firemen when they come from their tiring work below.

### Our Wages and the Bosses' Profits.

When we guage the so-called advance in wages we must do so in the comparative sense. To do so we must ask ourselves the following question: "Do the marine workers get a larger or a smaller portion of the productivity of their labor than they did thirty years ago?" Everyone knows that they get far less than they did formerly. We know that the marine workers manned the ships during the dangerous period of the war, and were as well off at the close of it as they were at the beginning, while the ship-owners reaped tremendous profits, scandalous dividends. As long as shipping is operated under private ownership, the conditions of our life will become worse, while those of our masters will become better. Hence, if we are out for anything at all, we must organize for the definite control of industry. We must organize to end our slavery by the One Big Union.

The power of our masters has grown tenfold. Our existing trade unions have made no such advance, altho the number of their members has increased. In plain words, the existing national unions and the so-called international unions are like so many wooden warships at the mercy of one giant battle cruiser straight from the fitting yards. Our unions are obsolete, their structure is defective, and while their guns make a big noise, they are actually more dangerous to their own crews than they are to the enemy. They have no speed, and have as much direction as a derelict. Their national anthem is, "Work, boys, work, and be contented." That is also the national anthem of a lunatic asylum. Their flag is the yellow flag of ignorance and cowardice. The working class movement can never march ahead on the international battle-field as long as these forms of disorganization exist. Just as the bow and arrow is useless against the machine gun, so also is national lapdog trade unionism useless against the Capitalist World Octopus of Ocean Transport.

### Great Britain's Funeral Societies.

In Great Britain we find three unions of seamen and firemen. The National Seamen's and Firemen's Union is the coffin society led by Mr. Havelock Wilson, M. P., C. B. E., etc. This outfit is now water-logged, and the man at the wheel is seated in a bath-chair. In Glasgow and Southampton the Seafarer's Union holds sway. This union was born from a squabble between Mr. Wilson and Mr. Emanuel Shinwell, who has conferred upon the Seafarer's the honor of possessing him to guide their barque towards the doldrums. Some time ago Mr. Shinwell received a sentence of six months at one of His Britannic Majesty's rest-cure Homes for participating in the 40-hour strike in Glasgow. While he was in, Mr. Wilson set to work to corner up his opponent's membership. The Hull Seamen's Union was formed as a break-away from Mr. Wilson's fold. It has very strong objections to foreigners who do not have the good sense to be born in Great Britain or India.

Germans, Austrians and Turks are refused membership in that union. The German Ambassador, needless to say, goes quite often nowadays to Buckingham Palace, and as I sit writing this, the yellow Mr. Legien, of the lap-dog German trade union movement, is sitting beside Jouhaux and Bob Williams in the Holborn Restaurant at the Hard Labour Congress.

### "The Old Man of the Sea"

We cannot touch upon marine unionism without discussing Mr. Havelock Wilson, M. P., C. B. E., etc. This ancient barnacle is a dead weight on the body of the marine workers of the world. His own constituents are tired of him. He is a Liberal in politics, and so reactionary that labor is going to oppose him at the next election. He is a cast-iron dictator; the rules of his union make it impossible for him to be ousted. His retarding influence is as baneful upon the great organization that he controls as that of "Grandpa" Gompers upon the American Federation of Labor. No advance can be made of an international character as long as Wilson's Funeral Society retains its prestige. There are overseas unions that have done more for their members in one year than Wilson's union has accomplished for its members in 33 years.

Intelligent marine workers will remember that it was Wilson who used his power to stop Ramsay MacDonald from going to Russia some few years ago. It was on one of his scab ships that three of the best men in the Swedish working class movement were sentenced to death. The "Amalthea" carried men to break the Swedish dock strike in 1908. Only a few weeks ago efforts were made to fill the places of striking Belgian sailors by members of Wilson's Union. The Coffin Society, in short, is in the hands of the Chamber of Shipping. Havelock Wilson received the Order of the British Empire on the recommendation of the British Government while the war was on. Some of the other members of the union received the same honor. Every working man knows quite well that these baubles are not given out for helping the men who toil, but for bull-dozing and side-tracking them. Wilson and his creatures caused the tabling of a resolution by the Italian seamen's union in Genoa at the International Seamen's Congress a few months ago, calling for action to compel the foreign imperialists to cease their blockade of Soviet Russia. He allowed the eight-hour day for seamen to be defeated by one eighth of a vote. His seamen and firemen are receiving £15 a month while in the United States the seamen and firemen are receiving about £24 a month.

Wilson, in addition to being a paid official of his union is also a Member of Parliament in the House of Commons. That brings him in the nice little sum of £400 a year. There are now possibly about a million unemployed in the country, but that does not trouble in the least "the ancient mariner" who is not fit to look after one job properly, never mind two. There are large numbers of unemployed marine workers who could hold down either of the jobs as badly as he does. His organization is well hated thruout Europe, for his Coffin Society holds the Belgians, the Dutch, the Danes and the Spaniards from doing anything for themselves. The organ of the German Seamen's Union, "Seemansbund", says that Wilson's union is 'merely a minor appendage of the British shop-owners'.

### "Some" Supper

There is one thing that ought to be engraved in letters of gold on his monument when in the fullness of time he becomes entitled to one, and that is the fact that he accomplished more for British seamen than even Lord Nelson did. Nelson managed to get his men bread on two days a week. Wilson, however, contrived to get HIS men bread on three days a week, the remainder of the days being, of course, "biscuit" days. Possibly when the world's seamen use the last coffin for this funeral society, British seamen will be able to have bread seven days a week as a right, — and not as a privilege.

We have great pleasure in reprinting the following account of the "Annual Dinner of the British Seamen's and Firemen's Union", and we ask the members of this and other unions to read it carefully and ask themselves what they pay their union dues for. The excerpt is from London "Solidarity", the organ of the Shop Steward's movement.

### Lions and Jackals at a Feast

"The National Seamen's and Firemen's Union held their Annual General Meeting at the Memorial Hall, London, during the first week in October, 1920. The 'Annual General Meeting Dinner' took place at the Holborn

Restaurant on October 5th, at which prominent ship-owners were present, and also representatives of the Government departments. Along with most of the officials of the Union, they were well fed and wined, at the expense of the members of the Union —tho we doubt with the consent.

"They certainly did themselves well.

"It will interest those seamen and firemen who are paying one shilling per week to the organization to obtain better conditions, and who expect the Union to fight the shipping magnates, to know that the dinner consisted of EIGHT courses. We would give the menu (which of course, was printed in French, as all high class menus are), but we feel it would be likely to incite to riot the thousands of sailors and firemen who are now hanging around union and shipping offices in all the ports of the kingdom, unable to get ships, or food for themselves and their children. Thomas Chambers, C. B. E., Treasurer of the Union, was wine steward, and he carried out his duties (on this occasion) with great honor. He was warmly complimented by the ship-owners present on "the lavish supply of very fine wines". They are certainly judges, and apparently Chambers has had some experience before and knows their tastes by now.

"The toast list was as follows:—

"First, 'The King'; with several knights, baronets, C. B. E.'s and other stiffs present, "George' would naturally take first place.

Then the 'National—or isn't it Gnashional —Seamen's and Firemen's Union of Great Britain and Ireland', coupled with the names of J. Havelock Wilson, Esq., C. B. E., M. P., C. B. E. This toast was proposed by the Rt. Hon. C. W. Bowerman, M. P.

" 'The Shipping Industry' coupled with the names of Sir Joseph Maclay, Bart., W. J. Noble, Esq. (President of the Chamber of Shipping), and Henry Radcliffe, Esq. Proposed by Sir Montagu Barlow.

"After that 'The Guests' coupled with the names of Sir Walter Kinnear (Controller of Insurance Department, Ministry of Health) proposed by Councillor Peter Wright (Mayor of Newport).

"Presentation by Thomas Chambers, Esq., on behalf of the officials and members of the N. S. & F. U. to Mrs. Havelock Wilson.

"Quite a nice slap-up little dinner, let me assure you. Of course, after the champagne had begun to work, things got a bit lively, but nothing serious. Unparliamentary language WAS used, but with quite good feelings between the lions and the jackals. Nothing was said about the rank and file in any of the speeches, but doubtless arrangements were made as to their future in conversation".

Time and time again have conferences been deferred between the union and the bosses. On every occasion some excuse has been brought forward. First it was the Genoa conference, and then it was to wait until the Wilson Coffin Society swallows Comrade Shinwell's remaining members. Now matters have been deferred until after a meeting is held in Brussells, which, according to Mr. Wilson's recent speech at Marseilles, is going to perform wonders for ALL the seamen of the world. We are just wondering what kind of "junk" is going to be handed to the marine slaves by the bath-chair Moses who has been leading his tribe by the nose thru the Egyptian desert. We are afraid that there is a long sojourn coming in the desert to create the necessary stamina to lead us to the "Promised Land".

**Other British Marine Workers.**

In Great Britain there are separate organizations for officers, engineers, wireless operators, and all those engaged in the steward's department. Thus on a British ship we can easily find the members of five or six unions, and possibly in addition a few men who are members of no union whatever. Each man owes allegiance to a different union, which gives him feeble protection in home ports, and none at all in over-seas ports. This is the principle of craft unionism, the gospel of despair. The workers are divided into sections, so that they may be attacked one at a time by the powerful shipping interests. One section goes on strike, just like the wireless telegraphists did not long ago, while the other union men go on working, easing perhaps, their trade union consciences by paying a sixpenny levy to support their poor brothers, who—sob!—are on strike.

The basis of marine unionism in Great Britain is rotten to the core, and neither fine-sounding names nor aggressive talk can alter that fact. It amounts to suicide on the installment plan. Altho most of the unions are within the Transport Workers' Federation, it does not prevent them from acting as they have done in the past. The axe has to go to the root; the spirit and structure of craft unionism must be destroyed. And we must remember that even an Industrial Union of British Marine Workers cannot attain its objective if it confines itself solely to the ports of the United Kingdom. **Capitalism is scientific in its structure and international in its scope; the Unionism of the Workers of the Sea must also be scientific in its structure and international in its scope.**

# Defense News

**By John Martin**

THE LAST STAGE of the legal fight to free our fellow workers involved in the Chicago case has been entered. On February 28th, our Petition for a Writ of Certiorari was filed with the Supreme Court. What the outcome will be, we are not at the present time in a position to say. Should our Petition be denied, it will mean that those out on bonds will be compelled to return to the Leavenworth penitentiary and, with those who were never released on bond, serve the remainder of their long sentences—unless the workers of this and other countries demand the release of all our prisoners and stand ready to enforce such a demand with their economic power. A Petition for a Writ of Certiorari will also be filed in the Sacramento case. In the Wichita case, we are now awaiting the decision of the Appellate Court.

### RELEASED ON BOND

We have succeeded in obtaining the release of Fellow Workers M. Sapper and F. Grau, two of the Wichita defendants, on bond. We are greatly handicapped in obtaining bonds for the Wichita men inasmuch as the Appellate Court has ruled that outside of cash and Liberty bonds, only local property located within the State of Kansas will be accepted as bail sureties. Therefore, anyone having Liberty bonds on hand is requested to place them at the disposal of the General Defense Committee to be used for bonds. Cash loans are also acceptable. It is imperative that those fellow workers are released on bonds before the Appellate Court renders a decision in their case, inasmuch as after a decision is rendered, they will not be eligible to bond.

### PERSECUTION STILL GOING ON IN FULL FORCE

From California comes the report that at the present time nine fellow workers are being held in the Los Angeles jails. Five of them—Edwards Peters, Henry Maflin, E. O'Rourke, T. F. Olsen and A. Shorken—are being held on charges of Criminal Syndicalism. Two of them—Frank Rice and Karl Kasemeyer—are awaiting jury trials for vagrancy; they were selling the "Industrial Worker" on the streets of Los Angeles when arrested. The charges against the other two—Gudson and Murphy—have not yet been ascertained. The California District Defense Committee and the local committee organized in Los Angeles are taking care of these and other cases pending in California.

Fellow Workers Philip Taft and James Fitzpatrick were arrested on the streets of Kansas City, Missouri, on February 3rd, and a charge of vagrancy placed against them. However, Caroline Lowe succeeded in having the case dismissed when it came up for trial.

The case against Fellow Worker Roland Stevens, Fort Wayne, Indiana, who was arrested on the morning of September 28th, 1919, and charged with inciting to riot has finally been dismissed thru the efforts of Attorney Mulks. Stevens has been at liberty on a $5,000 bond.

In the cases of the deportees held in the East, deportation was secured on all cases on February 2nd with the exception of the cases against Ephraim Kertz and S. Diankosky. The Department of Labor is still holding Kertz at Ellis Island on the pretext that his deportation papers have been lost. The New York Defense Committee is looking after the matter and is trying to obtain his release or to compel the Department of Labor to deport him. Diankosky is being held on account of his refusal to sign his passport.

### SPEAKERS ROUTED FOR THE DEFENSE

Fellow Worker Harry Lloyd's speaking tour for the Defense has been very successful. He has so far spoken at several of the towns on the Mesaba Range, besides at Duluth, Superior, Minneapolis, Sioux City, and Kansas City. In Minneapolis, besides holding his regular meetings, he appeared before most of the A. F. of L. local unions and was received with much interest. As a result of these visits, nearly every day brings a contribution to the General Defense fund from one of these local unions

Fellow Worker Ralph Chaplin has been routed on a Western tour for the Defense. His tour will include all the larger cities on the northern route between Chicago and Seattle. After arriving in Seattle, he will be routed by the Northwest District Defense Committee.

### MONEY BADLY NEEDED FOR DEFENSE

The General Defense Committee is under a constant heavy financial drain due to the many cases which have to be defended. Unless immediate and more general financial help is given than has been given us in the past months, we shall not be able to look after the defense of our imprisoned fellow workers in such a way as they should be taken care of. Under no circumstances can we afford to slack up now. We must not let those who fell in the clutches of the law thru their organization activities be neglected. Make all checks and money orders payable to the General Defense Committee and forward them to John Martin, 1001 West Madison St., Chicago, Ill.

**DO NOT FORGET THE REHABILITATION FUND!**

# To Soviet Russia - An American Workingman Speaks

By Charles Ashleigh

YOU HEAR a lot about Russia in the papers nowadays; an' about them Soviets.

I'm not quite sure about what Soviet means; the papers speak about them as though they was a disease. But Ivan, the guy who works along with me in the shop, says as how it just means Council—a workers' council.

An' about all I used to know about Russia was that they had a stiff called a Czar there, an' he used to send lots of working men and women to a place called Siberia whenever they tried to make their life a little easier.

Then they got rid of the Czar, an' started a bran'-new republic. But I wasn't much het up about that, 'cause I knew that in a republic, you can have starving or overworked men an' women; an' little kids without enough to eat . . .

But then I read that the workin' people of Russia had started in to run things for themselves; that they were trying to run the factories and plants an' other things for themselves; an' that they wouldn't let no kids go hungry.

An' that sounded pretty good to me. I've got kids of my own, an' I'd like 'em to get a chance to have a real education, with college an' all. So I figured: If that's what them Soviets is doin', they're about all right!

But the papers kept on printin' pictures of fellers with long, wild whiskers; an' with bombs an' knives in their mitts—blood-thirsty lookin' characters, they was.

So I says to Ivan, who works with me, I says: "Say, Ivan, you don't look much like these here Russians they puts into the cartoons. I guess you ain't a real honest-to-God Russian."

So Ivan says: "Come along with me, an' see some more of 'em." An' I goes with him to his boardin'-house, an' there's a whole gang of 'em; an' some of 'em did have beards, right enough, but they was workin' stiffs, like me; so I figures: "It don't much matter what way a guy wears his hair. It's what he's got under it!"

An' sure enough, those guys had some real horse sense. An' they was just like you an' me, even if they did talk funny English. An' they explained some things to me.

An' now I know better than to believe the newspapers!

So I says to Soviet Russia—an' to the workers there—

Go ahead, boys! There's some of us here as understands you, an' knows what you are driving at.

You've got the hardest job any bunch of workin'men ever had in the world; an' you're tacklin' it like men.

An', by God! if you really make a whole job out of it—an' it looks as though you will—we fellers on this side, an' the stiffs in France an' Germany an' England an' other places, is likely to get all kinds of high-flyin' ideas too. An' I guess the boss would just hate that! He don't want us to think we can run things for ourselves.

But we over here are watchin' an' waitin' an' thinkin', brothers! An' we may do more than just wait an' watch! We may start right in to get rid of our own masters!

So, here's our hands, you Russian lads, an' here's our hearts! Up from the dark places where we work an' live, we are sendin' you a sign of brotherhood.

For workers are workers, the whole world over. An' we know what hunger is, an' bein' out of a job, an' watchin' your kids go hungry, an' bein' insulted by some swinish boss; so we're blood of your blood, an' bone of your bone; an' we're with you!

Here's to you, Russia of the Workers' Councils! You're the new great light, shinin' in on me an' mine.

An' by your light we'll steer our way, over the hard, tough places to a new power an' a new life!

CONGRESS OF THE COMMUNIST YOUTH OF RUSSIA

# Labor Demands Resumption of Trade with Russia

**We reprint below a circular letter received from the Phoenix Central Labor Union:**

February 6, 1921

TO THE VARIOUS SUB-DIVISIONS OF THE AMERICAN FEDERATION OF LABOR:

**Brothers:**

The following resolution, regularly adopted at the last meeting of our Body, was amended to permit sending a copy to Central bodies thruout the country.

We ask that you give it consideration, and if in accord with its spirit, provide for its being read before the local unions affiliated with your body.

Fraternally,

**Ed Huffman, Secretary**
**Phoenix Central Labor Union.**

TO SAMUEL GOMPERS,
PRESIDENT, A. F. OF L.:

Whereas, we, the Phoenix Central Labor Union, after many years connected with the A. F. of L., during which we have been schooled to expect a Moses to lead the hosts of Labor forth from economic bondage, now realize the fact that our A. F. of L. gods have feet of clay; that if these officials move in our interest, it is only after they have received a vigorous shove from the workers upon whose backs they so nonchalantly ride. Therefore, Mr. Gompers, we are constrained to thus address you:

Do you realize that millions of men and their dependents face starvation in this country because of unemployment, because of stagnation in industry, because we now have a period of over-production—that ever recurring phenomenon of the capitalistic wage-system for whose continued welfare and existence you have ever shown such tender solicitude?

Do you know that in Russia, that country where today one finds the only Government on earth conducted by and for the people who do useful work, millions of our brothers, after successfully defending their workers' Republic from the treacherous assaults of international capitalism, now endure hardships, privation and want, for lack of clothing and shoes, medical supplies and canned milk, paper and dishes, machinery and farming implements—in a word, the varied products of our farms, mines, mills and factories, while their Soviet Government stands ready to purchase these products with either gold or exchangeable raw commodities?

Here in the Salt River Valley of Arizona, our largest industry is the raising of long staple cotton, which Wall Street, because of no market, is forcing out of the hands of the producers for a fraction of its value. Do you know that Russia has announced she will purchase the entire world's surplus of cotton?

Are you so blind to the welfare of those you purport to serve that you cannot see your duty clear to demand in the name of the unemployed workers of this country that trade relations with the Russian Soviet Government be established?

When the jackals of capitalism demanded the life-blood of the workers for the protection of their markets and credits, you dramatically announced you were "a living, breathing, fighting man," and behind the smoke of "Make the world safe for democracy" you valiantly led us to the slaughter. For that democracy we still fight, and thanks to our Russian comrades, the plan of successful battle begins dimly to unfold. The workers of all countries can and will free themselves from wage slavery.

How cruelly and maliciously were the workers seduced in the World War is now apparent to all. Can it be that you alone have not yet recovered from the poison-gas attack of Wall Street? Or are we to understand that your "galvanic, dynamic energy" can be aroused only in the service of the exploiters? The time is near at hand, Mr Gompers, when you must speak out in the real interest of Labor, or make way for one who can and will.

For the present, Mr. Gompers, to the end of relieving immediate distress both at home and abroad, you are instructed to humbly supplicate the powers that temporarily be—a task to which you have shown yourself peculiarly fitted—to lift the economic and commercial blockade against Soviet Russia.

Resolved, that these our sentiments and views above set forth, after receiving the official endorsement of the organizations composing this body, be forwarded to President Gompers and published in the labor press.

# The Berlin Conference of Syndicalist and Industrial Unions

**By H. Van Dorn**

ON DECEMBER 16th, 1920, a conference of representatives of Syndicalist and Industrial unions took place in Berlin, Germany, called for the purpose of forming a revolutionary Industrial International. The following organizations were represented:

| Organization | Country | Membership | Delegates |
|---|---|---|---|
| Ind. Workers of the World | America | 100,000 | George Hardy |
| Freie Arbeiter Union Syndicalisten | Germany | 150,000 | Fritz Kater<br>Max Winkler<br>Rudolph Rocker<br>August Souchy<br>Franz Barwich<br>Theodor Plevier |
| Union Syndicalisten | Czecho-Slovakia | 2,000 | Gust Pogonski |
| Federacion Obrera Regional Argentina | Argentine | 200,000 | Tom Barker |
| Comité Syndicalist Revolutionairc (961 groups) | France | 300,000 | Victor Godonnèchc<br>Jean Ceppe |
| National Arbeitssccretariat | Holland | 40,000 | B. Lansink<br>E. Bouwman |
| Sveriges Centralorganisation | Sweden | 32.000 | F. Severin |
| Shop Stewards, Workers' Committees | England | 200,000 | Jack Tanner |
| Total Membership | | 1,024,000 | |

The Italian and Spanish delegates had been prevented from appearing at the conference due to their imprisonment. No alternates were sent. Denmark sent a letter of approval, but could not be present owing to financial conditions prevailing within the Syndicalist Union.

Fratcrnal delegates were present from the French Communist Party, the All-Russian Trades Unions and the Russian Communist Party.

On the morning of Dec. 16th Fellow Worker Winkler of the "Frcie Arbeiter Union Syndicalisten" called the conference to order and delivered an appropriate addrcss of welcome. He pointed out that this was the first conference of revolutionary Industrialists since the war began, the last one having taken place in London in 1913, when the Syndicalists met from various countrics with 35 delegates present.

The delcgates then reported on the economic conditions in their respective countries, and dwelt especially upon the persecution of industrialists by the mastcr class. When thcy hcard from Follow Worker Hardy of the persecutions, jailings and lynchings of the mcmbers of the American I. W. W., they were greatly astounded. They could hardly believe that such things took place in this far-famed "land of the free and home of the brave."

The following resolution was adopted:

> "Resolved, that this Congress of Revolutionary Syndicalists, held in Berlin, herewith demands the release of all political prisoners from capitalist governments, and calls the attention of all rcvolutionary unions to concentrate upon the capture of thc marine transport industry—capital's most vulnerable point —to effect a general action for the release of all class war prisoncrs. We also great all comrades behind prison walls, and will do all in our power to effect their speedy release."

A resolution protesting specifically against the persecution of the I. W. W. was also passed. It reads as follows:

> "Rcsolved, that this Preliminary Conferencè of Revolutionary Syndicalists and Industrial Unionists do hereby most emphatically protest against the continued persecution of members of the I. W. W. by outrageous scntences, brutal treatment and murder, and pledges itself by various methods to effect their release from prison, and to stop the atrocities practiced against them; and further, that a copy of this resolution be sent to the United States President and the Department of Justice."

Another resolution of great importance, moved by Delegate Tom Barker and carried unanimously, reads as follows:

> "Thc members of all thc following revolutionary organizations are entitled to membership in the corrcsponding organizations in other countries without paying any transfer or initiation fee. They shall be acccpted upon cqual tcrms and enjoy full privilcgcs therein: U. S. A., I. W. W.; Australia, One Big Union or I. W. W.; Mcxico, I. W. W.; Chile, I. W. W.; Germany, Freie Arbeiter Union Syndikalisten; Czecho-Slovakia, Freie Arbeiter Union Syndicalistcn; Holland, National Arbeids Scerctariat; Sweden, Arbetarcentralorganisationen; Denmark, Flagopposition Sammcnslutning; Francc, Comité Syndicalist Revolutionaire; Norway, Norske Syndicalist Federation; Grcat Britain, Shop Stewards' and Workers' Committee Movement; Spain, Confederacion General del Trabajo; Italy, Union

Sindicala Italia; Argentine, Federacion Obrera Regional Argentina; Uruguay, Federacion Obrera Regional Uruguaya; Canada, One Big Union.

The French delegates stated that their organization was one of committees inside the General Confederation of Labor, and that they were federated together, first, into local centers and then into district and national federations. This will make it possible to strike against capitalism concertedly, as far as France is concerned. This revolutionary organization is also affiliated to the Third International.

After a great deal of discussion about the comparative merits of political and industrial action, during which much valuable information was elicited, the Conference adopted the following program:

### RESOLUTION.

"(1) That the Revolutionary Industrial International be based on the class struggle and the domination of the working class.

"(2) That the Revolutionary Industrial International shall fight for the destruction and removal of the economic, political and moral system of the capitalist regime, and stands for the creation of a free Communist Society.

"(3) That the Revolutionary Industrial International declares that only the working class itself is capable of destroying the economic, political and immoral system of slavery under capitalism, and only by the sharpest application of their economic power, which culminates in Revolutionary Direct Action of the working class in attaining their ends.

"(4) That the Revolutionary Industrial International stands on the basis that the construction and regulation of production and distribution is the aim of the economic and industrial organizations of each country.

"(5) That the Revolutionary Industrial International shall be an autonomous body independent of any political body, and in case the Revolutionary Industrial International has decided upon some question and a political party or some other organization agrees to it, or vice versa, then the execution of the decision can be carried out together.

"(6) That the Conference sends out a strong appeal to all revolutionary organizations of Syndicalists and Industrial Unionists of all countries to respond to the call of the Provisional Red International of Trade and Industrial Unions to attend the Congress called by them to be held on May 1st, 1921, for the purpose of forming a permanent International of the Revolutionary Industrial Workers of the World."

As is seen by the above resolution, the Conference went on record to be represented at the forthcoming Moscow Congress of Industrial Unions, where will finally be completed the formation of the Industrial International, incorporating all the revolutionary trade and industrial unions of the world.

### COMMUNATING COMMITTEE

It was resolved that an International Committee be set up to communicate with similar organizations, and acquaint them with the results of this Conference. Delegates Rocker (Germany), Tanner (England), and Lansink (Holland), were appointed. The last named will be the Secretary, with offices at **Nassanhere, 101, Amsterdam, Holland.**

In commenting upon the significance of the Berlin Syndicalist and Industrial Conference, we can do no better than reprint an article by **Enrico Leone,** the Italian Syndicalist writer and theoretician, which appeared in the **Guerra di Classe,** the official weekly publication of the **Unione Sindacale Italiana,** issue of Jan. 22nd, 1921. The Italian Syndicalist Union has over 600,000 members and is heartily in favor of the action taken at the Berlin Conference. **Enrico Leone** was up to a month ago professor of political economy in the University of Bologna, and is internationally known as a deep thinker and keen analyst in the fields of economics and sociology.

### COMMENTS ON THE BERLIN INDUSTRIAL CONFERENCE, BY ENRICO LEONE.

The report of the first International Industrial Conference is a historical document whose importance cannot be exaggerated. In contrast to the "party" congresses, in which emerge the personalities of those most expert in the art of making a noise around their own names, the only modest preoccupation of the participants in the Berlin Conference is the future destiny of the world of labor.

Theoretical Syndicalism—as elaborated in the Neo-Marxist critique—was probably unknown to the men who met in conference. Yet, with remarkable coincidence in detail, they consecrate in practice its theoretical conclusions. They proclaim, in fact, that Marx, as represented by the politicians who have reviewed and corrected him in order to provide for themselves personal successes and fortunate political careers, places in the front rank questions of "political" character, and ignores the "direct power of the working classes," which finds expression in the struggle on the economic field. It is practically the same accusations that Proudhon made against the followers of his great rival. But the Syndicalist revision of Marxism (with the "Divenire Sociale" in Italy, and the "Mouvement Socialiste" in France), has convicted of ignorance or duplicity the "false followers" of Marx, by showing what Syndicalist conclusions may derive from Marxism, considered in its most essential spirit.

Syndicalism hails in Sovietism, as a fundamental structure inspired by the needs of the producers, the principle which must demolish any eventual official governmental mechanism: therefore it does not believe that the present Bolshevik policy, which is directed towards a dictatorship thru the new-born Communist Parties, rallied at the last hour, can be conciliated with the true nature of the social revolution.

Today, as in no other epoch of history, revolutionary Syndicalism is called upon to perform a rescuing labor for the struggling proletariat, inspiring it with the ethical sentiment of individual pride, preventing its possible descent to the status

of a brute mass, which a party of dictators presumes to maneuver according to designs that are elaborated over the workers' heads.

The anti-pedagogic nature of the industrialist forces must accustom the proletariat to conceive the revolution as **its own undelegable struggle,** in which there must be no compromise with the capitalist and unproductive classes on the one hand and in which, on the other hand, no arbitrary powers will be accorded to "party leaders," always ready to transform the virtues of the masses into their own personal glory. The revolution must be the direct and heroic effort of the proletariat, which carries its cause in its heart and its vibrant poetry in its profound soul. The aspirants to historical celebrity, eager to earn today the right to the marble monuments of posterity, and wishing to strip the organized workers of their direct liberating power, in order to create a new State in place of the old, entertain an "autocratic" revolutionary conception, which might compromise the liberation of the working classes and defeat their historical mission. Proletarian Syndicalism is deeply conscious of the ridiculousness of a "political" outlook on the social revolution, which is to be the result of the creative effort of a party of leaders and statesmen, who propose to people the future "Socialist" world with patrons and dictators of the proletariat, by them insolently declared unable to free itself.

Syndicalism does not hesitate to denounce these dictatorial knight-errants of the revolution, whose directing corporation they wish to become, as men **in whom the ambition for the realization of their views surpasses the faith in the full and creative power of the working class.**

At Moscow the Syndicalists, by advocating the independence of the revolutionary unions from all parties; by consecrating the principle of economic action in antithesis to the "coup d'état;" by insisting on the liberty of the producers as against a misunderstood principle of authority which might make of them subjects after a new pattern, substituting the necessity for revolutionary defense with extra-militaristic means, will apply a very necessary corrective force to the revolutionary movement. Their words will be listened to by the masses of Red workers of Russia, who will develop a deeper affection for their Soviets and Industrial Unions, in order to render possible a social reorganization thru the direct and spontaneous efforts of the producers, and will see the diminishing significance and importance of legal and governmental forms, in which a "party" always vigilantly guards its lordship over the multitudes, and to which a relaxed enthusiasm of the masses for the Revolution might develop a spirit of resistance and a consequent return to the past.

Revolutionary Syndicalism may anticipate remedies to the delusions which the Bolsheviks of the Third International are running into by placing excessive reliance on the Socialist-Communist parties of Europe, assigning to them a revolutionary mission in full contrast with their political traditions, with their parliamentary and reformist nature, with their inevitably democratic objectives.

The Syndicalists can well avoid the possible results of this delusion, by forming and expanding the class International of Red Unions, which by hammering into **real accomplishments** the arduous programs of vain party eloquence, may succeed (by stimulating to action the more powerful Unions of the Amsterdam International) in realizing the formula voted at the Conference of Berlin:

"The creation of a free Communist society can come only from the Unions of Workers and Peasants, and not from a dictatorial state based on the domination of a political party."

**LIBERTY EQUALITY FRATERNITY and DEATH**

# The Class War in Spanish-Speaking Countries

By Frank J. Guscetti

## SPAIN

THE CLASS STRUGGLE IN SPAIN is growing more intense every day and the issue between the workers and the capitalists with their political parties of various shades and their armed forces is getting ever sharper. The development of a more intensive labor organization in the Peninsula during the last few years is a very interesting study. Spain got its full share of war contracts, and gold flowed toward it during the last few bloody years to an extent unheard of even in the days of the preciously laden galleons of old. Most of this trade went to Barcelona, as the most important industrial and commercial center of the Peninsula, while Bilbao and Valencia also shared in war prosperity.

We see today the Spanish **peseta** at its lowest point, declining as fast in exchange value as the currency of vanquished and victorious countries that took part in the war. As a consequence, the Bank of Barcelona finds it necessary to suspend payments, marking the gravest financial crisis in the history of the country, with the Bank of Spain unable to come to its rescue. In the meantime, the bourgeois press harps on the fact that the Catalan capitalists had opposed increased export duties during the height of war orders on the plea that they were to devote their profits to expanding and bringing up to date the various manufacturing industries concerned, in the interests of a transformed and modernized industrial Spain. Even the regionalist, Senator Cambo, leader of the Catalan seperatists, now echoes the cry: "What has become of the enormous gains of the war period?" And no answer is forthcoming, except financial ruin and social chaos, longer bread-lines than ever before and misery on all sides among the workers and the middle class.

And while the crisis has developed, the new civil governor of Barcelona, with the effective aid of the gunmen forming the so-called **"Sindicato Libre,"** or "Free Union," has, according to the bourgeois press, wiped out of existence the powerful movement of the **"Sindicato Unico."** Not only active members of the Syndicalist movement, but even lawyers, as in the case of the liberal deputy Leyret, who had defended Syndicalist cases in the courts, have been attacked and shot down openly in the streets, thus actually practicing what the bosses' associations and their controlled press have for so long accused the Syndicalists of doing.

To set the matter right, let us note here that the "sindicato ùnico" is not a definite organization but a form of organization, first proposed and provided for in the 1918 Congress of the Regional Confederation of Labor of Catalonia, which originated in Catalonia and later spread to other parts of Spain and to Portugal, and which today is earnestly discussed in Uruguay as well as other Spanish-language countries. The term "sindicato ùnico" is applied to the close grouping of all local and craft units into a "single union" in each industry, or a single mixed union where one industry predominates. So effective did this form of organization become, that it stirred the **Asociación Patronal** of Barcelona, the local merchants' and manufacturers' association, to utmost activity in combating it, brought on a prolonged series of strikes and lockouts, caused the reorganization of the bosses in a national federation, resulting in a long list of incarcerations and persecutions as well as deportations, effected the pact between the Syndicalist and the Socialist unions in September, and was indirectly responsible for the organization of the assassins and freebooters called the "Sindicato Libre," who have endeavored to institute a reign of terror without hindrance from the authorities.

We have just received a letter from the general secretary of the **Confederacion Nacional del Trabajo**, asking us to give publicity to the infamies of the Spanish bourgeoisie, in which he tells us that the union is not only holding its million members, but is constantly growing in numbers and power all over Spain. He says, among other things: "Our unions have been declared illegal and we are being shot down openly in the streets by bands of outlaws under the protection and in the pay of the authorities and the bosses' associations. Hundreds of our comrades have been detained in military camps and prisons and in dungeons, and thousands are conducted over the highways of the country, on foot, in mid-winter, resulting in the death of several, that we know of. These infamies, more fully dwelt on in our manifesto to the international proletariat, have forced us to ask for the moral support of the proletariat of the whole world, and in order that our fellow workers the world over may take immediate steps toward refusing to handle any and all goods proceeding from, or destined for Spanish ports. You are perhaps aware of the fact that we are defending ourselves in the fight that has taken on the character of open war without quarter. The spirit of our confederates, numbering over a million, and constantly growing, is good; we are more determined than ever in the struggle, which, tho practically confined to Catalonia during the past two years or so, has now extended to and is general in Asturias, the Levant or Valencia region, Andalucia, Aragon and Vizcaya, in which regions our ideas are taking concrete form and growing remarkably, especially among the peasantry and agricultural workers."

From "La Vie Ouvriere" we learn that dispatches

to the bourgeois press from Barcelona say that "22 terrorists," among them the "meneur syndicaliste" Angel Pestaña, have been incarcerated in the Montjuich of infamous memory. These "terrorists" of the capitalist press dispatches are apparently but militant Syndicalists of the National Confederation of Labor of Spain, and it is quite likely that the 22, or some of them, have been taken from the concentration camp of Mahon, in the Balearic Isles, to be kept more securely, or to be the easier done to death in the dungeons of Montjuich.

It is to the Mahon prison camp, on the isle of Minorca of the Balcaric group, that a number of the best known militant Syndicalists were taken about December 1st, 1920, when the new civil governor began to get in his work. Among the group was Salvador Segui, perhaps the ablest tactician of the Spanish Syndicalist movement, formerly secretary of the Regional Confederation of Labor of Catalonia during its period of phenomenal growth, 1918-1919, who has been jailed a number of times before. He is a captivating speaker and a deep student of the labor movement.

The **Union General de Trabajadores**, or General Union of Workers, is entirely dominated by prominent members of the Socialist Party, and has been ever since its organization in 1888. During the last few years it has been losing its foothold in the same degree that the C. N. T. has made rapid gains. It is fast being driven to join forces with the C. N. T. and dump the politicians overboard.

After the pact of September, 1920, with the Socialistic U. G. T., it was the splendid outline of fundamental principles urged by Segui that cleared up the situation, not only as regards the pact with the Socialist unionists, but also as regards the Russian revolution and the Communists. He pointed out the necessity of the U. G. T. separating itself from the party, and asserted his belief that only the workers in their union organizations could realize the ultimate fruits of the class struggle, and that, necessarily, any other element or organization stood in the way. He pointed out that the Socialist Party is but the latest expression of the radical parties of the bourgeoisie, and that true Syndicalists must therefore oppose it, emphasizing the fact that the failure of the present regime of capitalism is essentially the failure of parliamentarism, regardless of shades or colors, Socialist or Communist, that the Communists would have to expend much energy disputing political control, while the syndicates are alone eminently fitted to carry out the revolution and assure its ultimate success. The workers' syndicates must exercise dictatorship, admitting that such is necessary in the period of transformation, as they alone will have a mission to perform, since upon them will rest the responsibilities of production and distribution. While stressing the duty of defending the Russian Revolution at all costs, Segui, with most of the C. N. T., believes it important to note the fact that they are not obliged in any way to submission to Soviet Russia, which would mean acceptance of all the methods employed by the Russian Communists. The revolution in Spain, they say, will without doubt be quite a different thing from the one that took place in Russia.

However, the C. N. T. voted at its December, 1919, Madrid congress to affiliate with the Third International. Here is the resolution, adopted unanimously:

"The National Committee, as a résumé of the ideas expressed by the different comrades who spoke on the question in the session of December 17th, with reference to the subject of the Russian Revolution, propose the following:

First: That the **Confederacion Nacional del Trabajo** declares itself the firm defender of the principles which gave form to the First International, sustained by Bakounine;

Second: That it declares its provisional adherence to the Third International, because of the revolutionary character of its present directorate, and until the organization and holding of the International Congress in Spain, which is to lay the basis upon which will be founded the real International of the workers."

Continued persecution prevented the C. N. T. from carrying out its plans and sending out its intended call for an international Syndicalist congress.

The **Confederacion Nacional del Trabajo de España**, or National Confedaration of Labor of Spain, was organized on September 14th, 1911, at Barcelona, by delegates representing 28,000 organized workers, mostly grouped in local and autonomous unions, the big majority being located in the Catalonia region. It was founded at the height of the reactionary Canalejas regime, with wide-spread protests against threatened international war over Morocco, and with big strikes on every hand. A demonstration after the congress, in protest against the rule of reaction, resulted in wholesale imprisonments and brutality against the new-born Confederation, and it has been in the thick of the fight ever since, so much so that it had neither time nor opportunity to hold a congress until December, 1919, during a momentary lull in the unrelenting fight against it on the part of the Spanish master class.

On the 18th of December, on the eve of the parliamentary elections, a statement was published in certain liberal newspapers of Madrid in which the C. N. T. declared that it would consider the agreement entered into with the U. G. T. in September, 1920, as null and void. It accused the U. G. T. of open treason, because at a moment when decisive and energetic action could have put an end to the governmental oppression from which the militant members of the advance guard of the labor movement had been suffering for two years, the Socialist Party, influencing the U. G. T., preferred to divert the union's attention to political interests, instead of uniting in joint action, which the crisis required. It stated that thereby the Socialist Party prevented the movement of protest from attaining the desired

end. The Socialistic U. G. T. was charged with collaborating with the bourgeois element and with opposing the action of the Syndicalists.

**The statement terminated with the following unequivocal and ringing paragraph: "We re-affirm our anti-parliamentary convictions, and we ask all workers not to vote, not to help to forge the chains which will be put around our necks, even if these chains be gilded, as are those which the Republicans, the Radicals, and the Socialists hold out to us.**

**"We call upon the proletariat of the world to aid us in our struggle against Spanish persecution and political intrigue."**

## ARGENTINE

That the reign of unparalleled reaction, which began with the tragic second week of January, 1919, during the revolutionary general strike, has spent its full force and is receding, is evidenced by the holding, undisturbed by the authorities, of the first extraordinary congress of the non-conformist wing of the F. O. R. A. (**Federacion Obrera Regional Argentina**, or Argentine Regional Workers' Federation), the liberation by order of the national executive toward the end of December of nearly two score political prisoners, and the congress and changing of the P. S. I. or **Partido Socialista Internacional** into the Communist party.

There were 193 delegates present, representing 192 affiliated unions and 56 autonomous or independent unions, in attendance of the congress of the non-conformists of the F. O. R. A., formerly known as the "F. O. R. A. of the Fifth Congress," or "Quintistas", but now calling itself the **F. O. R. A. Comunista**, which it seems, has not borne out the high expectations of many of its partisans and participants. A lack of fixedness of purpose and much uncertainty of methods and tactics, if not indeed of principles, prevented better and more lasting results. As much as the regular F. O. R. A., sometimes called "of the 9th congress" or "of the 10th congress", merits criticism in parts and on occasions, our ardent fellow workers of the new **F. O. R. A. Comunista** must learn that criticism alone or a predisposition to insisting on individual plans of action instead of on a common and constructive program, will get them nowhere.

One concrete accomplishment seemed to be the adoption of a universal card and dues stamp, but later reports seem to modify this by apparent agreement that local unions will still retain their own books and stamps.

The delegate of the independent union of the Marine Transport Workers of South America, (I. W. W.), Fellow Worker José S. Pica, presented a plan of organization covering all industries and closely following the I. W. W. chart, which was very well received indeed, and favorably and widely commented upon in the radical and labor press.

Included in the liberated political prisoners are E. Garcia Thomas, Hermenegildo Rozales and Atilio Biondi, formerly editors of the anarcho-syndicalist daily, **Bandera Roja**, (The Red Flag), who were sentenced in July, 1919, to six years' imprisonment, after their paper had been suppressed and a notable trial and appeal had taken place. But the Siberia of the Argentine Republic, the penal settlement of Ushuaia, in the Antartic regions of Ticrra del Fuego, still holds its hostages of the class war in the antipodes, among them the undaunted Radowiski, whose very interesting story I would like to present here, but must postpone on account of lack of space and time.

The formation of the Communist party now gives Argentine three Socialist or Communist Parties. A majority of the municipal council of the capital city, Buenos Aires, which contains one-fifth of the population of the nation and is of larger proportionate importance commercially and industrially, are Socialists of one shade or another.

Just a few words about the F. O. R. A.: It was first organized in 1901, and adopted a declaration of principles resembling in a general way the preamble of the I. W. W. In its fifth congress, in 1905, there was a partial split between those who devoted their attention almost exclusively to the eight-hour day movement and those who were after the organization of the workers for the overthrow of capitalism, the latter winning out. In the 9th and 10th congress, the intransigeants took a more extremist attitude than ever, while a majority supported the so-called moderates, who have since been in control, and who have surely built up a powerful organization. In an open letter published some time ago, in reply to critics, Secretary Sebastian Marotta claims 80,000 affiliated members for the regular F. O. R. A., apportioned in 534 syndicates. The strongest single union in the federation is the F. O. M., or **Federacion Obrera Maritima**, (Maritime Workers Federation), made up mostly of coastwise and ferry boats plying the river Plata and tributaries. The efforts of the shipping interests to break up this the strongest union in South America, has forced strike after strike upon it, of incredibly long duration. They have recently come out of a strike lasting about a year, and entered the "ferry-boat strikes," in which the government took a hand against the union.

A splendid example of industrial solidarity occurred during the recent "ferry-boat strike," where twenty ferry-boat workers refused to man the boat after it had been loaded by scabs. The twenty were promptly arrested for obstructing necessary public transportation in violation of a recent federal law, and were loaded on a special train on way to jail, but the train crew and the yardmen at Basavilbaso refused to move the train, and they were arrested in turn. The twenty ferry-boat strikers were then put on a special car and the latter hooked to a thru train, but as soon as the crew were made aware of the incident, they also refused to move their train until the car was disconnected, which

was done after some more trainmen were discharged.

The strike of the Naval Constructors' Union against the Mihanovieh shipping interests, altho about a year old, still endures, and this union still is among the solid ones of Buenos Aires.

## BRAZIL

In Brazil, as in practically every country in the world, labor organization has gone on apaee, in spite of repressive measures, deportations and the general undeveloped condition of the country in its social and industrial life. Here, as elsewhere, intrigues and selfishness divide the workers and retard their progress.

The numerous deportations have been due to the faet that the number of the workers who rebel against the masters are predominantly foreigners, to the extent of perhaps 90%,—about 80% being Portuguese. The native workers have had their patriotism "worked on" and have responded to the treatment. A huge "patriotic eampaign" has been launehed in favor of eultivating the national spirit as against "foreigners", but its very intensity and ardor is undoubtedly going to have a contrary effeet. They are endeavoring to stir up the Brazilians to believe that they are being robbed and that their rights are being invaded by the foreigners, especially the Portuguese. And, unfortunately, large numbers of the workers, who are not as yet class-conscious, are responding to the anti-foreigner and patriotie campaign of misrepresentation.

But tho they may be able to deport all active agitators and stir up patriotic fury to fever heat, they eannot deport ideas nor the causes of diseontent. Many of us continue in our endeavors to spread the truth. But the difficulties in our path have increased and the disastrous results may be seen in some formerly promising unions. For instance, the Textile Workers Union, which in 1918 had 16,000 members, now numbers only about 3,000, the others having been raked in, by intimidation and insidious propaganda, by none other than the Catholic Union, which serves as a sort of entertainment eenter, maintained by subsidies of the industrial masters, assisted by the **venerable** pastors of the various flocks and congregations which abound in this fertile country. In these unions money seems to be plentiful, in common with dancing, singing, eard-playing and praying.

The flourishing Typographical Union of yesteryear has suffered from factional differenees and a general strike that failed, until now there are only about a dozen members in the local union.

Perhaps the one union that has been able to maintain itself in something like its former strength is that of the Construction workers.

In the southern districts labor conditions are more eneouraging.

You perhaps already know of the Third Brazilian Labor Congress, held in May of this year, 1920. As the first congress was held in 1906 and the second in 1913, these congresses are more than a ten-day wonder. The last congress brought together a larger and more representative gathering by far than any former affair of the kind in Brazil, and promises well for future organization. The I. W. W. preamble was read at the Congress and was well received. Literature had been sent by New England members of the I. W. W. and some of it was reproduced in the labor press. The Congress turned down completely all invitations to join Gompers' so-called "Pan-American Federation of Labor".

## CHILE

It is remarkable how international capitalism can "get away" with anything, including wholesale murder, when the spirit of the workers is not aroused. We have reeeived various confirmations of the barbarities recorded in a recent number of this publication as oecurring under the "white terror" of the Chilean bourgeoisie. News have also reaehed us of the torture of our Fellow Worker José Domingo Gómes Rojas, I. W. W. member, student and poet of widely reeognized attainments. One of the forms of torture he was subjected to was having cold water dropped on him in his cell, drop by drop, for long periods. He was driven insane, and his sensitive constitution being unable to stand the strain, he died. His funeral brought out forty thousand people, of all ages and both sexes, paralyzing the industrial and commercial aetivities of the capitol city of Chile for the day, and tying up local transportation completely. The cortege was formed at the offices and halls of the Students' Federation and passed in front of the palace of "La Moneda," the seat of government, as well as in front of the tribunals of "justice", as a protest against the oceupants of these institutions, who had stirred the "patriotie" mob to acts of violence and incendiarism that marked the beginning of the recent reign of terror thruout Chile. At the cemetery additional stands had to be provided for the speakers who addressed the multitude in memory of our brave fighter and poet, who was relentlessly persecuted beeause of his being a member of the I. W. W. Among the speakers was one of the editors of the radical review **"Numen"** (Inspiration) and ex-president of the Students' Federation, Santiago Labarea, who had been indicted but was not as yet aprehended. Police officers, learning of his presence, endeavored to reach him and arrest him, but the dense crowd would not open up the way for the poliee, and Labarca was enabled to finish his address and get away. But he was arrested later.

Many of those who filled the jails have been released on bond, and trials have started. Among those to whom provisional liberty on bond was denied is the former secretary and one of the main organizers of the Chilean I. W. W.—Juan O. Chamorro. A new beginning is being made by a group of earnest workers and students, as was to be

expected after all the enthusiasm that went into the making of the I. W. W. here last year. They have issued two numbers of **Accion Directa** (Direct Action), issuing a ringing challenge to the newly inaugurated president in the first issue, advising him that he will be held strictly accountable for close adherence to his promises of free speech, free press and unrestricted right of organization. The history of the development of the Chilean I. W. W. is one of the most interesting chapters in American labor history, and we hope to give an account of it at some early date.

## CUBA

The cost of living has soared upward in Cuba as in all other countries, and the financial crisis has hit the workers hard. The "forward-looking" bosses have been fearing a spontaneous uprising, and recently attempts have been made to make it appear that an uprising of the blacks against the whites was imminent. But in reality, the economic disturbances in the Wall Street controlled republic and the policy of labor repression have brought about an intolerable condition of affairs, and the "blacks" are the capitalist wretches of Wall Street, and the local capitalists and speculators in sugar and in the life of the people.

An epidemic of strikes swept Cuba during 1920, and many unions have been forced out of existence by the organized power of the bosses, backed up by the cynical government of the jackal Menocal and the sugar barons. Few workers' publications have escaped supression. Open assassination is being resorted to in the cane fields in the present harvest to forestall any attempts at organization, as letters received direct from the cane fields and sugar mills inform us. The employees of the Havana Electric Company had their union broken up for them by the good 100% American directors and superintendents of this corporation, and these workers are endeavoring to reorganize.

American managers of such corporations as the Havana Electric in Cuba, the Armour and Swift concerns in Uruguay, Argentine and Chile, and other similar corporations, are accumulating for all except working-class Americans of the U. S. the well-merited contempt, if not hatred, of thousands upon thousands of mercilessly exploited and hard-driven workers of the countries mentioned, to whom the very word "American" or "Yankee" is a by-word of hate. It is for this special reason, as well as on general principles, that it is highly important and desirable that we lose no opportunity to show our fraternity and solidarity with our fellow wage-slaves of Cuba, Mexico and Central and South America.

## MEXICO

The much-heralded congress of the so-called Pan-American Federation of Labor was duly held in the City of Mexico as per schedule, but the representation was such as to require a change of name, if not indeed the dissolution of the pet creation of old man Gompers. Sammy was quoted as stating to a Mexico City newspaperman in an interview upon his arrival there, that the I. W. W. did not exist, but this glib generality did not satisfy nor convince the Mexicans. It is now seriously up to Sammy to prove that the high-sounding "Pan-American Federation of Labor" really exists.

The remarkable thing about the affair is, not who was there and what was done, but rather the many Pan-American countries (practically all of them) that were neither represented nor intended to be represented. Organized labor in Brazil definitely refused to have anything to do with Sammy's pet creation; Argentine, ditto; Uruguay, the same; Cuba was only represented in two or three unions, who authorized Santiago Iglesias of Porto Rico to "handle" their representation; Chile, absent; Ecuador, absent; Peru, absent; Bolivia. absent; Paraguay, absent; Venezuela, absent; Costa Rica, absent; Nicaragua, absent; Panama, absent; Honduras, absent.

The Mexican I. W. W. has met with much success in its renewed activity in Tampico, lining up many new members and putting the Oil Workers' Local Union on its feet again, as well as rendering valiant support to the Mexican administration and aiding materially in the regular publication of "El Obrero Industrial", their official organ, which appears regularly each month with good industrial union and fundamental organization propaganda matter. **More power to it!**

# The International Council of Trade and Industrial Unions

By A. Lozovsky

(Continued from the February Number.)

SIMULTANEOUSLY with the struggle of the Russian trade unions on the social revolutionary front the labor organizations in Western Europe and America became revolutionized. The labor masses streaming into the unions brought about a change in the old decrepit organizations. The trade union bureaucracy who reigned unchallenged in the unions during the war, began to feel that their position was becoming unstable. In England a movement for direct action is growing up in the old unions. The Miners' Union, Transport Workers' Union and the Railwaymen's Union formed a triple alliance and put forward demands which the bourgeoisie cannot concede. A series of gigantic strikes has shaken England, and if the government has come out of it unharmed, it is only due to the fact that the leaders strove to substitute fighting by agreements, and at all costs to find compromises. Within the old trade unions in England there is growing up a Shop Steward movement which, however, is rather a number of groups of revolutionaries of like opinion than the factory committees in the Russian sense of the term. The British Shop Steward organizations exist simultaneously within and outside of the trade unions. They stand for the revolutionary class struggle, the violent overthrow of the capitalist system, put forward the Soviet System as a substitute for the parliamentary system, and put forward the demand for labor control. Altho the British Shop Steward Movement is not yet sufficiently formed and its ideas not yet clearly defined, it is nevertheless a revolutionary class protest against the trade union bureaucracy and its hope of a peaceful solution of the age-long conflict between capital and labor. If the as yet weak Shop Steward committees were confronted by a completely unanimous trade union movement then the revolutionization of the British labor movement would be a matter of the distant future. But the fact is that the trade unions themselves—not the leaders but the broad masses—are pressing to the left with the progress of events. The Shop Steward committees in their struggle rely on the sympathy of the masses; and as MacDonald said in one of his speeches, the left wing in the British Movement is very weak in normal times, but acquires considerable weight and importance immediately a serious social conflict arises. In order to render a complete picture of the British trade union movement it is necessary to point out that the Irish Trade Union Congress resolved to affiliate with the Third International and that a number of Irish trade unions are leaving the British organizations owing to their compromising tactics. The seven million workers organized in trade unions in England represent the following picture:—at the top there is the bureaucracy, nine-tenths of whom are hopeless compromisers; at the bottom there are the discontented worst paid sections of the workers, comprising the militant sections of the Shop Stewards movement, and in the center there are the average workers tied by training and a mountain of prejudice to their fatherland, but gradually, under the influence of the severe lessons of life, emancipating themselves from the delusion of a peaceful, gradual and constitutional solution of the social conflict. At all events there are sufficient elements of the new trade union movement in England for the new international center to rely on at least a section of the organized British workers. This was proved by the conference called in London on March 11-12 on the initiative of the Workers' Committees. Nearly 200 delegates were present at this conference, including representatives of eleven local branches of the Railwaymen's Union, three branches of the General Laborers' Union, six branches of the Amalgamated Society of Carpenters and Joiners, four South Wales Miners' branches, two branches of the Yorkshire Miners, two branches of the Electrical Trades Union, branches of the Building Workers' Industrial Union, and a number of branches of other unions and political parties. All the resolutions of this unofficial conference were saturated with the revolutionary class spirit. The resolution on the nationalization of the mines says, "the continued existence of the capitalist system of production is leading to the ruination of mines. The conference calls upon the workers to set up an industrial apparatus thru which they can take the control of the means of production and distribution into their own hands." The conference expressed itself in favor of direct action and a general strike, as a means of securing satisfaction of the miners' demands. It also carried a resolution of greeting to Soviet Russia, and congratulated the Red Army on the brilliant victories it has achieved in its struggle against the united forces of the capitalist governments, and expressed its solidarity with the Russian Workers' Soviet Republic. In a special resolution the conference expressed regret at the inactivity hitherto displayed by the British workers in connection with the attack of world capitalism on Soviet Russia. Besides this, the conference demanded the independence of Ireland, sent greetings to the workers of Egypt and India, and demanded the withdrawal of British

troops from, and the granting of independence to, these countries. It declared against raising the productivity of labor under the capitalist system, and in a special resolution declared that the existing Parliament and organs of local government suited the requirements of the capitalistic system and served as a means for the legal enslavement of the workers. Soviets, or Workers' Committees, are recognized by the workers of all countries to be the best weapon for the overthrow of the capitalist system, and the best organ of administration in a Communist Republic. Besides other resolutions the conference resolved to welcome the Third Communist International formed in Moscow, and to call upon all organizations represented at the conference to accept the Communist platform and affiliate to the Third International. The conference urges upon all those participating in the conference to see to it that their organizations leave the Second International and the Labor Party and affiliate to the Third International. These resolutions indicate that within the British labor movement there are small but nevertheless revolutionary groups of workers who have completely broken with the Second International.

**The Headquarters of the All-Russian Trade Unions and of the International Council of Trade and International Unions, Moscow, Russia. John Reed's funeral procession in the foreground.**

The situation in France is somewhat different. The patriotic attitude taken up by the Confédération Générale du Travail during the war called forth protests from a number of syndicates already at the end of 1914. In december, 1914, Pierre Monatte, the editor of the Syndicalist organ **"La Vie Ouvriere,"** resigned from the C. G. T. and published a warm protest against the war policy of the former revolutionary Syndicalists. A "Trade Union Defense Committee" was formed in Paris around which grouped all the international elements in the trade union movement. This committee is part of the "Committee for the Re-establishment of International Connections" which is composed of two sections—trade union and Socialist. At the end of the war the left wing was considerably strengthened, and at the congress at Lyons, September, 1919, the minority received one third of the votes. From September, 1919, the influence of the left wing slowly but surely grew, and a large number of unions, including the Paris Metal Workers, Railwaymen, various local miners' unions, builders, leather workers, textile workers, and a number of department organizations, expressed themselves in favor of affiliation to the Third International. When the decision of the All-Russian Central Council of Trade Unions to set up a new center for the revolutionary class unions became known in France, it met with great sympathy from the left wing unions, and the daily organ of the revolutionary minority, **"La Vie Ouvriere,"** at the head of which were Monatte and Rosmer, spoke categorically against the Amsterdam International and for the new Trade Union International.

In Italy the situation is different, first, because

for a long time two organizations have existed, one, revolutionary Syndicalist—The Italian Syndicalist Union—and the other, the reformist General Confederation of Labor. But the stand of the Italian proletariat, its revolutionary anti-war position, compelled the moderate leaders of the C. G. T. to conduct an international policy in agreement with the Socialist Party. At the end of 1919 the revolutionary Syndicalist unions expressed themselves in favor of affiliation to the Third International, while the C. G. T. not only avoided giving a definite reply to the questions raised by the revolutionary epoch, but participated in the Berne and Amsterdam Conferences and even in the Washington Conference. This opportunist policy of the C. G. T. roused considerable dissatisfaction among the masses, and various unions began to ask their Centers why they did not affiliate to the Third International. The Executive Organ of the Confederation, in March, 1920, made vague replies to these questions, from which one could gather that it did not wish to say anything definite for or against the Third International. Meanwhile various unions passed resolutions wholly conforming to the platform of the Third International. Thus, for instance, the general conference of the Italian Metal Workers' Union, which took place in the beginning of 1920, definitely expressed itself in favor of affiliation to the Third International. This was the general temper that reigned in the majority of the Italian unions in the middle of 1920.

In Spain also two organizations existed, one patriotic, headed by Vicente Bario, and the other, which arose during the war—revolutionary Syndicalist. The new organization had its base in Barcelona, with its industrial proletariat and old Anarcho-Syndicalist trade unions. For the last two years the National Confederation of Labor of Spain, as a result of its revolutionary tactics, has dominated almost the whole of the trade union movement of Spain. Out of the million organized workers in Spain, 800,000 belong to the revolutionary Syndicalist Confederation of Labor, while only 200,000 belong to the opportunist labor unions headed by Vicente Bario. The program of the General National Confederation of Labor of Spain includes the violent overthrow of capitalism, and revolutionary class struggle against the bourgeoisie and the compromisers who co-operate with it. At its last congress, the General National Confederation of Labor of Spain resolved to affiliate to the Third International. In view of the fact that the congress was held semi-illegally and the government had forbidden a discussion of the question of the dictatorship of the proletariat on the threat of dispersal, the congress did not pass any resolution on this question. One thing is clear, however, and that is that three quarters of the organized workers of Spain stand for the revolutionary class point of view and are prepared, not in words but by action, to fight the capitalist class.

In Germany the trade unions have all the time been unanimous, that is, if the weak Hirsch-Dunker and Liberal unions are not considered. The Free Social-Democratic unions entered the war with a membership of two and a half millions, of which only a third remained after the end of 1915. But at the end of the war we see in Germany, as in all countries, a tremendous growth in the revolutionary movement. In the middle of 1920 the membership of the German trade unions stood at nearly eight millions.

The German trade unions were the most powerful apparatus and the main buttress of the military policy of Hindenburg and Ludendorff, and in spite of the defeat of Germany the influence of the trade union bureucracy remained even after the war. The excellently organized and controlled trade unions of Germany are to a very high degree adapted to crushing the revolutionary spirit of the workers. Here the struggle is much more difficult than in other countries. The trade unions are the buttress of the Scheidemann regime; during the Kapp affair, and the government crises connected with it, the deciding factor in constructing the ministry was the trade union leader Legien. As a result of the reactionary policy of the German unions there arose an opinion in favor of the revolutionary elements leaving the trade unions, which in spite of their revolutionary exterior are deeply reactionary and play into the hands of the governing bureaucracy. Besides the labor unions having a membership of 60 to 70 thousand there are in Germany revolutionary-syndicalist organizations with a general membership of nearly 200,000, and it is possible to find in these organizations strong support for an international center of revolutionary class unionism. Inside the Legien unions there is at the present moment a solid minority which is fighting against the old policy. The Metal Workers' Union with a membership of 1,800,000, the Textile Workers' Union with a membership of 450,000, the Leather Workers' with 200,000 members, and the Berlin Council of Trade Unions are already in the hands of the Independents, which means that they will soon pass into the hands of the Communists, for the inconsistent and half-hearted policy of the Independents compels the workers, not only formally but actually, to break with the old compromising and half-hearted policy.

It is sufficient also to recall the severe struggle which the rank and file members of the trade unions in the Ruhr Basin conducted against the Scheidemann and Noske regime to be able to say that ground for a revolutionary class struggle in Germany is sufficiently prepared; it is only necessary to be able to take advantage of the revolutionary energy of the mass, and this can be done least of all by forming separate unions isolated from the masses.

**(Editor's Note:—Owing to unforeseen circumstances we are not able to publish the whole of the second half of the above article in this issue. The remainder will appear in the April number.)**

# Book Review

### TRADE UNIONS IN SOVIET RUSSIA.

**Pub. by The Labour Research Department, London, 50c.**

An exceptionally good book, to be studied carefully by radicals who are working within the trade unions of the United States. This book offers a collection of first hand documents tracing the growth and development of the trade unions in Russia and the responsibility thrust upon them by the Revolution.

The collection was compiled by the Independent Labour Party Information Committee and the International Section of the Labour Research Department from authentic documents furnished by the All-Russian Council of Trade Unions.

"Trade Unions in Soviet Russia" has had a wide circulation among British workers. Evidence of this may be seen in the strong position taken by them thru the Councils of Action in preventing the mobilization of British troops against Soviet Russia during the last Polish retreat.—R.M.

### CONDITIONS OF LABOR IN AMERICAN INDUSTRIES.

**By W. Jett Lauck and E. Sydenstricker. Funk and Wagnalls Co., New York City. $1.75.**

A careful study of Conditions of Labor in American Industries is a very essential requirement of those who are interested in the labor game. The Government has had thousands of investigations in every field of human activity; many of these investigations have been good and useful, others have been useless and wasteful. None of them have been from the proletarian point of view, leading up to workers' control of industry. Statistics relating to the conditions of capital are abundant. There are many agencies whose sole purpose is to investigate industrial conditions and make daily reports to the members of the master class, thus enabling them to perpetuate their control over the worker. They know the rates of interest, of profits, of rent, and of any other kind of expense, including wages and taxation. They know the percentage of risk certain investments are subject to, but they create reserves to "protect" them, and build large navies at the people's expense to "protect" their foreign investments.

When it comes to investicating the conditions of labor in American industries, one has to search high and low to find accurate data, which will be of value to the labor advocate. The authors of this book do not draw any conclusions, they only state facts and let the student do his own thinking. But when this little book is touched with the magic rod of Karl Marx it becomes pregnant with dynamic power, which cannot but help change the conditions of labor in American industries to an extent that only the future will tell.—R. M.

### DEBS AND THE POETS.

**Edited by Ruth Le Prade. Pub. by Upton Sinclair, Pasadena, Cal. 50c.**

Debs has broken thru the clouds of American slavery into the glorious light of Liberty among the immortals!

His name rings sweet in the ears of hundreds of thousands of workers in America and the world over. Tho his body is held prisoner in Atlanta, his courageous spirit proclaims to the whole world his determination to stand by his decision against the imperialist wars of the master class.

"Debs and the Poets" speak together of the Freedom that is to be. Debs pays the price, the Poets the compliment. They have written of him who is in Atlanta a beautiful collection of poems that Ruth Le Prade has compiled for the reader. Many books have been printed about Debs, and 950,000 votes were cast for him, and the Poets have sung his praises. That is an everlasting challenge to autocratic Wilsonian Dictatorship. Never in the history of America has so base a travesty been perpetrated upon any man as upon 'Gene Debs.—R. M.

### ONE BIG UNION OF ALL THE WORKERS:—THE I. W. W.

**Pub. by the Industrial Workers of the World Chicago, Ill. 10c.**

The organization of the minds of the workers must precede the form of economic organizations they are to adopt in the industrial field. The bosses have their Chambers of Commerce, centralized in the United States Chamber of Commerce at Washington, D. C. Scott Nearing's pamphlet entitled the "One Big Union of Big Business" proves that conclusively. The workers must do likewise, they must have their industrial unions centralized in the One Big Union of All the Workers. This pamphlet endeavours to show how we ought to organize ourselves in industrial unions, and indicates the function of each industry in the whole economic system of to-day. The chart at the back of the pamphlet gives an objective view of the whole system of organizations, and the place of each worker in each union. The preamble of the I. W. W. clearly shows the need of a class-conscious labor organization, that carries on the work of unionizing the men at the point of production, to carry on the work when the crash comes, for it is the historic mission of the working class to fight its way thru all obstacles to the attainment of the Industrial Commonwealth.—R. M.

### INDUSTRIAL UNIONISM AND REVOLUTION.

**By Philip Kurinsky. Pub. by The Modern Press, New York City. 10c.**

The little pamphlet of Kurinsky's discusses the

necessity of the industrial form of organization in order to place the workers in a commanding position when the revolution comes. It is not easy, however, for all revolutionary leaders to agree in every respect on the way how best to prepare the workers for the final conflict. That a final conflict must inevitably come is not doubted by the class-conscious worker, but millions of them are not yet class-conscious, and to wait for the majority of them to become so, may take ages. What, then, shall we do? We are united on principles, but divited on tactics. Different men under different conditions give birth to different ideas; therefore let us study the conditions under which we work and adapt ourselves to the actual needs as revealed by a careful analysis of the situation. That is what military experts do on the battle field in consultation with their general staff; they study every possible angle for attack, as it arises in the development of the struggle; they hunt for strategical advantages over the enemy and aim at his defeat. This means the dictatorship of the victorious army over the vanquished one: the United Armies of the Allies over the Central Powers; the United Armies of the proletariat over the Capitalist Powers. When that is going to happen no one can say. However, Kurinsky discusses the different issues very ably. It is a pamphlet worth reading.—R. M.

## PRINCIPLES OF REVOLUTION.

**By C. Delisle Burns. Allen and Unwin, London. $1.50.**

C. Delisle Burns studies past revolutions and analyses them, in order to discover in them certain laws of action that we might formulate and be pleased to call "Principles". Each one of the different revolutionary leaders, whether he be Rousseau, Marx, Mazzini, Morris, Tolstoi or any other, had a different schooling, different experiences, and different conditions to tackle, therefore all of them had different points of view, giving birth to different ideas. He believes that revolutions are born out of evolutionary thoughts and emotions created by the biological urge of human personalities eager for expression. That when this expression is blocked by the powers that be, then the revolution breaks, and the amount of violence and bloodshed depends upon the amount of resistance made by the ruling classes in control of the military. It is the worker's duty to be wide-awake and not to permit himself to be used as a tool or caught in a trap. "Principles of Revolution" will help to clear the mind of childish notions.—R. M.

## INDUSTRIAL REVOLUTION.

**By Charles Beard. Allen and Unwin, London, $1.00.**

Today we are in the midst of an Industrial Revolution, tomorrow we shall be in the midst of an Industrial Commonwealth!

That is what Beard reads in "his story" of the Industrial Revolution. He begins with the days of agricultural serfdom on the landlord's farm and ends with industrial serfdom in the bosses shop! History repeats itself by mankind periodically occupying a place a little higher in the scale of evolution; were it not so, we would lose heart in the struggle for human freedom. There is something in the spirit of man that will not die, that will not give up the fight for that better system which will give to every man the full social value of his labor.—R. M.

## ILLEGAL PRACTICES OF THE DEPARTMENT OF JUSTICE.

**Pub. by The Worker's Defence Union of New York. 25c. Each, 5 for $1.00.**

The Workers' Defense Union of New York has issued a special edition of the pamphlet "**Illegal Practices of the Department of Justice.**" It is signed by twelve prominent lawyers,

R. G. BROWN, Memphis, Tenn.
ZECHARIAH CHAFFEE, JR., Cambridge, Mass
FELIX FRANKFURTER, Cambridge, Mass
ERNST FREUND, Chicago, Ill.
SWINBURNE HALE, New York City.
FRANCIS FISHER KANE, Philadelphia, Pa.
ALFRED S. NILES, Baltimore, Md.
ROSCOE POUD, Cambridge, Mass.
JACKSON H. RALSTON, Washington, D. C.
DAVID WALLERSTEIN, Philadelphia, Pa.
FRANK P. WASH, New York City.
TYRRELL WILLIAMS. St. Louis, Mo.

It makes charges of a highly sensational character, which are now being investigated by the U. S. Senate. It sets forth that

"Under the guise of a campaign for the suppression of radical activities, the office of the Attorney General, acting by its local agents thruout the country, and giving express instructions from Washington, has committed continual illegal acts. Wholesale arrests both of aliens and citizens have been made without warrant or any process of law; men and women have been jailed and held **incommunicado** without access of friends or counsel; homes have been entered without search-warrant and property seized and removed; their property has been wantonly destroyed; workingmen and workingwomen suspected of radical views have been shamefully abused and maltreated. Agents of the Department of Justice have been introduced into radical organizations for the purpose of informing upon their members or inciting them to activities; these agents have even been instructed from Washington to arrange meetings upon certain dates for the express object of facilitating wholesale raids and arrests. In support of these illegal acts, and to create sentiment in its favor, the Department of Justice has also constituted itself a propaganda bureau, and has sent to newspapers and magazines of this country quantities of material designed to excite public opinion against radicals, all at the expense of the government and outside the scope of the Attorney General's duties."

It contains affidavits, pictures and graphic descriptions to substantiate the charges. It will be a valuable handbook for future reference and ought to be on the bookshelf of every radical, and of every true American, whose blood is red enough to defend the constitutional liberties won by the American Revolution of 1776.

### CROATIAN I. W. W. PAPER

Our Croatian fellow workers have started a newspaper, issued twice a month, on the 1st and 15th. All Croatian and Jugo-Slav fellow workers are requested to send in orders for bundles, and spread the paper among their nationality workers, in order to acquaint them with the teachings of the I. W. W.

Price, single copies, 5 cents; by bundle order, 3 cents. Subscription price, $3.00 per year.

Address, GLAS RADNIKA, 1001 W. Madison St., Chicago, IIII.

---

Large incomes are property incomes. The rich are rich because they are property owners. Furthermore, the organization of present-day business makes the owner of property more secure—far more secure in his income, than is the worker who produces the wealth out of which the property income is paid.—Ccott Nearing.

# WHAT HAPPENED IN CENTRALIA?

The newspapers said that unoffending paraders were killed without provocation or excuse by ambushed I. W. W.'s.

**DO YOU BELIEVE IT?**

Papers telling the truth about the tragedy were shut down or denied the use of the mails. Only the Lumber Trust version was permitted to reach the public.

**DO YOU WANT TO HEAR THE OTHER SIDE?**

Every effort was made to spread broadcast the lie and suppress the truth.

**ARE YOU WILLING TO HEAR THE TRUTH—EVEN IF IT HURTS?**

**The Centralia Conspiracy**, by Ralph Chaplin. 80 pages; 44 half-tones of actual scenes. Price 50 cents. Get a copy at any progressive bookstore, or order by mail from the following places: The Liberator, 138 W. 13th St., New York, N. Y.; Geo. Williams, Box 1873, Seattle, Wash.; George Hardy, 1001 West Madison St., Chicago, Ill.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class has interests in common with their employers.

These conditions can be changed and the interests of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

## Red Russia and the I. W. W.

**A Letter from Tom Barker**

RED RUSSIA is passing from the war period to that of industrial construction. The Red Army, after its great victory over the White forces of General Wrangel, is demobilizing for the new fight on the industrial front, where problems are more complex and intensified. It is, I think, quite true that very few other countries could have withstood the combined forces of war, hunger and cold for nearly seven years in the way that Russia has done. Her people have an enormous power of resistance, which has left them still sturdy and strong in a contest that would have destroyed the more nervous Americans and Britishers by the million. The Russians have also enormous recuperative power, and I am sure that there is no country in Europe, excepting perhaps Norway and Sweden, where the general mass of the people are so healthy and vigorous. Such is their power of both resistance and recuperation that their health and vigor is maintained on food which would probably utterly ruin the fastidious stomachs of Western peoples.

Red Russia is alive to the needs of the moment. The end of the war and the pressing problems of economic reconstruction have precipitated an intense discussion upon the role of the unions in industry. The long series of wars upon nineteen fronts against the mercenary White Guards and the agents of world capitalism could only be waged by a highly centralized political and military organization. When one reflects upon the woeful state of both the political and military organizations after the fall of czardom and the Kerensky regime, one can see the tremendous organizing work that was necessary to throw a sense of direction into the aimless rabble, and by enthusiasm, propaganda and ceaseless hammering weld it into the most powerful of all modern armies.

Judging by what I have seen of the Red Army, the blood-stained imperialists of the West have as much opportunity of reducing Russia by their own dissatisfied and semi-mutinous troops as they have of unloading their shoddy goods on the inhabitants of Mars. The next time Russian armies have to march to repel an invader, they may probably not maintain that solicitude for staying within their own frontiers. The small Baltic states can neither fight nor permit outside troops to pass thru their poverty-stricken lands. Finland is about to open trade with Soviet Russia, and Latvia is talking in a very conciliatory strain. The Polish imperialists cannot at present afford to give vent to their diseased policy of overrunning Europe and murdering the Jewish race. Roumania may give some trouble, but a little reflection will teach her to remember the ignominious trashing she received from the Germans in 1917, after she declared war in the usual high-sounding phrases so current among people who are bankrupt in everything else. So, undoubtedly, the efforts will come thru agents, smuggled in, to re-organize the counter-revolutionary elements still existing to some minor extent in Russia. These trouble-making gentry who could well spare themselves for some other much worthier cause—say, the white slave traffic—will find their work both hard and dangerous. The only satis-

slogan, "War on the Bourgeoisie" is not a platitude, and the person—whatever his label—who works to bring more war, misery and hunger upon the Russian workers and peasants will thereby probably receive more attention than he bargains for.

As for the blockade, its effects are breaking down. It is true that highly essential things are lacking, even elemental things, but, as I have already said, the Russian will grow strong upon half the bread which he could eat. Russia's harvest under normal conditions will feed her for five years. Last year was a bad crop year, but nevertheless the people obtained, despite this and the occupation of the best crop lands by the White Bands, nearly sufficient to feed everybody. Bad transport, engines in foul repair, dynamited bridges, destroyed track, all these have hindered the distribution of bread in some of the districts, which have gone hungry, while other districts have had a superabundance. But the best of the winter is over, and in two and a half months the country work will be in full swing, hundreds of thousands of men and women will go back to the land, the zealously guarded seed will be sown and then Nature herself will prove to the "big men with warped minds" that the blockade has been broken—not by Allied politicians, but by the Russian workers and by Mother Nature! Ploughs are being repaired, here and there one sees a tractor being assembled. God knows how it came here; but it is going to send up the total of food produced in this great flat fertile country. Next year food will be plentiful. Vegetables and fruit will be a welcome change to the salt fish and the heavy bread. The damaged bridges will be repaired, three "sick" engines will become two "healthy" ones, the tracks will be regraded and ballasted anew, and, little by little, the feeble transport arteries will throb with new blood.

Russia is so great, so immense. Time is of little or no account and her people are slow. But there are 180,000,000 of them, and parasitism is almost destroyed. A little from so many, is ever so much more than the intensified complicated efforts of the workers in the capitalist world, working on weapons of destruction, or objects for the gratification of parasitism and all the odious professions which are bent upon perpetuating parasitism. A gorgeous and glorious year opens before Russia. It is the first year of Peace, the first year when her workers can turn from the anxiety of overthrowing her class enemies, and can enter upon the greatest work of construction that ever devolved on any people in history. If half the energy can be utilized in the reconstruction of industry that has been used in the organization of the Red Army, then success, while slow, will be assured. Such a condition of affairs is a challenge to the finest mechanics and inventors in Europe. Tools are lacking; labor is mostly unskilled. The crying need of the hour is for mechanical and technical workers; the war has killed off nearly all of them. Russia is overrun with theoreticians and draftsmen, but what she needs are men who can construct, men who can build. For instance, in Moscow there are thousands of large hotels and dwellings unfit for habitation simply because all the heating and plumbing arrangements have become disorganized and unusable. But a few I. W. W. men came into town, and under the leadership of one plumber, and with a scanty collection of tools, the obtaining of which "was like drawing teeth," they began to solder and mend, and to put huge buildings back into use again. A little industrial experience is worth a great deal in Russia.

Russia is not perfect, but perfectly organized social systems do not fall from heaven; a great social transformation is not brought about by simply exercising the powers of pure logic. The bursting of the shell of the old society does not result in a full-grown economic chicken strutting gaily forth into the world. The period of transition is now on. The counter-revolution is not yet dead, nor is the bourgeoisie, either of Russia or of the world, ready to relinquish its designs on this country and its enormous resources. I was held up at Yamberg, the frontier station, for six days. From there I could see, half a mile away, a wrecked railway bridge blown up by White Guards, which had meant the loss

of hundreds of rail miles, and perhaps the death of 10,000 workers thru starvation caused by the breakdown of the transport system.

As to the future in Russia, the I. W. W. may have little fear. Industrial construction is the essential thing, not for the moment but for many years to come. This implies economic organization, unionism, but not according to the outer-word conception of it. Speaking a week ago at the All-Russian Industrial Union of Miners, I said: "It is true that the mines in which you work, or in which you will work, are swamped by water, the machinery rusted and useless, or entirely destroyed by the White Bands, but bad as all this is, they are **your mines!** And bad as things are, are you not a thousand times better off now than the mining slaves of the great capitalist countries, who toil to enrich their masters, contract pthisis, lead-poisoning, and all the other ills and evils of the capitalist system?"

And so it is! It is so difficult for men who have lived all their lives under a capitalist dictatorship to realize the real position of the industrial workers in Russia. The full power is actually diverting to their hands. A few are opposing this, but certainly least of all men like Lenin or Bucharin, Tomsky or Zinoviev. I don't believe that they desire to maintain one iota of power on the day the industrial workers are ready to assume it. But as I have said, the industrial workers are few in an immense country. Besides, as yet, the industries, owing to lack of fuel and raw material and defective transport, are only beginning to operate in part. So it is evident that while the power of the industrial workers is growing, and not merely growing, but loudly and clamorously asserting its growth, it is still a step, and possibly a fairly lengthy one before the full administration of Russia will fall entirely into their hands.

And to those who may disagree, I say, "Look at Russia!" The I. W. W. can help Russia greatly. The I. W. W. is respected in Russia more than any other outside organization. It is respected for its many fights against the American, Australian and South American authorities, and even more for what the I. W. W. have done, and are doing today in Russia. If ever there was a field for work, lasting, permanent work, it is in this country. Mechanics, engineers, turners, blacksmiths, tool makers, mechanic's laborers, Russia wants you, and if possible, your bag of tools. And I tell you that you can fight the American boss from Russia, by building a proletarian civilization that will demonstrate to the workers of the whole world how stupid they are to tolerate the vile system of greed, piggishness and misery that prevails in capitalist countries. Industrial unionism is coming into its own in Russia, and as soon as the outside enemy is punished sufficiently to learn to leave well enough alone, all production will be carried on only to supply, to quote my old friend, John Benjamin King, "the economic wants of society." The State will disappear, and people will live naturally, humanly and beautifully.

Fellow workers, you know as little of Russia as Russia knows of you! They have "put something across" and have lighted Eastern Europe and Northern and Western Asia with the Red Star of the Proletariat! Less criticism of Russia based upon lies and distorted facts, and more real help and desire to assist will be to the advantage of all. Remember how much Russia has done, and how little we of the outside would have accomplished, and do not presume that our experience is the sum-total of the world labor movement.

Industrial Workers of the World! If you are tired of keeping a boss, or of being continually broke, there is room and a welcome for you in Red Russia. In this country every ton of iron ore and every extra truck of coal is a nail in the coffin of capitalism, whereas in **your** country they mean only a speedier way to hunger and the road. Summer is coming and you will get all the food you want, and you can grow up with something in Russia, instead of going down with nothing in the land of hypocrisy, Wilson, Standard Oil, bull-durham, stool pigeons, bull pens and lawless law. Bring your card with you, and have it paid up!

Moscow, Feb. 1, 1921.

# Toward a Definite Syndicalist Policy

SYNDICALISM in the labor movement is a relatively recent phenomenon. It has had its eminent theoreticians, especially in the Latin countries of Europe, but in its practical manifestations, this remarkable philosophy is the spontaneous result of the experience of labor in its endless struggle for emancipation. Being a movement of the rank and file, a growth from the most fecund tho humble depths of human society, it has with difficulty established international connections, such as the political parties enjoy for many years. The ideas of men find a ready unity across obstacle and distance; much more significant is the joining of hands of mighty labor groping by its own painful but heroic efforts towards the goal of emancipation.

The London conference before the war and the Berlin conference held recently are the only efforts ever made at syndicalist international organization. It is all the more striking, in view of this relative isolation, to what an extent unity of thought has been achieved in the world syndicalist movement. This coincidence of purpose and policy is significant in that it establishes syndicalism as a definite and powerful world-factor to be reckoned with in the labor movement.

We reproduce below extracts from recent writings of authoritative French, Italian and Spanish syndicalists on the much-discussed problem of the relation between Communist Parties and Syndicalist Unions. The reader will notice how closely these views tally with each other and with the prevalent ideas in the I. W. W. on the subject.

## THE ITALIAN SYNDICALIST UNION AND THE COMMUNIST PARTY

(Extracts from an article by **A. Faggi**, Acting Sec.-Treas. of the Italian Syndicalist Union.)

What, then, shall be our attitude towards the new Communist Party? As a class organization, we shall first of all declare our absolute independence and most rigid neutrality, even towards the Communist Party. This does not exclude, naturally, the possibility of the most neighborly and friendly relations to the new party. If this organism is really a nucleus of vital revolutionary elements, we cannot ignore it, we must be its good friends and allies, even tho we function in a different field and must maintain our own characteristics, which do not admit of alterations; our organization needs no tutors, it cannot and must not become a submissive pupil.

As to the individual militant members of the Italian Syndicalist Union, just as there are many to-day that belong to the Socialist Party, so there will be, and in a larger measure, many who will belong to the Communist Party. It is undoubtedly true that this new body exercises considerable fascination among our members and the reason is easily explained. To our way of thinking, the situation is mature for a revolution in Italy; it can be successfully attempted. In order to triumph, it requires a revolutionary organism in which are earnest and authorative men who should say the word "go". The proletariat will be with these men. Can the Communist Party assume this vital revolutionary role? Will its men rise to the exigencies of the occasion? Whoever answers affirmatively to these questions naturally joins the Communist Party, remaining also an active member of our Union.

For my part I believe that the Italian Syndicalist Union must be considered — in harmony with the syndicalist conception — the most important single factor in the coming Italian revolution. This belief does not eliminate the possibility that in the decisive period that we are traversing, a political organism such as the Communist Party should exercise a great influence in the revolutionary preparation, especially if it were to purge itself of the infection that afflicts the Socialist Party, and that Karl Marx once called "electoral or parliamentary idiocy".

There is one point upon which it is impossible to agree with certain com-

munists. It is in reference to their absurd pretention of wishing to **monopolize** the revolution, making it in effect a party or even a sect affair.

In speaking of labor unions, these communists seem to consider them as organisms that must pass under their command; the Communist Party would thus assume all the destructive and creative functions of the revolution. It is by this road that our friends arrive at the conclusion of the **Communist Dictatorship,** which in the thoughts of many of them has taken the place of the **Proletarian Dictatorship.** All this is in absolute opposition to our ideas and represents a serious danger to our class. In our eventual dealings with the Communist Party we Syndicalists must always avoid the appearance of sanctioning a principle, harmful in itself and potentially fatal to a workers' revolution, namely: the supremacy of the political group over the Union and consequently the diminution and alteration of the self-sufficient, autonomous organizations of labor.

The Italian Communists cite as an example the Russian revolution — undoubtedly rendering it an evil service — in which they pretend to see the dominance of a political party over all the manifestations of social life.

In Russia, evidently, it is the **Soviet** which dominates and controls social activities. It may happen that in Russia, thru the Soviets, the directing functions may fall to the men of the Communist Party. But this phenomenon simply indicates a condition in which the Russian revolution took place and is presently developing. In Russia, the workers did not have Unions developed to the point that we have reached in Italy; our proletariat has reached a further stage of class-consciousness and maturity. Consequently, even tho we recognize that in Russia the revolution was the fruit of the audacity, the genius and the enterprise of the virile and marvelous body of men that constitute the Communist Party, thru the instrumentality of those magnificient organisms — the Soviets, it must not necessarily follow that exactly the same course should be followed in Italy.

With us, a Communist Party may have educational, inspirational and similar functions — just as other political groupings have in a varying measure — but the Union cannot surrender the creative functions peculiar to the organism which unites in one powerful body the producers of all social wealth, and therefore destined to the historical task of building the new society.

The organized workers may require more education, more organization, better tactical and moral disposition for the supreme effort — but the indispensable practical and technical factors of social reconstruction are with them and not with the lawyers — in the Union and not in the Party. It is the revolutionary Union that must in the event of revolution furnish the thousands of humble proletarians able to reorganize and administer industry, and the elements for the successful guidance of the local and central Workers' Committees. It is in the Union that even today the unmistakable lineaments of a new society are appearing, just as it has been the Union that has raised our fellow workers to their present stage of maturity, and which will create the psychology and the ethics of the coming society of free producers.

No party can advance pretensions to the **Dictatorship** over these workers, who have in themselves the secret of all future victories: the proletariat alone, collectively as a class, must dictate to the enemy class, which it must destroy in the transitory period of revolutionary consolidation in which the new civilization of the producers purges the earth of the lurid survivals of the capitalist order.

The new Communist Party may degenerate into a sterile and disagreeable sect if it does not take these facts into account; it may, on the other hand, be worthy of the highest consideration and support if, permeating itself with our syndicalist viewpoint and spirit, it should duly appreciate these brief considerations.

# THE SYNDICAT AND ITS RELATION TO THE SOCIALIST AND COMMUNIST PARTIES AND THE RUSSIAN REVOLUTION

**By Salvador Segui**

(Former secretary of the Regional Federation of Labor of Catalonia, Spain, and active militant in the National Confederation of Labor; jailed in Barcelona, March-April, 1919; leader in the Madrid congress of the N. C. of L., December, 1919; arrested and deported to Mahon prison, Balearic Isles, December, 1920, and now confined with Angel Pestaña and others, in the infamous Montjuich fortress, Barcelona, where Francisco Ferrer and numerous other political prisoners were incarcerated, tortured or executed.)

What we desire more than anything else to eliminate from the General Union of Workers (the socialist **Union General de Trabajadores**) is the influence of the Socialist party. The workers who form the Union should no longer continue under the tutelage of a "foreign element". This "foreign element" is the Socialist party. It is possible that it is composed in its entirety of workers—of hand or of brain; nevertheless its function is very distinct from ours. We believe that the class struggle, which we must necessarily maintain, cannot be realized by any other body than the syndicat, the union of workers as workers. Any element or organization other than the syndicat or workers' union stands in the way rather than helps in the struggle.

Our methods in the struggle are completely different from the methods of the bourgeoisie, just as our field of action must also necessarily be different. The Socialist party cannot be considered as other than a prolongation of the radical parties of the bourgeoisie, of the which it is the last expression. Our organization, our Union, must act, therefore, not in accord with the Socialist party or as its adjunct, but rather contrary to it or against it.

The same reasons that make us stand aloof from militant socialism cause us to eschew the political contests or elections. We are anti-parliamentarians, as the whole world knows. The failure of the present regime is the failure of parliamentarism; and, it is for this reason that, even tho some confidence might otherwise be inspired in us in behalf of parliamentarism, we would still continue to repudiate it, as it would be folly to accept it now that its uselessness has been demonstrated.

No, we shall not accept this heritage. The syndicats have a mission to fulfill which is separate and apart from all election contests and their influence. Our intervention or participation in the elections would serve to give the present regime a sort of an injection which would permit it to artificially prolong its existence a little longer. But we do not nourish any sympathy for the present regime.

It has been said, with pretense of converting us, that we should accept the political contests, and that the Russian Communist Party, which now assumes the responsibility of power in the republic of the Soviets, participated in the elections to achieve its triumph.

Our attitude towards the Russian Revolution, beyond the limits of sympathy, is that of allies disposed to defend it at all cost. But this does not obligate us to a submission which we ourselves could not respect, nor to a complete acceptance of all the methods employed by the communists of the former empire of the czar.

Without it being considered that these words signify censure, as all that we read about Russia tends to show that our comrades there acted in the best manner possible, yet, we believe that the revolution will have to be a very different thing in Spain from what it was in Russia, and we also believe that the power will not be in the hands of a political party, no matter how good the intentions of such a party might be, but that the power will be in the syndicats because it is the syndicats, the unions, after all things are taken into account, that alone will have a reason for being, and will have a mission to perform, since upon them will rest the responsibilities of production and distribution.

The dictatorship—admitting that in the period of transformation from the bourgeois to the communist state we may have need for a dictatorship—must be exercised by the syndicats because it is in the syndicats where resides all the power of that class

which must necessarily make the revolution as well as insure its ultimate success.

The Communist Party would inevitably have to dispute its mandate with other parties which would stand in its way, and, in order to retain its power the Communist Party would have to expend much energy which would necessarily be urgently needed to correct defects of organization in the new society then being born.

With the syndicats, none of this would happen. However warm the discussions might be within the syndicat or union, the different contenders or factions would sooner or later arrive at an agreement, for the simple reason that it is much less difficult for people directly and intimately concerned to agree on questions of administration or of production, etc., than on speculative problems.

We understand that the power, or to state it better, the duty to attend to the economic needs of society, of the new communist society, is really the exclusive attribute and function of the syndicats or unions.

The various philosophic, social and art schools may and will flourish better, without any doubt, apart from the material life and freed from the tread-mill struggle for existence, and their different conceptions would then take on a tone of true nobility and disinterestedness which they would never be enabled to assume while subordinated to the passions and everyday needs of the material side of life.

## DECLARATION OF THE FRENCH DELEGATION TO THE BERLIN SYNDICALIST CONFERENCE

The French delegates presented the following declaration of principles:

We, the French delegates, are of the opinion that all revolutionary syndicalist organizations should unite in one single body to put up a united front against international capitalism and against the Reformist Amsterdam International. By dividing the forces of revolutionary labor into two Internationals we could only help capitalism and the Yellow Amsterdam International.

The French Revolutionary Syndicalist Minority, organized within the reformist General Confederation of Labor (Générale Confederation du Travail), comprises Syndicalist-Anarchists, Revolutionary Syndicalists and Socialist-Communist Syndicalists.

We are of the opinion that these same elements can enter into the formation of the Red Industrial Union International at Moscow. The French Revolutionary Syndicalist Minority already has affiliated to the Third International. Our point of view is reinforced by Zinoviev in a speech at the last congress of the Russian trade unions, in which he declared:

"I believe there is place for all unions to participate in the coming conference. It is not necessary to exact from participants recognition of the Dictatorship of the Proletariat, Communism and the Third International. It is sufficient to place before them the question: Amsterdam or Moscow. There must come to Moscow only those who do not wish to go to Amsterdam."

The Industrial Union International of Moscow will be what the Revolutionary Syndicalists who will enter it will want it to be.

The main problem before us at the present time is the formation of this International, which will be capable of taking revolutionary action when the time arrives. This is no time for us to enter into lengthy discussions of questions of only secondary importance.

We should first of all agree on a program of class-war and direct action in order that there may be formed within our trade unions the necessary complementary organs (Councils and Workers' Shop Committees) which will be prepared when the time arrives to fulfill their functions of taking over the factories, of re-organizing them and of continuing the work of production and distribution after the revolution.

By voicing our intention to come to Moscow, we do not want to convey the impression that we subscribe to the platform of any political party. It would be unjust to place the Communist Party of Russia, which has made the revolution, on the same

level with the more or less opportunistic political parties, parliamentary and otherwise, which exist in the different countries at present still under capitalist domination.

By adhering to the Red Industrial International the French Syndicalist Minority has not been influenced in its conduct by any political party. This Revolutionary Minority has formed Revolutionary Syndicalist Committees in all the French Reformist Trade Unions; the purpose of these Committees is to propagate the revolutionary doctrines of direct action and the class struggle, and to give to the reformist management of the trade unions and confederations, and to the General Confederation of Labor as a whole, a revolutionary direction.

In this work the French Revolutionary Syndicalist Minority is not following the advice or instructions from any political party; it has, however, declared its readiness at its last congress to co-operate with other bodies for the abolition of wage slavery.

It is in the above spirit that the French Revolutionary Syndicalist Minority asks all of the organizations represented at the Berlin Syndicalist Conference held in December, 1920, to affiliate to the Red Industrial International and to send their Delegates to the Congress that will take place in May, 1921, in Moscow. At this Congress a definite plan of action by all revolutionary labor bodies there represented will be formed.

# Two Conventions of Italian Labor

**By G. C.**

ON THE WEEKS beginning January 15th and February 28th of the present year, the Italian Socialist Party and the General Confederation of Labor, its economic reflex, held their national conventions in the socialist municipality of Leghorn. The importance of these conventions to the Italian people and to the world labor movement cannot be overestimated; one Leghorn daily declared that they were the most important single events since the armistice in their potential influence on the destinies of the Italian nation.

The Socialist Party delegates, to the number of over three thousand, met in the Goldoni Theater. They represented the strongest single party in Italy, with over 210,000 members, 156 deputies in the Chamber, and the most important industrial municipalities and provinces under their political control.

Still the glory and pomp of power could not conciliate the most heterogeneous gatehring of "socialists" imaginable. The metallurgical workers' agitation of last October had bared to the view of the Executive Committee of the Third International, and to a large body of Italian workers, the essentially conservative soul of the loud-spoken, phrase-monging politicians. When the moment for revolutionary action came, the Maximalists of the Bologna Congress, the men who had been to Soviet Russia and had attested their revolutionary faith before the officials of the Third International, deliberately sabotaged the workers' movement and sent the Italian proletariat reeling back into the depths of disillusion and despair. When the Revolution reared its unkempt head brusquely before them, the politicians refused to recognize it.

A heated, controversial correspondence with Moscow followed; Zinoviev reproved Serrati, the Centrist leader, bitterly and to the point of offense; the party disintegrated into a half-dozen groups of varying views, which merged into three main divisions: the extreme Left, led by Bordiga, Bombacci, Terracini; the Centre, with Serrati, Baratono and Lazzari; the Right, with the old and crafty politicians Turati, D'Aragona, Modigliani, etc.

It was the general feeling that the Leghorn Convention could have but one outcome: a complete

THE ITALIAN SOCIALIST DELEGATION AT A RECENT SOVIET CONGRESS
**Sitting at the table, left to right: D'aragona, Graziadei, Zinoviev, Bombacci, Serrati, Dugoni.**

split. The popular expectations were verified, the only surprise being occasioned by the completeness with which the ambiguous and fluctuating elements of the Centre gave themselves into the arms of the Extreme Right when they faced the inevitable alternative. The essential opportunism of all politicians was here unmistakably revealed; two years ago the Centrists of today steered their Socialist Party into power and prominence on a program which satisfies the popular demand for Revolution and Soviets; today they renounce Revolution and substitute the formation of Soviets with the more convenient task of conquering more offices in the bourgeois political structure. It is to the great credit of the Moscow Communists that they have finally seen thru this duplicity: they state clearly in their telegram to the Convention that "the general revolutionary circumstances (in Italy) give them the External Appearance of being more to the Left than the Centrists of other lands."

The Third International was represented at the Convention by the Bulgarian Communist, Kabaceff, who made known to the delegates the views of the Central Committee in no uncertain terms. On the first day of the Convention the following telegram from Moscow was read:

> "Dear Comrades: The attempts of our representatives, Zinovieff and Bukharin, to participate in your Congress have not had the results hoped for thru no fault of ours (they were barred out by the Italian Government). Moreover, Comrades Serrati and Baratono, who had declared their intention to come to Russia, have not come. Therefore we send to you with this telegram our fraternal greetings and the following message:
>
> "We have followed thru the columns of your journals the struggle of the last months between the diverse tendencies of your party. Unfortunately the actions of the Communist Unitarians, at least the actions of the heads of the faction, have confirmed our most unfavorable expectations. In the name of unity with the reformists, the unitarian leaders are as a matter of fact ready to separate from the communists and also from the International.
>
> "Italy is crossing at present a revolutionary period, and it is for this reason that the reformists and the centrists seem to be more to the Left than those of other lands. Day by day it has appeared more clearly to us that the faction headed by Comrade Serrati is in reality a faction of centrists, to which only the general revolutionary circumstances give the external appearance of being more to the Left than the centrists of other lands.
>
> "Before knowing how the majority at your Congress will be constituted, the Executive Committee declares officially in an absolutely categorial manner: the decisions of the second world congress of the Communist International obligates adherent parties to break with the reformists. They who refuse to effectuate this schism violate an essential law of the International and put themselves outside the ranks of the International. All the unitarians in the world cannot convince the International that the editorship and the inspiration of that arch-reformist review, the "Critica Sociale" (Turati's journal), are favorable to the dictator-

THE ITALIAN SOCIALIST CONGRESS IN SESSION IN THE GOLDONI THEATRE, LEGHORN, ITALY

The streamer above the picture of Karl Marx reads: "Workers of the World, Unite!"

ship of the proletariat and to the Communist International. No diplomacy will convince us that the faction of the concentration is favorable to the proletarian revolution. Those who wish to bring the reformists into the International wish in reality the death of the proletarian revolution. They will never be of us.

"The Italian Communist Party must be created at any odds (**in ogni modo**). Of this we have no doubt, and to this party will come the sympathy of the proletariat of the entire world and the warm support of the Communist International.

**"Abbasso il reformismo! Viva il vero partito comunista italiano!"**

After six days of heated discussion in which the gulf between the contending factions widened increasingly, the matter came to a head with the vote on the motion to join the Third International under the conditions outlined by Kabaceff—strict observance of the 21 points, including expulsion of the reformist wing of the party.

The vote on the motion was as follows:

| | |
|---|---|
| For (Communists)..... | 58,000 |
| Against (Center and Right)..... | 111,000 |
| Abstained from voting..... | 50,000 |

The Communists abandoned the convention and proceeded to hold one of their own in which the Italian Communist Party came to life.

* * * * *

At the convention of the General Confederation of Labor about 1,750,000 workers were represented, of which almost a million are embraced in the powerful Agricultural and Metallurgical Workers' Federations. Transportation is the Confederation's weakest point for neither the Syndicat of Railway Workers nor the Federation of the Toilers of the Sea belong to it; these are extremely radical and efficient independent industrial unions.

The struggle which materialized at the Leghorn Convention of the Italian Socialist Party had its counterpart in the Convention of the G. C. of L. Communists and moderates fought for supremacy and the latter won out in the test vote. On the motion of the Communists to withdraw from the Amsterdam International and join the Third International, the vote stood 1,300,000 against and 418,000 for. The convention approved the closest co-operation between the Confederation and the Socialist Party, the withdrawal from the Amsterdam International, and possible co-operation with Moscow on the basis of national autonomy in the policies to be pursued in the future. Here also the ambiguities of Centrism triumphed. That socialism which seeks the conquest of the bourgeois governmental mechanism for its own purposes of political dominion has again fooled a large section of the Italian workers into believing its revolutionary protestations.

A very competent appraisal of the significance of the split in the socialist forces from the pen of Angelo Faggi (formerly editor of the Italian organ of the I. W. W. and at present acting secretary-treasurer of the powerful Italian Syndicalist Union) appears in "Guerra di Classe," of January 29th, 1921. This is Fellow Worker Faggi's comment on the situation:

"Evidently the Communist Party is destined at its birth to meet great sympathy and powerful support in the ranks of the Italian workers. Nursing the hope of imminent revolution, they find themselves today suffering bitter disillusion. Still, their general tendency is to rebel against their betrayers, and, veering instinctively towards a more precise and decisive stand, they naturally sympathize with whoever preaches the most extreme doctrine. From this point of view, the Communist Party will have a large following, especially because of the fact that on the political field it will be the authorized representative of the Third International.

"To what extent the new Communist Party can satisfy the hopes of the proletariat, it is difficult to foretell at this early stage. It is better to see it in action before hazarding a judgment which may be either too pessimistic or too rosy.

"As to the influence that the new party will have in the ranks of the General Confederation of Labor, it is impossible to foretell. It seems that the Communist Party, thru its most authorative leaders, has expressed the determination to support this organization in order to gradually conquer and transform it. It is a fruitless labor that the Communists are attempting, to our way of thinking. Still we have read with pleasure the writings of many members from the rank and file of the party who sustain the only clear road in the economic field it outside of the G. C. of L., and precisely in the Italian Syndicalist Union. If,

**In the centre, Filippo Turati—a potential Italian Scheidemann.**

**Above the cross, the Centrist leader G. M. Serrati. The most prominent figure in the Italian Socialist Party, in 1903-4 editor of "Il Proletario" in New York City.**

> then, the split in the Leghorn Congress will not have an immediate repercussion in the ranks of the G. C. of L., to the point of causing a secession of the forces controlled by the Communists, some effect of this nature it will surely have, especially as the G. C. L. is bound to follow the Socialist Party in an increasingly conservative policy, all communist efforts to the contrary notwithstanding."

If we were politically minded and believed that the fate of the Italian workers was entirely in the hands of the warring political sects and factions, the situation would indeed appear dark to our anxious eye. But fortunately such is not the case; the Italian workers are developing thru continuous warfare on the economic field a remarkable capacity for independent action; almost one million workers in the Italian Syndicalist Union and the railwaymen and seamen's unions, repudiating all political tutelage, are a living example of this new spirit. The metullurgical workers' movement of last October is an indication of the possible future tactics of Italian labor, and the workers have learned a great lesson from that memorable uprising.

Norman Matson writes in the March Liberator:

> "In the first great industrial struggle they took over the now famous 500 factories, and holding them, turned to their previously unconsulted leaders for advice. Out of the maze of contradictory, ambiguous accounts of that tense moment, one remembers the story of the night of waiting. In the factories of Turin and Milan not a red worker slept. Would their political and industrial advisers—Serrati, D'Aragona & Co.—tell them to hold the line or retreat? The order—formulated by the men who now lead a party purged of bolsheviks—was "Retreat—evacuate!" A young Torinese told me: 'The disappointment crushed us. Some of us wept that night!' "

Today Italy is practically rent by civil war; in the first week of March, the Italian workers, goaded by the bourgeoisie's white guard, the "fascisti," have been driven to retaliation. General strikes, riots, and a guerilla warfare in which the troops have used machine guns and three-inch cannon, have spread from Trieste in the North to Bari in the extreme South. The dead on both sides number close to one hundred; the wounded reach many times that number; thousands have been arrested. Still the Socialist Party maintains that the time for revolution is not yet at hand.

**To the millions of Italian workers surging forward under the impellent urge of hunger, unemployment and reaction, the Italian Syndicalist Union alone has a virile message of hope and deliverance; to them it says constantly:**

**"Do not weep; do not retreat; do not wait for orders; keep right on fighting on your own initiative and the world shall be yours, and the riches thereof."**

## CAPITALISM MAKES WAR INEVITABLE

**This monstrous thing called war will occur again! Not because any considerable number of people want it, not even because an active minority wills it, but because the present system of competitive capitalism makes was inevitable. Economic rivalries are the warp and woof of capitalism.**

**Today the rivalries are economic—in the fields of commerce and industry and finance. Tomorrow they will be military.**

**Already the nations have begun the competition in the building of tanks, battleships and airplanes. These instruments of destruction are built for use, and when the time comes, they will be used as they were between 1914 and 1918.**

**Again there will be the war propaganda—subtle at first, then more and more open. There will be stories of atrocities; threats of world conquest. "Preparedness" will be the cry.**

**Again there will be the talk of "My country, right or wrong"; "Stand behind the President"; "Fall in line"; "Go over the top!"**

**Again fear will stalk through the land, while hate and war lust are whipped into a frenzy.**

**Again the most stalwart men of the nations will "dig themselves in" and slaughter one another for years on end.**

**Again the truth-tellers will be mobbed and jailed and lynched, while those who champion the cause of the workers will be served with injunctions if they refuse to sell out to the masters.**

**—Scott Nearing in "The American Empire."**

## THE STATUS OF ORGANIZED LABOR IN SOVIET RUSSIA

IN THIS ISSUE of The Industrial Pioneer are printed three articles dealing with the labor situation in Soviet Russia. Controversy has been going on for some time past on the share that organized labor should assume in the management of industry and in the functioning of the Soviet Government. As will be seen by a reading of these articles, the Soviet Government is at present completely in the hands of the Communist Party, which numbers some 500,000 members. The labor unions in Russia, on the other hand, number 6,500,000 members. Altho they have a great deal to say about the management of industry, the supervision and co-ordination of industrial life is entrusted to the Communist Commissars. Of late a strong demand has arisen among a portion of the unionists that the major functions of the State should be taken over by the industrial unions. The names most prominently associated with this movement are those of Alexandra Kollontay and Schlapnikoff; at the other extreme stand Trotzky and Bucharin, with Lenin occupying a central position. Karl Radek, whose article appears in this issue of The Industrial Pioneer, and whose views on this subject coincide closely with those of Lenin, was at one time Soviet ambassador to Germany, and served on the Soviet delegation to the Brest-Litovsk and Riga peace conferences.

These articles are printed in order that our readers may get a more accurate understanding of the situation in Soviet Russia. It is exceedingly difficult to judge what ought to be done over there by trying to apply principles which are adaptable to America and to other highly industrialized countries. The industrial population of Russia forms only 15 per cent of the people, the other 85 per cent constituting the agrarian population. But since the Soviet Government rests primarily on the 15 per cent of the industrial population, and yet at the same time has to satisfy the demands of the other 85 per cent, it is apparent that they have a task on their hands of no small proportions. It is not for us to say what the Soviet Government should do to solve its difficulties. We rest assured that in the course of time these difficulties will be solved in a manner satisfactory to all concerned.

## POLITICAL VERSUS ECONOMIC ACTION

There seems to be a great deal of uncertainty concerning the real meaning of political and economic action.

In everyday parlance the meaning of these terms depends very much upon the person using them. When, for instance, a pure and simple trade unionist speaks about economic action he means the going out on strike for more wages and shorter hours. When a democrat speaks about political action he means the going to the polls and the casting of votes for aldermen, mayors, congressmen and other legislators. When, on the other hand, a thorogoing industrial unionist uses the expression economial action he does not simply mean striking for more wages or shorter hours; he understands by this term any action which his union may take, irrespective of the ends to be attained. To illustrate, should the members of his union go on strike for shorter hours, this would be economic action. But should they go out on strike for the liberation of class war prisoners, that would also be economic action; and

lastly, should they lock out the employers and take over the industry in which they work, this would likewise be considered as economic action.

From the point of view of the adherents to political parties, the last two instances will be cited by them as examples of political action. They would claim, for instance, that a general strike proclaimed for the purpose of liberating all class-war prisoners is a political act; likewise, they would claim that a parade of strikers for the purpose of enrolling the sympathy of a city populace is also a political act.

It seems to us that in determining whether an act is political or economic, we ought to consider the source from where it emanates, and not the ends that it has in view. Any action that originates and is carried thru, directly or indirectly, by an economic organization should be considered as economic action; likewise, any action which originates and is carried thru by a political organization should be considered as political action. This would save a great deal of misunderstanding and ill feeling caused by squabbling over the meaning of words which in themselves really are of little importance to the working class.

The trend of the times is away from the political towards the industrial way of running society. Political administrations are becoming obsolete for the simple reason that they do not satisfy the needs of the hour. Lenin has expressed this truth very succinctly by saying that we should substitute the "administration of things" for the "administration of persons." In this new scheme of things the industrial unit is to be taken as the point of departure instead of the territorial unit, which makes it impossible to give the necessary attention to industrial requirements. Political organizations are left-overs from an order of society which is fast sinking into oblivion. While they, as yet, perform useful functions in most countries, the shadow of extinction is upon them.

It is quite possible for economic organizations to function in the field at present commonly occupied by political organizations. The Russians have made a good beginning along these lines by the organization of the Supreme Council of National Economy. This Council will eventually take over the functions at the present time performed in bourgeois countries by legislators and political governmental departments of labor and production. The idea prevails in the minds of a great many people that in the labor movement it is absolutely essential for a political party to serve as a unifying influence between the different labor organizations. This concept is, of course, borrowed from the role that the Communist Party has played and is playing at the present time in Soviet Russia. It is doubtful, however, that in highly industrial countries it is at all necessary for a political party to assume these supervisory and unifying functions. It seems conceivable to us that the labor organizations themselves could create organs to take over the work commonly assigned to political bodies, whether they be Communist or otherwise.

## NIKOLAI LENIN ON EFFICIENCY.

"Keep accurate and conscientious accounts; conduct business economically; do not loaf; do not steal; maintain strict discipline at work." These slogans, which were justly ridiculed by revolutionary proletarians when they were used by the bourgeoisie to cover its domination as a class of exploiters, have now, after overthrow of the bourgeoisie, become the urgent and principal slogans. And on the one hand the practical realization of these slogans by the toiling masses is the **sole** condition for the salvation of the country, which has been shattered by the imperialistic war and by the imperialists (headed by Kerensky), and on the other hand, the practical realization of these slogans by the **Soviet** power, with its methods, and on the basis of **its** laws, is necessary and **sufficient** for the final victory of Socialism.

# For a Concerted Plan of Action

By H. Van Dorn

THE TIME has arrived for the Industrial Workers of the World as an organization, and for each member individually, to ask these questions: Where do we stand? Why are we not growing faster? What should be done to make the I. W. W. the power that it should be in the American Labor Movement?

Conditions were never so good for the growth of the I. W. W. as they are today. Unemployment, lowering of wages, the open shop, hunger, lockouts, persecution—these are the things that make the workers turn their eyes to the radical movement as the only way out of the morass of capitalism. These are the things that the I. W. W. will grow strong on, and that, if proper advantage is taken of the opportunities as they present themselves, will make of the I. W. W. in the not distant future the **one big power** in the American Labor Movement.

A thoro discussion from all angles of the problems confronting the I. W. W. is especially desirable in view of the nearness of the Thirteenth Convention; more, it is imperative, if the I. W. W. is to play its proper role in the great impending struggle between the forces of labor and capital, which already throws a threatening shadow athwart the continent.

For the purpose of clarity of thought let us divide our discussion into three parts, dealing with the necessity of

(1) **A definite I. W. W. policy,** which will be mainly a discussion of principles.

(2) **A concerted plan of action,** wherein the policy arrived at will be applied to particular problems.

(3) **The creation of organs for the execution of the I. W. W. plan of action.**

### For An I. W. W. Policy

The situation that prevails in American industry today is unique. All previous unemployment crises were of a temporary nature, whereas the unemployment of today is here to stay. For this reason our policy, built upon the past experience of the organization, will have to be revised to conform to the changed situation in industry. Consequently, our plan of action for organizing industries will also have to be revised.

During the war this country produced not only enough goods to supply the current needs of the people, but also a tremendous volume of work was done to manufacture war munitions and other commodities for the prosecution of the war. Since the signing of the armistice all of the man-power that was previously engaged on war contracts has been thrown into other fields of activity. For a time a good deal of this man-power was absorbed in the production of goods that were exported to South America, to Europe and to other countries, as well as in catching up in industries which had been neglected during the war period, such as the building of automobiles, residences, factories, etc. By this time, however, the country has completely caught up with its neglected industries, and the man-power that was previously engaged in work of this nature has been thrown out of employment. To aggravate the situation, the export trade is but a shadow of its former self. American manufacturers shipped to Europe exports to the value of some three billion dollars, and afterwards found that they could not collect on this trade on account of the greatly depreciated exchange value of European currency. Our exports to South America and other countries also have greatly fallen down. To make things worse, wages are being cut for the workers who still are fortunate enough to have jobs, which in turn means that the purchasing power of the money that they receive will not be as great as it was when wages were high, so that so much less commodities will have to be manufactured to supply the needs of the

country, which in its turn will throw more people out of work. There is no reason to believe that anything will turn up to accelerate production. In the course of the coming years, should the incoming Republican administration be far-sighted enough to open trade with Soviet Russia, it will help matters for a while, but even this cannot be looked upon as permanent relief. The Russians can only use so much machinery and other manufactured goods, and the supplying of these commodies would only be a drop in the bucket of unemployment in the United States.

It is exceedingly important that the situation outlined above be clearly understood and emphasized, for it changes the whole complexion of the industrial situation. Labor organizations which answered the needs of the working class in years past will no longer do so under the changed circumstances. Millions of men and women out of work will make it practically impossible for labor organizations to fight for shorter hours and more wages with the same tactics that have been used in the past, and win out. Furthermore, those labor organizations whose backbone has been their ability to give to their members bigger wages and a closed shop, will find themselves utterly useless. For instance, in the past the only reason why working people joined the different A. F. of L. unions was because by doing so they got more wages, shorter hours and better conditions than if they were not members. As soon as these craft unions are no longer able to offer these inducements to the workingmen, naturally these workingmen will not join them, and those who already belong to these craft unions will gradually drop away. This leads us to the conclusion that the craft unions comprised within the American Federation of Labor from now on will be losing both in numbers, in prestige and in influence, and will in the course of some years practically go out of existence. Added weight is given to this prediction by the inability of these unions to uphold their present wages and working conditions, as has been demonstrated time and again during the last few months when wages have been cut and these unions have submissively accepted these cuts, as well as the lengthening of hours.

Altho not with equal force, the same argument applies to the independent industrial unions, such as the Amalgamated Textile Workers, the Amalgamated Clothing Workers, and others. The Amalgamated Clothing Workers have been locked out in the City of New York by employers for months, in an attempt to break up the organization, and there is no reason to believe that the employers will not be successful in this attempt. The Amalgamated Textile Workers are practically useless as a labor organization to the silk weavers in the East.

As for unorganized workers to go on strike in isolated instances under the present circumstances is utterly foolish, for they have not the ghost of a chance to succeed. Whenever any group of men, heretofore unorganized, go out on strike they are doomed to lose, for there are thousands of men and women to take their places. Therefore, for any craft organization to try to line up members at the present time with the plea of giving them shorter hours and more wages is attempting the impossible. It would amount to nothing else than a conscious attempt at deceiving these unorganized workers.

As a consequence of the conditions outlined above, among the rank and file of the unorganized as well as the organized the sentiment for the radical labor movement, as exemplified in the Industrial Workers of the World, is growing stronger day by day. The conditions are forcing the working class to understand that nothing short of complete industrial unionism will make it possible for them to fight capitalism. It is primarily on this account that wherever one may go at the present time, whether it be the West, the Middle-West, or the manufacturaing centers of the Eastern and the New England states, one will find a strong sentiment in favor of the I. W. W. And what is more important, this sentiment is growing stronger as the days go by. These workers are getting to be actually hungry for somebody to come along and tell them

what to do, and how to organize in order to put up a solid front against their masters. The only organization which is capable of doing this is the I. W. W.

In order to meet the situation successfully, we have to adopt

**A Definite Plan of Action.**

In outlining our plan of action we ought to keep two things in mind:

(1) That we gain the confidence of the wokers only by telling them the truth, and not by giving rash promises.

(2) That we must always lay special emphasis on the necessity of the workers taking over industry and running it for the benefit of the whole community instead of for a few individuals.

It has been the experience of branch secretaries all thru the country that wherever unorganized workers go on strike they very often apply to the I. W. W. for organizers. These workers may number only a few hundred, or they may form but one department in a big industrial establishment, and the chances are twenty to one that they will lose out. Now, should the I. W. W. send organizers to help them with this strike, it should always be the duty of these organizers to impress upon the minds of the strikers that the chance of winning their demands for more wages, shorter hours, or whatever else they may want, are very slight, but that they will have accomplished much indeed if they will line up in the I. W. W. and thus become part of a nation-wide organization, whose aim is primarily to abolish the whole system which makes strikes possible.

It ought to become readily apparent to all open-minded Wobblies that in view of the changed conditions the field for the I. W. W. has greatly widened. We should not only try to line up members individually, but we should also get into other labor organizations and try to get them over into the I. W. W. bodily. We should get away from the habit of condemning other labor organizations just because they may have the A. F. of L. label or some other label on them, and should remember that the rank and file in any labor organization are simply workingmen who are as much subject to persuasion as the unorganized. We should keep uppermost in our minds that if the organization that a workingman belongs to is not capable of offering him a solution for his troubles he will cast around for some other organization which is capable of doing so.

To illustrate the above contention, let us cite a few instances from recent history in the labor movement. A few months ago the Amalgamated Textile Workers in Lawrence, Mass., took a vote to affiliate with the O. B. U., and this motion came within 75 of being carried. This action was of an entirely spontaneous origin, as the members of this union had come to realize the uselessness of an independent union such as the Amalgamated Textile Workers. Now, it is reasonable to expect that with a certain amount of concerted action within the Amalgamated Textile Workers during the months to come it will be an easy matter to swing this organization bodily into the I. W. W. Another instance: some months ago the switchmen in Chicago and in other cities revolted against their Brotherhood and formed what are known as "outlaw" Switchmen's Associations. This only goes to demonstrate that the old form of organization was not adopted to meet the needs of the switchmen under the changed conditions, so that they were forced to form another organization. It is reasonable to expect that with a certain amount of hard work, agitation and education within the "outlaw" Switchmen's Associations it would not be a hard matter to take them bodily over into the I. W. W.

Some fellow workers will object to this line of argument on the grounds that when men are taken into the organization in great numbers thru the taking over of other unions they are not educated well enough to be of any substantial use to the I. W. W. This argument is fundamentally wrong, for there is nothing on earth to prevent the I. W. W. from educating them after they become member of our organization. Furthermore, they would bring into the organization funds which could be used for the purpose of spreading propaganda and educational matter not only among themselves

but also among other workers in different industries. This in turn would bring in more members, who in turn would bring in more funds, which could be used for the putting out of more educational propaganda, which would bring in more members. In this way we would establish a steady rotation of funds, education, organization, more funds, more education, more organization, which would make of the I. W. W. a power in the labor movement of America undreamed of at the present time.

As a further argument for the necessity of the I. W. W. extending its sphere of activity, let us consider the transportation industry. Is it not futile to imagine that we will be able to line up individually in our Railroad Workers' Industrial Union No. 520 the hundreds of thousands of men who now belong in the big railway Brotherhoods—all the brakemen, conductors, firemen, locomotive engineers, switchmen, maintenance-of-way men, etc.? These Brotherhoods are at present so solidly organized that it is unreasonable to expect for anything short of an earthquake to shake these members away from their respective organizations in the course of the next few years. While we are doing everything in our power to get in as many individual members as we possibly can into our Railway Workers' Industrial Union, why should we not at the same time get on the inside of the Brotherhoods and also do everything in our power there to create sentiment for the I. W. W., to educate the workers, and, should the opportunity present itself, to take over some of these unions, or at least locals, bodily?

Those members who object to these "boring from within" tactics should remember that conditions today are not what they were in the past. Their stand in the past was perfectly justified, because at that time the craft unions had something to offer to the working class, and it was exceedingly hard for revolutionists to make any appreciable progress within these organizations. At the present time, however, practically all craft unions are bankrupt and have nothing to offer to their members. Their members are in a condition of extreme dissatisfaction, and will get more so as the months go by. The counseling of agitators within their midst will be eagerly listened to, and, should conditions permit it, their advice will be followed. This leads us to the third part of our discussion, which is

**The Creation of the Necessary Organs for the Execution of the Program Outlined Above.**

It will generally be admitted that the following four industries are the most essential, so to speak the pivotal, industries in this country:

(1) Transportation.
(2) Steel and Iron.
(3) Mining Industry.
(4) Food Industry.

Outside of having organized a small portion of the mining industry, the I. W. W. has no hold whatsoever in any of the four industries mentioned above. The big problem, therefore, is this: How are we going to proceed to organize these industries?

Such Industrial Unions as are at present functioning within the I. W. W. have a General Organization Committee, the so-called G. O. C. In the smaller unions, altho theoretically they also have a G. O. C., this G. O. C. as a rule does not function, the union being handicapped in the matter of finances. In those industries in which the I. W. W. does not function there are no G. O. C.'s to lay plans for organization work to be carried on there. Consequently, it ought to be apparent that what we need is some sort of a central organ, the specific function of which will be to carry on organization work in industries and localities which at present are not included in the field of activity of the already existing I. W. W. Industrial Unions.

What we need, therefore, more than anything else at the present time is a **Central Propaganda and Organization Bureau.** The functions of this bureau could be outlined as follows:

(1) To gather vital data about industrial conditions all thru the country.

(2) To route speakers and organizers to districts which present the most favorable conditions for organization work.

(3) To prepare propaganda

(a) Of a general nature, which could advantageously be spread among all classes of workers, dealing with general questions, such as unemployment, break-down of the capitalist system, the necessity of organization, etc.

(b) Of a special nature, to appeal to workers engaged in separate industries and under distinct working conditions. To illustrate: the getting out of leaflets which would appeal specifically to the automobile workers all over the country, to the packing house workers, to the coal miners in West Virginia, etc. It is to be understood, of course, that in the preparation of this literature the Bureau would work in the closest conjunction with the G. O. C's of the respective Industrial Unions.

(4) In its work, this Bureau should overlook no factor which would react to the benefit of the I. W. W. It should concentrate as much on the spreading of favorable I. W. W. sentiment within already existing labor organizations, and should endeavor thru organizers to capture some of these organizations bodily, if the opportunity should present itself, as on the lining up of individual members. In co-operation with the G. O. C's it should see to it that the right men are placed in the right places and that they work according to orders for the benefit of the I. W. W., and not according to their personal whims. This brings us to the necessity of

**The Strictest Discipline in the Carrying Out of This Organization work.**

We might as well make up our minds now as at any other time that if the I. W. W. is to attain power in this country it has to learn to instill the spirit of discipline within its ranks. One of the weaknesses of the I. W. W. in the past has been its haphazard, unsystematic way of doing things. Let us constantly bear in mind that unless we become at least as efficient and as well-disciplined as the capitalists, that we will never be able to successfully take over the functions that the capitalists are performing today. To be able to the better to grasp the importance of discipline, let us present a concrete illustration:

Suppose the G. O. C. of the Railroad Workers' Industrial Union decides that the conditions prevailing in the repair shops of a particular railroad are especially favorable for carrying on I. W. W. propaganda and organization work. Having made this decision let it get its men on the job, and let those members who already are on that job understand that a special effort is to be made to line up that particular repair shop. The G. O. C. should then gather all data respecting the conditions, wages, sentiment and any particular situation that may prevail in that shop. Thus prepared, it should draw up a detailed plan of action. It should then communicate its plan of action to the members on the job and it should make them understand that they are absolutely expected to carry out this plan and not to work according to their personal likes or dislikes. Whoever is not willing to conform to this action is to be shoved aside as not fitted to function on that job. This will virtually amount to the formation of machines. A machine is a term greatly disliked by some of our members, but let them remember that in reality it is nothing else than a co-ordination of the efforts of a militant minority.

Let us, therefore, coin these new watchwords for our future organization work: **Efficiency and Discipline.**

* * * * *

The writer of the above article earnestly hopes that it will provoke constructive thinking in the membership, and will eventually lead to fruitful activity for the creation of a bigger, a stronger and a more powerful I. W. W.

# ORGANIZATION

By James Kennedy

ALL WEALTH is produced by labor being applied to the natural recourees of the earth. Wherever labor and natural resources come togcther, there industry springs up—a job eomes into existence. The wealth produced on the job is divided in two parts. Part goes to the workers in the form of wages and part to the capitalists in the form of profits. Thc share of eaeh is determined by the amount of eontrol they exert over the job. On every job therc are two conflicting interests. The capitalist wants to make the biggest possible profits in the shortest possible time. To aeeomplish this he must get as mueh as possible out of the workers and must give them as little as possible. He wants hard work, long hours, low wages, and low running expenses, which make rotten conditions. The workers are on the job to make a living. To this end they must have short hours, high wages, easy work and good eonditions. This conflict of interest is the eause of the struggle that goes on between workers and employers—the class struggle.

In this as in all struggles the side with thc most power will win. Thc seeret of power is **organization.** The capitalists are few in number. They do no useful work but live as parasites off the labor of the workers. They are entirely unneeessary to the running of industry. They perform no useful function in society. But they are organized, and by virtue of their organized power they control the natural resourees of the earth and the machinery of production, and only allow the workers aecess to them on condition they can make a profit off their labor.

The workers are absolutely necessary to running industry. They furnish the labor power without whieh not a wheel would turn. But they do not control their own labor power because only a small percentage are organized. Being forced to deal as individuals with the organized power of the capitalists they are helpless and have to accept whatever conditions the employers see fit to impose on them. On all jobs where the workers are unorganized their standing is little better than that of work animals—of cattle. They only receive enough in the form of wages to enable them to keep in working condition, just as a four-legged beast of burden is fed enough hay and grain to enable tim to furnish motive power for his master's wagon. If an individual worker voiees a protest he is diseharged. This causes no inconvenienee to the boss, for it is easy to get another to take his place.

But when the workers begin to organize, a change takes place. When all the workers on a job, or even a fair percentage of them, make demands the boss cannot diseharge them without shutting down or seriously crippling his job. Fear of stopping or reducing his profits forces him to make concessions. He will try to compromise. Just how much he will eoneede depends entirely on the strength of the workers' organization. Where the workers are unorganized the eapitalist holds undisputed sway. He has complete eontrol of the job. But on every job where the workers are organized there are two contending forces—that of Labor and that of Capital. Unorganized, the workers are powerless and must tamely submit. With organization they gain power and are able to dispute the eontrol of the eapitalists. Hence, where the workers are organized, hours, wages and eonditions are always better than on unorganized jobs. Provided, of eourse, the workers' organization is genuine and not a fake controlled by the bosses.

### Workers Organized to Produce.

Organization is the keynote of power and suceess. Without organization nothing worth while can be aeeomplished. Even wild animals and birds know enough to organize for mutual proteetion. By organization and eo-operation primitive man was able to overeome the beasts and reptiles of the primeval forest, and rise to eivilization. Without the workers being organized to carry on industry, production would stop and the world would go back to savagery.

When a man goes to work in the woods his object is to get wages—money. He wants to make a "stake" and to make it as big, as easily, and as quickly as possible. He cares nothing about the profits of his employer. When a lumber company hires men to work in the woods their object is to make profits, and to that end they must get out logs. They are not concerned with the welfare of the workers. Thus we see there are two distinct objects to be accomplished—that of the workers "organized"—arranged in interdependent groups each co-operating systematically with the others so as to work to the best advantage and produce the greatest results. One set of men fall the trees. Others cut them up into logs. One man acts as hook tender; others set the chokers. A fireman keeps up steam in the boiler, and the engineer runs the donkey. Some load the logs on cars and the railroad erew haul them out of the woods. Some act as riggers, and some as cooks and flunkeys. The whole crew is working together systematically to get out logs—to accomplish the object of the company—and they work successfully. They get out many logs and make big profits for the company because they are organized for that purpose.

Suppose the same number of men were to go into the woods, and instead of working in an organized manner, each one was to work as an individual.

Suppose each carried in his own tools, his own food and his own cook-stove; built his own shack, did his own cooking, cut his own roads, and tried to get out logs all by himself. How much headway would they make? We all know they would accomplish practically nothing. If a boss put men to work that way they would consider him insane. They would not accomplish his object of making profits. Yet that is exactly how the great majority of men go to work to accomplish their own object. Have unorganized men any reason to consider themselves sane? They co-operate systematically to produce wealth for their employers, but not to protect their own interests. Small wonder hours are long, wages low and conditions rotten.

Occasionally we hear of a number of men breaking out of jail, but who ever heard of such a break from a lunatic asylum? It takes organized action to break out of captivity, and it is a well-known fact that lunatics never organize.

### Industry Run Entirely by Workers.

The workers in each camp co-operate to get out logs. Each camp is a unit in the producing organization controlled by capitalists. All of the camps of a lumber campany co-operate to supply the sawmills. The production and distribution of lumber is carried on by the co-operation of loggers, railroad men and sawmill workers. These producing organizations are composed entirely of workers, either by hand or brain. Foremen, superintendents and general managers are all workers, as well as the men who do the actual manual labor on the job. To the extent that they take part in managing and organizing industry they are useful and necessary, but their renumeration is usually out of proportion to the value of the work they perform. In this way they are subsidized or bribed by the company to prevent them from combining with the other workers to take control of industry. These company officials are known as salaried workers and are usually part workers and part parasites. As a rule the higher officials of a company are also stockholders, and to the extent that they draw dividends they are parasites. The work of a general manager may be worth $10,000 a year, but if he receives a salary of $100,000 a year then he is 10 per cent worker and 90 per cent parasite. If in addition to his salary he draws dividends of $100,000 a year then he is 5 per cent worker and 95 per cent parasite. Besides performing their useful and legitimate function of managing industry these officials, under the present system, play the part of slave-drivers to speed up the workers and produce the greatest possible profits for their masters. They are also used to spy upon the other workers and prevent them from organizing. But altho the workers are divided and some are used in a manner detrimental to the others, the fact remains that industry is run entirely by the workers.

### How Industry Is Controlled.

Each camp is controlled by a foreman, who in turn is controlled by a walking boss or superintendent. Each department of a sawmill is controlled by a foreman, and control of these is centralized in the hands of the superintendent. Logging and sawmill superintendents are controlled by the general manager from the head office of the company. The general manager is controlled by the board of directors, the members of which are usually large stock-holders; and the board of directors is controlled by the stockholders. Thus industry is run by workers and controlled by parasites. Under the present system all officials, from strawbosses to general managers, are rated by their ability to grind profits out of the workers.

### Hundred Per Cent Parasites.

While a small amount of stock may be held by individuals who are part workers and part parasites, by far the greater part is held, and all control exercised, by one-hundred-percent parasites. For instance, a person may hold millions of dollars worth of stock in the Lumber Trust, but take absolutely no part in the management of the industry. His sole occupation is drawing dividends. He may never even have seen a logging camp or a sawmill. Such people live in million dollar mansions or swell hotels, surrounded by luxury and extravagance. They have residences in different parts of the world, and migrate from one to another with the changing seasons. They travel in palatial steam yachts, luxurious pullmans and high-priced touring cars.

When the lumber worker is wading thru snow with the thermometer showing 40 below zero, or slinging heavy rigging thru mud and rain, he may find some comfort in the thought that high rolling parasites who live off the product of his labor are playing golf at Palm Beach or sailing on the sunny waters of the Mediterranean. Or when trying to sleep in a filthy, unsanitary, vermin-infested bunkhouse, inhaling the stench of drying socks and the sickening germ-laden odor from the slime-covered floor, it may be an inspiring thought to the "timber-beast" that in a palatial mansion in a land of perpetual summer where the soft night breezes waft the perfume of roses and honeysuckle thru the open windows, tended by liveried lackeys, entertained by the entrancing strains of an all-star orchestra, sated with rare wines and costly foods, and surrounded by amorous, languorous-eyed females, his masters are holding a "brilliant society function." When a lumber worker is unable to keep his family in decency or is condemned thru poverty to a life of "single blessedness," let him ponder the fact that his labor makes it possible for some parasitic timber-thief to buy a diamond necklace for his lady friend's lap-dog; and that lack of organization on the part of lumber workers makes this state of affairs possible.

While the old financial pirates who stole the timber lands were men of criminal instincts and anti-social character, it cannot be denied they had shrewdness and ability. But the descendants of

these men who inherit their vast wealth, enjoy it without having made the slightest effort to gain it, and wield the enormous power it places in their hands, may be entirely lacking in ability of any kind—may even be degenerates of the Harry Thaw type.

**How the Parasites Are Organized.**

The capitalists are organized, not to produce wealth but to separate the workers from the wealth they produce. They are the robber class. By fraud and violence they have stolen the natural resources and the machinery of production and by fraud and violence they hold the workers in subjection and continue to rob them. In most industries the capitalists are organized into trusts by means of which they reduce competition among themselves to a minimum. Those industries, which are not trustified and in which the majority of the employers are small, such as agriculture, are controlled by trusts in other industries on which they are dependent, such as the railroad trust, the packing-house trust, the harvester trust, and the banking trust. These trusts, by controlling transportation, markets, supply of agricultural machinery, and credit, have reduced the farmer to a condition in which he is just as effectually exploited as a wage worker. The various great combinations of capital are all interlinked by means of common ownership of stock and interlocking directorates. While there may be many thousands of stockholders in the different companies which go to make up a trust, the control is centralized into the hands of a very few men who own large blocks of stock. By means of "rigging" the market these trust magnates are able to force the prices of stock down when it suits their purpose to buy, and to put prices up when they are ready to "unload." In this way they loot and plunder the smaller stockholders who are known in Wall Street as "shorn lambs." Another way in which the big stockholders rob the small ones is by forming subsidiary companies. For instance, the controlling stockholders of a railroad often form construction companies, and let contracts to themselves at profiteering prices.

There are many ways in which the interests of different groups of capitalists conflict. Where such is the case the advantage always rests with the biggest capitalists. They can install larger and more expensive machinery, manufacture on a larger scale, produce cheaper and so undersell their competitors till they put them out of business, or force them to sell out at their own terms. Great financial interests which control railroads are also engaged in many other lines of business, such as lumber and mining, and they can stifle competition by withholding cars from their rivals. Big capitalists can maintain the strongest lobbying committees at Washington and are better able to bribe Congress to make them presents of the natural resources of the country. Consequently the control of industry is constantly becoming concentrated into fewer and fewer hands, and in the near future we may expect to see control of the industries of all countries concentrated into the hands of one gigantic world-wide trust.

Altho the interests of capitalists conflict in many ways, and big capitalists prey on small ones, their interests are all identical in maintaining the system by which they rob the workers. On this point they all recognize their community of interest, and display solidarity. To protect their interests as a class and to hold the workers in subjection they are united in commercial clubs, boards of trade, chambers of commerce and similar organizations of a class nature.

By means of their wealth the capitalists control the government, press, schools, colleges, churches, theatres and moving picture shows. They use these institutions to control the minds of the workers and prevent them from realizing their true position in society. By control of the press and the means of communication, such as telegraph and telephone lines, they suppress news of interest to the workers, or distort and color them to suit their own purpose. By false teaching and cunningly devised propaganda they make the workers think they are free and independent "sovereign citizens," while as a matter of fact they are dependent for their very existence on permission to toil for a master. By theoretically placing the ballot in the hands of all citizens they lend an appearance of truth to the outworn fallacy of "government of the people, by the people, and for the people." By their control of schools and colleges they propagate the lie of "equal opportunity" and teach the economic falsehood that the interests of labor and capital are identical, and the requisites for success are honesty, industry and loyalty to employers. Subsidized churches preach the divine right of property, and counsel meekness, obedience and self-denial. Theatres and moving picture shows ridicule the revolutionary movement, glorify scabs, and show how the chief sucker on the job may rise to affluence by marrying the boss'es daughter.

Literature is also prostituted to capitalism. The reading matter dished up to the "public" in the form of "popular novels" and magazine stories is of the cheap and trashy variety. The "heroes" of this intellectual slush are the kind that rise from poverty and win success by being good dogs for their masters and traitors to their fellow workers. The purpose of the detective story is to bluff the workers into submission by creating in their minds an exaggerated idea of the ability of "Sherlock Holmes" and all his scabby tribe, whose intelligence, in actual life, is of the lowest order. Such literary garbage is widely advertised and reviewed, and sold by the car-load, while books and writings dealing with facts are refused publication, or if they do get into print, are limited to a small circulation, being boycotted by the capitalistic press.

When fraud and deceit fail to hold the workers in subjection violence is used. The beast of capitalism throws off his cloak of democracy and shows

himself in his true colors. The machinery of a servile state is called into action. Anti-labor laws are passed. Injunctions tie up union funds and prohibit workers from striking. Corrupt judges sentence workers to long terms in the penitentiary for the "crime" of being active in the labor movement. Police and detectives frame up on active union men. Mob rule is stirred up by the press. Union halls and offices are raided. Workers are kidnapped, beaten, tarred and feathered, deported and murdered. Private armies of gunmen shoot down strikers and rape, torture and murder their wives and children. All who dare to question the right of the ruling plutocracy are hounded and persecuted and terrorism holds sway.

The capitalists have organized the workers to produce wealth. They themselves are organized to rob the workers. And they have organized all society to protect their stolen property and privileges. They are strongly intrenched in power, but this is no reason for discouragement. The capitalists are strong, but not with their own power; they are strong with the power of the workers. Industry is the source of all wealth and of all human power. Only the workers can run industry, for only the workers have the labor power. Therefore all human power comes from the workers. Without workers, capitalists could not exist, but without capitalists workers could live as human beings, instead of existing as beasts of burden as they do today. The power of labor is the greatest in the world, in fact it is the only human power in the world. Without labor to produce food, clothing, shelter and fuel, human life could not exist. Without labor to feed, clothe, equip and transport them, armies could not fight; governments could not function; scientists could not study; professors could not teach; editors could not write. All human activity would come to an end.

Without the power to produce wealth there could be neither financial power, political power, intellectual power, military power, nor any other power. The workers do not control this power because they are not organized for that purpose. Lacking control of their own labor power the workers are reduced to the level of cattle, mere beasts of burden toiling to produce wealth for their masters, whenever their masters see fit to give them permission to toil. Organized in such a way as to control their own labor power, the workers can control the world.

To organize means to come to a common understanding as to the end to be accomplished, and then to work systematically together for the attainment of that end.

# Mr. Block Has the Blues

They laid me off. Ain't that a shame?
I worked so hard. I'm not to blame.
I never kicked when pay was small.
I worked and worked and that was all.
One day a Red came up to me
And said: "Look here," says he,
"It's wrong for you to work so fast,
You'll lose your job; it will not last.
When goods pile up in store and bin
The boss will say with pleasant grin:
" 'Get out, you Block, and—very well—
If you don't like it go to hell.' "
I told the Red: "Don't talk to me,
To hell with your philosophy."
My boss he heard it and he said:
"I'm awful glad you're not a Red.
Speed up now, show your loyalty,
Curse all the Reds and stick to me."
The Reds I cursed, faithful and true—
Now look at me, I'm feeling blue.

# On the Threshold of the Great Work of Reconstruction in Soviet Russia

By Karl Radek

## I.
## THE ROLE OF THE TRADE UNIONS IN RUSSIA

WORK—that is the password that lives in the consciousness of millions of adherents of the Soviet, and which must be translated into knowledge and faith on the part of all the working masses of Russia. Indeed, all the differences arising within the Russian Communist Party grow out of the difficulty of grasping the complicated conditions in which the process of economic re-construction must proceed. In this article, which is to serve foreign comrades as a guide, these differences may best be presented by directing attention to the conditions under which the Communist Party has to execute the decisions of the Congress of Workers' and Peasants' councils.

Soviet Russia is a country with an 85 per cent agrarian population. The Soviet government is not a purely industrial government. It called itself from the first day of its existence a Workers' and Peasants' government. Many of its opponents and adherents believed that this was merely a nominal title in order to lure and quiet the naive little peasant; since the government is entirely in the hands of the Communist Party and since the left-wing social revolutionists have deserted it, this erroneous assumption seemed even more justified. But this was incorrect. Simply because no peasant party sits in the Soviet government, the millions and millions of peasants in Russia do not disappear. Without their co-operation neither the defense nor the reconstruction of Soviet Russia is possible. In the Red Army, which in its majority was a peasant army, the class consciousness of the peasant was made keener, and political intelligence was imparted to them. Altho they take no part in the government thru a separate party, the government is compelled to consider their interests and their sentiments. Now, when the peasants have the feeling that the danger of the return of the Junkers has disappeared, now when the government must demand fresh sacrifices from them, in order to bring industry into operation, thru the assurance of provisioning the city population, the government must naturally give the peasant class special considerations.

After three years of imperialistic wars, the industrial classes have bled and starved for another three years for the dictatorship of the workers. Tortured by hunger and cold, they have often wavered and hesitated. But always the Communist Party was able in the hour of danger to arouse in them the necessary energy to continue the work in the factories and to place a hundred thousand of them at the head of the administrative machinery of the state and at the head of the army.

Not only did they hunger for victory and fight for it, but they renounced a great part of the rights which belonged to them according to the Soviet constitution, and which needed to be sacrificed on account of the dire necessities of the war. Since their most energetic leaders were at the fronts and were sent on economic and administrative missions from one end of great Russia to the other, the proletarian mass organs of the dictatorship, the Soviet and the unions, were crippled. The working class was compelled to yield when, in place of their elected representatives, frequently revolutionary and non-revolutionary bureaucrats took matters into their hands, which must inevitably lead to special abuses in an impoverished country. They had to exercise patience, when all available clothing was reserved for the army, when bread went to the front, while they received herring-tails or raisins. Now the possibility of peaceful labor for a certain time appears to be at hand. If it was possible during the war to charge all abuses and deprivations to the account of the war, the masses must now be given the possibility to find for themselves the means for removing the abuses and diminishing the deprivations, and to convince themselves how much of their burdens can be removed, and what they must still bear for the purpose of overcoming needs. The dictatorship of the proletariat was not suspended, as the Mensheviks of the whole world shrieked, when the organs of this dictatorship were restricted. But now when, perhaps only temporarily, no war exigencies require the mailed fist of the proletarian dictatorship, the needs of the hour demand that the organs of the dictatorship be restored to that class the defense of whose interests constitute the real purpose of the dictatorship.

The trade unions, which the Bolsheviki had already captured under the rule of Kerensky, have fought during the three years of civil war side by side with the party, with the Soviets, in a true sense of the word, for the maintenance of the dictatorship. Not only did tens of thousands of members of trade unions go to the various fronts because of mobilization, but other tens of thousands went voluntarily and fought with weapons in their hands as soldiers or Red officers for the workers' dictatorship. When the Soviet Republic needed thousands of experienced men for the organization of provisions, the trade unions gave them. And when the hungry workers in the factories grumbled, when it was necessary to get seamstresses to produce 15,000 army coats a day, altho they were hungry, cold and bare-footed, these trade unionists went to the factories and to the homes of the workers in order to overcome their fatigue thru persuasion and explana-

**Peasants listening to speakers from the propaganda train "Lenin" at the station of Sosovo, in Siberia.**

tion and to make them forget their hunger. On them primarily the masses exercised pressure, and they who had been until now accustomed to the organization of the battle corps, for the improvement of the condition of workingmen thru strikes, were compelled to make it clear to the masses that only thru work can the needs of a proletarian regime be met. Quite true, the trade unionists, oppressed thru too great a division of labor, are not even in Soviet Russia people with the broadest mental horizon. They have not sufficient leisure to think out all connecting issues, and yet they frequently take more sober thoughts than those leaders whose task it is to keep their eyes directed towards the entirety. As all of Russia, they were continually diverted thru the civil war from adjusting the problems of production, altho they recognized, ever since the first congress, held after the October revolution, the role which the trade unions must play in production. The trade unions comprise 7,000,000 workers. It is clear that under the conditions of Russian transportation, with the small number of trade unionists left by the war in the trade bureaus, they could not remain in sufficient contact with these masses. But that does not alter the fact that these seven millions of more or less organized trade unionists are the proletarian basis of the Soviet government, that the comrades conducting the trade unions and the 500,000 Communists in them are the connecting link between the six and a half-million and the Soviet government.

These premises are not grasped with sufficient completeness in a first attack on the problems which confront the Soviet government and the Communist Party by all comrades or by all groups which have crystallized out of the party. Industry can only be built up when the independence of the working class is developed. The organs of this mass, if they are to be separated according to kinds of production, are the trade unions. Therefore, the control of production must lie completely in the hands of the trade unions—so declares a group of the unionists under the leadership of Comrade Schlapnikoff. The unions will succeed better with the problems of production than the best workers' bureaucracy, to say nothing of the civilian specialists who, accustomed to large means, are compelled to go slow in view of the poverty of technical equipment in Soviet Russia, even if they were able to handle the workers properly or to arouse in them the necessary enthusiasm.

This tendency overlooks a small fact. In a country with 85 per cent of peasants, the re-construction of industry is impossible without the confidence of the peasants that their interests shall be considered, that they shall not be plundered by the industrial workers. If the industrial economic plan can be accomplished thru an organization formed from representatives of the production unions, the general economic plan cannot conceivably be accomplished without the co-operation of the organs of the state, which have to put in order the agrarian question and that of matters of subsistence, and which are not constituted of trade unionists. Only

a general economic plan should be considered, because bread is as necessary for industrial production as coal and iron. This point of view alone makes it impossible to hand over the direction of industry exclusively to the unions. Also, there has accumulated in the general economic organs of the state a mass of experiences which cannot be discarded; for instance, the enrollment of the specialists, as long as they have not been completely assimilated by the unions, can be more easily done by official means than thru the medium of the unions. Then there is the further consideration that the unions—certainly not thru their own fault, but owing to the conditions under which they have functioned—are very little prepared for the direction of production. Their technical comprehension is small; even their production propaganda is in its infancy.

This last observation is the point of departure of the position of Comrade Trotzky and a group of very competent unionists like Holzmann and Kasior. The latter emphasize the weaknesses of the union and, besides, insist that in their present state the unions are still incompetent to conduct production. But yet they consider the direction to be the task of the unions in a proletarian state. Thence they conclude the necessity of reconstruction, of reorganization of the unions. Thence also comes their preoccupation with thoughts of production and their induction of new members who have learned in the economic organizations and in the Red Army to direct great enterprises unemotionally and energetically. Their point of view tends to reform, with all their powers, the unions from the top down, that is, to take away a part of their independence, in order that they may become in the future the directors of production.

What has been said above concerning the direction of producting thru the unions in the discussion of the point of view of the group of Schlapnikoff, we need not here repeat for the group of Comrade Trotzky. The same is true here. What should specially be considered in this case is the danger of his conception that the unions have no task but to increase production. One might perhaps accept this formula, for in a workers' state every organ of the mass of the workers must serve the principal task, and that is production. The points which make Trotzky's passionately maintained point of view dangerous are the following: In the unions we have only half a million Communists against six and a half million workers without party. This indicates how great is still the function of the union as the educator of the masses towards Communism and as the intermediary between the Soviet government and these millions. Trotzky is, indeed, quite right when he maintains that this educational function cannot be accomplished outside the demands of production, but he cannot deny that there is an independent problem, a problem which in the first place consists of the great task of persuasion, and not primaritly of direction or command. When Trotzky declares that in a workers' state, not the unions but the government must care for the material welfare of the workers, he tells only a part of the truth. Lenin is entirely right, when contrary to Trotzky, he declares that the Russian government is a government of the workers and the peasants. If weapons like strikes are inadmissible and unnecessary against such a government, there is not the slightest doubt that the state has an interest in controlling a mass organization which feels the pulse of the workers and which is always concerned in securing as much as possible for the workers from the state. One might complete the thoughts of Lenin to the effect that because no peasant party is represented in the workers' and peasants' government, which might represent the peasants' interests in the coalition by means of pressure on its partner, the battle between the workers and the peasants is conducted in the heart of the Communist government itself.

The latter has always before its eyes an 85 per cent peasant population and an industrial population of only 15 per cent. This may often lead to slips and errors of calculation. If the government wishes to retain under its feet its only secure basis, the proletarian, it is to its interest to be subjected constantly to the pressure of the unions, its constant controlling factor. The second danger in the attitude of Comrade Trotzky lies in the fact that the reconstruction of the unions from above may easily lead to their bureaucratization and militarization. Specifically, for this reform, there should be considered the tens of thousands of comrades who have during the last two years passed thru the great school of the Red Army. Now, Trotzky is entirely right when he calls attention to the fact that the Red Army was by no means formed solely thru compulsion, not even primarily so. Conviction, spiritual persuasion, played a great part in its formation, and the comrades who have formed the army are most certainly equipped to hold places of command and advice in every other post under the Soviet Republic. However, the differences in the methods of work on the field of attack and in industry are immense. Where every error may cause the death of hundreds, where one must decide the most important matters in a few minutes, cooly and unemotionally, and must carry them thru, the will to command is of more importance than the will to convince. Truly, the questions relating to the rebuilding of production require energetic attack; not an easy-going direction, but the will to have things moving in the shortest possible time. But since psychologically the consciousness of danger, due to delays in the factory, does not burden the masses as much as on the field of battle, every harsh attack would damage production, rather than promote it. Naturally, the Soviet government cannot renounce compulsory measures against comfortably negligent elements, simply because they hold the labor club, but its main method must be persuasion, agitation, which work more slowly but all the more surely.

II.

As in all discussions, opposed points of view are crystallized into catch-words, or are at least so characterized. Thus the position of Schlapnikoff's group is known as "Syndicalists." That of Comrade Trotzky has adopted the slogan of "Production Democracy," but is called by its opponents "Bureaucratic-Militaristic." That of Lenin is spoken of as "Worker Democracy." All of these designations have only very limited value. The tendency of Schlapnikoff acknowledges the dictatorship of the proletariat, the proletarian state, which was never true of the Syndicalists. Those circles of the party grouped about Trotzky do not consist of bureaucrats nor of military blusterers. They represent, so far as their energy goes, by no means the least considerable portion of the Commuist Party, and their military gruffness is of too recent origin to have a permanent effect on their characters.

Trotzky's own choice of a slogan, "Production Democracy," need not be contradicted on theoretical grounds. Democracy is the system of the bourgeoisie by which it rules the masses, giving them certain political rights but keeping in its hands all means of production. In speaking of a Workers' Democracy, the addition of the term "Proletarian" indicates that the tools of production and the power belong to the proletariat; in short, that the old political conception of democracy has succumbed to a gentle disintegration. The use of the concept "Workers' Democracy" has also the specific purpose of accentuating that the proletarian dictatorship is coming or seeking to come to the position where it will not only be supported by the working class, to defend their interests, but also to represent them thru the mass organization of the proletariat. Production democracy has no meaning at all unless it be an interpretation of the motto: "Who does not work shall not eat." In this is expressed a means to an end, but not the purpose of the dictatorship of the proletariat. But we may well drop these explanations of the history of dogma, for Trotzky is not concerned with the introduction of a new theory or the proclamation of a new policy, but rather with avoiding the accusations that he is developing production by militaristic-bureaucratic methods. He is concerned with the determination of a universally acknowledged fact, namely, that the Proletarian Democracy in Russia can only maintain itself by learning to produce.

And that it will do. It will do so because there is in the Russian working class, in the Communist Party, enough energy to make that Soviet republic, which they have defended on the field of battle, secure thru their labor. In this the entire Communist Party, enough energy to make that Soviet Republic, means are of such a nature that they could not grow into antagonisms, which might impede the increase of production. The Communist Party is completely in agreement that the unions must participate in this work in growing measure. Even their program declares this. As soon as the trades unionists re-

**A deserter from Wrangel's ill-fated army. To judge by this fellow's appearance is it any wonder so many of Wrangel's soldiers deserted and revolted?**

turn from army service and get back to the trades and shops, the increase of their participation in the direction of production will follow of itself. Nobody can or wishes to renounce their aid. That Schlapnikoff's demand for the transfer of production to the unions is not absolutely law and gospel is quite apparent from the simple fact that the great majority of unionists themselves admit themselves to be for the time being ill adapted to exercise this function. Should we then attempt to adapt them by throwing them into the great kettle to be stewed and roasted into condition under the direction of the military and economic cooks? The military comrades themselves must first adapt themselves to the new tasks in economics and they have not less to learn than the unionists, altho possibly in other directions. Is the party to renounce the persuasion of the unions? No one dreams of it. Anyone who reproaches a Lenin or a Zinoviev because they are basing themselves on the neutrality of those unions, which they have fought all their lives, makes himself ridiculous. Naturally, the party to whose discipline the comrades in the unions are subjected

as much as all others, will permanently control their policies, beeause the party is the most exalted instance of the labor movement, beeause it alone has a comprehensive theory of the labor movement. But it will do its duty to the unions with the understanding of the special tasks and methods of the unions. It will carry this out not in a spirit of guardianship but in the spirit of broad communistic guidance.

The influencing and adaptation of the unions to their new tasks are not new problems in principle but are new as parts of a program to the extent that they now confront the proletariat; and to these problems the party will direct all the forces available. Among these are the eompetent comrades from the army and eeonomic organizations. But the party will say to them: You are not entering the unions as clever instructors for stupid unions, but so that you may adapt yourselves to the new tasks and learn to execute them. The union organizations daily take a great part in the conduet of production. The differences between the concrete proposals of the various groups of the party in reference to this partieipation are not at all great. Actual experienee will have to show what must be added and what subtracted in this field. Inasmuch as the unions, in their entirety or possibly by special adjustments, become more and more incorporated into the direction of production, they will not become bureaueratic ehancelleries.

For the achievement of their tasks they will not at all need to be officialized formally. Quite on the contrary, official government adoption would only hinder them in the execution of their tasks. So long as only a half-million of the seven million trade unionists belong to the party there is the proof that they are not yet filled with the spirit of communism, the foundation of the Soviet Republic. Under these circumstances the formal officialization of the unions would only impede the Communists in the accomplishment of their tasks. The unions will exercise governmental functions and the better the Proletarian State and the unions co-operate the sooner will reluctance to an official adoption disappear, but the more eertainly also will such officialization become unneessary.

This is the status of the debated questions of the Communist Party in Russia. The bourgeois press and the Mensheviki have always prophesied that the Communist Party would perish because it had throttled the workers' democraey, the freedom of discussion in the ranks of the working elasses and their organizations. Now that the party is discussing publicly the differenees of opinion concerning the unions as it diseussed those arising from the peace treaty of Brest-Litovsk, and those concerning the organization of production, in order to arrive at a unified decision of this important question of the Russian revolution, the bourgeois and mensheviki press is prophesying that the Communist Party of Russia will perish beeause it does not hush up its disagreements but diseusses them. It is the strength of the Russian Communist Party and working class that they understand how to waive discussion when the moment of battle has arrived and that they discuss, and diseuss thoroly, when preparations for new battles are the subject. The discussion has already polished off some of the rough spots. And when the party deeision will have been reached the party will stand like a "roek of bronze" on which the enemy will break his teeth. The great task of economic organization will be eompleted even if our enemies disturb us. The eongress of workers' and soldiers' couneils has submitted to the Russian working class and to the world proletariat no plans which can only thrive in an idyllic world where the sheep and the wolves pasture peacefully together. The plans are battle plans against the bourgeoisie of the world. If we get a breathing spell these plans will be completely realized. If we are compelled to fight on with weapons in our hands only a part of the great plan of construction can be realized immediately; but the world bourgeoisie will have to repay for this disturbance of our labors. In a battle with arms we will secure the necessary conditions of a reconstruction, possibly somewhat retarded but all the more complete.

# The Star is Risen

**Russia is free! The Star in the East**
**Is risen. Nor scourge of czar nor priest**
**Shall e'er again with blight and sorrow curse**
**The children of our green-valed, native earth;**
**The banner sweeps o'er boundless northern plains—**
**Speed the glad message, Brotherhood now reigns.**

# Conference on Scientific Organization of Labor and Production in Soviet Russia

ON Jan. 20-28, an inaugural conference took place in Moscow for the scientific organization of labor and production. Over 150 engineers, professors, and highly skilled specialists, including representatives of various trade unions and industrial organs interested in the organization of labor, participated. The diverse political tendencies at the conference met on the platform laid down by the Communist Revolution in the field of labor anl production.

The conference was opened by comrade Gvosdiev (ex-minister for labor under the Provisional Government), chairman of the Organizing Committee for convening the conference, who remarked that the conference was the first experiment of its kind on the organization of labor not only in Russia, for, as far as is known, such a conference has never taken place anywhere else in the world. The aim of the conference was to throw light on the fundamental questions of the scientific organization of labor in industry and to create a central organ able to exercise a daily influence over the building up of national industry in the sphere of the organization of labor.

In the exchange of greetings that followed from various labor organizations and the Socialist Academy of Science, one was recurrently reminded of Lenin's celebrated phrase to the effect that happy times are coming for Soviet Russia, when, instead of politics, our conferences will discuss questions of industry and production, and when engineers, technicians and savants will take the place of politicians. Verily, the whole proceedings of the conference confirmed this supposition.

Comrade A. Bogdanov, in his report, pointed out that Man's organizing experience, up to present times has not, as a whole, been scientifically systematized. This experience was accumulating and taking shape, but it was elemental and unconscious. All science handed down to us is essentially a systematization of the organizing experience in a given field. Under the capitalist system, this systematization has been developing in the direction of individualization with an utter disregard of the experience of other systems.

We know the science of the structure of an army and of a factory but we do not know the general organizational tasks which could lead to the attainment of a harmonious system in various fields.

In characterizing Russian industry as it stands today, comrade Bogdanov pointed out that, for organizing production in Russia in its present state, it is necessary first of all to carry out a careful census. Let us suppose that after such a census we learn that we have such and such a number of the population, so much labor power of a definite degree of skill, and so much incapables, including here also the training of new men. We would then be able to calculate how much of one or other articles of consumption, raw material, or implements we need, and get the correct calculation of an economic entity.

Speaking of the importance of technical progress in industry, comrade Bogdanov asserted that the technical revolution, in spite of all difficulties, is possible of realization in Russia, even more so than in any other country. The progress of every technical revolution is obstructed by the vitality of the old enterprises, the reconstruction of which demands a great realignment of the economic forces. From this point of view, the technical revolution in Russia has a clear path; all kinds of improvement are applicable in all spheres of industry.

The main work of the conference was conducted in Sections, the conclusions and decisions of which are of tremendous importance not only in relation to the new "science of the organization of labor", but also for the industrial life of Soviet Russia itself.

Among others, Professor Chalpanoff, from the Section of Psychology of Labor, made a report on the function of psychology in the organization of labor. "Only psychology"—said Professor Chalpanoff—"can solve the still problematical questions of labor. It studies the influence that is exercised by exhaustion, will, effort, rest, etc., upon the productivity of labor. The function of psychology consists in discovering the factors which render it possible to produce the greatest amount of products with an expenditure of the same unit of time and effort. It should lay down the path of adapting the machine to the individual piculiarities of the worker, to his abilities, perception, mind, will and so on. It should define when the worker begins to feel tired, and how he is influenced by monotony and variety of work, etc. It must define the fitness of each worker for a definite specialty, it must go into technique and create a type of psychologic-engineers."

Doctor Granovsky remarked that the time had come to solicit the aid of technicians, economists, and physiologists in the question of the organization of labor. "The application of human labor in the industrial processes should be based on the systematic study of labor power from the point of view of biology and sociology, using for this aim the methods of natural history and social science. At the present time, the Commissariat for

Labor is organizing a State Institute for the experimental study of human labor and investigation into scientific-concentration and education, which is to work in close contact with the evonomic administrative organs and the industrial organizations of the workers."

Professor Gredeskoul made a report on "Taylorism and Socialism".

Engineer Polynkovsky, speaking on the introduction of scientific methods of organization under present conditions, declared that we must accept the principles of the organization of the labor process outlined in the Taylor system. When this business was in the hands of the capitalists, it was the source of great evil, but now, when this process is in the hands of the workers themselves, the latter need entertain no fear of the scientific organization of labor. The bad aspects of Taylorism need cause no dismay if the working masses take the matter up in a practical manner. When the training of the working masses will have been accomplished a great industrial wave will sweep over the whole country.

At its last sitting, the conference adopted a multitude of proposals and practical measures put forward by the Sections, in the interests of the scientific organization of labor. Finally, the presidium proposed the following general resolution, which was adopted by the conference.

(1) By the scientific organization of labor should be understood, organization based on the careful study of the industrial processes with all the accompanying factors and circumstances. The basic method here is the calculation of the expenditure of time, material, and mechanical labor in terms of things, the analysis of all collected data for the purpose of securing the symmetrical and most advantageous plan of production;

(2) The essential basis of scientific organization is the work and deductions of psycho-physiology, reflexology, and hygiene in relation to the process of labor and to the endurance of the worker, this being the sole means to preserve economy of production and the interests of the workers themselves.

(3) While recognizing the merits of Taylor and his collaborators in the establishment of a scientific method of organization and a rational utilization of the technical factors of production, the conference considers the identification of the conception of "scientific organization of labor" and the "Taylor System" erroneus, in view of the fact that the latter conforms to the principles of the scientific organization of production only in the above quoted case; whereas it has unscientific aspects, aiming chiefly at the excessive augmentation of labor effort in disregard of the sum-total of energy at the workingman's disposal.

(4) In view of the extreme disorganization of the economic life of the republic, which individual organizers unacquainted with the method and accomplishments of scientific organization strive to alleviate, the necessity arises of paying special attention to the methods of scientific organization. These methods open up wide possibilities of a sure, rapid, and systematic improvement in the industrial position, and they should therefore be widely used and encouraged.

**A Tartar coal miner of the Caucasus on the market.**

(5) In conformity with this an organ should be created which, basing itself on the workers organized in the industrial unions, would set up a symmetrical system of measures for the carrying out of the methods of scientific organization.

The chairman, Professor Bekterov, in closing the conference, made a resume of its work, and expressed himself as follows:

"Our conference, in my opinion, forms an historic event for our country. It not only spent its time on theoretical work, but it has even afforded practical results. Having made the first step to define the practice of the scientific organization of production, the task of the next conference will be to negotiate and reach an agreement with the working elements who will be fully represented thereon."

# How Industry is Managed in Soviet Russia

THE MANAGEMENT of industry in the present time in Soviet Russia is as follows:

The Supreme Council of Public Economy is the central organ, defining the production program for separate branches of industry, and regulating and managing industry; in the provinces there are the local councils of public economy. Each branch of industry, in its turn, is managed and regulated by the Head Department in the centre, and by the corresponding section of the Provincial Economic Councils in the localities. Finally separate industrial enterprises or their combines are managed by the Shop or District Management.

All organs managing industry have as their basis the industrial unions. The apparatus of management is constructed wholly on this basis.

The guiding apparatus of the Supreme Economic Council is the Board, which at the present time consists of 13 persons, formed by agreement with the All-Russian Central Council of Trade Unions (A. C. C. T. U.). The Boards of the Provincial Economic Councils (P. E. C.) consisting of 3 to 7 persons, confirmed by the Board of the S. E. C., are elected by the local Executive Committee in agreement with the local provincial T. U. Council; the Chief Industrial Departments are appointed by the Board of the S. E. C. in agreement of the Central Committee of the corresponding trade union, and in the event of disagreement, with the Presidium of the Central Council of Trade Unions. The District Management of enterprises is preliminarily indicated by the District Conventions of representatives of the workers of the corresponding enterprises, and is confirmed by arrangement with the Provincial Branch of their trade union, with the Chief Department of the corresponding branch of industry or with the Prov. Econ. Council according to what category the concern belongs to, the second or third. The management of an enterprise is appointed by the District (or by the Chief) Management.

The management of industry is thus based on the industrial trade unions, and the trade unions and their amalgamations take part in the organization of national economy just as they take part in organizing the apparatus for the regulation and management of industry. Hence, the trade unions and their amalgamations only formally take part in organization of the managing apparatus, i. e., they agree on one or another candidate put forward by the organs of the Supreme Economic Council; others apart from agreement also put forward their candidates which form the majority; and finally the degree of pariticipation by a third class is deeper; they not only participate in the organization of the managing apparatus but also in the organization of industry itself, so forming an absolute minority.

In summing up the participation of the wide labor masses in the organization of industry, the Board of the Supreme Economic Council establishes the fact, that the participation of the workers in the organization of industry was business-like and creative. The following table characterizes the degree of participation of the workers in the organs of management:

**Table Showing the Proportionate Representation of Manual Workers, Technical Experts and Office Employees on the Supreme Economic Council, and as Factory Managers.**

**Personnel of the Supreme Economic Council and Prov. Economic Councils:**

| Workers | Per cent | Technical Experts | Per cent | Office Employees | Per cent | Total Personnel |
|---|---|---|---|---|---|---|
| 908 | 61.6 | 451 | 30.7 | 58 | 31.0 | 188 |

**Committee Factory Managers:**

| Workers | Per cent | Technical Experts | Per cent | Office Employees | Per cent | Total Managers |
|---|---|---|---|---|---|---|
| 726 | 63.5 | 398 | 34.9 | 37 | 26.4 | 142 |

**One-man Factory Managers:**

| Workers | Per cent | Technical Experts | Per cent | Office Employees | Per cent | Total Managers |
|---|---|---|---|---|---|---|
| 74 | 51.4 | 31 | 22.2 | 19 | 1.7 | 1,143 |

**Total:**

| Workers | Per cent | Technical Experts | Per cent | Office Employees | Per cent | Total Members |
|---|---|---|---|---|---|---|
| 108 | 57.2 | 22 | 11.8 | 114 | 7.7 | 1,473 |

Here we have 61 % of workers, among whom are many prominent administrators and organizers, and 30 % of experts, with whom we cannot dispense, especially now, when wide industrial perspectives of peaceful construction have opened up before the Supreme Economic Council.

The labor management changed its character in the course of the work itself. At first, large collegiates stood at the head of the management in the centre, in the districts, and at the enterprises, a thing which made necessary to have representatives of all kinds, of departments to decide all questions co-ordinately. These collegiates also aroused the mistrust of the workers to the administrative-technical personnel and the officials, i. e., the department representatives. In proportion as the corresponding collegiates actually united the management in their own hands, the department representatives became superfluous; part of the workers became so familiarized with the work that they were actually able to conduct it themselves and the former distrust gave way. Parallel with these changes, there took place the transition from wide representative collegiates to narrow business directorates of one-man management.

At the present moment, most of the factories and works have gone over from collegiate to one-man management; out of 2,483 enterprises 2,183 are under one-man management and 300 under collegiates.

It must be emphasized that in the practice of economic management at the present time the principle of automatic representation of separate institutions in the organs of management is already done away with, and we have at present gone over to the principle of organizing the guiding collegiates or appointing confirmation of the activities of each industry or its branches by the corresponding guiding organ of the State on the basis of business considerations. Owing to this, the possibility is avoided of friction or misunderstandings between the trade unions and the organs of economic management, in view of the fact that persons belonging to the organs of industrial management or the leaders of these organs, are responsible before the corresponding central committee of the trade union, and on the other hand the responsibility for the preparation in the execution of their tasks rests with the organs that appointed them, and with the trade union in agreement with whom they were appointed.

The Central apparatus of the Supreme Economic Council is split up into three groups of sections. First of all the Board of the Supreme Economic Council itself, six sections, with the aid of which it established the industrial plan for the current year and carries out the general leadership of industry. These sections are:

1. The commission for production which receives separate production programs for separate branches of industry, which are examined and submitted to the Board for confirmation.

2. The Financial, Economic and Accounting Sections, which examine the balance sheets of both central and local economic organs and which finance industry.

3. The Utilization Commission, which establishes the plan of distribution of the products of industry (its personnel also comprises representatives of the Food Commissariat).

4. The Council of Supply and Distribution (in process of formation), which confims the program of the distribution of semi-manufactured products which require finishing, and conducts all the technical work of distribution and supply.

5. The Factory Statistical Section.

6. Section for Provincial Contact, which conducts communication with the local Councils of Public Economy.

The second group are production sections, there being 15 of them, in accordance with branches of industry. They directly manage and regulate the corresponding branches of industry, in respect to which they oversee the execution of the production programs and orders, they distribute the raw material, take account of manufactured products, subsidize the enterprises of the last group that are of special state importance. The contact of the production sections in the local organs of public economy is under the Provincial Councils of Public Economy.

The third group of sections are: 1. Industrial administration. 2. Inspectorate. 3. Juridical Section. 4. Editing and Publications, etc., which can be defined as auxiliary sections.

In each province, the local economic council is the organ directing and managing industry; i. e., the Provincial Council of Public Economy, organized on the same lines as the Supreme Council.

The local councils are spilt up into corresponding industrial sections: Metal, Textile, Chemical, Electro-Technical, etc., which are directed by the Boards of Economic Council on one hand, and on the other hand are likewise subordinated to the corresponding production sections, where they present their balance-sheets and whence they receive instructions and orders as to the management of the industry under their auspices and on their territory.

Enterprises of the second and third groups are under the management of the local councils. Thus the local councils subsidize the enterprises under their management, according to a budget, substitute and appoint directors, etc. At the head of the sections of the local councils are men confirmed by the Board of the Local Economic Council in agreement with the corresponding Trade Unions. In order to keep pace with the growth of work caused by the Federation of other Soviet Republics, local councils for public economy have been created. These now number 81.

# From Berlin to Moscow

By E. Bouwman

I.

THE CONFERENCE at Berlin succeeded beyond our expectations, not only as regards the discussions that took place, but also as regards the number of those who attended it. Two important resolutions were adopted. First, that all the participants of the Berlin conference will be present at the congress of the International of the Red Trade-Unions in Moscow and that the Centrals of the various countries that were not represented at the conference be prevailed upon to take part in the congress to be held at Moscow; second, an agreement was reached on six points which will form the basis for the discussions at the congress for the participants of the Berlin conferenee.

We do not mean to imply that all who took part in the conference at Berlin were united on all points. This was by no means the case. As appears from the discussions (a full report of which was published in "De Arbeid") different tendencies were represented; the divergent opinions clashed, both as regards fundamental questions and questions of organization. Distinctly above all, however, sounded the parole: **To Moscow!** Not a separate Syndicalist International, but **ONE single International of all the Industrial Workers of the World** to be brought about in co-operation with the International of the Red Trade-Unions.

This was the message which Comrade Hardy of the I. W. W. brought with him from America. Our friend Barker from the Argentine and the Dutch delegation expressed the same opinion, whereas, of eourse, Comrades Jaek Tanner of the Shop Stewards in England, Victor Godonneeke and Jean Ceppe, Minority C. G. T. in Franee (which parties have already joined the International of the Red Trade-Unions) entirely agreed with us.

Only the German Syndicalists, represented by Comrades Fritz Kater, Max Winkler, Rudolf Rocker, August Souehy, Frank Barwich and Theodor Plivier, supported by the Deputy of the Swedish Syndiealists, Franz Severin, were in opposition on this point. This side repeatedly declared: "We are Syndicalists and what we want is a Syndicalist International;" whereas it was clear eaeh time again from the deliberations that especially the German Syndicalist movement has become fast-rooted in the anarehistic doctrines, as was formerly the ease for a long time with the Independent Trade Movement in Holland. At all events the Germans wished to go to Moscow; with a resolution, however, that not only would have widened the breaeh between themselves and Moseow, but would also have made it impossible for them to come to an understanding with the different revolutionary Trade-Centrals that have not yet joined the International of the Red Trade-Unions.

No one who is at all at home in the industrial workers movement will be surprised that on this point especially the Russian delegation, represented by Comrades S. Belinsky and Grebelskaje (who also represented the International of the Red Trade-Unions) came in conflict with the German Syndicalists. Belinsky maintained the standpoint that the first task of this conference must be to choose between Amsterdam (A. T. I.) and Moscow (R. I. I.). Between these two there is no meanway, and therefore the formation of a separate Syndicalist International would simply increase the confusion still more in the international revolutionary trade movement than was the case at the moment. The representatives of the I. W. W., the Argentine, the Minority C. G. T. of France and the Dutch delegation were entirely in aceord with this standpoint. The Dutch delegation aimed at striving to find a common working-basis for the revolutionary trade movement of the world to meet the International of the Red Trade-Unions on. On the other hand, the German Syndicalists and the Swedish Deputy placed themselves on the basis of the resolution passed by the Syndicalist Congress which was held in London in 1913, and that goes out from the idea of forming a Syndicalist International. Moreover, the condition was made that only the organizations that accept the federative standpoint could take part in the formation of this international.

By aceepting this resolution it follows that a eentralized organization like the I. W. W., which like almost all the Revolutionary Centrals in the other eountries has organized in its ranks besides Syndicalists, also Communists and Anarchists, would not be able to work in the purely Syndicalist International as it is intended by the Germans.

The standpoint advoeated by the Amerieans is, in our opinion, therefore, the correct one and agrees in all respects with that adopted by the Dutch Independent Trade Movement, namely, that we can no more form a Syndicalist than a Communist International. There must be room in our international for the adherants of all parties and all tendencies who accept the standpoint of the class war and who are prepared to join us in the revolutionary struggle against eapitalism. Therefore, all our endeavors should be directed towards the formation of the **International of the Industrial Workers of the World.**

It is a matter for real satisfaction for us that we were able to come to an agreement on this point, whereby the original plan of the Germans to bring about a purely Syndicalist International was frus-

trated. And so is the fact that **the conference fairly generally placed itself on the standpoint that the Centrals of each country shall be perfectly free to decide for themselves upon the form they adopt for their respective organizations.** This makes it all the easier to come to an understanding at the congress in Moscow.

II.

Two other questions dominated the discussions at the Berlin conference. In the first place the question whether the trade movement (also therefore a revolutionary international trades-union) must be independent of political parties; and in the second place, whether or not the revolutionary trade movement had to accept the standpoint of the dictatorship of the proletariat.

**With regard to the first point the delegate of the I. W. W. declared that tho he had instructions to proceed to Moscow for the purpose of bringing about ONE International of the Red Trade-Unions, his organization maintained the standpoint that the international of the trade movement was in no wise to be placed under the control of the Communist III. International, or of any other political party. This standpoint was also expressly brought forward by the Argentine delegation, Holland, Germany and Sweden.**

The delegates of the two latter countries laid somewhat too much stress on the anti-political standpoint. As tho by negating all political action the workingclass will be able to fight out the political struggle against capitalism. This obviously is impossible. The development of capitalism teaches us that as the class contrasts grow more intensified political and economic actions tend to flow into one until finally in a far-advanced revolutionary situation the dividing line between the political and economic sphere falls away altogether.

Belinsky quite rightly pointed out at the conference amongst other things that the anti-political standpoint had become obsolete, as it no longer adjusted itself to the revolutionary stage at this period. Moreover, it is not only extremely dangerous, but also impossible to seperate the political and economic spheres of action.

Suppose, for instance, Russia—where the proletariat has seized the power—were forced to defend itself at the penalty of the annihilation of the proletarian revolution against the onslaughts of its own counter-revolutionary generals who were aided by the armies of the other capitalist countries, such a step would be a political action and only an unrevolutionary mind would say: "We have nothing to do with political affairs." Consequently a Syndicalist International would be compelled to take part in politics.

**But, as Belinsky said, the relation of the Third International to the International Red Trades-Union is something different altogether. Here we have two separate bodies and it is misleading to represent the second as being under the control of the first, as is usually done on several sides.**

The Third International places itself on the standpoint that organisatorily the trade movement should be completely independent; and in the preliminary statutes of the International Red Trades-Union there is no evidence whatsoever to the contrary. A spirit of union, however, we hold to be essential in the political and economic revolutionary organizations of the proletariat. This is necessary in order to force a united front against capitalism and its assistants. We, therefore, must not interpret the word "independent" in the narrow sense thereof, i. e., not in the sense that tends to isolate the trade movement from the political revolutionary movement, for it is quite possible, without following up the instructions of the political revolutionary parties, to work in harmony with them for the one great aim: the libcration of the workingclass from the yoke of capitalism and the realization of the communist state. The reprensentatives of the revolutionary minority of the C. G. T. of France shared our views on this matter. Tho they have joined Moscow they are nevertheless of the opinion that the trade movement should not be dependent on any political party, but should certainly work together with the Third International and the revolutionary parties. The French comrades pointed to Zinoviev, who recently emphatically declared that the attitude of the Third International towards the trade movement differed altogether from that assumed towards political parties, that no doctrinal standpoint is taken up with regard to the trade movement and that in no way will the communist parties interfere with matters concerning the trade movement.

In connection with the above observations Comrade Belinsky proposed an amendment of Point 5, which, however, was rejected, but will be brought forward again for discussion at the congress in Moscow. It will, therefore, not be out of place to say something more about this amendment. Belinsky proposed to amend Point 5 as follows: "That the International Red Trades-Union shall be independently organized, but shall pursue its actions in deliberation and in co-operation with the Third International."

The acceptance of the amendment would not have made any intrinsic differcnce in Point 5 as drawn up by the commission. Belinsky, too, desires to bring about an independent International Trades-Union. But he further wants to obtain a more positive declaration by the revolutionary Trades-Union International of its preparedness to co-operate with the Third International.

Tho personally the writer of this article would have supported Belinsky's amendment, he voted in favor of Point 5 as drawn up by the commission, as it was more in accordance with the instructions which the Dutch delegation had received from the H. A. S. Board.

**To be more clear: We, too, desire to see a revolutionary International Trades-Union that does not dance to the tune of the Third International, or of any other political party.** But this does not do away

with the fact that in the present revolutionary period especially, we have to define clearly the sharp line of division that separates the reformistic from the revolutionary labor movement in the world. On the one side we have the remnants of the Second International and the A. T. I. who are one at heart; on the other side, the growing revolutionary Third International, which is steadily amalgamating into one International Trades-Union. Between these is no midway. Certainly we can expect that the advocates for the Second International will endeavor to carry on the old concern under another name and will so try to re-unite the parties that have deserted the Second International in the Right front of the labor movement and to smooth the way for co-operation with the A. T. I.

Both Troelstra (one of the well-known leaders of the Second International) and Oudcgeest (one of the secretaries of the A. T. L.) spoke in this spirit at a recent Christmas meeting at Amsterdam held by the S. D. A. P. and the N. V. V. of Amsterdam, where Kleerekooper prcsided, and according to whom the meeting was a demonstration of thc indestructible bond bctween the political fight and that of the trade movement. Both speakers intimated that the Second International must be superceded by an international with a tendency to orientate itself more in the direction of the Left (the A. T. I. was to work with it). But we know what to think of such statements when uttered by men who have hitherto gone arm in arm with the bourgeoisie. What does this amount to other than that the leaders of the Second International in conjunction with the A. T. I. are busy forming out of the more moderate and parliamentarian labor movements a united front against Moscow?

Once more—There is no midway. One stands either on the one or the other side of the line. All over the world evidence is accumulating that the process of separation is gradually approaching maturity. In Germany the U. S. P. chose the middle way with the result that the breach was unavoidable; the Right wing was shoved more to the Right and the Left wing more to the left. The same thing occurred in the French Socialist movement. It wished to have nothing to do with the Second International, nor at first with Moscow; not till the cngress held at Tours in 1920, when a change took place and by a large majority it was decided to join Moscow. The development of the trade movement in France is going thru the same experience. So far Jouhaux and his partisans have succeeded in keeping the C. G. T. tied to the A. T. I. Despite these attempts a strong minority in the French Trade Movement has gone over to the Red Trades-Union International, and unless the signs deceive us, this minority will in time become a majority ready to vote for Moscow against Amsterdam.

To vote for Moscow is to vote in favor of the trade movement and of forming **ONE single revolutionary International of the Industrial Workers of the World, which will not permit the Third International to dictate the rules to it,** but will consult with it and work together, in short, will form a united front in the struggle against capitalism. This is the standpoint we have to adopt in this question and which we shall all have to strive to come to an agreement on at Moscow.

Point 5 of the resolution adopted at the conference in Berlin reads as follows: The International Trades-Union (R. I. I.) is entirely autonomous and independent of all political parties. In the event that the R. I. I. decides upon a certain action and political parties or other organizations declare themselves in accord with such an action or vice versa, then the execution of the decision can be carried out together."

This standpoint makes co-operation with the Third International possible; but at the same time presupposes the possibility of co-operation with the Reformistic International. We think, therefore, that this point is formulated too vaguely and prefer the amendment as proposed by Belinsky at the Berlin conference. This also was the opinion of the representatives of the Shop Stewards of England and the Minority of the C. G. T. of France.

III.

Extensive discussions followed on the question of the dictatorship of the proletariat. On the second day of the conference the two French representatives declared that the Minority in the C. G. T. (including also anarchists) expressed themselves in favor of the proletarian dictatorship. We are in favor of the dictatorship, they said, because we are revolutionists and all who wish to take part in the irreconcilable fight against the dictatorship of capitalism will have to acquiesce in the proletarian dictatorship for the period of transition. The representative of the I. W. W. shared this viewpoint. The I. W. W. people of America constantly propagate the idea of the dictatorship of the proletariat. Hardy, therefore, proposed that the Berlin conference express itself for the dictatorship of the proletariat.

This proposal was supported by Belinsky (Russia), Tanner (England), Barker (The Argentine), and the writer of this article, whereas the German and Swedish representatives strongly opposed it.

The chief arguments against the dictatorship of the proletariat were that the time was not yet ripe for it. Rocker stated, they were for a dictatorship by the workers, but against a dictatorship of force by the state. Moreover, the term "dictatorship" did not originate with thc working class; it was an instrument of the bourgeoisie and dates from the time of the French Revolution, when the Jacobins—the party of the petty bourgeoisie—made use of it for the first time. Later it became a source of conflict between Marx and Bakounine and we Germans agree with the latter. Severin of Sweden, too, placed himself upon the same anarchist standpoint against the dictatorship, for according to him

the word "dictatorship" presupposes: the power in hands of the state.

The Germans proposed that instead of the dictatorship of the proletariat the conference should express itself in favor of the Social Revolution.

Belinsky stated rightly that fencing with the words "social revolution" is a mere phrase. That these words say nothing at all is evident from the fact that the leaders of the International of Amsterdam recently carried resolutions with tremendous applause at London, so that these people too speak about "social revolution" and the "revolutionary struggle." But these words in themselves say very little as long as one is afraid to state with what means one wishes to bring about this social revolution.

What we want to know is that we cannot step from the capitalist into the communist social order. Between these two there is a period of transition during which the dictatorship of the proletariat is indispensable. Whoever refuses to accept the dictatorship of the proletariat is a reformist, for he infers that communism can only be reached by the road of democracy, along which the reformist social-democrats as well as the bourgeois democrats wish to lead the workers. We must not be scared of the word dictatorship, for we shall then make the same mistake that the bourgeoisie makes daily when it tells its readers again and again how fatal party dictatorship is, that in reality does not exist!

The same bourgeois press, of course, approved entirely of the Noske dictatorship, for the reason, in fact, that is was exercised in the interests of the bourgeoisie and the former rulers against the rebellious German proletariat. The dictatorship of the proletariat implies the exact opposite. The delegates of the German and Swedish Syndicalists and Comrade Barker (The Argentine) say: "Dictatorship of the workers themselves is all right," and by this they apparently mean by means of the trade unions! But if the trade unions, say, for instance, that of the Syndicalists, with its 32,000 members, were to exercise the power, would not that be a minority as well? And the Russian trade unions with 6 or 7 million out of a population of 180 million? Therefore, we need under the dictatorship of the proletariat a very wide organization. The proletarian dictatorship has no other object than to destroy the bourgeoisie.

On our side we stated at the conference, and we wish to repeat it once more in this article, that the opponents of the dictatorship of the proletariat omit to indicate another way by which to pass from the capitalist into the communist social order. Rocker's statement that the time was not yet ripe for the proletarian dictatorship is a presumptious supposition by which in fact the idea is propagated that the proletariat is not yet ripe for the realization by means of it of communism. One is apt to forget, however, that under capitalism they will never be ripe, in the sense that the workers en bloc can consciously bring about the social revolution, and therefore, one gives the workers a bill payable within eternity by constantly proclaiming that the proletariat is not yet ripe.

What does it matter to us who was the first in history to make use of the dictatorship? Whether it is a system, as Rocker said, that was first brought into practice by the Jacobins; or whether Marx was an advocate for proletarian dictatorship and Bakounine was not? Marx and Bakounine 60 years ago said many things that are still true in 1920, but as they lived under quite different social conditions, they also said things in those days that are no longer true in 1920. What we have to know is that present social circumstances will place us before the fact that the proletariat will have to have the courage to seize the power. It is not for us to fix the moment when this will happen; the historical development will make that out.

The assertion: "We are against the dictatorship by means of state power" is really a confession that one dares not accept the consequences of the revolutionary struggle of the working class against capitalism. For historically it is as sure as anything in the world that capitalism will not voluntarily resign itself to its doom, any more than it will, without offering resistance, permit the workers to seize the factories and the peasants to take possession of the land in order to found a communist state. On the contrary, capitalism and a whole army of satellites, including a large number of unconscious workers who have been set up against their own class by the most unscrupulous machinations, will impede every real attempt at realizing communism. Under such circumstances, i. e., in a proletarian revolutionary situation there is no time for speculations about state and liberty. What will be required then is a social organ representing the power of the proletariat and which, of necessity, is prepared to establish the proletarian power by means of force. Under such circumstances, when not only the bourgeoisie turns against the proletarian revolution, but when most probably a great number of individuals will try to profit by the disorder and "score a great hit," a rigorous dictatorship is absolutely necessary, especially in the beginning.

No one positively declared himself against the dictatorship of the proletariat at the conference. Besides Belinsky, Tanner, Hardy, Godonneche and the present author, Barker (Argentine) too, declared himself in favor of the proletarian dictatorship, while Rocker declared: "The dictatorship of the workers themselves is all right."

The dictatorship is feared only in the case when it is exercised thru force by the state or when it rests in the hands of a few leaders. These are the men who themselves maintain the narrow trade union standpoint and who believe that there the struggle of the working class ends. According to this point of view they see in the dictatorship by means of the trade union movement the true proletarian dictatorship from below. As if no objections

existed against the dictatorship in the minds of some, mostly conservative trade union leaders.

We ourselves have been working in the trade union movement for 18 years and during the last 12 years played a leading part. Our experience is that the daily practical and opportunistic work in the trade unions tends to make it thoroly reformistic. No wonder that so many trade union leaders become entirely absorbed in the practical work. (Work, let it be noted, does not even give a limited satisfaction to the workers nowadays, who take little interest or no interest at all in the great social struggle.) Let it be clearly understood: We have no intention to be malicious towards certain persons. We merely state a fact, namely, the fact that the trade union leaders, even the best and most revolutionary among them, are for the greater part engaged in work of an opportunistic nature. And in this connection we doubt whether the objections against the dictatorship of a few trade union leaders would not be at least at great as against a number of party leaders.

We are therefore just as much against the one as against the other. The chief thing is to overthrow the dictatorship of the bourgeoisie, which can only to be attained thru the temporary dictatorship of the working class. This cannot and may not be the dictatorship of a party, nor that of the trade union, but of the organization of labor in the widest sense of the word, i. e., of all who are concerned in the production.

Now, the "dictatorship of the proletariat" can be replaced by "the power of the working class," and it was in this spirit that the conference at Berlin passed the resolution. Essentially there is no difference between these two ideas. It is fighting about a **word.** It were better to trouble less about words in these days of fast approaching capitalist decay and of intensified class contrasts and to pay more attention to the revolutionary struggle which must be directed towards the destruction of capitalism.

The German Syndicalists especially should realize this, instead of alarming the workers by the word dictatorship.

---

In these lines we gave an account of the discussions held at Berlin, and our opinion concerning the most important problems which will be treated at the congress at Moscow. In doing so we based ourselves entirely on the principles of the Independent Trade Union Movement in Holland.

The attentive reader will have noted that there still remain points of difference between these principles and those of the Red Trades-Union International. But these are also to be found in every federation of revolutionary trade unions in the different countries. The question is whether the various sections of the revolutionary trade movement in the world will be able to come to an agreement at Moscow. In our opinion this will be possible.

But then we must not go to Moscow to look for contrasts, but to co-operate earnestly in creating **One** Revolutionary Trades-Union International.

# THE SEVEN AGES OF MAN.

**AGE No. 1: THE POLITICIAN.**

**And He Never Grows Out of It.**

# The Australian Labor Movement

By J. Morris

THE LATEST and most authentic information regarding the development of the Australian Labor movement that has been received from that country is to the effect that the mining and transport departments of the One Big Union will become a reality in the very near future.

There are quite a number of interested persons in America who are under the impression that the O. B. U. of the workers of Australia has existed for some time.

Such, however, is not the case, and to all intents and purposes the forming of the two departments mentioned above is the first practical attempt to bring the O. B. U. into being.

If such is the case we are in a quandary as to the actual conditions prevailing in Australia at the present time.

That we may understand and estimate correctly the progress that the Australian worker has made it is necessary to have a general knowledge of the various unions and their activities in recent years. About 90% of the workers of Australia are organized, but as they are separated into approximately 365 different craft unions there is nothing wonderful about it. Even amongst workers of the same trade, such as carpenters, engineers, etc., you will find different unions mutually antagonistic.

There appeared to be no end to this tangle until in the latter part of 1913 the I. W. W. came along with their industrial union propaganda. Immediately a fierce fight began between the old and the new ideas which culminated in the extraordinary development within the rank of the working class that we are attempting to present in this article.

It is unnecessary for us to outline the activities of all the craft unions. We will deal only with the more important ones.

### The Australian Workers' Union.

The biggest union from a numerical point of view is the Australian Workers Union, more familiarly called the A. W. U.

It has a membership of 100,000 and is organized in the pastoral and agricultural industries. A majority of its rank and file are migratory workers because of the seasonal character of the work.

They very seldom pull a strike, as most of the disputes are handled thru the Arbitration Court. Occasionally they indulge in a little job action and it is upon these occasions they display a militancy that is surprising. The officials of the union are reactionary and they do their utmost to prevent the rank ant file from conducting job activities.

Up to the time of my leaving Australia these officials had succeeded in bulldozing these workers into the belief that the O. B. U. is impractical, tho with a rapidly growing militant minority their influence is fast waning. They (the officials of the A. W. U.) are the backbone of the Australian Labor Party (the politicians of the **"labor"** brand), and are continually inculcating into the minds of the rank and file of the union the idea that by electing representatives to parliament they are doing away with the necessity of the strike.

This line of "bunk" is loosing its punch, and to the very evident dismay of the union officials the workers are resorting to job action; in parts of Australia they have even gone so far as to create job committees.

Thru the official organ of the A. W. U., the Australian Worker, the officials are bitterly attacking the growth of the One Big Union idea.

The election of officers is conducted thru a machine that prevents the election of any worker opposed to the policy of the officials.

In order to counteract the propaganda of the industrialists they made the claim that **they** are the O. B. U. and in order to prove it pointed to the presence within their organization of a few workers belonging to craft unions now affiliated with the A. W. U.

They are trying to stampede the workers into their organization but must fail because of their reactionary attitude.

It was these officials who persuaded one group of workers to scab during the 1917 strike on the plea that "it will not affect the strike."

### Coal Miners' Union.

This organization, with a membership approximating to 20,000, is the real fighting unit back of the drive for the O. B. U. The members of this union have a record of struggles with the coal barons that stamps them as a very militant and intelligent group of slaves.

They started the fight for the six-hour day and they appear to be winning out. Their favorite tactic is the "go slow" strike, or as they have it, the "Old Man" strike. Old men work slow, they affirm.

They are quick to rally to the support of any other union that conducts a strike; it was in pursuance of this policy of sympathy that they came in on the 1917 strike.

The union officials are fairly militant and they have for some time encouraged the creation of mine committees.

The union has the habit of so regulating the coal output that the boss is unable to build huge stocks of coal that could be used against the mine workers during a strike.

The miners at Broken Hill stayed out on strike for ten months on the six-hour day issue and improved working conditions. They lost out on the first demand but gained the last.

With this fighting union backing up the new move, success is assured.

**The Australian Seamen's Union.**

The seamen on the Australian coast are an exception to the general run of seafaring men. Taken as a whole they are very militant, but are too easily influenced by their leaders.

Particularly was this the case during the thirteen weeks' strike of 1919. At the present time the militants have control and they are supporting the miners in the new move for reorganization.

Like the miners they are continually striking over one thing or another. The last big strike of theirs gained very little for them. They have the six-hour day in port and an eight-hour day at sea. The many clashes with the bosses have been the means of developing their militancy. The idea of forming ship committees is gaining a foothold and upon one ship this committee declared a "go slow" strike whilst at sea. The union has a membership of 15,000.

The secretary, Tom Walsh, was sent to jail during the last strike because he refused to advise the men to refer their dispute to the Arbitration Court for settlement. He 's a fine type of a man, thoroly understands the labor movement and is a first rate rebel.

The seamen, during this strike, ignored the government and refused point blank to have anything to do with Judge Higgins and the Arbitration Court. The Arbitration Court is a dead letter to them.

Altho they lost out on the six-hour day issue they are preparing for another fight and hope to win out by other means than the starvation strike.

**The Waterside Workers' Union.**

For many, many years this union was considered to be the most powerful union in Australia. At one time they undoubtedly had the boss where they wanted him. High wages and short hours operated for a long time. That was before necessity compelled the master class to organize. Now it is different.

With the growth of the population job competition became accentuated and the union closed its books to prospective members.

The union had preference on the waterfront and if one wanted work he had to carry the union card.

The action of the union in closing the books (at the beginning of the intensification of job competition they raised the initiation fee to a prohibitive level and instituted a procedure of nomination for membership that practically amounted to a closing of the books) was based upon a desire to provide a continuity of employment to its members.

They would be precluded from doing this if all and sundry were permitted to join the union. At the time of the closing of the books they had a membership of about 10,000.

They were a militant bunch, that is as far as the job was concerned, and had a very peculiar habit of quitting the job unexpectedly. This tactic got on the boss'es nerves and when the opportunity offered itself, he smashed the organization. The breaking of this union began with the 1917 strike. The waterside workers came out in sympathy with the railway workers.

The bosses began recruiting scabs and they used the condition created by the union's closing of the books as their main argument in order to entice those who had been prevented from joining the union to help them break this "pernicious organization" that had denied him, the worker, the right to work. The boneheads fell for this line of "bunk" and poured into the bosses' compounds by the hundreds. The bosses then organized them into a union, the "Loyalists' Union," and promised them work in preference to the old union men.

But the bosses discovered that the scabs were very slow and inefficient workers, and when the Waterside Workers' Union officials suggested that the bosses give preference to their members on the grounds of greater efficiency, they immediately complied.

The rank and file had suffered a great deal during the strike, and thru their suffering they saw the mistake of making a job trust of their union. The union books were thrown open and many hundreds of new members found their way to the wharves for work.

The old difficulty of not enough work had again to be met but this time a new tactic was adopted. The old system of loading a ship as rapidly as possible was abolished and no member of the union is permitted to work more than eight hours in one day.

In the days prior to the strike it was a common practice to work right thru, altho it usually meant working seventy-two hours at a stretch, until the ship was loaded.

But now the work must be more evenly distributed and to this end they elect a committee on every ship, on the basis of one delegate from each batch aboard ship and one from each gang working ashore. This committee regulates the speed at which the men are to work. Formerly they loaded or unloaded a ship at the rate of 30 slings of cargo per hour, now they are not permitted by the union to do more than 20 slings per hour.

This is a good start and is indicative of the

development within the organization. The rank and file are supporting the move for an O. B. U. and are very active in backing up the miners and seamen in their attempt to launch the Mining and Transport Departments of the O. B. U.

**The Railway Workers.**

These workers are divided into six different unions, one in each state; five of them generally manage to be working whilst the other is on strike. Most of their strikes were failures owing to the mutual scabbery that is the outcome of their manner of organizing.

Many attempts have been made to amalgamate them into one organization, but all have been abortive.

The militant members within the various sections are attempting to line these unions up into the Transport department of the new organization, and they are confident that they will eventually succeed.

The opposition to this move comes from the old men who are afraid they will lose pensions from the government should they assist in rebuilding and reorganizing their unions.

It was the militant element that forced the 1917 strike, whilst the old workers stayed in and scabbed. The union has a membership of 20,000. All the railways are run by the various state governments and it will be very interesting to watch how the labor politicians, who are in a majority in the State House of New South Wales, will act when these workers begin the offensive.

**The Australian Meat Industry Employees' Union.**

The meat workers were the first to organize along industrial lines. They have done much to break down the craft barriers within the labor movement. Butchers, laborers, electricians, carpenters, engineers, machinists, plumbers and painters were organized into one union and they functioned largely on the job.

If men required work they could obtain it thru the union office only, and no slaves were permitted to hang around the factory gates. No worker could be discharged without the sanction of the job committee. This policy kept the rank and file continually at issue with the bosses and developed a fighting spirit within the organization. The "go slow" strike was frequently resorted to.

The bosses made many attempts to smash the union and partially succeeded in the last attack. This strike is a very interesting one in that it shows how "labor" politicians, when they hold the reins of government, will act.

It happened that a labor government held office at this time and when the bosses in pursuance of a well laid-out policy, locked out the workers in the Alligator Creek meat works, Townsville, this bunch of "labor" politicians gave instructions to the police force of Townsville that the factories were to be protected against possible action by the locked-out slaves.

These workers drove the police from the factories and commandeered all the cattle and sheep for their own consumption.

Immediately, Premier Mr. Ryan, thru his assistant Mr. Theodore, organized a force of some 300 policemen and sent them to Townsville to cope with the activities of the workers.

The journey of some 200 miles to Townsville from Bristane (the seat of government) had to be made by rail, but the railway workers refused to man the trains.

Did this act of the railway workers serve as a deterrent upon the "labor" politicians? Decidedly not!

Did it not occur to the labor government that their manner of "emancipating" the workers from their slavery was not in keeping with the ideas of the workers themselves on that subject?

Maybe it did, but they reasoned that whilst they were fighting for labor's "emancipation" they must not permit the workers to violate property or to run counter to the bosses' institutions.

With their consciences clear upon this point they manifested no mental perturbation during the process of organizing scabs to man the trains. When the police arrived at their destination they immediately proceeded to "hand it out" to the workers of Townsville. The strike was broken and the militants hounded out of the district. The union officials were sent to jail and many workers were shot down in the fights between the police and the residents of Townsville.

The workers, however, do not mind very much a few setbacks of this character. It helps to clarify the issues. It helps to breed a spirit of class hatred, the very essential preursor of solidarity. They are reorganizing their union, discarding its faults and collaborating with the railway workers and the miners on the One Big Union issue. The next strike will be conducted on different lines, more in the nature of a general strike and then, Mr. "labor" politician, your job as a lackey won't be a sinecure.

**"Political Organizations."**

Australia is blessed, or cursed, just as you conceive it, with very few political organizations. We have the labor politicians united under the banner of the "Australian Labor Party," the Nationalist Party, which is composed of politicians, confessedly reactionery, and rats from the A. L. P., and at whose head is the "Hon. William H. Hughes, Prime Minister of the Commonwealth of Australia" (rather a high sounding title but there is nothing to it, really), and a flavoring of farmers' candidates. The Nationalist Party holds down all ministerial jobs and is in a majority in the House of Representatives and the Senate.

The "labor" politicians are without exception of the same kidney as Ryan, Theodore & Co. One of the most popular labor politicians, Frank Anstey,

is losing caste with the slaves thru the scabby tactics indulged in by him during the seamen's strike.

The party is but a huge grafting machine that fakes ballots thru its various branches and on all and every occasion seeks to disorganize the working class. When in session in Parliament, the representatives vote in favor of all restrictive legislation directed against the workers. Particularly was this the case during the war. They gave their support to the War Precaution's Act and the Unlawful Associations Act (this latter act is somewhat similar in its application to the Anti-Syndicalst laws of the U. S.).

They toed the mark again on the new Immigration Bill that takes the place of the War Precaution's Act.

Incidents like the Townsville affair are educating the slaves on the futility of parliamentary action, and they are turning more and more toward the industrial field as their only alternative. The daily papers (conservative) estimated that only 40 % of the workers voted at the last election.

The Nationalist or coalition party does not concern us very much. It is frankly and openly opposed to the working class.

It relies for support upon the farmers, capitalists and petty bourgeois elements, as well as upon the aristocratic or skilled workers, such as the masons, carpenters, etc.

It plays the usual game of politics and concentrates on such burning issues as "hanging the kaiser", war indemnity, etc. The profiteers, extremists and bolsheviks are their anathemas.

The Farmers' Party amounts to very little. The "rube" farmer firmly believes that with a majority in Parliament he could counteract the efforts of the big capitalists in their attempts to crush him out of existence. Like the rest of his kind he is dead from the shoulders up.

A particularly interesting move is being made by the Federal Government. A commission has been in session for the last eighteen months trying to determine a basic wage. It concluded its activities by presenting to the government a suggestion that $21.00 per week is the lowest possible wage that could be given to the working class.

The government turned the suggestion down cold and is fathering a new scheme that works out this way:

The basic wage shall be arrived at by estimating how much it costs to keep a single man, and a married man is to be subsidized by the government according to the number of children he possesses. In other words, they've reached the culminating point in capitalist economics. This move marks the end of the day wherein a single man received the same wage as a married man, and it solves one of the many incongruities within the capitalist system, besides helping to speed the day of the collapse of capitalism itself.

**The I. W. W. (Australian Administration).**

The history of the I. W. W. in Australia is a history of the birth, development, and death of one of the most remarkable and extraordinary organizations that has seen the light of day in Australia. In the latter part of 1913 the I. W. W. was officially launched, and from that day on, right up to the end of 1918, when it went out of existence (as an organization) by virtue of the Unlawful Association's Act, it conducted a veritable whirlwind of propaganda. From the very start it met with a great deal of opposition, and to its eternal credit be it said it met every attack with an all-crushing counter-attack.

The members of the Australian I. W. W. overcame almost insurmountable difficulties, until today, two years after they ceased to function, their ideas are the driving force behind the labor movement in that country. Their advocacy of industrial unionism brought against them all the meal-ticket artists within the craft unions, but so soundly and thoroly did they expose these miscreants that their opposition had very little effect.

When we consider the fact that this group of rebels conducted most of their activities during the war period and at a time when the majority of the people were suffering from a war mania, the success attained by them is phenomenal.

When the soldiers had broken up all other meetings of socialists, pacifists, etc., etc., they turned their attention to the Wobblies. There they met unexpected opposition; here they met their Waterloo. The Wobs were better organized than the soldiers and it was only because of this that they continued to hold meetings right to the end of 1918. The Wobs made many mistakes, but they were quick to realize whether a tactic was efficacious or not, and did not hesitate to alter their ideas accordingly.

As a case in point we can state that many of them believed that that they could line the slaves up into their organization and thereby build the O. B. U. As a matter of fact they attempted to do this in the mines at Broken Hill, but when the officials of that section of the miners' union saw that if they succeeded it would mean that they, the officials, would lose their meal tickets, they squashed the attempt at its inception. If the I. W. W. has gone out of existance as an organization, what has become of its rank and file? Have they any secret organization? No! but within the ranks of the working class they, as individuals, continue the work of rebuilding and reorganizing the decrepit craft unions. Whatever action is taken by the rank and file of the Australian Labor Movement in the near future, we can rest assured that behind is that bunch of rebels who blazed the trail of industrial unionism in Australia.

**"Communist Party."**

Oh, yes! Australia has its Communist Party just the same as most other countries and like in all all other countries it is of recent origin. It came into being near the end of 1920, and as within its ranks are united all or most of the various socialist factions that existed prior to its formation it renders unnecessary a detailed account of its component parts. The socialist parties included within the new organization are as follows:—Australian Socialist Party, International Industrial Workers (ex-members of the I. W. W.), Socialist Labor Party and part of Victorian Socialist Party.

Whether this new group will function effectively or not is problematical. Much, however, depends upon the understanding arrived at between the various parties in the new organization. The A. S. P. has very little time for industrial unionism, concentrating mostly upon the "political" field. The I. W. W. are a bunch of industrialists, disseminating their propaganda on the job, whilst the S. L. P. was wont to run candidates for parliament in opposition to their present stable mates, the A. S. P.

Quite a heterogeneous bunch, eh!

**Conclusion.**

No matter how inconclusive this presentation of conditions operating within the Australian labor movement at the present time may be, it is sufficient in itself to demonstrate the presence of a radical change in the psychology of the Australian worker.

Their outlook has broadened and the resultant activities bid fair to carry them quite a long way towards industrial freedom and place them in the vanguard of the movement for labor's emancipation.

Let us, then, study attentively the growth of the One Big Union in that country and let us apportion our credit or censure sparingly, with a thoro understanding of the fact that great objectives are not achieved, nor revolutions accomplished, in a day.

The Australian worker has a comparatively clear field to plow, no racial differences to overcome, no "open shop" difficulties to confront, and besides, having the advantage of possessing an elementary education that enables him to read and write, he can appreciate and understand much in the realms of politics and economics.

The future holds everything for the Australian workingman, and today he is preparing himself for the part he is to play in the building of the new society.

# What Have You Done with The Old Men?

**By Berton Braley**

**What have you done with the old men**
**You've broken by toil and time,**
**Once they were brave and bold men,**
**Now they are past their prime,**
**Now they're aged and useless,**
**Now that their race is run,**
**Now that they're weak and nerveless,**
**Tell us—What have you done?**

**Have you made their hard lives rougher**
**By turning them out, in truth,**
**To shiver and starve and suffer**
**In the world that was meant for youth?**
**Now that they cannot aid you**
**Nor earn their toiler's wage,**
**For all that their work has paid you,**
**How have have you dealt with age?**

**Once they were young and gay men,**
**Toiling to make you wealth;**
**Now they are bent and grey men,**
**Broken in strength and health,**
**Have you fostered these one-time bold men,**
**Or starved them as some men do?**
**As you have dealt with the old men**
**May Destiny deal with you.**

# "Let's Go Into Business"

**By A Worker**

MY DEAR GEORGE:

I RECEIVED your letter yesterday. I was very glad to hear from you. You suggest that you and I go into business and become independent of the big fellows for whom we have to work, and you ask me my opinion of the proposition. Really, I appreciate your wanting to take me into your confidence in such a venture, but the facts to be considered are such that it is impossible for me to be seriously interested.

Of course, little "cockroach" business enterprises sometimes succeed to grow, but I am an electrician and you are a metallurgist in the steel industry. I don't like the business of electrical contracting as carried on by those firms that employ ten, twenty or fifty men. It is a cut-throat game, and these contractors get only comparatively small work. They have plenty of trouble collecting their bills, because they are continually trying to cheat the customer by installing inferior equipment and cheap material. They are organized into associations, but are ever undermining each other. They agree on a schedule of prices in their associations and then go out and double-cross each other. I am, more or less, familiar with this phase of the business and I even know of cases where so-called "legitimate business men" in the electrical contracting business have bought material and equipment that they knew had been stolen from a fellow contractor. They try to subsidize representatives of the trade unions to try and get the unions to discriminate against big general contractors, so that they, the small contractors, can get work sublet to them.

The small business man has outlived his usefulness, and for you and me to try and buck the tide of industrial development is impossible. Only here and there do we see a business where owner or a partnership of individual owners on a small scale survive. Peanut stands, shoe repair shops and sub-contractors are examples, and their "independence" is a libel on the name.

The corner grocery is giving way to the chain store, and the individual drug store is being displaced in the same way.

Even the bell-boys work for a syndicate, "the Tipping **Trust.**"

In no way does the sub-contractor justify his existence as such. He contributes absolutely nothing to progress. Technically, materially and intellectually, he is a parasite of the most useless type. His knowledge of social forces is nil. His time and energy are expended in trying to double-cross his fellow-contractor, in trying to corrupt officials of the Building Trades Unions, in cheating the customer or owner by "rawhiding" mechanics to the extent that good workmanship is impossible. His social status among real industrial leaders and engineers might be compared to that of the hod-carrier's assistant among the old-fashioned aristocrats of labor, the brick-masons. Only (in fairness to all) it must be said that the hod-carrier's helper is a necessary factor and a useful productive worker.

I really like construction, George, but by that I mean to work in a **real** building organization. I like to feel that my work is being used to advantage in the most thoro and efficient manner possible.

Now, who can produce more efficiently in the building line, with less wasted time and material, big construction companies or a whole bunch of little one-horse concerns? It is obvious that the legitimate building organization produces better buildings in less time with much less overhead expense. The large concern has one organization instead of twenty. It has departments working like cogs in a gear; departments of mechanical trades, safety-first engineering, cost estimating, production (with chart schedules and progress sheets), time-keeping, receiving of material, etc. It has a system of tool checking and material checking. It has blacksmiths and machinists to keep tools, equipment and machinery in working order; it can buy in trainload lots instead of by the dozen, by the ton instead of by the pound.

With the possible exception of agriculture, all the basic industries: transportation, mining, public service (telephone, telegraph, traction, electric light and power), metal and machinery, are centralized, developed, organized for big production at comparatively low unit cost. The industry of building construction is well on the way. The day of the sub-contractor is past. His day was in the hand-tool age. Economic evolution has brought the machine age.

When we have our own little individual troubles in "getting by", our job to go to every morning, if we are so fortunate just now, we lose our sense of perspective, if we ever had such a thing. In buzzing around our little sphere of social activity we do not know our position in relation to society, the industries, the state or our fellow men.

Every once in a while we feel the seeming impossibility of putting up with our lot and we look around and see so and so apparently prospering in business. We don't look any farther. We feel the monotony of working for some one and know that we will never own the steel trust or the General Electric Co., but feel that we can at least build up a small business and become independent. It's natural, I guess—the ambition to become a business man, to become independent.

The days of a Carnegie or a Gary to grow up

with a business are past. Those fellows happened to be there and on the job when eonditions were ripe for a steel industry to develop from the scattered hand method and semi-machine method to the monopoly of organized, single ownership, all-embraeing industry of steel and its allied industries.

The opportunity today is not to own but to understand the teehnical and administrativo problems of inter-dependent industry. In the senso of real progress and result of human endeavor, the young man of today employed in industrial teehnical enterprise has opportunity unheard of in the whole history of mankind. Today in the public library I came across a book, entitled "Non-Technieal Chats on Iron and Steel" by Laverne W. Spring, A. B. It is intensely interesting. It explains the history of iron and steel development from the days of pre-historie men down aeross the ages to the modern processes of today.

In the book are sketehes and photographs of the simple, crude implements of the aneients, used in the extraction of iron from the earth, and of others used down the ages to the latest eoke-ovens, blast furnaces, rolling mills, rail mills and wire mills that you no doubt are quite familiar with.

Large scale produetion is here. It is imperfect, of eourse, but it is infinitely farther ahead of a one-man or one-proeess business.

You ean never own a steel mill and I can never own a power development system. But you can learn the management and teehnique of a steel mill and I ean learn the eonstruction of a power-house or any other building operation. We are both in a position where we ean, with no eost to ourselves, learn to stand the eombined experienees of the pioneers in our own partieular line, and quite possibly apply an idea to improve this or that proeess or lay-out.

Society has reaehed a point where industry is not an individual affair, but an affair of soeiety itself. Man is a soeial animal. He lives in communities and works in gangs beeause he is a soeial animal. For the same reason (mutual advantage) he displays the gang spirit in his union, his elub, his ehureh, his lodge, his sehool life, his eountry and most fundamental of all, **on the job.**

He produees not as an individual, but as part of an organization of producers. His individuality and initiative are brought out on his partieular operation, on his partieular part of the job. His is a very important faetor. But that quality in him would never develop anything if it were not for the condition under which he works and experiments. For example, you are engaged in a shop where car wheels are produeed. You hit upon an idea that is a big labor-saver. Were you not working in the shop, or were the shop not existing your idea would never have been conceived.

So you see, George, that wheel-making organization owes you something for a praetieal improvement, but you too have the shop to thank for the eondition which furnished the baekground for your idea to fit. That is eolleetive soeial progress.

**The gang spirit in operation on the job.**

I take real interest in my work and feel pride in seeing the achievements of a construction organization. I feel a social pride in hearing the turbines hum in a power-house; cables carrying eurrents down from the switch-board into the ducts, thru the man-holes to faetories, where shoes and machinery and earwheels are turned out. Shoes for the fireman who keeps steam up for the turbines, and ear-wheels for the gondolas that carry eoal to him from the mines.

No, I don't want to go into business. I want to carry on in the building eonstruetion and possibly improve a system or a method. Particularly do I want to understand thoroly the already established operations and try with my fellow workers to be able to assume responsibility.

The faet that the ownership of industry is largely removed from the real produeers,—the managers, unskilled workers, skilled workers, technieians and elerieal forees, etc.—is only a passing state of affairs. The reason the produeer doesn't get all the benefit of these efficient methods of today is beeause he is ignorant of the thing, he is a part of soeiety and its evolution.

He wants to go into business. He is still thinking in the hand-tool age.

You are on the job. Get to understand the operation in whieh you are engaged in its relationship to the operations before and after the eommodity passes thru your department. Your fellow-workers will either learn or they will die. The fellow who knows his industry will be at an advantage in every way.

His standard of living is higher beeause he generally is better paid.

He is able to jump into a position requiring executive or technieal skill when sueh vacancy oeeurs.

He will fill a tremendously important position when the workers are called upon to assume responsibility.

He ean feel that in knowing his industry he is responsible in a great degree for the labor-saving tools and methods, that some day will be a blessing for himself and his fellow-man.

So you see, George, if it happens to make the Steel Trust rieher a bit, if you stiek and improve a proeess, why worry about it? You and the rest of us will benefit by it some day when the Steel Trust (as a privately owned monopoly) will be where the Government of Kerensky is—along with the League of Nations.

The only thing left of it will be a memory.

Yours sineere friend,

**Clemens.**

# Ship Committees - A Problem in Organization

By Card No. 804943

ALTHO seafaring-men, generally speaking, are dissatisfied with the conditions under which they work, no great attempt has been made by them to secure an improvement.

They have nothing but contempt for their various craft unions, and very rarely do they attend the meetings.

Charges of fraft have been leveled at their officials. Some go so far as to assert that their unions are governed by graft, altho no concerted move has been made to back up this claim.

Supposing the assertion to be correct, it constitutes a refleetion upon the intelligence of the rank and file which permits such a state of affairs to exist.

Our unions are abject failures. We cannot get away from the truth of that statement. Why are they failures? There are two reasons:

1) The lack of interest shown by the membership in their own affairs, and

2) The manner in which the unions in this industry are organized.

We know how impossible it is for a big majority of the rank and file to attend union meetings, did they so desire. Of what use is a union, constructed as at present, to workers who are at sea nine months out of twelve?

It has taken us a long time to regognize this.

It is unnecessary for me to enlarge upon the abominable conditions under which we labor. They are too well known to need any further elaboration.

Recognizing the faults of the present form of organization it is incumbent upon us to lay dawn a constructive program for a union of workers in the shipping industry. A union that is to be of any use to its members must be so organized that it enables the whole, or any section of the rank and file to act immediately the occasion demands it. The present unions do not make provisions for this. It is a common thing for seafaring-men to wait months at a time ere they reach the home port and place their grievances before their unions.

Even then there are, as a rule, so many complaints before the union that it is well-nigh impossible to get any satisfaction. As a consequence we have to suffer under these injustices indefinitely.

If by taking our grievances to the present unions begets us no satisfaction the only logical thing for us to do is to handle our grievances ourselves.

That we may do this we must organize on all ships, a committee, elected from the rank and file of the crew. For effectiveness we must make this committee a real ship committee, that is, it must be thoroly representative of all the workers aboard a particular ship. The committee must, therefore, be comprised of delegates from each department, namely, the stewards, oilers, wipers and firemen, and the deck departments.

The committee shall negotiate during a dispute with the ships officers on behalf of the crew.

No agreements can be arrived at between the committee and the responsible ship's officers unless they have first been ratified by a mass meeting of the rank and file of the ship.

By adopting the above procedure we are enabled to overcome the old difficulty of attending union meetings. Besides, this would give to the rank and file a direct voice in their own affairs, which would permit them for the first time in the history of this section of the working class to absolutely control their own union.

One of the greatest faults of the old style unions is the permanency of its officials. The average union official becomes job-conscious after a while and hates like hell to have to relinquish office and go back to the daily grind of toil under a boss. He schemes to retain his job and stoops to the lowest depths in his endeavours. He plays to the ignorant in the union and eventually becomes reactionary and a menace to the welfare of the rank and file.

With the ship committee operating we will have no use for delegates.

When a worker signs on a ship he, along with the rest of the crew, takes part in electing the ship committee that is to function for him during the trip.

He sees that it is to his interest to support this committee in times of a dispute, and it will therefore be comparatively easy to line him up into the union.

The committee shall collect dues and contributions. Where, then, lies the necessity of delegates? We know that, the way it works out now, before a man can get a job on a ship he must first join a union. If he has not the necessary cash he cannot get the job. Consequently he starves, besides having a hatred of the union. When a strike is declared the boss finds it very easy to get this man to scab.

The boss is very clever in granting us preference, because it is a double-edged weapon in his hands to be used against us whenever we rebel.

He will threaten to withdraw the preference

clause on occasions, and if this ruse fails he will call upon that group of workers who were prevented thru lack of funds from joining up, to assist him in breaking this union that had denied him the right to work.

Of course, these arguments are very plausible, but the fact remains that the bosses get by with them.

However, difficulties such as these will be thrashed out at meetings of the various ship committees, and the great benefit that will accrue from a discussion of issues similar to the above will manifest itself in the growth of understanding of the fundamental principles of the working class movement.

What a blessing it will be to do away with that army of officials now battening and fattening on the working class! When they are back on the job, working as we have to work, they will soon drop that office-chair philosophy.

Of course, someone will say, "We must have some officials." That is certainly true, but as a great proportion of the work will be done by the ship committee, which, by the way, functions in an honorary capacity, very few officials will be required.

A general secretary and some assistants could do the secretarial work, while all disputes affecting the general organization could be handled by a special committee elected for that purpose.

In other words, we could elect a committee every twelve months who will constitute a general executive board of the uniion and whose function it will be to keep in touch with all ship committees and direct negotiations with the bosses during a dispute. This board or committee would not receive renumeration except upon occasions when they would be in session directing a dispute or doing work necessary to the general welfare of the union.

The election of this executive board and the general secretary, etc., should be conducted much in the same manner as the ship committee election, namely, by the vote of the rank and file of the workers on all ships.

The ship committee would direct the voting on each ship and would be the medium thru which all matters relative to the organization are made known to the rank and file.

The general organization should have its headguarters at the port where the majority of its membership are in the habit of signing on, and branches should be established in all other seaports.

When we have abolished this hydra-headed unionism of today and replaced it with one union of seafaring-men we will be a force to contend with.

A body of men organized as we then will be will have no need of going, cap in hand, to our "masters" begging for the right to live.

And when we have taken the step in this direction we will be able to perceive and understand that we are but a part of the transport industry, and there will be born within us a recognition of the necessity of further co-ordinating our forces by forming the One Big Union of Transport Workers.

Our real objective then shall be, not higher wages, shorter hours or better conditions on the job, but the complete taking over of the whole transport industry and conducting it in the interest of the working class.

We workers have starved so long in this land of plenty that we are beginnig to think a lot. We have developed "a new mentality". We are no longer satisfied with what our masters are pleased to give us.

And we can see no other solution of this problem than the complete expropriation of these billionaires who have made their wealth out of the sweat and blood of us workers.

Aye, even if we "go down to the sea in ships" the profits still flow into "their cursed unsatiate tills."

But if we are to achieve the wonderful objective that we have in mind we must first make the initial move, namely, the forming of ship committees.

The fight will be a long and a hard one, but there are plenty of warkers who, if they do not thoroly understand, at least are sympathetic, and if at the beginning we can bring together all intelligent workers we can do very effective propaganda work and give to the average worker a line of thought that will lead him out of the mental wilderness that he finds himself in. The shipping industry is practically a virgin field as far as propaganda is concerned and these workers are rotten ripe for a change.

**The onus is upon us, and so let us begin at once by forming committees on our ships, which will be the nucleus of the One Big Industrial Union of the toilers of the sea.**

# The Story of the Sea

**By Tom Barker**

**(Continued from the March Number.)**

## CHAPTER 6.
## MARINE TRADE UNIONISM.

### Ireland.

IN this "poor disthressful counthry" our fellow workers of the Transport Workers Union command our attention and admiration. Their courage and heroism stand in marked contrast to the cowardly supineness of the British organization. Neither terrorism nor outrages deter them. The great majority are for scientific world unionism, and within their island they are perfecting their weapon to take their stand by the Brotherhood of the Seas and Docks, when it makes its advent. Organizations that live in the world of struggle must generate both clear-minded and intelligent men, men who are in the movement for the sake of their class and not for personal ambition, the degrees of capitalist universities or the thirty pieces of silver of the master-class press. You men on the Cork and Dum Langshaire docks, and you Irishmen who toil on the ships of the world, throw in your forces for establishing the dictatorship of the outcast seaman and the pariah longshoreman.

### Scandinavia.

It is regrettable to know that in Seandinavia the unions are as divided, and their outlook almost as reactionary, as in Great Britain. The late secretary of the Norwegian Seamen's and Firemen's Union reeently received a gold medal from the King for something he had **not** done for his membership. The members "saeked" him. In **Norway** there is, however, a steadily growing spirit among the men for something better. Overseas they are the fighting spirit of unionism, and there are no better men than the boys from the fjords for letting the world know about the necessity for One Big Union. During the recent fights for unionism in the ports of South America, they were the backbone of the Union, ready to picket or strike at a moment's notice. The officers are, in the mass, more democratie, and there is not the air of "stand-offishness" that is so typical of other nations. In **Sweden** the seamen are in the hands of Charles Lindley. He is the same type of man as Havelock Wilson, and was the right-hand man of Herr Branting, the Social Democratic White-guard, when the latter was Premier. The question for the Swedish marine workers is whether or not they can afford to wait until Mr. Lindley is translated to the Kingdom of Heaven. The deep-water Swedes are good fellows and they are good organizers and aggressive.

Early in 1920 in **Denmark** the Firemen's Union went on strike. Prior to that event there were separate unions for seamen and firemen. They were defeated in the bad old fashion, after being sold out by parliamentary bell-wethers. (The term "bell-wether" is a rather good one, and fits the average politician. A bell-wether is an educated sheep which leads the other muttons into the slaughter pen, and then steps back to lead the next batch. The muttons, wihch are very human in their instincts, will always follow their leader. They emulate their two-legged cousins by going into a long sleep after they have been beguiled and soothed by the bleats of their political misleaders). The Union was fined 400.000 crowns, but if the members would consent to work industriously and eontinuously, the government is willing not to colleet the fine. While the strike was on, the ships were worked by scabs from the rural distriets, and these gentry ran the ships to oversea ports where union men belonging to the Yellow Transport Workers Federation, handled the cargo. When I was in Kristiania, in April, 1920, the strike was just declared. The Danish motorship "Afrika" came into port. Her anchors were no sooner down than the seamen and oilers went on strike. They were taken off the ship and sent back to Denmark, probably to jail. The "Afrika" had cargo on board for Lisbon, and the officers and engineers worked her, **the largest motor-ship in the world, and took her down to Lisbon without an able seaman of a motorman aboard her.** So you see, fellow worker, what motor-ships are going to mean to you in the years that are going to come. They will not need you, that's all.

Long distance scabbery is one of the worst evils of our present state of disorganization. In July, 1919, the Finn barque "Lawhill" left La Plata, Argentina, with a scab crew. This was reported by the Marine Transport Workers to the Danish union. When the "Lawhill" arrived in Aarhus, Denmark, she was tied up, and her scab crew were ehased ashore and afterwards heavily fined for their treachery. Isolated actions such as this case shows what a punch a World Organization could develop, as it would make it impossible for scabbery to exist in the marine industry.

In October, 1920, the politicians were ousted from the control of the Danish marine unions, and Fellow Worker Borgland was re-instated in the presidency. In order to avoid the fine, the industry is to be re-organized on Industrial Union lines, and there is to be a break-away from Havelock Wilson's machine. During the strike of 1920, the Danes did **not** get solidarity from the Yellow Amsterdam Federation.

### The Eastern Baltic.

On the Eastern shore of the Baltic, the Finnish Seamen's and Firemen's Union have their centre at Helsingfors. According to Fellow Worker Ahonen, the secretary, the Finns are in sympathy with the creation of a fighting international. I have found Finns in overseas unions to be a fine militant type, very determined and intelligent. Owing to the predominance of the White Terror, the wages and conditions are villainously low. The wages are equivalent to about £3.0.0 English per month. In Reval efforts are now being made to line the workers up, and matters are too unsettled in Riga and other ports to form any idea of the future.

### Germany.

Marine unionism in Germany is in a deplorable state. That is due mainly to the fact that the greater part of German ships are now in Allied hands. The pre-war tonnage of 5,135,000 tons had been reduced to 419.000 tons in June, 1920. Thus the **"Deutsche Seemannsbund"** has lost about 90 % of its former influence. As a result of this the German workers are suffering tremendously, but the spirit that runs thru their publications is far ahead of many other countries. There have been many industrialists deported to Germany from the United States and other countries, and the slavishness that used to be characteristic of German merchant ships has almost ceased to exist. All the ships owned in the old Austrian-Hungarian Empire to the extent of 1,052,000 tons have been confiscated by the Allies, and are now under the Italian flag, and the blue-and-white striped Inter-Allied flag. Hence there are no unions in those district, outside of the Italian Union which has now spread to the Eastern Adriatic.

### Holland.

In Holland we have another advancing body of dockers and seamen, who are fed up with Havelock Wilson and the reactionaries in control. Fellow Worker **van den Berg**, the secretary of the Netherlands Transport Workers' Federation, is a student of advanced forms of organization, and is anxious to see something newer and better. The men are not afraid to strike, but wages are very low and conditions are bad. During their strike of February, 1920, solidarity was extended to the Dutch workers in the ports of the United Kingdom and Argentina. Rotterdam is one of the most promising ports in the world for the new organization.

### Belgium.

Since the war the Belgian Seamen's Union has been re-organized as a part of the National Seamen's and Firemen's Union of Great Britain. The Belgian section, however, has accomplished far more for its membership than Wilson's union has in its 33 years of uselessness. Indeed, in 1919, Mr. Wilson had to issue a warning to the Belgians that they were going too fast. All the fishermen are also organized in the union. In the pre-war days, conditions were very bad out of Antwerp, and until quite recently the companies used to brand their men on the arm with a rubber stamp. The Belgian dockers are very miiltant, and a few months ago tied up three blackleg-loaded ships that came from Malaga in Spain. Antwerp is a very promising place.

### France.

In France the organizations are weak and the wages low. A French officer does not receive as much wages as an American seaman. There is, apart from the official element, quite a good spirit growing up, as was exhibited when the captain of a French ship had the steward arrested in Hull. The whole crew struck and were taken, under escort, back to France for trial. They were sentenced, but speedy action and a strike procured their release. A large section of the men were colored, and from the French possessions. No action was taken in Hull to protect their French fellow workers, altho they are both in the Yellow International.

### The Peninsula.

**Portugal** is in a state of chaos, and at the mercy of several unscrupulous political groups, who are always getting in and then thrown out in their turn. The unions are making headway, but the **cabecillas**—professional chiefs—are still a hindrance.

**Spain** is under the iron heel and the quarters of the fighting organizations are **"clausurada por el gobierno"**—closed by the government. **La Sociedad Naval de Marineros y Fogoneros** of Barcelona exists in secret in the foc's'les, but the leaders are lying in the fortress of Montjuich. The Spaniards are fine fighters for the cause, and right thru the main Spanish ports there are hosts of deportees whose propaganda for the One Big Union is making strides. In the Canary Islands the wages are very low for both marine workers and dockers, being less than half the wages paid in Bilbao and Cadiz on the mainland.

### Italy.

The Italian coast-line is under the control of the **"Lavoratori del Mare"**—the Toilers of the Sea—with headquarters in Genoa. This latter port is one of the promising ports in the world movement. The revolutionary activity among our Italian fellow workers is too well-known to need any extensive description. More than any other nationality outside of Russia they have manifested their manhood, particularly by initiating the blockade on munitions to be used against the Soviets, and afterwards by insisting upon the unconditional release of the Red crew of the Russian Soviet steamer, "Rodosto". These are only two incidents out of many. Genoa is to be one

of the great ports in the reconstruction of the Red Marine International. It is the largest shipping centre in the Mediterranean for over-seas ships.

### The Levant.

The only organizations in the Levant outside of Russia are the Greeks Seamen's Union and a small industrial International Union in Constantinople. Little is known about the Greek organization, but that little is good; the members do not stand for any nonsense from the employers. The Russian port and marine unions have been isolated owing to the blockade, but trade is sure to be soon opened up, and there are orders for at least 500 ships in hands of Vanderlip and Co., of the U. S. A. We may take it for granted that the Union in the Black Sea will be a model organization, and their living and working conditions as ideal as human ingenuity can make them. The Brotherhood of the Sea will receive an enormous accession of strength and militancy from their affiliation.

### The Far East.

There are organizations lifting their heads in the ports of Japan, China, Burma and India. In 1914 Ping Yin, a Chinese, formed a seamen's union in Rangoon, Burma, which possessed a weekly newspaper in Chinese. Lately a union has been formed also in Madras and Calcutta. These things are encouraging, for whether we, the marine workers like it or not, we have to organize together, white and colored, for our common emancipation. We cannot let our race rivalries get the best of our common-sense. There must be One union, or unions that act as one, in Calcutta and Singapore as well as Glasgow and Antwerp. The Eastern people will be easily organized once the language difficulty is overcome.

### Oceania.

The Australian Union has undergone a vast change in the past few years. The reactionary officials have been thrown out of their jobs. Wages are lower than on American ships, but conditions are better. One is now spared the odious sight of a seamen carrying his bedding about with him, and the company, in addition, must supply eating and other utensils. The food is good, and there are opportunities to pay off at almost any port that a man desires. In June, 1920, the seamen and wharf-laborers in Sydney, N. S. W., gave the Labor Government thirty days in which to release the famous I. W. W. Twelve, otherwise they would declare a general strike. Their action forced the release of ten of the men, including Peter Larkin, Tom Glynn, Donald Grant and others, after they had been in jail for nearly four years on trumped-up evidence. The Australian Seamen's and Firemen's Union recently issued a call to the marine workers to establish an international undestanding, and such will be welcomed everywhere thru the Island Continent. In New Zealand the seamen are still in reactionary hands, but the wharf-laborers are a militant section of New Zealand Transport Workers' Federation, and may be relied upon, in the main, to support a move in the right direction. In Westport, N. Z., the dockers used to commence their week's work on each Monday morning by having their union meeting starting at 8 A. M. After they had terminated their own business then they were ready to do the work for the boss. It is a good example to follow, fellow workers.

### North America.

Organization of marine workers in the United States is divided between The International (?) Seamen's Union and the Marine Transport Workers of the I. W. W. The officials of the former union are well paid, and not worth the money. They believe that by lobbying around the Senate House in Washington, they will help the seamen. As a matter of fact, such work never altered anything of importance for the seamen. It is true that the conditions on U. S. ships are an improvement over those prevailing on ships of other countries, but we have to remember that the U. S. is a new-comer in marine transportation, and that she has been compelled to give good conditions in order to attract men to go to sea. It has been necessity more than lobbying that has accomplished things. The Marine Transport Workers are destined to grow and to bind together the marine workers in the United States. The warring craft and graft unions on the New York water-front must give way to the scientific form of organization adopted by their fellow workers in Philadelphia. In the Gulf and on the West Coast the ONE BIG UNION has to come, and the fighting vanguard of the I. W. W. will easily carry the day if they will but bestir themselves. More than the members of any other party or union, are the I. W. W. men scattered around the world. There is no corner of the world where one does not come across the "wobs". They leave a good trail behind them. It is all the easier to make headway because both the American Federation of Labor and the International Seamen's Union insist upon ignoring even the Yellow Amsterdam Federation. The U. S. is big enough and wide enough for the I. S. U.

### Mexico and the West Indies.

In Mexico the I. W. W. has undertaken the organizing of the marine workers, and are establishing locals in Tampico and Tuxpan, both big oil ports. Cuba is becoming quite a red centre, where there have been many strikes of late. Trinidad and Jamaica have also had labor troubles, in which the marine workers were prominent. The world movement need not fear the workers in these countries being behind. They are ripe, when the right men blow along.

### South America.

There are three great maritime nations in South America, the A. B. C. countries, viz., Argentine, Brazil and Chile. In **Argentine** the Port Workers' Federation is one of the most advanced and scientific organizations of its kind. The leaders are fervent industralists, know what they want and how to get it. They have a **fighting** alliance with the Red Transport Workers' Federation, and the Marine Transport Workers, which since May, 1919, has catered for the oversea workers of all nationalities and unions who arrive in the ports of the Republic. The **Federación Obrera Maritima**—the Argentine Seamen's, Firemen's, Officers' and Engineers' Union—is reactionary, but with a big leavening of industrialists. When this organization is lined up with the dockers and the overseas union, then the coast of Argentine will be the closest organized in the world, and the international boss will have his work cut out. The M. T. W. doubled wages, abolished shanghai-ing, reduced hours, and established job control in these ports, a thing that could be accomplished in every maritime country if the workers would only set to work to do it.

In **Chile** the marine workers are organized in the **"Gonte del Mar"**—the People of the Sea—and the dockers and launch-workers (nearly all cargo is worked from the ships to lighters on the West Coast) belong to the Union of **Lancheros y los Estibadores de los Puertos Chilenos.** These are sections of the Chilian I. W. W., which possesses a membership of 28,000 members and is the bane of not only the Chilian, but also the "gringo" capitalist. In the last two years, the organization has spread to Arica in the North and down to Puerto Montt, Corrall, Coronel and Talcahuano in the South.

The port workers in **Brazil** possess many radicals in their ranks, and during 1919 and 1920 many of their members were deported for agitational work in Rio de Janeiro, Bahia and Santos. The conditions on Brazilian ships are scandalous and wages are very low. In many cases the shops are manned with navy men who are paid at navy rates. Since the war Brazil has obtained quite a large merchant fleet, mainly at the expense of Germany. Callao in Peru and Monte Video in the Eastern Republic of Uruguay are also important ports that have to be reckoned with in the business of organization.

### Conclusions.

Something more than a mere International Transport Workers' Federation is needed to bring these workers together into one organization, or at least into such an understanding of one another that they will act as one organization. The black shadow of Havelock Wilson has deterred the movement long enough. The isolated action that we have witnessed during the year 1920 is enough evidence of the present childish way of fighting capitalism. The Danes and the Dutch were both defeated simply on account of a lack of understanding. World Transport is the strategic point of International Capitalism. The marine transport industry is the most cosmopolitan of all industries. The proletariat can never assume control until it conquers the ocean routes and the ships that follow them. The present state of sectional, national unionism reminds one of so many mosquitoes attempting to push an elephant over. Let us consider the enormous power that we are fighting, and climb, for the moment, out of the dingy foc's'le or the grimy port where we work. When the dockers in Liverpool discharge the grain from a Norwegian barque, do they ever think of the brown-skinned Argentine workers who reaped it, loaded it to the railway, pulled it to the docks, and then packed it away in the corner of the hold where they find it? Or of the polyglot crew that has brought her thru the trades, across the Line and thru the mists of the Channel?

Let us, I say, rise out of our ordinary groove and notice our own share in the production and distribution of wealth. We are one of the links in a long chain, that stretches from the Argentine wheat field to the baker's shop in Swansea. From our combined labor springs all the wealth that we see around us. We produce the gorgeous banquets for our masters as well as our own meagre meals. Fine clothes for our masters and their over-fed cubs, and dungarees and shoddy for ourselves and our children! Our labor is much the same as that of our brothers in Shanghai, Sydney or Valparaiso. There is so little difference that it is not worth fighting over.

**There are a thousand good reasons why we should be in one organization fighting the same fight against the same tyrants. Let us forget our nationalities, and remember that we are of the same class, and that our interests are the same. Let us counter the Giant Octopus with the fighting armour of One Big Union on the Sea and the Docks.**

**Let us, I say, build from the stocks up, a super warship of Proletarian Power, and wipe their cursed slavery from the seas. Let us erect Industrial Democracy in the foc's'le, and build the structure of that future administration that will control all the ships, and place them beneath the banner of the World Organization of the Toilers of the Sea.**

**"He who would be free, himself must strike the blow".**

# Defense News

**By John Martin**

THE PAST MONTH has not seen any great changes in the Defense situation in the federal cases. No ruling has as yet been rendered by the Supreme Court on our Petitions for Writs of Certiorari in the Chicago and Sacramento cases. In the Wichita appeal, we are still awaiting the decision of the Appellate Court.

**Arrests, Convictions and Releases.**

Fellow Workers John Murry and F. B. Kellar were arrested in Kansas City, Missouri, on March 4th and held without bonds for the federal authorities. Later, when no pretext could be found for federal prosecution of these fellow workers, a charge of vagrancy and trespassing was placed against them. On this charge they were found guilty and Kellar was fined $25.00 and Murry $125.00 because (so the judge stated) he was an organizer.

On March 5th, about twenty fellow workers were arrested on the streets of Florence, Kansas, but were all released later, with the exception of Fellow Workers Tom Foley and High Delaney, who were taken to the jail at Marion. We do not know at this time on just what charge they will be tried since the complaint aganst them charges both violation of the Criminal Syndicalism law and vagrancy.

Fellow Worker Sam Forbes, one of the Wichita defendants, has been released on bond and we are in hopes of having the bonds for Fellow Workers Morris Hecht, George Wenger and O. E. Gordon, other Wichita defendants, completed within a short time. Again we must call attention to the fact that we have very little time in which to obtain bonds for the fellow workers involved in the Wichita case, inasmuch as the Appellate Court may render a decision in their appeal in the very near future. Should the decision be adverse, these defendants would no longer be eligible to bail. We therefore urgently request all fellow workers and friends who have Liberty bonds, which they can spare, to place them at the disposal of the General Defense Committee, or to make cash loans to be used as bail for these defendants before it is too late.

In the case of Wm. Danton, our Petition for a Writ of Habeas Corpus was denied by the Supreme Court of Kansas. Fellow Worker Danton was arrested on July 1, 1920, in Rice County, Kansas, and charged with Criminal Syndicalism. Later he was released on a $500.00 bond, which has been canceled since the decision rendered by the Supreme Court, and Danton has returned to the county jail at Lyons, Kansas, to await trial on the charge pending against him.

The brief in Fellow Worker Henry Tonn's appeal is nearly completed and will in the near future be filed with the Supreme Court of Iowa. Following this the briefs in the appeals of Fellow Workers Harry Breen, Wm. Murphy, Robt. Dilgar and Thos. Payne will be taken up and filed with the Supreme Court of Kansas as soon as completed.

We are just in receipt of a letter stating that Charles L. Anderson, Charles Clifford and Charles Carlson, three of the fellow workers sentenced to the Idaho State Penitentiary on charges of Criminal Syndicalism, have recently been paroled and released.

**News from Other Countries.**

From the Stevedores' and Dockworkers' Union of Mexico comes the news that the members of that union have voted to be assessed 25 centavos each for the defense of the imprisoned members of the I. W. W., and as soon as the collection is completed, the money will be forwarded to us. They further protest against the persecution of our members and send greetings to all imprisoned fellow workers.

From the Syndicalist organizations of Sweden, we have received word that they have collected 1,661 crowns for the General Defense and the money is being sent to us. The Swedish workers are also demanding the release of all wartime prisoners in America.

**Watch for Our "Amnesty Special."**

As previously announced in our publications, the General Defense Committee has decided to co-operate with other organizations in making April 13th Amnesty Day and will, as part of its program, publish a special edition for that date demanding the release of all industrial and political prisoners. In order to carry any weight, this edition must be gotten into the hands of people who have so far received little or no information regarding these prisoners. We must reach people outside of the radical movement and arouse their indignation against the persecution to which our fellow workers have been subjected.

**Your Help Is Needed Now.**

In order to hake our Amnesty Edition the success it should be and in order to continue the defense of our fellow workers properly, we must have immediate and generous financial assistance. We fully realize that the unemployment prevailing all over the country makes it impossible for many of our members and friends to respond to our appeal and we therefore urge all fellow workers and sympathizers, who are not out of work, to take this fact into consideration and make their donations large enough to prevent the interests of our imprisoned fellow workers from being jeopardized.

**Make checks and money orders payable to the General Defense Committee and send them to John Martin, 1001 West Madison Street, Chicago, Ill.**

---

**We have just received word that our Petition for a Writ of Certiorari in the Sacramento case has been denied by the Supreme Court.**

# The International Council of Trade and Industrial Unions

By A. Lozovsky

(Continued from the March Number.)

IN AUSTRIA the trade union movement is in the hands of the social-compromisers, but during the last year the Communists have done tremendous work. Communist fractions have been formed in all the unions, and a special bureau has been formed in connection with the central committee of the Austrian Communist Party for the purpose of co-ordinating the work of the Communist fractions in the unions.

In Hungary, after the victory of the reaction, the old social-compromisers came to the head of the unions and endeavored to continue their policy under the white terror, but the victorious counter-revolution does not even allow the social-patriots to develop. The ruthless white terror compels even the most backward Hungarian workmen to understand that it is necessary to choose between the dictatorship of the bourgeoisie and the dictatorship of the proletariat.

In Czecho-Slovakia, a decree of the Government made it compulsory for every worker to belong to a union. With the aid of this decree the Government succeeded in crushing many revolutionary unions by the influx of backward elements into the unions. The majority of the official organizations stand for the Amsterdam Federation and the Second International. The minority stand rather solidly for revolutionary class struggle.

In Jugo-Slavia (Serbia etc.) the General Federation of Labor stands in close contact with the Communist Party and for the Third International.

The last trade union congress in Esthonia voted for the platforms of the Third International and in White Finland the general trade union center and the large unions also stand for the revolutionary class struggle.

The last conference of the Norwegian trade unions which took place in Christiania at the end of July, 1920, resolved to affiliate to the Third International. In Sweden, Denmark, Holland, and in all other European countries there are important minorities who stand for the revolutionary class struggle.

The position in America is very peculiar. The powerful American Federation of Labor in entirely in the hands of Gompers and Co. Side by side with this body there is the revolutionary organization—the Industrial Workers of the World,— whose influence lies chiefly among the unskilled laborers. The I. W. W. is undoubtedly a revolutionary organization, but its theory and tactics suffer from many serious defects, as a result of which it embraces only some hundreds of thousands of the millions of the American proletariat. In spite of the fact that the whole apparatus of the A. F. of L. is directed towards crushing the revolutionary ferment in the American unions, the unions are nevertheless becoming revolutionary. Within the large trade unions a serious movement is growing up against the theories, and particulary against the practices, of the A. F. of L. and its leaders. Besides this there are many large unions in America which do not belong to the A. F. of L., and which are becoming revolutionary under the influence of the sharpening social struggle.

In Canada the strike movement of 1919 affected the whole of the trade union movement. It particularly affected the revolutionary unions, and in a number of towns during the strikes in April and May, 1919, the strike Committee became the only authority in the town. American trade unionism, which intellectually and organizationally had the Canadian movement in its hands, became discredited among a large section of the workers. The Canadian movement became not only formally independent of the American unions, but also intellectually independent of the bourgeoisie.

The trade union movement in Australia and other British colonies is divided, in some cases intellectually and in others organizationally, into two camps —for and against revolutionary class struggle, for and against co-operation of classes. This division has reached even such countries as Java, India and Japan, where the movement has only just arisen, where trade unions arise as a result of severe revolutionary strikes, and where as a result of the very conditions of the struggle the movement cannot take any other stand than that of revolutionary class struggle.

Thus the world trade union movement, which in the middle of 1920 united more than 30 millions workers, varies very greatly. Many trade unions are nothing more than **organized representatives of the bourgeoisie with the labor movement,** and the International Federation of Trade Unions and the Labor Bureau of the League of Nations are the general staff directing the organized operations of the bourgeoisie against the trade union movement. It naturally follows therefore that the task of the day is not only theoretically to condemn the policy of compromise and class co-operation, and advocate affiliation to the Third International, but to give it form by setting up a revolutionary class center of the trade union movement. This was done in Moscow in July of the past year.

* * *

The arrival in Russia of British, Italian and other trade union delegates for the purpose of studying conditions in that country, served as a starting point for the negotiations with the creation

of a new trade union center. The preliminary negotiations with the representatives of the left wing of the British trade unions showed that there was common ground for reaching an agreement between the class unions of various countries. On the initiative of the Executive Committee of the Third International a meeting took place on the 16th of June, 1920, between the representatives of the British trade unions (Robert Williams and Alfred Purcell), the Italian Federation of Labor (L. D'Aragona and Joseph Bianchi), the Italian Federation of Metal Workers (E. Colombino), the Italian Federation of Agricultural Workers (Dugoni), representatives of the All-Russian Central Committee of Trade Unions (A. Lozovsky, M. Tomsky, G. Tsiperovitch, and V. Schmidt) and the President of the Executive Council of the Third International (G. Zinovieff).

The first meeting was held for the purpose of discovering to what extent there was unity of opinion on the fundamental questions of the international trade union movement. It became clear that the views of the Russians trade unions were only partly acceptable to the representatives of both the British and Italian movement. The differences arose on the following points:—(1) the relations between the future trade union center and the Third International, (2) The Dictatorship of the Proletariat, (3) and the relations to the Amsterdam Federation of Trade Unions. Both the Italian and the British representatives assumed that the relations of the new trade union center should be decided at an early international congress of revolutionary class unions. It appeared also that the representatives of three countries present variously understood the theoretical and practical meaning of the dictatorship of proletariat. In connection with the Amsterdam Federation, Dugoni declared that "many members of the Italian trade unions did not belong to the Third Internatinal but to the Amsterdam International, nevertheless they conducted a severe class struggle against the bourgeoisie, and therefore to indentify them with the yellow international would rouse a protest on the part of the Italian masses." Nobody, of course, desired to indentify the Italian workers with the yellow international.

The fact that the Russian delegate described the Amsterdam Federation as "yellow" was undoubtedly a correct definition of its political character. If there was any opposition to so describing the Amsterdam International, it certainly did not come from the rank and file of the British and Italian trade unions, but from the central organs who still belong to that body.

In spite of a number of disagreements on principle, it was nevertheless found possible to agree on the following; (1) the necessity of forming a new center of revolutionary class unions, (2) to call an international congress of left trade unions, (3) to elect a committee to make preparations for the congress, (4) to work in close contact with the Third International. These four points served as a basis for further negotiations after the departure of the British representatives.

In the beginning of July of the past year there were present in Moscow representatives of the Italian, Spanish, Bulgarian, Jugo-Slavian, and French trade unions, British Shop-Steward committees, the Syndicalists and Labor Unions (Arbeiter Unionen) of Germany, the I. W. W. of America and Australia. Official and unofficial negotiations and meetings with these brought to light a number of radical differences on points of principle, for the discussions at these meetings centered around (1) Dictatorship of the Proletariat, (2) Politics and Economics, (3) The necessity for a political party for the proletariat, (4) Relation to the Third International, (5) Proletarian government and the Soviet System, (7) Splitting off from or conquering the mass unions. These questions, as we see, touched the very foundations of the trade union movement, and it is essential to clear them up before anything in the nature of an international organization can be formed.

* * *

Dictatorship of the Proletariat was contested from two points of view. On one hand it was shown that in Western Europe Dictatorship of the Proletariat, i. e., the violent suppression of the exploiters, and the subjection of the peasants and petty boureoisie to the proletariat as was done in Russia, is impossible, and that it was still less possible to subject the less class conscious workers to the advance guard of the working class. Several representatives of the Italian Federation of Labor argued that the question on the dictatorship of the proletariat was not at all clear and for that reason this should not be made the central point of agreement between the revolutionary class union. This point of view was shared by Dugoni and partly by D'Aragoni. "Trade unions", said comrades in discussion, "are non-party organizations, including supporters and opponents of dictatorship of the proletariat, and it would therefore be better not to speak of it in the preliminary declaration, but to leave the question to the international congress." After a long discussion the Italian delegates proposed to formulate this point in the following way; —"to propagate the method of proletarian dictatorship as a final and transitional means of defense and consolidation of the conquests of the proletarian state against the bourgeois reaction." That it is necessary to propagate the idea of proletarian dictatorship is beyond the slightest doubt, nevertheless one of the most fundamental questions of modern labor policy must not be placed in this academic fashion. The German Syndicalists, the British and American representatives of the I. W. W., and the Shop-Stewards approached the question from quite a different point of view. They questioned the necessity of any form of dictatorshp. They regarded the dictatorship, not as the dictatorship of the proletariat, but as dictatorship over the proletariat and categorically protested against establishing this prin-

ciple. One must state that these representatives were not unanimous on the question. While the German Syndicalists and representatives of the Labor Unions would not hear of dictatorship in any form, the representatives of the I. W. W. and the Shop Stewards admitted the possibility of the dictatorship of "proletarian organizations", altho they thought that the revolution will be brought about by the industrial unions which will not have to set up any dictatorship. In vain did we point out that whatever kind of organization will overthrow the bourgeoisie it will nevertheless, for the protection of the working class, become a power to crush, not only the resistance of the exploiters, but also the resistance of the workers who follow it,—the industrialists and Syndicalists were firm on one thing,—dictatorship of the proletariat may be necessary for Russia, but it is absolutely unnecessary for Western Europe and America where the proletariat will be able to make its revolution and manage to protect its gains without it.

After four joint meetings with the industrialists and Syndicalists the latter proposed a resolution worked out jointly by them which was to be the basis of the new international trade union organization. The main points of the resolution are as follows;— "(1) Recognition of revolutionary class struggle as a fundamental principle. (2) The violent overthrow of the State and capitalism by adopting the dictatorship of proletarian organizations as a temporary and transitional measure for the attainment of Communism."

The insufficiency of these two points as a platform was quite evident. One must not limit oneself to the recognition of revolutionary class struggle, one must demand the practical application of it; on the other hand it was impossible to agree to the formula of the overthrow of the State unless there was a definite indication of what kind of State was meant, the bourgeois State or State in general. All this indefiniteness was quite natural, for the industrialists and Syndicalists not only could not agree with us, but they could not agree among themselves, so much were they divided for and against dictatorship of the proletariat, and they were therefore compelled to accept an indefinite resolution in order to satisfy everybody. As a matter of fact they achieved the very opposite, for their resolution satisfied nobody. In substitution of this indefinite formula the representatives of the All-Russian Central Council of Trade Unions proposed the following point on the dictatorship of the proletariat;—"The dictatorshp of the bourgeoisie must be opposed by the dictatorship of the proletariat as a transitional, but resolute, measure as the only means by which it is possible to crush the resistance of the exploiters, and secure and consolidate the gains of the proletarian government."

This formula was adopted by all except the syndicalists, and the representatives of the I. W. W. and the Shop Stewards.

The confusion in connection with the dictatorship of the proletariat arose from the fact that the Syndicalists and industrialists approached the question from the standpoint of the old anarchists on politics and economics. In the first place they opposed dictatorship because they regarded it as politics, and they regarded it as politics because the dictatorship was carried out by a political party. This old dispute between Marxism and anarchism, —arose now because the representatives of some labor organizations (Syndicalists, industrialists, I. W. W.) opposed politics in the old anarchist spirit. "All politics," said the representatives of the German Syndicalists, "distract the workers from the direct struggle and should therefore be abandoned." "A political party by its very composition is foreign to the workers and strives to dominate them, and this represents a great danger for the social revolution. The industrial unions will make the revolution not only without a political party, but in opposition to it." The representatives of the I. W. W. judging parties by their American experience, stood for approximately the same point of view. For them also the weapon of the social revolution was the industrial unions, and it did not even occur to them that any other organization could play even an auxiliary role. The Shop Stewards' representatives took a middle course, and stood for the necessity of co-ordinating all the parties that belonged to the Third International, but they did not carry this to a logical conclusion. In reply to our argument that it is impossible to separate politics from economics, that there was not a single great economic conflict that was not at the same time a political conflict, that to divide the social struggle into an economic and political struggle meant the weakening of the proletariat, they said that the experience of Western European and American parliamentarism proves that politics corrupt the workers and that the political struggle distract them from their class aims. All the while they confused politics with parliamentarism. Comrade Rosmer, the representative of the French Syndicalists, adopted a healthy point of view. He pointed out that in the first place if the proletariat made a revolution it must be able to defend it; it must beat off all attacks of its enemies and finally crush them. For this purpose it is necessary to have a dictatorship. Secondly he pointed out that the Communist Party and the revolutionary unions must march side by side, and that only on such conditions could the victories of the working class be secured.

It was difficult to unite these conflicting tendencies,—from the denial of the necessity of a political party—to the recognition of the necessity of the inseverable connection between the party and the unions, on a single platform. It was still more difficult to reconcile the point of view of the Russian trade unionists on the supremacy of the party over the unions with the various views explained above. The discussion showed one thing, and that was that those elements of the labor movement which denied the political struggle, which denied the necessity of

a political party of the proletariat, and the closest bond between the communist party and the trade unions, could not enter the new international trade union center, because the whole idea of the international organization of the revolutionary unions lay in gathering all the economic and political organizations of the working class into one body—the Third International—for defensive and offensive operations against the capitalist class. This point of view was shared not only by the representatives of Russia, Italy, Bulgaria, Jugo-Slavia, and Georgia, but also by Rosmer, the representative of the French Syndicalists and even by Pestana, the representative of the National Federation of Labor of Spain, an organization which stands entirely for the anarcho-syndicalist point of view. Pestana said that he could not imagine such a relation between the party and the unions as existed in Russia possible in Spain, for the reason that in Spain the unions are a great force while the Communist party is only in its embryonic stage. He opposed the subordination of the unions to the party, but was in favor of the closest contact between the party and the unions on a national and international scale. Neither the representatives of the British Shop Stewards or the American I. W. W. objected to co-operating with the Communist party, but the German Syndicalists and the representatives of the Industrial Labor Unions were categorically opposed to any co-operation.

# The Stranger

**By Julia C. Coons**

Night's curtain had closed swiftly down, o'er city, shore and bay,
And lines of eager workmen hastily trod the homeward way;
Among them was a stranger, with uncertain step, and slow,—
Who turned aside from the lighted street, to the tide's incoming flow;
The waves, e'er lapping forward, splashed the pebbles at his feet,
While gleams from distant firesides seemed to beckon thru the sleet.

November's chill was in the air; her winds brought sifting snow,
But the stranger, all unheeding, lived once more in the long ago;
Death's seal was written in his face, with its halo of whitened hair,
And looking out across the waves, he breathed a silent prayer:

"O, Thou unknown, eternal One, who holdest in thy hand
The tempest of the mountain, and the desert's shifting sand,
I am a stranger in this land, tho it did give me birth,
For I am of that scattered tribe that hath no place on earth.

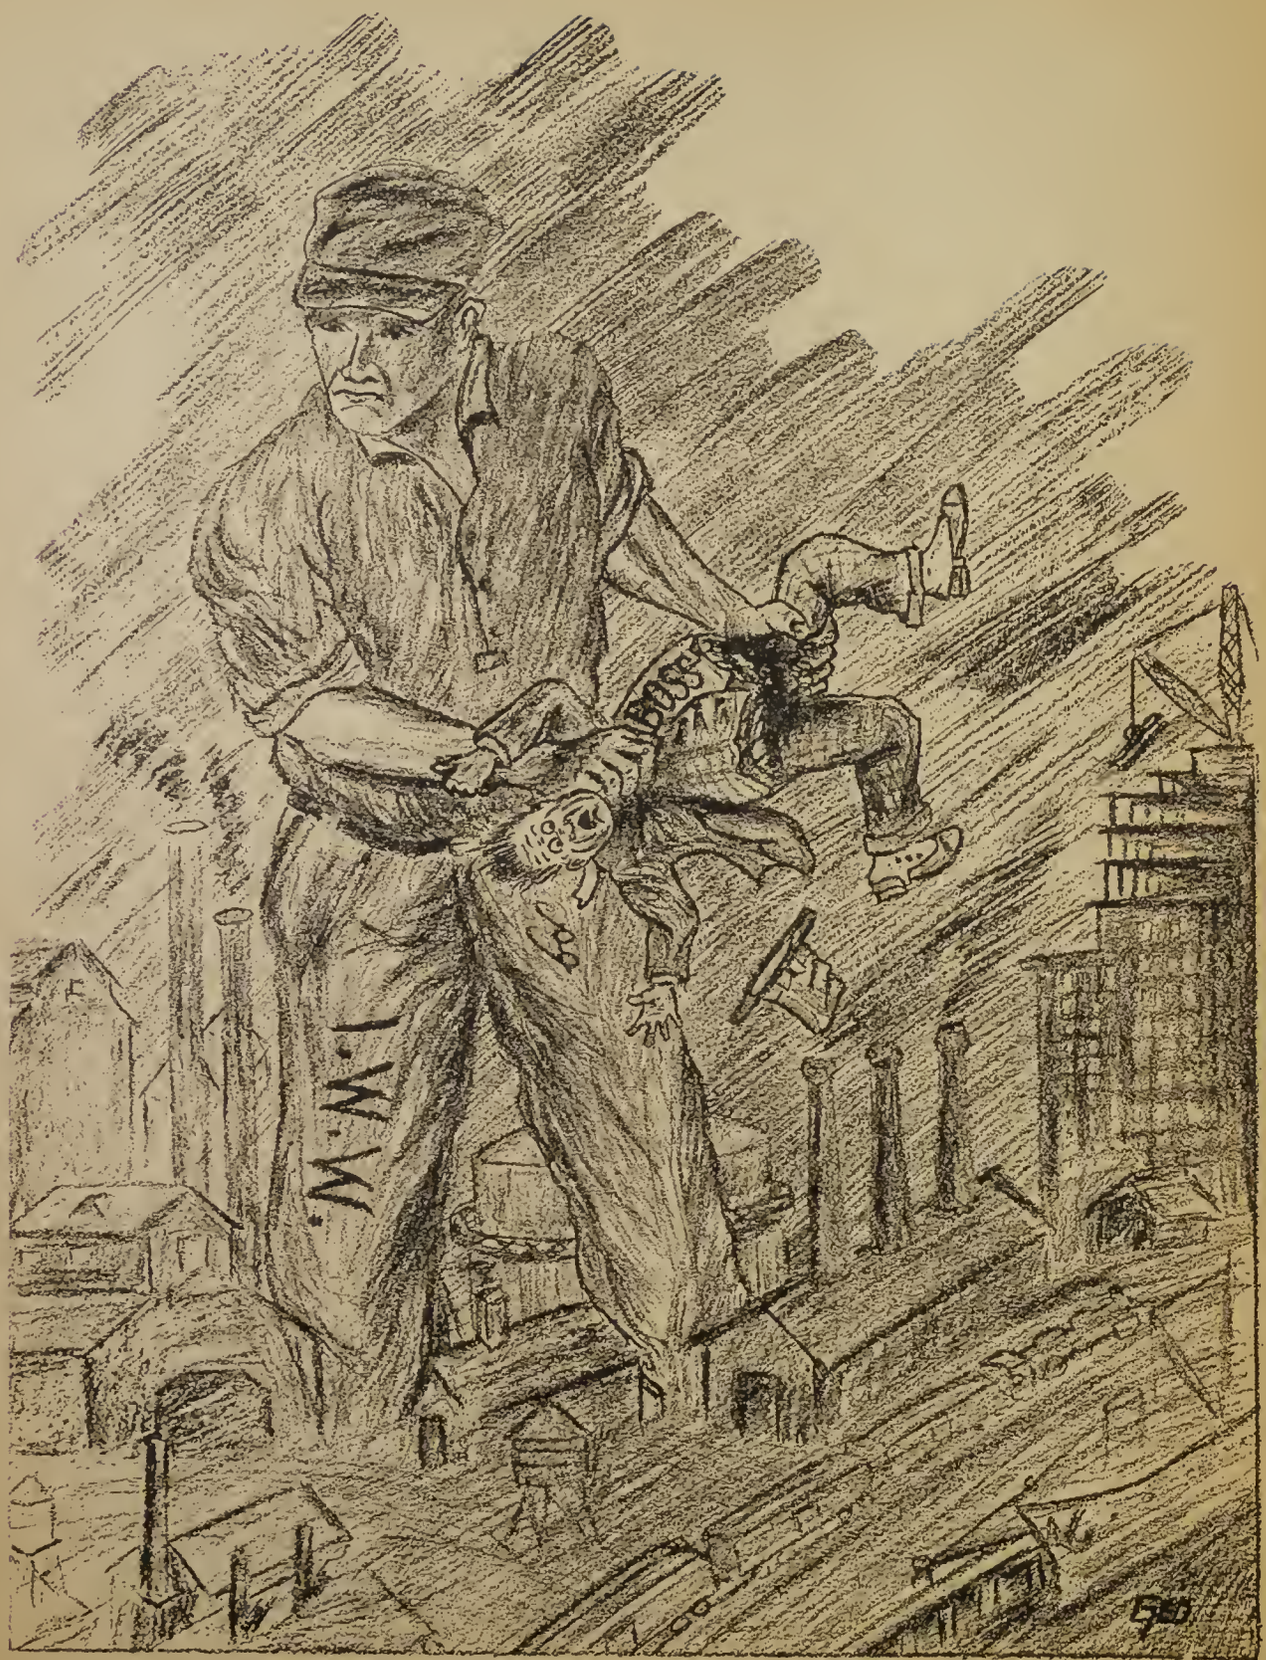
"In my youth a woman loved me, but she sank 'neath Christian scorn,
And faded as a lily might, if by the tempest shorn;
And then I wandered far away, to lands across the sea,
But the people of all nations have set a curse on me.

"Now, War hath sent across the wave a pestilential breath,
And Jew and Gentile both must fall before the sickle, Death.
My only son, my life and pride, lies 'neath the Flanders' sod,—
And I, ah, many of my race a blood-seeped path have trod.

"And I am come unto that door, whose portal, opened wide,
Doth look out on the dark, smooth sweep of an eternal tide;
'Tis said Thou loosed the Hebrews' bonds, and swept aside the sea—
'Tis said for love Thy only son didst die on Calvary;
And that Thou gav'st Thy word and law to men in times of old—
O, bring all of earth's warring sons beneath one crimson fold."

— — — — — — — — — — — — — —

When, in the morn, a radiant sun had set the east aglow,
A workman found the stranger 'neath the newly fallen snow;
A faded, pictured woman's face was clasped upon his breast,
And the stranger, weary, heartsore, had found eternal rest.



GETTING READY TO TAKE OVER INDUSTRY.

# The Story of a Hard Workingman and His White-Collar Son

By H. V. D.

CHARLIE was one of them fellers that believes in working all the time because he says that's the only way to save money. The only reason Charlie didn't work 100 weeks a year is because there ain't no more than 52. He worked in a lumber yard and the foreman Tim Mulligan used to say for years Charlie Higgins is the best man I got.

One day a little accident happened, a big lumber pile fell over. It would not been so bad except Charlie was in the way when it fell. When they drug him out they found that one leg and six ribs was broken and altho his nose was still there it had so little resemblance to an upright, respectable-looking nose that it was as hard to recognize it as the Soviet Government. Everybody said Charlie was the lucky dog because nobody couldn't understand why the big lumber pile hadn't killed him. Charlie agreed with them but when they took him to the horspital and the boneyard specialists started to poke around lookin' for the busted ribs and the splinters of his thigh bone he changed his mind and said it would been a darn sight better for his health if he had cashed in on the spot. Well anyway they kept him in the horspital for 5 months and then turned him loose again to face the crool world. But Charlie wasn't so spry now because one leg was shorter than the other and couldn't keep up with the longer one and so he couldn't move so lively.

He went back to work in the lumber yard and this time he was still luckier than before because no lumber pile didn't fall on top of him no more. But one evenin' as he was going home from work an ortomobile run over him because he couldn't get out of the way quick enough. Outside of breaking an arm and a leg in a different place from where it was broke before it didn't hurt him much but it give an awful jar to his nerves. So they took him to the horspital again and this time after 4 weeks he kicked the bucket. It was the month of May and it broke Charlie's heart to have to lay in bed when the weather was so fine for carrying lumber.

After they took the crepe from the front door Ma Higgins says to her only son Jimmy, who was then 17 years old, Well, James, people thought that the only reason Pa worked so hard is because he liked it but that t'aint all because he had another big idear in his head. He wanted to give you a good erdication so as you wauld become an office manager and then a vice-president of a big company and then marry into Society. But owing to the horspital and doctor expenses and the high cost of gettin' buried why there ain't no more than $483 left in the bank, but all the same you start going to Business College Monday mornin' and some day you will marry into Society and then your Ma will be so proud of you.

And so Jim started to go to Business College and learn the difference between single and double bookkeeping and what kind of letters to send a debtor to make him come across and how to run a typewriter without running it into a repair shop too often and never to start a sentence with an and. Well as the old saying goes every silver cloud has a lining so when the $483 run out and Ma Higgins started to go out washing Jim also got a job as assistant bookkeeper. The salary was only $14 to start but as the ad said with opportunity for advancement to the right party.

An apple don't never fall very far from the apple-tree and so it come that Jim was as hard a worker as his father. In nine year's time he had worked himself up to be head-bookkeeper of the Firm. After he had been there seven years he married Mabel the vice-president's typewriter. Ma Higgins was satisfied in a way because Jim was a good boy and never got drunk and never played pool for money but she could not get over Jim marryin' Mabel. She claimed that Jim had oughta been the vice-president himself and had oughta married into Society instead of the vice-president's typewriter. But because when he married Jim got a raise of $2 per wk that helped some to make Ma feel better.

Mabel is a good girl and they got along fine first off but in time Jim got very cranky and got to quarreling over nothin' and now Mabel gets to feelin' blue quite often. You see Jim he is been sittin' bent over a desk for so long that his shoulders is round and his chest narrow and there ain't no blood in his face as he don't get the proper exercise and all this makes him very irritable so that he flies off the handle over nothin' at all. Another thing that makes him sore is that altho he figures all them thousands of dollars every day he don't never get none of this money as the most he ever got was $30 per wk and that sets him to thinkin' that he ain't gettin' a square deal from society and to worryin' and so he's got indigestion.

Jim himself is now got a kid 16 years old but he don't want him to learn nothing about single and double bookkeeping, not even to find out that there is such a thing as accounts payable. Jim wants Charlie (they called him that in honor of grandpa) to become an honest-to-goodness workingman and to make some money when he grows up, so they have apprenticed him to be a bricklayer. And Mabel don't want Charlie to marry into Society neither because she believes that Society meaning the 400 will soon be done away with and there won't be nobody left in the world but working people. She thinks that a good sensible working girl will be good enough for her boy.

# A Real Love Story

**By John E. Nordquist**

MIKE and Maggie who live in the little cottage down in the hollow are a blissful pair, and they have reason to be happy. Who could possess their rosy-mouthed, crowing, blue-eyed, six weeks old urchin and remain sad for a single moment, I wonder?

This happy couple are not rich. Far from it. Mike is a common laborer and his wages are a mere pittance. Neither is Maggie extravagantly dressed, nor does she attend matinees thrice weekly and the movies nightly.

Mike and Maggie are working hand in hand for the realization of their Utopian dream. They are not allowing poverty to spoil their present nor meddle with their plans of future independence. As they work, they sing and smile at the seeming futility of their hopes.

Mike does not spend his evenings in the saloon with the boys, nor does Maggie waste her days gossiping with the neighbors.

Mike knows that his paltry wage will never bring them freedom, so each evening he studies along certain lines, and slowly but surely he is mastering the puzzle of education. Maggie, too, is a student. She is the lady of the garden. She furnishes the table with every variety of tasty vegetables and fairest flowers.

The happy pair are not selfish. Somehow they find time to help their neighbors, visit the sick and cheer the faltering. Not in a patronizing way, but in a spirit of real comeraderie that is contagious and inspiring.

Here's the secret of their unbounded self-confidence and hopefulness: They are both full-fledged Wobblies. That means that they not only have red cards, but that they are active in the movement. They never miss an opportunity to convert others to their Industrial Union faith, and when they have made converts they line them up at once, as both Mike and Maggie are I. W. W. delegates.

These real lovers, with their manifold duties and pleasurable errands, have no time for pessimism or sadness. Even tho the blues should gain the ascendency in an unguarded moment, an appeal to the cooing arbiter of their happiness would soon adjust matters.

So you see this happy couple are not rejoiced at hopes of a better future, alone; they are laying the foundation of what is to be, and daily building a little of the super-structure. They dwell in a real paradise of work, love and laughter, —today. The "valley of sorrows" is a meaningless term to them. They have uprooted the thorns and briars and replaced them with flowers and garden greens.

I wonder, can there be a happier couple than Mike and Maggie and their little hopeful Wobbly?

**"Papa, I want you to carry me!"**

## CALIFORNA WORKERS HELP RELATIVES OF CLASS WAR PRISONERS.

**The General Defense Committee is in receipt of a remittance from George Schafer, San Fernando, California, of $90.75, being a collection taken up among the workers in a camp near Los Angeles, California, for the relief of the wives and children of class war prisoners, and wishes to extend to those who contributed to this its thanks and appreciation for their help and co-operation.**

**JOHN MARTIN,**
**Sec'y-Treas. of the General Defense Committee of the I. W. W.**

---

**A Socialist state can come into existence only as a net of production and distribution communes, which keep conscientious accounts of their production and consumption, economize labor and steadily increase its productivity, thus making it possible to lower the workday to seven, six or even less hours. Anything less than rigorous universal, thoro accounting and control of grain and the production of grain, and later also of all necessary products, will not do.**

**—Nikolai Lenin.**

## A STATEMENT BY ZINOVIEV ON THE RELATION BETWEEN ECONOMIC AND POLITICAL BODIES

Since the October revolution we have drawn onto our path all kinds of revolutionists in all sections of the globe. An important question arises before the trade and industrial union movements of the world: that of the relations between the revolutionary economic and political bodies of the working class. In this matter, we must not show ourselves too sectarian and too doctrinaire; we cannot and must not hold that we have a panacea suitable for all countries.

The party must in no instance mix in the internal affairs of the unions nor must it play the part of governess towards them. The party must give the general direction only, but we must at the same time state clearly with whom we are going into the congress called by the International Council of Trade and Industrial Unions for the First of May, 1921.

I believe there is place for all unions that wish to participate in the coming conference. It is not necessary to exact from the participants recognition of the dictatorship of the proletariat, communism and the Third International. It is sufficient to place before them the question: Amsterdam or Moscow. There must come to Moscow only those who do not wish to go to Amsterdam.

At the same time we must say clearly to those that come to Moscow that the unions must constitute a section of the Third International. We must explain that the Third International is not simply an assembly of political parties from the entire world; but that it is an organization which unites in one body the soviet, the trade and industrial union, the co-operative and the cultural movements of the working class; that this organization is the synthesis of all aspects of the proletarian movement.

(From the speech of Zinoviev at the Congress of the Russian Trade Unions.)

From "La Vie Ouvriere" of Dec. 10, 1920.

## GREETINGS TO THE REVOLUTIONARY INDUSTRIAL INTERNATIONAL.

Shenandoah, Pa., March 13, 1921.

**The Coal Miners' Industrial Union No. 220 of the Industrial Workers of the World closed the sessions of its conference with greetings and cheers for the Moscow Revolutionary Industrial International.**

PRESS COMMITTEE:

(Signed) Joe Brijunas,
F. Kalpokas,
J. Voliukas.

## RESOLUTION PASSED BY I. U. No. 210 AND I. U. No. 220

March 11th, 1921.

Fellow Workers:

The following resolutions have been made at the convention of M. M. W. I. U. No. 210 and C. M. W. I. U. No. 220:

**Resolution No. 32:**

"To All Class War Prisoners:

The members of the convention of M. M. W. I. U. No. 210 and C. M. W. I. U. No. 220 now in session send our greetings to all Class War Prisoners, whose only crime under the present system of slavery was to try to overthrow the ruling of the capitalist class.

We are assuring you that members outside the prison walls understand the final aims for which you became the victims of the present system of Industrial Tyranny.

We also assure you that we will follow the road laid by many victims which ends in Industrial Freedom.

(Signed)

**Convention of M. M. W. I. U. No. 210 and C. M. W. I. U. No. 220.**

Moved by Smith and seconded by Koskinen that we concur with Resolution No. 32 and that we give this to all I. W. W. papers for publication. Carried.

**Resolution No. 33:**

We, the members of the convention of M. M. W. I. U. No. 210 and C. M. W. I. U. No. 220 send our greetings to the members of the convention of the L. W. I. U. No. 120 and feel sure that you will put all energy and time to laying plans to build up the I. W. W. as a whole. That your industrial union will prove before the working class that the only hope to free ourselves from the capitalist chains of slavery is to fight under the banner of the I. W. W.

Wishing you full success in your work of construction; we are with you.

(Signed)

**Convention of M. M. W. I. U. No. 210 and C. M. W. I. U. No. 220.**

Moved by Smith and seconded by Shank that we concur with Resolution No. 33, that we send it to the convention of L. W. I. U. No. 120 and that Resolution No. 33 be sent to all I. W. W. papers for publication. Carried."

Yours for the I. W. W.,

Tom Meaney,
Sec'y-Treas. of Nos. 210 and 220.

318 N. Wyoming St., Butte, Mont.

# What Our Readers Say About "The Industrial Pioneer"

"And by the way, you are getting out the best periodical in America now. Congratulations."

**Mary Marcy.**

"We welcome with enthusiasm the appearance of "The Industrial Pioneer," a thing of beauty and truth, and we are enclosing our check for $5.00 to pay for two subscriptions, one to read and the other to circulate."

**Bishop Wm. Montgomery Brown,**
**Author of "Communism and Christianism."**

"If The Pioneer keeps up its present A No. 1 standard it will gain in circulation in this territory."

**Wm. Chance, Br. Secretary, New York City.**

"This month's issue is very good and those who get them I am sure will want them next month."

**Joseph Levine, Br. Secretary, Akron, O.**

"I want to say that the new magazine is the thing so far as an educational magazine is concerned. Hoping to see the magazine grow and grow."

**E. Leischer, Br. Secretary, Cincinnati, O.**

"Received 'The Industrial Pioneer' O. K. and say that there is quite an improvement in the magazine from what the O. B. U. was. I got one of the local bourgeoisie to handle the magazine."

**John Miller, District Sec'y of I. U. No. 120.**
**Missoula, Mont.**

"I just received the 20 copies of 'The Industrial Pioneer' yesterday afternoon and by night had sold half of them. The fellow workers all say that it is some magazine. The make-up of the magazine is great. It reminds me of the old International Socialist Review."

**Modern Book and Supply Shop, Denver, Colo.**

"I am forced to compliment you all on the contents and make-up of the magazine of the I. W. W. and a delegate who can't get business with this class of literature to pave the way is in bad with the workers. Received the fifty in good shape."

**Frank Blackstone, Delegate.**

"Your issues are used continually by our staff and the students of the working class movement, and it is important that our files should be complete."

**People's Social Research Institute,**
**Toronto, Canada.**

"Just a line to let you know that I and other fellow workers in Detroit think 'The Industrial Pioneer' is the best magazine the Wobblies ever had."

**Pete Grant, Detroit, Mich.**

# An Extraordinary Offer to Our Sub Hustlers

**With the view of getting "The Industrial Pioneer" into the hands of as many workers as possible, we are making an offer to our sub hustlers only, to last till the first of June this year.**

**If you have no sub hook, get one from the secretary in your locality. Start in today and get as many subscribers as you can. For every yearly sub you send in to this office you will receive a book in return. You will he surprised in how short a time you will have a library that any worker can be proud of.**

For one yearly sub that you send in, we will send you any of the following books:

**Cloth Bound.**

| | Value. |
|---|---|
| The End of the World. By Meyer | $0.75 |
| Evolution of Man. By Boelsche | .75 |
| Evolution of Property. By Lafargue | .75 |
| Origin of the Family. By Engels | .75 |
| Social and Philosophical Studies. By Lafargue | .75 |
| Value, Price and Profit. By Marx | .75 |

### A RESOLUTION TO HELP THE I. W. W. PRESS.

Sioux City, Ia., March 8, 1921.

Whereas, The press is our most effective means of educating the working class along the lines of revolutionary industrial unionism, and

Whereas, Our press on account of the lack of sufficient funds is unable to publish and circulate the necessary amount of educational literature to educate the workers in any great numbers

Be it therefore resolved, That we, the members of the I. W. W. in Sioux City, in regular joint business meeting assembled, go on record as being in favor of each industrial union of the I. W. W. paying a per capita tax of 5c. for each due stamp sold, into a fund for the upbuilding and maintaining of a more efficient I. W. W. press.

And be it further resolved, That a copy of the above resolutions be sent to all I. W. W. publications for publication.

(Signed) Card No. 213834 A. W. I. U. No. 110.

# INDUSTRIAL PIONEER

PRICE 25 CENTS

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class has interests in common with their employers.

These conditions can be changed and the interests of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

THE HOLY TRINITY OF MODERN CIVILIZATION

The Industrial Pioneer

Vol. 1, No. 4 MAY, 1921 Serial No. 4

# First of May, 1921

WE ARE living at a time pregnant with tremendous possibilities. On the First of May of the year nineteen hundred and twenty-one the workers of the whole world are face to face with a situation more critical than has prevailed at any time during the last one hundred years. Starvation, unemployment, chaos, death, rule triumphant in all the four corners of the earth, East and West, North and South.

Behold, oh children of men, the blessings of capitalism! In America, the "land of cream and honey," the land of "prosperity," the "haven of refuge" for the oppressed and persecuted of all countries, the gaunt figures and pinched faces of four million unemployed men and women looking for a job! Aye, four millions, at the most conservative estimate, and very likely twice that number, besides all those others who work but two or three days in a week, or but a week out of a month! Unemployed parades, in America! Suicides caused by lack of work, in America! Bread lines, hundreds of them, in America!

When we turn to other countries things are just as bad—or worse. In England, 2,000,000 officially known unemployed; in Germany, another 2,000,000; in France, even more. Wherever we may turn—in Italy, Poland, Holland, Switzerland, the Baltic and the Balkan States, South and Central America, unemployment, suffering, chaos, revolt, stare us in the face. On top of this, the brutal hand and the spiked heel of the White Terror in Hungary, Italy, Spain, Chile, Japan! In these countries thousands of our brother-workingmen are being murdered for daring to raise their voices in protest. Sweet, indeed, are the blessings of capitalism!

In this night of blackness and despair the one bright beacon of light is Soviet Russia. There, also, is suffering, but it is suffering for the cause of humanity; there, also, death reaps a bountiful harvest, but it is for the purpose of upholding the rule of labor. But there is no unemployment in Soviet Russia, and its ship of state, instead of being headed for the shoals of economic dissolution, is headed full blast for the tranquil sea of Reconstruction.

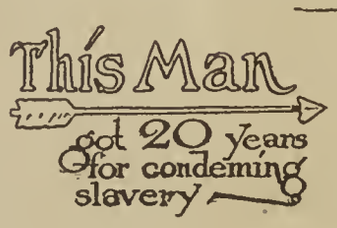
The one thing that labor is learning in these its days of supreme trial is the need, the absolute necessity, of working class solidarity the world over. The workers of no country can stand alone and win their struggle against the capitalists. Their efforts must be co-ordinated on an international scale, the other alternative being defeat at the hands of the powers that be. And herein lies the great significance of May Day, the international labor day. Never has the edict of Karl Marx, "Workers of the world, unite," been weighted with as profound meaning as today.

For thousands of years has the man who works been trying to become his own master, and yet today he still finds himself in bondage. The mistake that he has been making down the ages has been that of always looking for a Messiah, of expecting somebody else to set him free, of ever depending upon a Moses to lead him out of the desert to the Promised Land. And, truly, thousands of Messiahs has he found, but always has he been led astray, into a wilderness more desolate, and always have the fruits of his struggles and his sufferings been reaped by someone else. The other significance of May Day is that it makes the workers realize with a force multiplied a hundredfold the truth of the old saying that "he who would be free himself must break his chains."

# Supreme Court Denies Petition of I. W. W. Prisoners

THE PETITION for a writ of certiorari of the members of the Industrial Workers of the World sentenced in 1918 in the City of Chicago was on April 11th denied by the United State Supreme Court. This means that the case will not be reviewed and that the sentences will be upheld.

Of the ninety-four men who were sent to Leavenworth penitentiary by Judge Landis twelve received one-year sentences, at the expiration of which time they regained their freedom; the sentences of the others varied from five to twenty years. Of these latter forty-six have been released on bond, who will now have to go back to Leavenworth, unless pardoned by President Harding.



The case of the thirty-eight I. W. W.'s convicted in Sacramento also was brought up to the U. S. Supreme Court, and the petition for a review was denied some three weeks prior to the action taken on the Chicago case. This leaves only the fate of the twenty-six men convicted in Wichita in the balance. Their case is at present pending in the Appellate Court. Judging by the actions taken in the other two cases, not much hope can be entertained for them.

April 13th was Amnesty Day. Our hope was that President Harding could be induced to start his term of office by releasing all political prisoners. More than two hundred representatives of organized labor and political and civic organizations presented to Congress and to President Harding a petition signed by citizens of forty-one states, asking amnesty for persons convicted under the war-time espionage act. They were told by the President that he did not contemplate their release until a state of peace with Germany would be officially declared.

How soon a state of peace will be declared is problematic. On the same day that the amnesty petition was presented Senator Philander C. Knox of Pennsylvania introduced into the Senate his resolution declaring an end to the state of war that has existed for four years between the United States and Germany. Our hope is that this resolution may be passed in the very near future and that the President's subsequent action may result in the release of all class war prisoners.

And as for us, fellow workers, who are still outside the prison gates, let us do everything in our power to hasten the day

when it will no longer be possible to put men in prison for twenty years whose only crime has heen that they have tried to educate and organize the working class in order that it may free itself from wage slavery. Stop to realize what it means for men to be torn away from their wives and children, from their work, from everything that is dear and near to them, and to be thrown into a loathsome prison, in the shadow of brutality and despair, to rot there for endless years. Fellow workers, let us voice a protest against the continued imprisonment of all class war prisoners loud enough to be heard from one end of the country to the other. And, as the final and most effective means of obtaining justice, let us go to work with a firmer determination than ever before to build up the One Big Union of all the workers—The Industrial Workers of the World.

Workers of America, may you soon come to understand that "the concern of each is the concern of all" and that "an injury to one is an injury to all!"

# The Son of Man

(Dedicated to All Class-War Prisoners Confined in American Jails and Penitentiaries)

NOW, after these weeks have passed, it is the memory of your patience,
Which stabs with the pain of crucifying nails!
How still you were, watching the wheels grind your clean lives to dust!
How still and patient, there in that cold, white-ceiled room, day after droning day!
"An injury to one, an injury to all," you say, who are too strong and big to feel the pain I now feel for you.
You it was who showed me plain, the bright, brave face of Courage.

Little brothers, strong and young, or old and bent and work-worn,
The fire of your young eyes lit my dull heart with hope for all the race of men.
Glittering knights, once on a time, threw gauntlet down
For any cause . . . a woman, or a worthless king or a dead sepulchre.
And their deeds blaze immortally thru song and story;
And you, with bright laughter, throw to the wolves
The slender, running chance Life gave you . . .
Even the all of comfort, shelter, love,
And single-hearted make your tourney,
Under the shabbiness and grime wearing the pure gold armor,
Lance invincible, of Principle—undying faith in Right,
Missing that flanking knowledge to sustain, that your dear Cause,
The Son of Man, the age-old sacrifice, is for the Son of Man today,
And that you are, yourselves, the Son of Man, rejected and despised.

The prince of this world came, and finding nothing of himself in you,
Took you to his own grinding in the mill that makes lives dust.
"The years shall pass," his high-priests say,
"The long, devouring years shall pass, before the bars shall be undone,
Which shut you from the right to your own life!"
But how can bars shut from the light your swift, clear thought,
Your gleaming spirit? I watched it blaze, and poured out tenderest love
To that which is so strong it needs no love.
No gift that I could give but very poor in the bright presence of the selflessness you gave . . .
And that, not made with hands nor seen with eyes, shall never pass
Beneath the wheels of what the Prince of this world calls his justice.
Never shall it be dust, nor like the dust, more than is starlight.

Listen, my little brothers, my strong and mighty brothers!
Last night I watched a star set, a white point of light,
It dropped with silver silence into the upheld arms, the boughs of a black cypress.
Down it slipped to where I could not see
Into the black net of the cypress tree, but was its light put out?
I heard your marching feet go beating from the echoing room,
The rhythm of your ringing battle hymn, strong, high and clear,
Then dying muffled, down the tunneled way that led to the steel cage.
I saw the fine-frocked servant of the Prince rub his smooth hands and laugh.
O, servant of the Prince, the light of stars is not to soon put out!
That was not all, there in the hollow room!
The trailing battle hymn, muffled at last by walls,
Kindled more stars in souls who heard it pass,
More fire in those, who in the name of Brotherhood, will hold it high,
And be as runners, messengers, for you.

Listen, little brothers . . . strong, great-hearted brothers, for today
I stood upon the edge of a wide pool, left by the storm of yesterday,
And suddenly I knew it was a mirror magical.
It held a universe inverted and bewitched.
The gray and knotted roots of the pines were at its very surface,
While their lifted tops pierced downward to its dregs.
Even the shell-pink clouds flung in the wide glow of the afternoon,
Seemed to be lying down so deep, they could have touched its slime.
Such is the strange world of inverted things,
The values of that realm ruled by the princes of pride you came to overthrow.
And when we watched you, singing, march away, down the black hole beneath
Were we not looking into a grotesquing pool that registers delusion?
Were your firm steps not in reality, hitting a high, white trail,
An upland way, winding invisibly up spiritual heights that end among the stars!
This was the truth of it, and yet at that dark hour I did look down,
And turned into the gathering dark upon the street,
Too numb for tears, there in the beating rain.
A sudden, wonder scent blew from a florist's stall.
O, dearest God, how strange there were still violets upon the earth!

If those who owe me love and fine allegiance should not pay
I could but bruise a bit of wild herb in my hand, growing beside the path,
Here in the meadows, breathe it in deep, and heal the hurt,
Or push it so far back that it could come no more into remembrance.
But to you, who are betrayed and robbed by those who take
What they can never give the world, or you!
How should I offer comfort! I to whom this hour
The mountain lilac signals with its jewels, sapphire and lapis lazuli . . .
But tenderer bloom and lovelier than jewels—
Why should I ever think of sorrow personal,
Who now can hear the fluting meadow lark across the bright, wet fields!
Where you are now there is not one sweet sight or scent or sound.
Only grim steel, only gray shadows, harsh and most desolate.
You are in there for me. I in whose soul your stars are kindled,
Here in the fields for you! Could you but know their loveliness!
There is a glowing poppy in my hand, its petals spun with sheen so exquisite,
It seems I must behold it in my dream. Yet it is here . . . I touch it,
Upon the same strange earth which holds you in the pit!
This morning, in a warm bend of the beach that curved to hold me,
Like a sheltering arm, I felt the velvet sand slip thru my hand, remembering you,
And watched the little surf beat out its song.
You cannot have them now, but they will stay unchanging.
They will wait like Love, till you are free.

Last night I saw a dense black forest hill
All suddenly aglow with fire!
A golden veil enwrapped it!
A little while, and then, out of the midnight dark
A planet flowered, a yellow shield encircled,
Its light blazoned with strange beauty, and the thicket-wilderness was lit with sudden, wondrous fire.
So from the blackness of your midnight
Oppression of this night of ours
Shall your Truth blaze its fair, transcendent way.
Comrades, the light is on you!
Your feet have reached the Mountains of High Purpose.
We watchers, waiting in the valley, lacking your valor,
Sight the dawn upon your faces, ere it breaks upon the world!

Carmel-by-the-Sea, February, 1920.

# The Truce in England

By Francis Davis

WHILE the cancellation of the British general strike seems a temporary victory for the Government, it actually amounts to nothing more than a truce. The next test of strength between the Government and the workers probably will have a much different result.

For eight years the miners, railway men and transport workers have been striking for wage reforms and for eight years they have been accepting defeats at the hands of astute British politicians. In 1912 the miners struck for a minimum wage and, after a struggle, won it—in principle. Actually, however, they went back to work at wages which were reduced to such a minimum that no man could live upon them decently. During the war the workers were tricked by the politicians in Parliament out of their traditional trade union rights and lost even the right to strike. In 1919 the miners struck for control of the industries and received—the report of the Sankey Commission, and the polite shelving of the entire question. In 1920 the miners and railway men struck again for improved wages and again were tricked out of victory.

In the present strike the miners have demanded that wages be maintained at a level of subsistence, contending that the mine owners' program would reduce wages to a level fifty per cent below the cost of living. To assure themselves of a decent wage they have asked a pooling of profits and a control of the industry similar to war time control. They are going back to work, having lost their demand for control and at wages which, even if fixed on a national scale, will represent a material reduction. This defeat is almost the last straw and the workers of Britain have lost patience with political handshaking. When they strike again they will be prepared to go thru to the end and take control of the industries finally.

There was nothing deliberately revolutionary about the present strike, even tho the demand for control of the mines sounded like a revolution. J. H. Thomas, head of the railway unions, went so far as to say that he deplored revolutions and that he would not have responded to the call of the miners, except that he felt honor bound to support the Triple Alliance decision, having pledged his unions to do so in all emergencies.

The strike might easily have led to a revolution, however, for there is thruout England the growing conviction among the members of the Triple Alliance that nothing short of a complete taking over of the industry and the State for themselves will obtain for them comfortable living conditions. This sentiment would undoubtedly have crystallized had Lloyd George called his ninety day middle class volunteers into action. A single clash between Government forces and the workers would undoubtedly have precipitated a nation-wide civil war and a revolution-by-accident would have been the inevitable result. It was only the wit of Lloyd George, who foresaw such a contingency, that turned the rising tide of sentiment and saved his Government from destruction.

Lloyd George has long been conscious of the growing revolutionary desire of British labor. His statement at the conference table that he felt that in talking to the union leaders he was not speaking to the rank and file, nor obtaining the answers of the rank and file, indicates clearly how delicate he felt the present situation to be. Time and time again thruout the controversy he has charged that he saw behind the strike a deliberate attempt to take over the Government or to precipitate a revolution and take over both the Government and the industries.

The same is true of the conservative union leader. J. H. Thomas, the leader of the railway unions, admitted that he felt that if he did not join the other elements

in the Triple Alliance, the rank and file already impatient with delays, might kick over the traces and strike in spite of the leaders for revolutionary purposes.

But for this growing impatience of the rank and file with anything short of revolutionary action the situation might have taken a middle-of-the-road, political turn and resulted in the discrediting of the Lloyd George Government and the seating of a "Scheidemann" Labor Government. The labor politicians, exploiting the workers' solidarity and their faith in evolutionary tactics, have gained power and should Lloyd George go to the country on a general election, particularly on an issue involving labor—the result might be an overwhelming victory for the labor politicians. For two years the Labor Party has been winning most of the national by-elections and is said to lack only ten percent enough votes to put over a successful election on any issue. Lloyd George, conscious of his loss of coalition support and facing the growing storm of disapproval by labor, declared that this strike was only a political plot on the part of Henderson of the British Labor movement to obtain control. While that statement may have represented the wishes of the men to whom he was speaking over the council table, it was evident that the rank and file were interested in something more than the control of political jobs. Among the rank and file there is a growing conviction that labor politicians are no better than other politicians and that with Henderson and Clynes in control of Parliament, labor will have to begin the work of taking the control away from them all over again. The rank and file of British labor wants the mines and the railways and the ships as well as the State and will not be satisfied with anything short of that result. Lloyd George understood this and understood that he was not only flirting with a political coup on the part of labor, but that if he mobilized the troops and began hostilities he was flirting with a labor dictatorship.

For years the British workers have been building up their economic power, consolidating and strengthening it in every quarter by a larger and larger application of the program of industrial unionism. In 1915 Robert Smillie brought the three great powers in the movement, the railway men, the miners and the transport workers, together in a single organization—the Triple Alliance. This great organization represents a total membership of nearly 3,000,000 men and has affiliated with it the Federation of General Workers, numbering 1,500,000 men. The effect of this union has been the drawing together and emboldening the other trades. In the present strike support was voted from every side and had the general strike been effected there is little doubt that the entire Trades Union Congress, the British organization similar to the A. F. of L., would have gone out at once in support of the Triple Alliance. Whatever the result of the present strike, therefore, it will have been made clear to the workers that they are possessed in such an emergency of tremendous power.

At the same time, the Government has learned its own power. Up to the present it has never had a test of its strength in a social war with its own people. It has fought furious wars in the Cape and in Egypt, India, Mesopotamia and Ireland and in these wars it could always exploit religion and nationalism or some other tradition; it has never had to turn machine guns and cannon on its own island workers. Because it has never had to come to blows at home, other workers have sometimes wondered whether the British workers were not too patriotic to assert themselves on behalf of their own social rights. The statements of leaders such as Henderson have led some Americans to believe that the British workers are imperialistic and are laboring in league with the British politicians to exploit the workers of the "Possessions."

Even if the British workers were so provincial as to be concerned about no movement but their own, they would not be imperialistic. It is said that British workers are afraid of the disintegration of the Empire, because the fall of the Empire would mean the discontinuance of colonial trade and the emigration of fifteen million work-

ers from the British Isles, but it is not capitalism nor imperialism which makes England the great industrial center of the world; it is the strategic position of the British Islands as its center of production and distribution which has concentrated so many great industries there. If anything, the capitalist regime has tended toward scattering industrial activities, finding it easier to exploit African, Indian and Chinese labor, than to pay the union wages at home. If the British workers wish to remain in England and to maintain England as the industrial center which it has become, their hope lies not in the profit system, but in a system of production which seeks to place industry nearest the source of raw materials and nearest the markets and which by a delicately adjusted system of balances seeks to eliminate every element of waste, giving all workers the consumption goods they need. British workers who fear emigration have much more to hope from the social revolution than from the profits system. From the social revolution they have everything to gain and nothing to lose but their profit-taking nobility and gentry.

But the British workers have given the lie to the charge of imperialism. It was the British workers who forced the abandonment of the Churchill dream of conquest of Russia from Archangel, it was the British workers who stopped the sending of ammunition to Poland and blocked the destruction of their Russian brothers from that quarter, it was again the British who thru the Council of Action brought the Irish question to the fore and forced the Government to declare its position before the world. The British workers are rapidly growing conscious of their power thru the use of it and if in the present instance they are canny enough not to gamble away their power because they are not yet strong enough and because the Government is yet too strong, they are to be encouraged and urged to continue the successful work of bringing their industrial organization to completion.

When the next test of power comes in England, and it is quite certain to come soon, the Government will find itself with a fully equipped force of middle class volunteers and a paid force of thugs and gunmen, such as are being employed in Ireland, opposing an array of several million workers ready with commissaries and funds and bound together with an unshakable solidarity. In the tilt which follows it will not be likely that political knavery will count in the settlement, for British labor (in the present strike) has learned that its future lies not with the politicians, but only with their own industrial solidarity and that their success depends not on the Hendersons, Clynes and Thomases, but will be achieved only in spite of them.

Today British labor holds the destiny of the world of the workers in its hands. Had a successful revolution been effected in England in this strike, the revolution would shortly have become a world-wide fact. If this is still the case. when the next test of power comes between the British workers and their masters, the wager is safe that British trade unions will not fail their fellow workers in other lines.

# All Aboard for "Normalcy"!

IT'S A LONG, long way to "normalcy," but President Harding's heart's right there.

Let any one who doubts the assertion read the text of the president's address to the speeial session of Congress on April 12th. It is a great deal to ask of any one, to plod thru the verbal slush of a presidential message, but the task will be found to be not without its humorous eompensations.

The nation's present chief exeeutive appears to be the victim of a mild form of monomania, charaeterized by the presence of what psychiatrists know as a "fixed idea." President Harding's fixed idea was first given expression when he startled an unsuspecting world with the long-slumbering word, "normaley."

Just what was meant by the word, no one appeared to know exactly, Mr. Harding least of all. Nevertheless, as a pieee of eampaign verbiage, it was very impressive, quite as impressive, indeed, as the high-sounding catch-words and ponderously sonorous phrases foisted upon us by his predeeessor, the now disillustrious Woodrow.

On one point, however, we were wrong. The word did have at least some sort of meaning for its foster father. What that meaning was—and is—becomes elear on a reading of the president's speech.

The president begins by telling the Congress that it has been ealled in speeial session to give its attention "to national problems far too pressing to be long negleeted." "We must invite," he says, "every factor in our citizenship to join in the effort to find our normal, onward way again." The first thing to do it to put our "own house in order." To this end, we must all "join in the give and take whieh is the essential to firm re-establishment.

The president then goes on to unburden himself of some 7,000 words. In all that number, however, the words "labor" and "unemployment" do not oeeur once. These two "national problems" are not given even passing mention.

One would think that, with something like 4,000,000 people out of work in the United States at the present time, with actual hunger in a million homes and the gaunt spectre of starvation staring hundreds of thousands of others in the faee, with bread lines and soup kitchens in all our large eenters of population, with wages eonstantly on the downward trend and prices falling slowly, if at all, one would think that with all this Congress would find itself provided with just about as "pressing" a problem as any with which it has to deal.

President Harding, however, apparently does not take this view. Either the situation does not exist for him, either he is the Mary Baker G. Eddy of polities, determined to blink the faets at any eost, or, what seems more likely, his silence is a matter of poliey.

It may be that he regards labor and the unemployment situation as a little too ticklish a subjeet, one the least said of whieh the better. In this conneetion, the question once put to President Taft may be reealled. Mr. Taft was asked what a working man out of a job with a starving wife and family was to do. His reply, long famous, was "God knows." Maybe, God knows what's to be done to solve the unemployment problem. President Harding evidently does not.

By a process of elimination, then, we arrive gradually at the presidential eoneeption of "normaley." Whatever "setting our own house in order" and indulging in the "give and take whieh is essential to firm re-establishment" may mean, it quite elearly has nothing to do with the working elass or its needs. True, there are some of us who believe that the workers of a nation are the nation, but we are an insignificant minority of "Reds" and "Bolsheviks."

What, then, does "normaley" connote to President Harding?

He begins by insisting that " we strike resolutely at expenditures" in order to lift "the staggering load of war debt." The latter, he thinks, ean best be taken eare of by "orderly funding and gradual liquidation." He has the graee to add, naively, that all this "is far more easily said than done."

"Our eurrent expenditures are running at the rate of $5,000,000,000 a year, and the burden is unbearable."

What are the remedies proposed? "Rigid resistance in appropriation" and "the utmost economy in administration."

After dropping us the eomforting bit of news that taxes for the next two years probably cannot be allowed to fall below the four-billion mark, the president attempts to cheer us up by hinting that he thinks the war tax on iee eream sodas, movie shows, ete., ought to be repealed.

All this while, however, he is fairly aching to get at the gist of his "message," the old G. O. P. standby, the proteetive tariff. What would a Republican platform or presidential message be without the faithful old P. T.? Mr. Harding's prologue, it is plain to be seen, bores him. He gets it out of the way with as few words as possible. But when he gets to the tariff—Ah! there he is at home!

The tariff leads naturally to the one subjeet dear to the presidential heart, the interests of "business." Mr. Harding does not say "big business"—that is a phrase whieh has been rendered unsavory by the usage of the muekraker—but there is no doubt that it is of the interests of big business that he is thinking. We have heard of the "business man's administration" whieh we are going to have, with a "business man's eabinet," ete. It is foreshadowed here. Labor and unemployment do not exist, but business—the eountry, it seems, is run in the interests of business.

"I have said to the people we meant to have less of government in business as well as more business in government. It is well to have it understood that business has a right to pursue its normal, legitimate and righteous way unimpeded, and it ought to have no call to meet government competition."

This, then, is "normalcy."

It certainly ought to warm the heart of the big business pirate, as well as that of the middle-class commuter. The latter hopes to share in the spoils, and both the big and small fry are agreed on one point, that "what this country needs" is a "business administration." Mr. Harding, reckoning, doubtless, that he was elected by this element, does not propose to leave them in any manner of doubt as to where he stands. His words are, in a president, unusually plain and outspoken.

Then, with the presidential habit of facing both ways at once, he turns around and, in the next breath, says what he quite evidently does not mean to be taken with any degree of seriousness. He throws a tid-bit to the "reformers" by promising that "profiteers" shall be, as the newspapers say, "rigidly probed."

Reduction of railway rates comes next. This will probably be popular with big business, but not with the railway workers, when the bosses, in their turn, begin slashing wages.

The development of public highways thru Federal aid, the extension of the U. S. merchant marine, the joining of the United States in an international radio and cable system, and provisions for the development of aviation bureaus are the recommendations next in order.

Then comes the inevitable bit of flag waving in a manifestation of "concern" for the welfare of our crippled soldiers. No presidential utterance would be completel without some such side-play. It appears to be rather hard for Mr. Harding to would be completed without some such side-play. too hard-headed, too cold-blooded. He lacks the unfailing "gift of gab" of his predecessor, Woodrow. One can imagine him, however, taking a larger bite off the presidential cut-plug and, after a deliberate aim at the White House cuspidor, settling himself to the task of turning out half a thousand or so words on the subject.

Next comes the astounding discovery that "new social forces" are at work in the United States.

"Events of recent years have profoundly impressed thinking people with the need to recognize new social forces and evolutions, to equip our citizens for dealing rightly with problems of life and social order."

What's to be done about the matter? President Harding thinks a department of public welfare might be founded, "which could be made to crystalize much of the rather vague generalization about social justice into solid accomplishment." "Education, public health, sanitation, conditions of workers in industry, child welfare, proper amusement and recreation, the elimination of social vice, and many other subjects," including the maternity bill, might, Mr. Harding thinks, fall within the scope of this department.

(May we suggest, parenthically, that, in our humble opinion, the shortest and simplest route to "social justice" would be the expropriation of the expropriators by the expropriated—but that's too deep for Warren.)

Touching next on the race question, the president opines that "Congress ought to wipe the stain of barbaric lynching from the banners of a free and orderly representative democracy." But his "one proposal" is "the creation of a commission"—and that's about as far as the race question ever gets in a political platform or a presidential message.

Coming to the question of disarmament, the president begins to warm up a little once more.

"The government is in accord with the wish to eliminate the burden of heavy armament. The United States ever will be in harmony with such a movement toward the attainment of the higher aims of peace."

Oh, yes, of course! But—

"But we shall not entirely discard our agencies for defense until there is removed the need to defend. We are willing to co-operate with other nations to approximate disarmament, but merest prudence forbids that we disarm alone."

Really, doesn't the world move, after all? The foregoing words might have been uttered in 1891 or 1871. The great war, with its "staggering load of war debt"—to say nothing of that other debt, the cost in human life, which is glossed over—the war has had no lessons for the master class, the class that made the war, the class that makes all wars. That same class would rush into another world war tomorrow for the sake of obtaining or preserving control of a route to Bagdad.

From disarmament we come to the questions of peace, the treaty, and the League of Nations. There is little in all this—even less than in preceding passages—to interest one whose thinking is done in terms of the class struggle and the coming social revolution. Indeed, there would be little sense in a worker's reading the document at all, if it were not that thereby his conviction of the futility of political action—if by "political" action we mean reliance on government and parliamentary forms—may be deepened.

Mr. Harding wants peace, but he isn't sure just when it may come. He wants a league—not the one that England and France want, bit his own G. O. P. brand. What have we workers to do with this? Let us forget government for the present, fellow workers. Let us organize for the capture and subsequent control of industry. And when we have taken over industry, as we shall do, we will find that we, the workers, **are** the government.

**S. P.**

# George Hardy on the I. W. W.

(The following letter was written by George Hardy and was sent by him from Russia to the Danish Syndicalist paper "Solidaritet," published in Copenhagen.)

FELLOW WORKERS:

AFTER having been in Europe for some months, and after having paid a little visit to Russia, I find that a great deal of misunderstanding prevails in regard to the position of the I. W. W. I have reached this conclusion after speaking to many Scandinavians, among them two Danish revolutionary fellow workers, with whom I had a long conversation in Moscow. These Danish fellow workers were very anxious to know our point of view; but when I emphasized that the I. W. W. is mainly a Marxian organization, they called my attention to the fact that the Swedish syndicalist papers, and even the yellow Branting paper, "Social-Demokraten," maintain that the Swedish syndicalists' position is the same as that of the I. W. W. Of course, the "Social-Demokraten" did not have as its object to be of assistance to the Swedish syndicalists, but it quoted Albert Jensen, who had translated an article from the "One Big Union Monthly," written by John Sandgren, who has now been removed as editor of the above mentioned magazine on account of his anti-bolshevik articles and because he took a similar position to the one taken by Albert Jensen in Sweden.

The I. W. W. is not the same as the European syndicalist organizations. It is a highly centralized, industrial organization. The decentralizers met with a decisive defeat at our convention in 1913. Our speakers have lectured on economic subjects and our locals have conducted study classes in which Marx's "Capital" has been used as a text book. "The Positive Outcome of Philosophy," by Joseph Dietzgen, is the basis for the train of ideas which we sought to convey to our classes, and the materialistic conception of history can be said to be our historical point of view. This gives us an understanding quite different from the humanitarian sentimentality prevailing in the minds of many of those who do not understand the materialistic conception of history; and because they do not understand this scientific and much-needed doctrine, they become opponents of the Dictatorship of the Proletariat—yes, even friendly toward the Entente, as was Albert Jensen during the war. On the other hand, the I. W. W. was absolutely against the war, altho without being guilty of "conspiracy" against the United States government, of which we were accused during the war. John Sandgren's removal by our General Executive Board shows our attitude toward Soviet Russia.

There is, however, an individualistic spirit within the I. W. W., but that is on account of the kind of workers of which our organization mainly consists: lumber workers, agricultural workers, miners and seamen, in America all of whom are, more or less, migratory workers. This gives them an independent spirit and makes them the most revolutionary workers in America. They are not afraid of a fight; this explains the frequency of strikes wherever our members have a functioning organization.

Our members know how to win because they shape their tactics according to the ones used by their opponents. It is, therefore, clear that it is not an anarchistic ideology that makes us individualistic, as the anarcho-syndicalists claim;—quite on the contrary, we are disciplinarians as a result of the very form of our organization, and my personal conviction is that we shall develop more discipline in the near future.

Nevertheless, we felt that we must co-operate with all the syndicalist organizations in all countries, understanding that they have developed under conditions much different from those in America. If we refused all alliance on account of these differences, we would not be justified in calling ourselves scientific, which we do.

We strive for a very elastic program, which will allow us to develop new tactics, etc., during a critical period. Even our point of view in regard to parliamentary action is elastic, altho firm. We are non-political, not anti-political, as many claim, altho some of our members may be. We take the position that economic organizations existing under American conditions would succumb if they officially took part in elections. Therefore, our program is: "We refuse all affiliation with political and anti-political 'sects'—we are non-political."

This means that our members can choose their own individual, political course. There is no doubt as to which way they will go, with a sound economic understanding of their class position. It can also be said that our membership is a great voteless mass because it consists of migratory workers, which is one more good reason for our non-political program.

I am afraid that I am taking up too much space, but I feel that I must give you this information, because the more correct information we have concerning each other the better will we be in a position to act during a crisis. The I. W. W. claims that revolutionary success to a great extent depends on our doing the right thing in the right way at the right time. If this holds good nationally, then it also holds good internationally. That is what we have learned from the Russian revolution, and altho the revolutionary crisis may become very different in countries which are more highly developed than Russia, we can be sure that the dying capitalist class will not act any more leniently elsewhere than it did in Russia, and therefore we must prepare ourselves for international action. The coming con-

gress of the Industrial International will be the expression of the highest revolutionary activity on the economic field. We must all support this congress and fight the yellow Amsterdam "International." I presume that this is obvious to everybody. There is no choice for the I. W. W. between Amsterdam and Moscow.

Hoping that you will have great success in Denmark and with greetings to all Danish revolutionists from the I. W. W. members in tyrannical America, I remain,

Yours for Industrial and International Freedom,

George Hardy.

# CAPITAL AND LABOR

**By John O'Hara**

CAPITAL and labor are enemies, combatants drawn up on the field of battle with a real no man's land between them. They have been at war with each other for centuries and cannot sign peace until one or the other scores a complete victory. One faction only will survive after peace is signed. Which one shall that be?

Capital and labor can come together only in conflict. They cannot mix anymore than can oil and water.

Disease, poverty, orphanages, and asylums, are the expressions of the casualties suffered by labor.

Labor's chief protection and defense lies in unions. When unions are beaten labor is beaten.

Capital's defensive and offensive force lies in its One Big Union. What a strong and powerful union it is! Solidly, systematically, scientifically organized, its members fight shoulder to shoulder in every sector and along the whole firing line, while labor retaliates by striking back in a puny, weakened effort which has little effect on capital.

Imagine the United States going to war with Germany one state at a time, or one city at a time! But it needs no imagination to see labor going to war with capital one trade union at a time, or one local at a time; that is an actuality. Is it any wonder, then, that capital always triumphs?

Uncle Sam's army has its artillery, its machine-gunners and infantry, its engineers, tank corps and intelligence divisions; there are many other branches to it, but they work together in harmony and are thus able to present a solid front against the enemy. With Labor's army, however, which is unscientifically organized, the case is vastly different.

It is split up into a great many divisions that meekly attempt to fight capital each by itself, and sometimes refuse the help of other crafts by an assumption of artificial superiority. The lack of team-work weakens labor's forces and causes retreat, sometimes "according to plans."

Up to the present time captial has always been victorious. Its weapons—financial power, the church, the press, the courts—are mighty, and its strategical moves are shrewd.

The I. W. W. are the shock troops of labor's army. When others retreat we hold the fort.

Mr. Workingman and woman, this is your fight as well as ours. Join us. You need us more than we need you. While you will give us the strength of one more member, we will give you the strength of our whole organization.

If you want to own a home and cover the dining room table with clean, wholesome food; if you want a shorter work-day whereby you can sleep an hour longer in the morning and be home an hour earlier at night; if you want all the good things of life and add ten to twenty years to your life; if you think the good things of life rightfully belong only to those who work for them, then, Mr. Workingman and woman, your place is in the ranks of the One Big Union of all the workers.

# MAY DAY, 1921

**I sing you a song, O my comrades,**
**O my comrades in the dust,**
**O my brothers, vanquished and torn.**

**I sing you a song of the new day;**
**And of resurrection.**
**Of the future that is yours—the green future.**

**The deep, dull dawn is born in the East**
**Amid muffled cannon roars**
**And the cries and struggles of the dying.**

**And the old order is giving up to the ghost;**
**And the new warrior is cleansing himself**
**To go forth to battle;**
**The young, straight warrior going forth**
**Without arms or armor,**
**Raising the blood-red standard.**

**And you, O my brothers, O my tired, defeated brothers;**
**Lying low, spurned and sore;**
**I see the coming rays touch on your maimed limbs.**

**O my brothers! O my comrades!**
**See you not the vision in the East?**
**The vision of hope, resplendent, eternal?**

**There is a vast stirring, and a sigh**
**Like the sob of the wind thru the western cornfields.**
**My brothers see the dawn—they are rising.**

## THE THIRTEENTH CONVENTION OF THE I. W. W.

THE Thirteenh Convention of the Industrial Workers of the World, which will meet in Chicago on May 9th, will be confronted by some very big problems. However, before setting to work on their solution, the delegates will find inspiration and confidence in remembering that the I. W. W., altho it has been subjected for years to the worst persecution ever meted out to any organization in America, is today as virile and strong as it ever was, and that the basic principles of the I. W. W. are being accepted today by millions of workers the world over. The powers that be may as well realize now as at any other time that as long as a vestige of intelligence or a ray of hope is harbored by the American working class, just so long will the I. W. W. continue to exist and flourish.

The present unemployment crisis is showing up the futility of craft unionism better than the best kind of industrial union propaganda could do. Lack of work, wage cuts and the "open shop" are the order of the day, and the now existing trade unions have proven themselves utterly incapable to put up any kind of resistence against these onslaughts of capitalism. The unorganized, of course, are in a worse condition than any other class of workers.

Thus we see that conditions themselves are paving the way for the coming of revolutionary industrial unionism. During the last year a great change has taken place among all classes of workers in their sentiments towards the I. W. W. They are no longer as scared of the three terrible initials as they have been in the past. Large masses of workers are paying earnest heed to the message of working-class solidarity; in places they are positively eager to receive it.

The biggest issue before this, as it was before all previous conventions, will be **Education and Organization.** How can we put out the right kind of propaganda in the right place at the right time, so that it will result in the greatest good to the organization? What are the best tactics to use to increase both the numerical and the moral strength of the organization? These are weighty problems, the correct solution of which will require the best minds in the movement.

## SECRETARY DAVIS URGES "A FAIR DEAL FOR CAPITAL"

TO THOSE benighted individuals in the ranks of labor who still look to governmental and similar agencies for "reforms" which shall alleviate the intolerable conditions of their unconscious slavery, the words contained in the first public utterance of James J. Davis, the new Secretary of Labor, should prove sufficiently disillusioning. Secretary Davis spoke in Chicago on the evening of April 12th, at the annual banquet of the Greater Chicago Lodge, Loyal Order of Moose, of which order he is a national officer. On the platform with him were such typical representatives of the working class as Capt. Marshall Field, H. H. Merrick, former president of the Chicago Association of Commerce, and Edward H. Litsinger of the Illinois Manufacturers' Association.

In view of his audience, Secretary Davis' speech is a little more understandable. Otherwise, one would not expect quite so much frankness. As it was, it appears to have "gone over big."

"Mr. Davis," the account contained in the Chicago Tribune the morning after tells us, "uttered a plea for a fair deal for capital, a decent living wage for labor, larger

profits for farmers thru lower shipping rates, and the settlement of all industrial disputes thru conferences between employer and employe.

"He warned labor that if it is to take a share in the policies of the nation it also must share the national responsibilities, declaring it was up to labor to see that transportation conditions were such that the farmer could make a fair profit.

"He upheld the right of capital, as well as labor, to be given a fair chance to present its side of all controversies, warning it, however, that a decent living wage was necessary to assure loyal Americanism in the ranks of the workers.

"From time to time," said Mr. Davis, according to the Tribune account, "large employers of labor have been made the football of muckrakers, some of them with justice. They have been painted in every color, save that of the lily, and when they have striven to give their side, they have been charged with spreading propaganda.

"They must be given credit for one thing at least—a desire to keep the wheels of progress going, of operating their factories even at a loss."

And finally, the secretary concludes with this sublime piece of school-boy humor:

"It would be much easier if capital and labor got together and settled their differences among themselves. I am sure they could reach an agreement easier than by having the secretary of labor or any one else try to adjust the differences. Above all things, however, neither side should try to put anything over on the other."

Poor old capital! It's in a hard way, indeed, when even the secretary of labor has to come to its defence. What about a fair deal for labor? It might not be altogether unbecoming in one who bears the title "secretary of labor," at least to keep up appearances a little. Of course, we all know which side of the fence he's on, but such frankness is rather shocking.

And what a monster this big bully, Labor, must be! Always picking on poor little Curlylocks Capital. Why doesn't he pick on somebody his size?

Seriously, Mr. Secretary, which side needs the fair deal more at the present moment, labor or capital?

Labor, however, if he's a good little boy, keeps his face and hands clean, doesn't tear his blouse, stays in his own back yard, and doesn't play with that naughty little Bolshevik boy next door, is to be given a great big cookie. What is it? A "decent living wage." Not even a "fair day's pay" in return for a "fair day's work," mind you (we wonder, incidentally, what's become of that hoary old A. F. of L. slogan?) but merely a "decent" wage.

Ideas of "decency" vary. We're not sure that we're willing to trust Mr. Davis.

And if labor doesn't behave—Secretary Davis doesn't say what will happen, but the "fair deal" is not far removed from the "square deal," and we all remember Mr. Roosevelt and the "big stick."

Another think that Mr. Davis is greatly wrought up about is Farmer John's profits, and he actually expects labor, represented by the transportation workers, to see that Farmer John gets, not merely profits, but more profits. (The farmer, of course, is "the backbone of the nation." Labor is merely a sort of useless vermiform appendix, or at best a very minor vertebra.)

After all this, we should not be surprised to hear the secretary springing the old chestnut about the credit which should be given to capital for keeping "the wheels of progress going." Labor has had no share in that! The picture which is drawn of the poor manufacturers, "operating their factories even at a loss," is heart-rending.

And what a nice little plan that is for labor and capital's "getting together." It's really a capital idea! We can see the happy pair on the way to the conservatory for a little tete-a-tete right now!

True, Mr. Davis, in the language of the street, "said a mouthful," when he opined that it would make things "much easier" if such were the case.

And "above all things," neither side should attempt to put anything over on the other. Oh, no! War is a game of ping-pong, and both sides must play fair. But Mr. Davis, presumably, has never even heard of the class struggle.

It would be a waste of white paper to quote so silly a speech at such length, if it were not for the humor of the thing and the fact that there are certain lessons to be learned from it which need to be driven home in the minds of hundreds of thousands of workers—members of the A. F. of L., adherents to the old craft-union form of organization, and the still vaster army of the unorganized. For, after all, Sammy Gompers, Jimmy Davis, Herb Hoover and the rest are all tarred with the same brush.

The fundamental error which blinds the eyes of these workers is the so-called "philosophy," imposed by capitalism, of "social solidarity." It is the old advice, given by the big-business buccaneer to the ambitious office boy: "Make your employer's interests your own, if you want to succeed."

Only when the words of the I. W. W. Preamble: "The working class and the employing class have nothing in common . . . Between these two a struggle must go on . . ." Only when these words have been burned into the consciousness of the workers will Labor at last wake up and, when it hears such drivel as comes from Mr. Davis, give a big Hee-haw, followed by a little action from the hind hoofs.

# The Striker

**By Robert Whitaker**

**Many have sung the soldier**
**From the rude, red days of old**
**To this madder hour of more murderous power,**
**And death schemes manifold.**
**But no one has sung the striker,**
**Tho a better fighter he**
**For the living cause and the larger laws**
**Of the empire that is to be.**

**Many have sung the statesman,**
**Of nation and state and clan;**
**Tho he served himself from the purse of pelf,**
**And lorded it over man.**
**Yet greater than he, the striker**
**Lacking both fame and fee,**
**At the cost of all he has built the wall**
**Of the city that is to be.**

**Many have sung the scholar,**
**Maker of books and school,**
**Tho his ease was earned by the throng unlearned**
**Who slaved that the few might rule.**
**But the lore and the law of the striker**
**Setteth the whole world free,**
**Neither ease nor toil shall the spirit spoil**
**In the knowledge that is to be.**

**Many have sung the saintly,**
**The pure of all times and creeds;**
**But alas, the good have denied the food**
**For even the children's needs;**
**Kinder by far the striker,**
**And truly more righteous he,**
**For he stakes his meal on the common weal**
**And the justice that is to be.**

**Some day, when all are toilers,**
**And nobody toils for naught,**
**When the worker rules over kirks and schools,**
**And shapes all the realm of thought:**
**They shall sing the song of the striker,**
**No longer an outcast he,**
**But with arms abreast he shall stand confessed**
**In the triumph that is to be.**

# How the I. W. W. is Organized

By James Kennedy

### The Fallacy of Craft Unionism

AS TO the necessity for working-class organization there can be no question. The point to be decided is: How shall the workers organize? This question is of supreme importance. If the workers allow themselves to be misled and tricked into organizing in a way that will not only fail to free them from wage-slavery or even to better their condition, but will put them more thoroly in the power of the industrial masters, much valuable time will be lost and discouragement and despair will result. What is needed is unity of thought and action. Far better no organization at all than a fake form which divides the workers against themselves and misleads them in the interests of the employers.

Such a form of unionism exists today. It is know as craft unionism and is represented by the American Federation of Labor. Craft unionism splits the workers up into as many different unions as there are crafts. Each of these unions is tied up by a separate contract with the employers, and all these contracts expire at different times. In this way united action is rendered impossible. Not only does the A. F. of L. divide the workers in industry but it teaches them the economic lie that the interests of labor and capital are identical. It stands for "a fair day's pay for a fair day's work." This may sound reasonable enough to these ignorant of economics and unacquainted with the real nature of the wage system. In reality it means nothing except that the A. F. of L. puts itself on record as upholding the wage system and condemns the workers to perpetual exploitation. Who can determine what is a fair day's pay? Wages and profits go together. One cannot exist without the other. If a worker admits his wages are fair then he must also admit that his employer's profits are fair. One might as well talk about a fair night's plunder for a burglar. Employers think a fair day's pay is just enough to keep the workers in working condition. Intelligent workers know labor produces all wealth, and they demand the full product of their labor. This would leave no profits for the boss and so would mean the end of the present system which is based on wages and profits.

The workers are organized to produce wealth—not by crafts but by industries. To get out logs the donkey engineer cooperates, not with engineers in other industries, but with fallers, buckers, choker men and all others on the job. In carrying on industry he is only remotely connected with engineers in other industries. He cannot come to an agreement with engineers in the mining and construction industries as to how many logs are to be got out by the crew with which he works. That agreement can only be made or carried out by the men who make up the logging crew. The stationary engineers are organized in a craft union. Their local union is made up of stationary engineers in all industries in that locality. At their business meetings engineers from the logging industry come together with engineers from all other industries. It is impossible for them to arrive at, or carry out an agreement to exert any control over the job, for their union separates them from the other men on the job, with whom they work.

The different local unions of a craft are brought together in so-called international unions. These cut across all industries and bring together a small section of the workers in each industry. It is impossible for workers organized on the craft plan to ever exert any appreciable control over industry because only the workers remotely connected in industry are brought together in the union, and those directly connected in industry are separated and tied up by separate contracts. On one job there may be a dozen or more different unions, each tied up with a separate contract. Thus the men

organized by the bosses to work together to produce, are organized in craft unions to prevent their acting together to control. Could any more effective system be devised to keep the workers divided and powerless? Could any arrangement better suit the masters than this Machiavellian policy of "divide and conquer"? The only explanation is that craft union officials are agents of the capitalists and traitors to the workers.

Not all A. F. of L. unions are craft unions. The United Mine Workers, for instance, is not divided on craft lines; but it is organized so as to prevent concerted action by its members. Instead of separating the workers by crafts it separates them by districts. These districts are all tied up by separate contracts expiring at different times. When one district is on strike the rest remain at work. The orders are transferred from the strike district to the others, and in this way one district scabs on another. Often the strikers go to work in other districts, thus scabbing on themselves.

### Revolutionary Industrial Unionism

Revolutionary industrial unionism, as represented by the Industrial Workers of the World, aims to organize the workers according to industry, on the basis of one big union in each industry, without regard to craft or the tools used; all these unions being brought together under one head and all co-operating together towards a common end. The I. W. W. is not only industrial in form but it is revolutionary in character. It is based on the principle that "the working class and the employing class have nothing in common" and that "labor is entitled to all it produces." Its aims are threefold:

(1) To organize the workers in such a way that they can successfully fight their battles and advance their interests in their every-day struggles with capitalists.

(2) To overthrow capitalism and establish in its place a system of Industrial Democracy.

(3) To carry on production after capitalism has been overthrown.

### The Job Branch.

The workers are organized by industries to carry on production. The job is the unit of these capitalist-controlled producing organizations. Each job is controlled by a capitalist's agent—a foreman. The object of the workers' organization is to control industry, therefore it must follow the lines of industry, and its unit must be the job branch. At the job branch meetings the workers who work together, come together in conference. At the meeting they can come to an agreement to work in whatever way is most beneficial to themselves. When they go back on the job they can co-operate to carry out this agreement. In case of strike all quit together. The foreman's control is exerted to speed up the workers and get the greatest amount of work done for the least money. Control by the organized workers is exerted to secure for themselves the greatest possible percentage of the wealth they produce. On all organized jobs the workers' control is centralized in a job committee whose function is to see that all legislation passed at the job branch meetings is lived up to.

### The Industrial Union

But little can be gained by organizing on one job if the other jobs in the same industry are unorganized. The workers on each job co-operate with the workers on all other jobs in the same industry to run that industry—for the capitalists. Capitalist control of the different jobs in an industry is centralized thru the medium of foremen, superintendents, general managers of companies, and industrial associations of capitalists until it culminates in the trust—or one big union of bosses—that dominates that industry. In the early days when employers were small and unorganized, the workers on one job might have organized and struck successfully. But shutting down one job brings little pressure to bear on a big company that owns many jobs. Even if all the jobs of one company were shut down by strikes it would still be

possible for that company to continue to do business by transferring their orders to other companies in the trust. The union must cover the whole industry. But even if the workers on every job were organized their power would be small unless they had some means of coming to a common understanding with the workers on all other jobs so they could act in unity.

Therefore all job branches in an industry must be brought together to form one mig industrial union so they can all co-operate to control that industry for themselves. They must have some means of arriving at a common agreement, and must keep in touch so they can co-operate to carry out that agreement. To this end annual or semi-annual conventions are held, composed of delegates from all branches in the district or industrial union. At these conventions a general agreement is reached as to how the business of the union is to be conducted. The convention is the legislative body of the union, but all legislation passed must be ratified by referendum vote of the rank and file on the job. As boards of directors are elected at stockholders' meetings to look after the interests of the company, and are responsible to the stockholders, so the executive committees of the union are nominated at the conventions and elected by referendum vote, and are responsible to the membership. The job branches of an industrial union are further kept in touch thru the medium of a weekly bulletin published at industrial union or district headquarters. This bulletin prints the minutes of all job branch meetings so each branch knows what all others are doing at all times.

### One Big Union of All Workers

The workers in each industry are organized to co-operate with the workers in all other industries to carry on industry as a whole. Each industry is dependent on, and linked up with all other industries. The whole complicated system of modern industry is run by capitalist-controlled producing organizations of workers. Control of the whole system culminates by means of interlocking directorates, common ownership of stock, "gentlemen's agreements," etc., in the hands of a ring of great financial magnates with headquarters in Wall Street. This is the one big union of capitalists who control all industries. The industrial unions of the workers in each industry must be brought together in one big union of the entire working class, so that the workers in each industry may co-operate with the workers in all other industries to control industry as a whole and run it for their own benefit. The connecting link between the different industrial unions is the general convention of the I. W. W., composed of delegates from each industrial union; and the General Executive Board, which is nominated at the general convention, and elected by referendum vote of the rank and file. The G. E. B. has general supervision over the affairs of the organization between conventions. As in each of the industrial unions the general convention is the legislative body of the union, but all legislation passed must be ratified by referendum vote of the rank and file.

Industry is world-wide. It pays little attention to national boundary lines. The modern wage worker has neither property nor country. Ties of birth and sentiment which connect him with any particular country are slight and unimportant. It makes little difference to him what country he exists in, but he must have a job. Therefore he follows industry. Capital seeks the most profitable investment. If an American capitalist can invest more profitably in the Krupp Works of Germany than in the Steel Trust of the United States he invests in the Krupp Works tho he knows his money may be used to finance the manufacture of submarines to send American sailors to the bottom of the sea. Capitalists often try to cover up their crimes with a cloak of patriotism, but the only patriotism they know is that of the dollar mark. The revolutionary unions of the workers must not confine themselves to geographical divisions or national boundary lines, but must follow the world-embracing lines of industry. The workers of all countries co-oper-

ate to carry on industry regardless of national boundary lines, and they must organize in the same way to control industry. To promote unity of thought and action among the world's workers, international conventions are held, composed of delegates from the unions of different countries. But as industrial development proceeds industrial lines grow stronger and national lines become relatively less important. It is probable that in future these conventions will be composed of delegates from the different branches of one great world-wide industrial union.

**Revolutionary Tactics.**

When the workers are educated to the real nature of the profit system they lose all respect for the masters and their property. They see the capitalists in their true colors as thieves and parasites, and their "sacred" property as plunder. They see state, church, press and university as tools of the exploiters and they look on these institutions with contempt. They understand the identity of interests of all wage-workers and realize the truth of the I. W. W. slogan: "An injury to one is an injury to all."

Organized industrially, the workers are in position to strike at the very heart of capitalism. Even with only a small percentage of workers organized there are many ways in which they can use their economic power for the benefit of their own class, and to weaken capitalism. Railroad men can refuse to transport scabs or material produced by scabs. They can refuse to haul gunmen or soldiers to be used against strikers. They can carry union men free of charge. Union longshoremen can refuse to handle munitions to be used against workers in any part of the world; or to load vessels beyond the safety limit. Union telegraph and telephone operators can fail to transmit messages detrimental to labor. Union printers and publishers can refuse to print distorted news, anti-labor editorials or advertisements for scabs. Union cooks and waiters can refuse to serve rotten food to union men or any food to scabs. Union store clerks can sell the best goods to union workers and reserve shoddy clothing and adulterated food for scabs and parasites. Union steel workers can refuse to manufacture armored automobiles, trains or tanks to be used against their class. Union factory workers can refuse to manufacture rifles or ammunition for use against workers. Union food workers can refuse to can rotten or diseased meat or to adulterate food in any way. Union construction workers can refuse to handle scab material, or to build jails or dangerous, unsanitary houses. Union lumber workers can refuse to supply lumber to scab construction jobs.

By mutual agreement organized workers can slow down on the job, thus conserving their energy and lessening the army of unemployed by causing more men to be put to work. They can dictate who shall be hired or discharged. They can refuse to work under objectionable foremen and can choose their own foremen. It might be objected that such action by workers would cause their discharge. This would depend on how strongly they were organized. Some of the examples given would require the backing of a strong union, others could be done with very little organization, but all have been put into practice in recent years both in this and other countries. Little is heard of such cases because, for obvious reasons, they are seldom mentioned in the capitalist press.

When the capitalists feel their control of industry slipping they will probably declare a lockout and try to cause an extensive shut-down of industry, hoping by this means to starve the workers into submission. But the organized workers, confident of their power to run industry, will remain on the job and continue to carry on production and distribution. These tactics were used on a large scale by the Italian workers in 1920. The metallurgical workers demanded higher wages, which the employers refused. They did not go out on strike but stayed on the job, and by the slow-down strike reduced production one half. The employers then declared a lockout, but the workers refused to leave the job. They put the bosses out and contin-

ued to operate the plants. Owing to lack of sufficient organization in other industries they were forced to let the capitalists take control again. But when they resumed work for wages it was on much more advantageous terms in regards to hours, wages and conditions.

No doubt the same tactics will be used many times in different countries before the final collapse of capitalism. With each trial of their strength the workers will gain experience and learn their weak points. As working-class organization grows stronger capitalism grows weaker. It has already outlived its usefulness. It is unable to run industry efficiently, and fails to supply the needs of the great majority of the people. With the workers organized industrially and understanding their interests and their power as a class, failure is impossible, and it is only a matter of time before they take full control of industry and abolish wage slavery.

### Facts About the I. W. W.

The I. W. W. is non-political. It is not concerned with the empty forms of a fake political democracy. Industrial unionists know popular government can never be anything but a fraud and a sham under a system of industrial autocracy. Knowing the industrial government is the real government, they refuse to waste time electing the hirelings of Wall Street money kings, but aim straight at the root of all human power—control of industry. The aim of the I. W. W. is industrial democracy, which means that those who run industry shall control industry and that every worker shall have a voice in its management. Control of industry by the workers means a social revolution—a complete turning over of the social system. With control of industry in the hands of the workers production will be carried on for use and not profit, and all activities of society will be for the benefit of the workers instead of for the maintainance of a parasite class.

The I. W. W. believes in, advocates and practices direct action. Direct action means the direct use of their economic power by the workers themselves—as in strikes—as opposed to parliamentary action by which the workers try to elect politicians to represent them in capitalist governments.

Initiation fees and dues in the I. W. W. are low in order to be within reach of all. The I. W. W. aims to take in all workers regardless of race, creed, color or sex. It is not its object to build up an exclusive job trust, but a great working-class union. Keeping workers out of a union by a prohibitive initiation fee forces them to scab and eventually destroys the union.

The I. W. W. is democratic in principle. It tolerates no official autocracy within its ranks. Officials are elected and all important questions decided by referendum vote of the rank and file. Strikes cannot be called on or off except by vote of the men on the job.

It is against the principles of the I. W. W. to sign contracts. When workers sign a contract not to strike they sign away one of their strongest weapons. Past experience shows employers only respect contracts so long as the workers have power to enforce them. When the workers have power to enforce them contracts are unnecessary, but when they lack such power contracts are useless, for the employers will break them whenever it suits their purpose.

There are no high-salaried officials in the I. W. W. Wages of officials are determined by the average wages of the workers in industry. There are no permanent officials, the term of office being limited to one year. Ex-officials must work at least six months at the point of production before they are eligible to hold office again.

In its battles with the system the I. W. W. does not depend on big treasuries. It realizes the power of labor is industrial, not financial, and that the few nickels and dimes of the workers can never prevail against the billions of the capitalists. No attempt is made to build up a big treasury, all funds not needed for actual running expenses being used to carry on the work of education and organization. Big treasuries are more a source of weakness than of strength. They cause a union to become

conservative, and in time of strikes can be confiscated by the courts or tied up by injunctions as in the case of the Danbury Hatters and the United Mine Workers of America. When any industrial union or branch is on strike it is backed up by the solidarity of all members in all industries. Meetings are held, collections taken up and subscription lists circulated. This method has never failed. Some of the biggest and most successful strikes ever carried on in the United States have been financed in this way.

There is a universal transfer system between the different industrial unions of the I. W. W. When a worker moves from one industry to another he can transfer from one union to the other without expense or inconvenience.

The I. W. W. is the result of the past experience of the labor movement. It has learned from the mistakes and failures of former organizations. It is a natural result of capitalism. So long as the conditions which produced it remain it cannot be destroyed.

For further information write to the Secretary-Treasurer of the Industrial Workers of the World, 1001 W. Madison St., Chicago, Ill.

Editor's Note—The above article forms a chapter in James Kennedy's book on the Lumber Industry, which will soon be published by the Industrial Workers of the World. Two other chapters from the same book have already been published in previous issues of The Industrial Pioneer.

# The W. W. I.

By JOHN BANKS

By reading the popular press I have found
(And, mind you, the press cannot lie),
That the cause of all sin, from without and within,
Is the W. W. I.

The cause of all murder and arson and theft,
Sedition and treason, most high—
In short, the one cause of all insulted laws
Is the W. W. I.

The scapegoat bore all of the old Hebrew's sins,
And was left in the desert to die;
But goats are now scant, and so we take a slant
At the W. W. I.

If Adam had eaten the apple today,
And the Lord in His anger drew nigh,
He would not blame Eve, as he did, but would say,
"'Twas the W. W. I."

Should you call up old Nero and ask whom to blame
For the burning of Rome, he'd reply,
"It was not the Christians who kindled the flame,
"But the W. W. I."

A hail storm has beaten the cotton crop down;
The chinch bug has taken the rye;
A cyclone has literally wiped out a town:
Pinch the W. W. I.

If the weather is warm, if there comes a cold storm,
If gloomy or azure the sky;
If it shines, if it snows; if it's calm, if it blows,
Blame the W. W. I.

Vile coal miners strike and are ordered to hike;
Bold house-maids their matrons defy;
A menacing stare greets the chaste millionaire;
Cause: The W. W. I.

You have hammered your thumb, you have bitten your tongue;
A cinder has blown in your eye;
You've a catch in your back or you've stepped on a tack:
Bless the W. W. I.

If your mother-in-law doth eternally jaw,
If your triplets get cholic and cry,
If their ringlets are red or they fall out of bed,
Curse the W. W. I.

If your cellar caves in, if you bark your poor shin,
If your old brindle cow goeth dry,
If your pancakes are tough and your sailing is rough,
Soak the W. W. I.

The cause of consumption, of asthma and gout,
The hook worm, the tape worm, the fly,
Of bedbugs and lice, of rats and of mice
Is the W. W. I.

And therefore I bless our Great Popular Press;
On its every report I rely;
It knows whom to blame for all sin, and the name
Is plain W. W. I.!

# Mexico; Its Government and Labor Movement

By W. J. Lemon

SINCE the return of King Gompers and his Court to the United States from their trip to Mexico, where they went as delegates and officials to the Pan-American Labor Congress which was held in Mexico City, January 10th to 20th of this year, he and some of his courtiers have been extremely busy contributing articles to both the capitalist and labor press that pay a glowing tribute to what they call the Labor Government of Mexico (King Sam says in one of his numerous contributions: "The Mexican Government is the nearest to a workers' government of anything on earth."). I am not going to make any comment on these enthusiastic outbursts: the mere fact that their writings are freely solicited by such respectable business men's journals as "The Mexican Review" and others of a similar nature should be sufficient evidence as to their worth and character. Before I came to Mexico I was somewhat deluded myself by the reported manifold glories of this so-called workers' government; not from reading the fairy stories written by Gompers, Kelley, Johnston & Co., but because I had read a few numbers of an English language magazine published in Mexico City under the title of "Gale's International Journal for Revolutionary Communism." Its glowing accounts of Mexico's remarkable Socialist and union movements had more or less impressed me with the idea that I was coming to a country where the workers were practically at the point of peacefully and legally, thru their political and economical power, taking possession of all lands, natural resources and machinery of production and distribution,—that the shackles of wage slavery were about to be struck from the limbs of the suffering toilers and a new Russia established on the American continent. It dilated on the many Socialists and prominent labor leaders who occupied important positions in the various departments of government, many of whom were now governors of states, heads of special diplomatic foreign missions, ministers in the federal cabinet, legislators, etc., including the Governor of the Federal District (who was once a shoemaker) and the Chief of Police of Mexico City (who was not only a Socialist but had once written a Socialist book). Gale summed it all up in one number of "Gale's" with: "Soviet Mexico is near."

* * * * *

I am not going to indulge in much philosophizing, for I want the readers to draw their own conclusions. What I hope to do is tell the facts as best I can in my crude way, both from personal knowledge and from information received direct from the workers themselves. I feel that this is what is needed above everything else—correct information about conditions down here to counteract the stream of exaggerated and misleading statements that are being sent out to the workers of other countries, deceiving them as to the true status of the Mexican workers and of the Government of Mexico. No greater injury can be done the labor movement of any country than by issuing flamboyant and exaggerated reports and articles thru the press, whether it be thru wilful intention or gross ignorance.

* * * * *

Merely to make a statement does not prove a fact. The principal fact that I shall bring forward to show that the Mexican Government is just as capitalistic as any other, and that it is in no sense a government of the workers, is the history of the recent strike of railway workers on the National Railway System of the republic. Here we have a government that Gompers has referred to as a model, and as the nearest thing to a real workers' government on earth, fighting the workers as viciously as any other capitalist government or corporation. I arrived in Mexico City a few days before the strike was called (Feb. 25th); consequently I have been in a position to see and understand just how the governmental machinery was turned on the workers when the Holy Trinity (Rent, Profit and Interest) of the capitalists was attacked. For several days before the date set for the walk-out troops were being mobilized and despatched to all points. Soldiers were quartered at all stations, yards, shops, bridges, etc., from one end of the republic to the other. One could not approach any portion of the railway property without being confronted by the point of a bayonet. Even the General Administration Building in which the general offices are located, situated in the heart of Mexico City far away from the zone of conflict, was guarded day and night by federal troops.

* * * * *

To explain the cause of this strike it will be necessary to refer back to another strike of the railway workers that occurred in 1920. This strike was called for the purpose of enforcing a demand for an increase in pay, better working conditions and recognition of the unions. This strike lasted only a few hours, all points being gained, including an increase in wages running as high as 45 %,—altho the section men, shop laborers and some other workers still receive wages as low as 1½ to 2 pesos per day of 8 hours (2 pesos are equivalent to $1.00 American money), a circumstance which alone is enough to condemn this government as a labor government. De la Huerta was then Provisional Pres-

**President Obregon and His New Cabinet—To the Right of the President, Secretaries Pani and Rubio. To the Left—Secretaries Calles, Estrada and De la Huerta. Behind the President—(in Citizens' Dress) Secretaries Villareal and Zubaran. In Uniform Are Members of the Staff.**

ident, in the interim between the governments of Carranza and Obregon, and he instructed the Director General of Railways to sign the schedules and agreements between the Administration and the unions. While De la Huerta was in power the unions say they had no further trouble; the unions were recognized and all agreements kept to the letter. But since Obregon took office, which was on December 1st, 1920, trouble has been brewing. The Railway Administration kept steadily encroaching upon the rights of the workers until finally it ignored the unions and all the agreements, the men as a last resort walking off the job on February 25th.

* * * * *

The National Railways of Mexico comprise a system of approximately 12,000 miles with about 60,000 employees. All went out except about 5,000 who belonged mostly to the Union of Conductors, Engineers, Firemen and Brakemen, one of the oldest if not the oldest railway union in the republic. At the present time, and since the strike of 1920, its membership is composed mostly of conductors, brakemen and switchmen, all the firemen, and all the engineers except about 75 having broken off and joined with the other 13 crafts that now make up the Railway Workers' Federation. There are 14 unions in the railway industry, 13 in the Federation, and one, the conductors, on the outside. This reactionary union did everything in its power to help defeat the strike. It requested the Railway Administration to refuse recognition to the other unions and went so far as to issue bulletins to the effect that it would help break the strike if it were called. The rest of the strike-breakers were recruited from all the walks of life, but they were not very numerous. The Committee states that 150 were brought from New York to Very Cruz by steamer, and 25 or more from El Paso, but that they all quit when they arrived at their destination.

A despatch was sent out from Mexico City, March 6th, stating that strikers were committing sabotage by blowing up bridges, tearing up tracks, etc., between San Luis Potosi and Monterrey and that 15 of the leaders had been captured and executed by the military. The strikers' Committee branded this as a capitalist newspaper lie whose purpose was to create antagonism against the workers. On March 7th, another report quoted Obregon as saying that the Government's strike policy remained unchanged; which would seem to mean that there would be no recession from the policy of non-recognition of the unions, with the attendant stern application of military measures to protect life and property (especially property). On Sunday, March 13th, a passenger train standing at the Huichapan station was telescoped from the rear by a freight train, killing 4, seriously injuring 26 and inflicting minor cuts and bruises on 50 others. The press reported that the engineer in charge of the freight was a thoroly competent man of 16 years' experience. This was

proven to be false by those who knew him, who testified that he was not only incompetent but also mentally unstable, having been discharged in 1913 on this account, and now re-hired by a "labor government" to break a strike. An endless list of accidents, such as boiler explosions, derailments and collisions, caused in nearly every case by incompetents engaged by this (according to Gompers and others) "labor government" to beat down the workers, could be recited if the space permitted. As I write this article there is a movement on foot to call a strike in Tampico to force the release of a worker who is under arrest there charged with speaking against the Government at a railway strike meeting. At Torreon 16 officers and members of the union are under arrest charged with committing sabotage. I am informed that there were a number shot by the military during fights.

I am reciting these things as evidence to show that Mexico has not a workers' government.

After a struggle lasting three weeks the men were ordered back to work on March 19th by their leaders, thru an understanding arrived at between the latter and the Railway Administration. They went back with the **understanding** that all agreements will be respected in the future (anyone who has had experience with corporations knows what such vague language means), but still the Director General of Railways insists that all strike-breakers shall be retained and that strikers shall be taken back "as vacancies occur," according to their standing when they went out. Consequently many of the youngest ones are still out. Why, it will be asked, did the workers lose, when everything was in their favor, with traffic about 30 % normal and motive power going to pieces fast? Because they were betrayed by the leaders of the unions, a repitition of the same tactics and the same old game of bluff that have been pulled off by the chiefs of American craft unionism for the past 25 years or more.

The Mexican workers in other lines of industry were waiting and anxious to come to the assistance of their fellow workers. The leaders had been boasting that 200,000 of Mexico's organized workers would be called out unless the Government made a favorable settlement with the strikers, but they never called them. But this is what did happen: about 8,000 textile workers at Orizaba walked out in sympathy without the sanction of the leaders and they were promptly ordered back (but they didn't go back, and at last reports they were still out). Orizaba workers are the most militant in the country.

The present status of the strikers summed up is that they have gone back to work practically defeated, except for the experience they have gained and the militancy that will later be developed—for we must remember that no strike was ever totally lost.

Enough has been told, I think, to convince the

**An Indian With His Load, Mexico City.**

reader that there is nothing in common between the workers and the Mexican Government, any more than between the two contending classes of all capitalist nations.

* * * * *

The next question to discuss is that of the numerous Socialists and labor leaders said to be representing labor in the Government. Granting that this is true, it does not mean anything to the workers to be represented in a coalition government. Many countries have passed thru the same experience to the sorrow of the workers. It is true that there have been attempts made by well-meaning individuals to better the conditions of the Mexican workers. A few years ago it is said a semi-Socialist state was set up in Yucatan, only to be drowned out in blood later on by Carranza, who at one time claimed to be a Socialist of the Scheidemann or Kerensky type but whose favorite sport, nevertheless, was shooting down strikers. Zapata, who established his little colony in Morelos and Tabasco met with a similar fate at the hands of the same gentleman, he being murdered about a year and a half ago. According to "Gale's," the Socialists are again in power in Yucatan, having regained their position at the last election,—but this must not be taken too seriously.

The States of Michoacan and Hidalgo both have "Socialist" governors, of what type I do not know, but I understand they are trying to confiscate the land of the church and the large haciendas and distribute it among the peons. Some land has already been given to the peons, but only a small portion of them have been supplied. And what

Grading Coffee in Mexico.

ean the peon do with land when he has no funds to buy tools with which to work it? Only communism can solve the land problem, and communism is not yet here, even tho "Gale's" may say, "Soviet Mexico is near."

Luis N. Morones, formerly head of the "Confederacion Regional Obrera Mexicana," known as the Gompers of Mexico, is also the leading spirit of the "Partido Laborista" (Labor Party), in addition to being director of the Government munition plants, a very lucrative post. The Labor Party was formed last year for the purpose of boosting the presidential candidacy of Alvaro Obregon among the workers, and has been the steady recipient of government patronage ever since. With revolutionary catchwords it attracts votes that could not be gotten in any other way. Its concrete program is opportunistic to the core and its entire achievements for the last year are participation in the Obregon revolution against Carranza, exertion of influence with Provisional President De la Huerta for the establishment of a government Department of Social Work (which Department has settled strikes, given charity to workers, etc.), exertion of influence for the improvement of conditions in the Penal Colony of the Maria Islands, and participation in various electoral campaigns. Its method is intriguing with the government officials, not steady revolutionary work along class lines. "Gale's" claims that the Labor Party has a membership of 200,000. I should like to know where the 200,000 hide between election campaigns. The truth of the matter is that the party is nothing but an ordinary political club, with no real active membership beyond the small group of officials and press agents.

Just as President Ebert of Germany was once a harness maker, so Gasca, Governor of Mexico City and the Federal District, was once a shoemaker, if that means anything. But I cannot see anything to indicate that he is giving a working class administration. The bootblacks are taxed three pesos a month for the privilege of walking the streets and shining shoes. Every peanut vender is also taxed all that the traffic will bear, and if you saw most of them you would say that it wouldn't bear much. Gasco occasionally acts as mediator between the robbers and the robbed, just as the mediators do in the United States, and the workers get about the same results.

As for the Chief of Police of Mexico City who is said to be a Socialist and author of a Socialist book, I can say that I have never heard of him arresting any of the respectable crooks, but every day I see his men marching gangs of men and women across the city. These are the petty crooks, victims of the system and members of the working class that have been forced down by the Big Crooks. —Anyone who visits this country can see the squalid misery and the scores of human wrecks that receive not the slightest care or consideration from this so-called labor government, but are forced to eke out an existence that would disgust the lowest animals. Those conditions infest not only Mexico City but every part of the republic. I don't say that they are worse than in any other capitalist country, perhaps they are not so bad as in the slums of America and Europe (for here the poor can enjoy plenty of fresh air and good climate without any extra charge). Soviet Russia is the only country in the world that is interested in the welfare of the workers; there provision is made for the young, the aged, the sick, the physically disabled and for mothers both before and after confinement. But in the fact of this contrast, King Gompers has the audacity to write a eulogy of the Mexican Government as a model workers' government, while at the same time there is sent out from A. F. of L. headquarters a circular to all labor unions denouncing the Soviets of Russia in terms so vile that they have never been equalled by Russia's bitterest capitalist enemies. Gompers was in Mexico from January 10th to 20th, and he was elected president of the "Pan-American Labor Federation." Was he here to whip Mexican labor into line to suit the interests of his Wall Street masters? Is he now trying to rouse the American workers against their Russian comrades as per instructions from his Wall Street masters, so as to enable international capitalism to make another attempt to crush our Russian comrades? This question I leave for others to decide for themselves.

* * * * *

Phrases like, "Soviet Mexico is near" and all the rest of the chatter about a red labor movement in Mexico is child's talk. It is, in fact, nothing short of treason to the working class, whether it be due to ignorance or evil intention. Mexico has no such thing as a red movement, i. e., a well-organized, disciplined body that knows what it wants and how to get it. There may be a few scattered groups here and there but they are of no importance at the present moment. The real Mexican movement is, unfortunately, still in embryo. Heretofore, the only labor organization here has been of an entirely reactionary craft union form, with a membership dependent upon the leadership of leaders who are out and out, pure and simple individualistic self-seekers.

A scattered group of militant unions is so far too weak to be of any decisive influence. The Mexican workers as a whole are not only victims of 400 years of feudal servitude and priestcraft, but are now being preyed upon by their leaders. What is needed here now is a group of clear-headed, well-disciplined workers, capable of educating and organizing the Mexican movement into a militant body, one that will brush aside all the leaders and others who stand in the way of the workers' freedom. There is an attempt being made now to organize a left wing movement, but it is still too early to predict what success it will have. This attempt centers around the newly-formed "Confederacion General de Trabajadores," which was organized only a few weeks ago at a congress called by the "Federación Comunista" of Mexico City. The Congress was made up of 53 delegates from 12 states, representing more than 40,000 workers and peasants. It passed resolutions condemning Sam Gompers' so-called Pan-American Labor Federation and provided for the formation of a competitive Pan-American labor organization, which should represent the true interests of the workers instead of those of their bosses. It also endorsed in principle the Red Labor Union International and voted to submit to the unions a referendum on the question of definite affiliation.

Needless to say, the "yellow" leaders of the "Confederacion Regional" did everything in their power the prevent the convening and successful operation of this congress. Among other things, they published false articles about the comrades who called the congress and united with Gale (who uses the name of Communism to cover up anything that may need covering) in the publication of a manifesto calling on the unions not to send delegates to it and hinting that the men who were pushing it were spies in the pay of American capitalism whose object was to destroy "the unity of the workers."—In spite of all this the workers did attend the congress and did organize the radical "Confederación General de Trabajadores."

Coffee Drying Near Jalapa, Mexico.

The revolutions that have been fought here have never been for the workers but always engineered in the interest of the business class. The workers have only been permitted to organize in the last few years. "Free speech" is somewhat freer here than it is in the U. S., but how much longer it will remain so is a question. The proletarian Revolution is yet to come, and the workers will not be free in Mexico or in any other nation until it does.

* * * * *

**Appendix**—There were a few in all crafts and departments who remained at work during the railroad strike; also about 175 engineers, besides those in the union who did likewise. Today, March 28th, a train auditor, who had been active in the strike, and had had one of the best runs on the system, showed me his written order to report for service on another division, which was an inferior run, and located in the yellow fever zone. This is being done as a form of punishment; several others have received similar treatment. I am also informed that over 2,000 strikers are out of jobs on account of being displaced by strike-breakers who were retained in the service.

Mexico City, Mexico.

# Bow of Promise

**There are gloomy prisons looming thru the breadth of our fair state,**
**There are many wives and children anxious for the loved-ones' fate;**
**There are soldiers and detectives who for hire a vigil keep,**
**And a million silent workers in whose hearts these wrongs sink deep.**

**For these men who lie in prison stood between the hordes of greed,**
**And the many hapless victims, in their day of greatest need;**
**And they scorned the despots' hirelings and their bid of yellow gold,**
**And for this today they perish in the federal prisions old.**

**Yet, our eyes are turned to eastward, to a New Day's welcome light,**
**And on its bow of promise are Brotherhood and Right;**
**Ah, prison doors shall open then, and exiles shall be free,**
**And all the world shall cherish our new-found Liberty.**

**Julia C. Coons.**

A Federal Soldier.

# "Dust" on Mexico

"Dust," the noted labor cartoonist, has just returned from Mexico, where he spent four months. The two pictures on this page were sketched from life and represent typical Mexicans. We print below what "Dust" has to say about Mexico and its government:

There seems to have been some efforts made to create the impression among American workers that a labor government is in control of Mexico. This impression, if it prevails to any extent, should be corrected, for it is not only ridiculously untrue but also impossible. As the situation now stands, it is simply up to the federal government of Mexico to get along with the foreign elements that are interested in Mexican resources, otherwise, the federal government will be unable to cope with the unsettled condition of that country. What I mean is this: Any time the government does not meet with the requirements of the dominant financial interests, it is a simple matter to finance another revolution. There is always an abundance of prospective soldiers who are willing to fight for any general who has sufficient funds to make such fighting remunerative. This, together with some high-sounding phrases and a few promises from some clever and ambitious politician, seems to be about all that is necessary to bring about an armed uprising in Mexico.

A TYPICAL STREET SCENE IN MEXICO

I do not wish to be construed as eulogizing the Obregon government, but it seems to me it is adopting an attitude that will tend to develop the vast natural resources and bring about a more settled condition thruout the country. Surely this will be of some importance to the labor movement of Mexico, for a state of continual civil war and chaos only retards economic organization as well as education, which is so essential to a proletarian revolution.

Just before the late railroad strike the chief of the railroad administration stated that the approaching strike would present an excellent opportunity to reduce the working forces of the railroads, which he claimed was then retaining a number of unnecessary workers. This is quite typical of the Obregon government, which is bourgeois in every detail and has no regard for the workers except to keep them in subjection. What is needed among the workers of Mexico, the same as in other countries, is **organization** and **education**, but without a similar degree of progress among the workers of the United States the working class of Mexico is absolutely helpless.

**Dust.**

# The Economics of a Patriot

**By Jacob Sherman**

1. There lived, in the days of the Great War, one so lacking in reason that men everywhere knew him by the name, Fool.

2. And it came to pass that out of the Capital an envoy was sent, waving a flag of striking colors, and prating of justice and freedom and Liberty Bonds.

3. Now, the Fool was deeply moved by the eloquent words of the envoy. I, too, can be a patriot, thought he. For the sum of my savings I will buy me a Bond.

4. At that time there lived in the land another who spoke of fellowship, brotherly love and peace; but him men knew everywhere as the Radical, the Red, the Agitator.

5. And it came to pass, when the Fool was on his way to draw his savings, that he met the Radical to whom the Fool related his plan of buying a Bond.

6. But the Radical, thereupon, was greatly vexed, and his patience was sorely tried.

7. Whose good art thou seeking, he asked, and who will profit therefrom?

8. And the Fool answered and said: Is not my money secure and will not interest be paid me?

9. Verily, replied the Radical, thou art indeed a Fool. Surely thy money is not secure. For thy loan is a hundred dollars, and the payment therefore will be a hundred dollars; but when the payment is made, the purchasing power of thy hundred will be even as twenty. And as for the interest, Fool, where will thy government secure its funds to pay thee? From taxes, Fool, and thou wilt be called upon to bear them.

10. But it was for naught that the other had been named, Fool. And he let loose his anger upon the Radical, calling him Slacker and Coward and Fool.

11. And the Radical departed with bowed head.

12. Now it came to pass even as the Radical had foretold:

13. A great scarcity came upon the land; and the price of food grew great and the cost of raiment soared high.

14. Then the Fool cried out in his distress.

15. I must sell my Bond, he cried, for my need is great. I must sell my Bond for my food is gone.

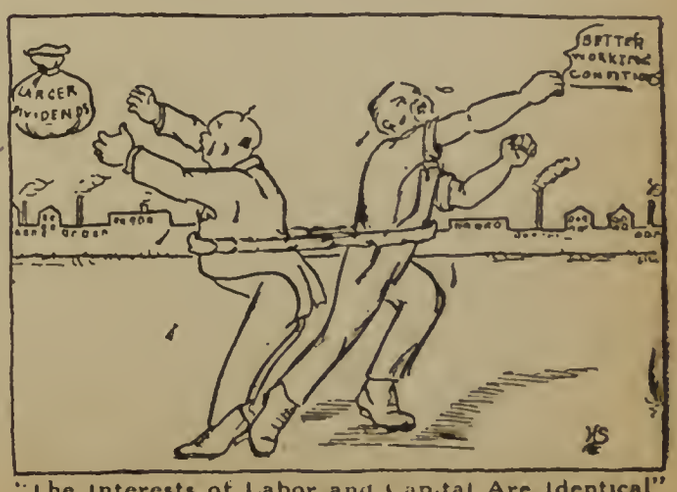
16. Now, when the Fool offered his Bond in sale to his Broker, behold, its value had shrunk to eighty dollars; but his need was great and the Broker secured the Bond.

17. And when the Fool sought to purchase food, he found that the price of sugar had risen to a hundred dollars a pound; and the price of an egg was a hundred dollars; and a loaf of bread was a hundred dollars.

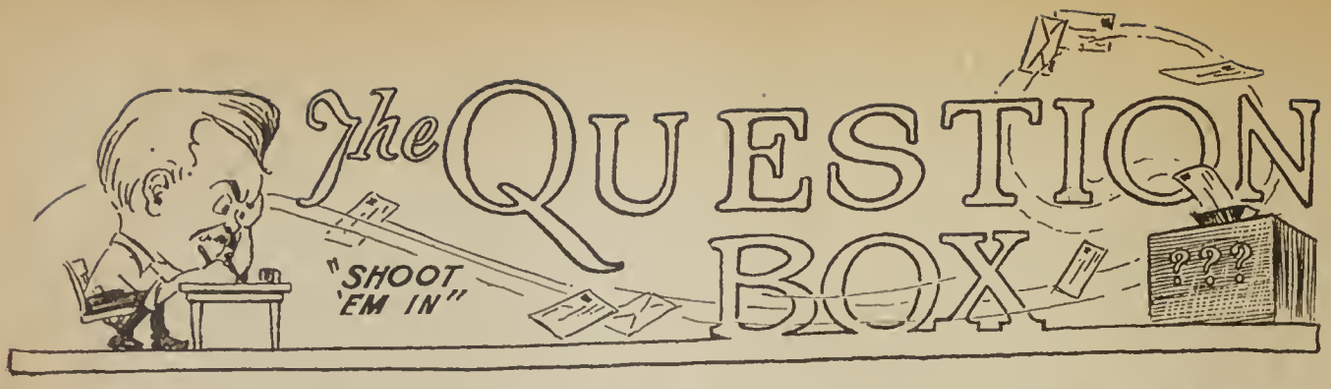
18. And he sought about him perchance to find that which he could yet secure for his money, but only a crust could be had for eighty dollars.

19. And the Fool, of need, bought the crust.

20. And taking the crust he went sadly home.



"The Interests of Labor and Capital Are Identical"



WE HAVE of late been receiving letters from some of our readers asking us questions relative to subjects touched upon in The Industrial Pioneer. This is a healthy sign, rather encouraging, to say the least. Once you get a man in the frame of mind where he commences to ask questions you have him started well on the road towards becoming a revolutionist. A receptive mind is the fuse which makes it possible for the spark of intelligence to set the whole works on fire; as a result the dross of bourgeois prejudices gets burned out, and, lo and behold! where once stood a pitiful, muddle-headed "scissorbill" there now blossoms forth an intelligent, clear-headed, class-conscious revolutionist.

A clever chap once made the following statement: "The less a man knows the more he thinks he knows; the more a man knows the less he knows he knows." Ponder this well, gentle reader. The wisdom of the universe is not confined within the walls of your cranium; or ours, either. Every addition to your knowledge which will tend to make of you a better rebel and a more class-conscious workingman is another nail in the coffin of capitalism.

While most of the questions that we will receive from our readers will deal, we expect, with economics, politics, the I. W. W. and the labor situation in general, we will answer all questions touching upon any subject whatever. Should any of our readers, for instance, desire to become better informed about the fourth dimension we will drop a line to Houdini and then communicate whatever information he gives us to our correspondent. Houdini, as is well known, has the trick of vacating a locked cell or a sealed trunk via the fourth dimension route. Or should somebody else want to know what it feels like to be president, we will drop a line to Harding with a courteous request that he send us a detailed description of his emotional reactions to being elected president by an overwhelming majority of the sane, practical, sensible, matter-of-fact, shrewd, far-sighted, common "peepul" of this grand and glorious Republic. (The emphasis on the "common," please.) As stated above, we will answer all questions, whether they deal with the Chinese alphabet or with the causes which turn an apparently normal human being into a gibbering, idiotic, cowardly gypo.

All questions not answered in the columns of The Industrial Pioneer will be answered by mail. When printed, they will be signed with the initials of the sender, unless otherwise specified.

* * * * *

**What is the difference between a hamburger and a liberty steak?—L. M.**

The difference consists in the propaganda value of the two terms. Calling a mixture of finely chopped-up liver and onion left-overs, scraps of beef and other garbage a hamburger steak is like calling a spade a spade. Calling it a liberty steak impresses upon the mind of the eater the boundless liberty that he enjoys in making his selection from the menu: If he hasn't the fifty cents with which to pay for a T-bone steak he is at perfect liberty to pay twenty cents for a liberty steak. Liberty is the thing that symbolizes, more than anything else, our wonderful country. As a nation, we will stand or fall by the banner of liberty. Liberty is the main strength of the "open shop" campaign, known, in this case, as freedom of contract. If a workingman does not like to take a job from one employer at 60c. an hour he has the liberty to take it from another employer at 50c. an hour. What right, say we, has a labor organization to take the liberty away from an American citizen, whose very blood tingles with the traditions of a republic in freedom born, by making it compulsory for him to work for not less than $1.00 per hour? And what right has anybody to make a craven slave of a man who wants to work twelve hours a day for seven days a week by saying to him: Thou shalt not work more than eight hours a day for five days, four hours on Saturday and not at all on Sunday?

Let us be done with all this talk about minimum wages, the closed shop, child labor laws, the dictatorship of the proletariat, and such other infringements of our sacred right of freedom. If a man is looking for a job there is nothing on earth to prevent him to keep on looking. If he doesn't succeed at first, let him try, try again; let him make up his mind that he will be a man and find a job, or die in the attempt. All our great men are where they are, at the pinnacle of society, on account of their powers of tenacious perseverance. If a man has not the price of a feed he is at perfect liberty to go without eating; it will do him good;—all the doctors say there is nothing like the fast cure for improving the health.

We say, let us get back to first principles. Let us get back to a clearer understanding of ultimate

values. Let us elevate the liberty steak to its proper place in our hearts, for it stands for everything that is dearest and nearest to us. We fervently hope to see the day when the liberty steak will be blazoned forth on the folds of banners flying high, with multitudes of zealous patriots ready to lay down their very lives (and even a few of their dollars) for the principles that it represents.

**How near is America to seeing the collapse of capitalism? In other words, how soon, in your opinion, will revolution hit the shores of this country?—P. M. C.**

In answering the previous question we waxed somewhat eloquent towards the end, being still under the inflence of a patriotic speech we listened to some two weeks ago. Since the revolution is admittedly a bigger thing than a liberty steak, we will now aim to be correspondingly more prosaic and matter-of-fact.

The opinion has gained currency among quite a number of radicals that the revolution is next door from us, getting ready to knock on our own door at 'most any time. They seem to think that in the course of a few months our beloved capitalists will recognize that the job is too big for them, will throw their hands up in dismay, and will pass industry over to the working class, saying: "Here, boys, have a try at running this country yourselves, for a change. We must admit that we can't make her go any longer." At any rate, many radicals have the idea that even if the capitalists should offer resistance, they will nevertheless be compelled by the force of circumstances to surrender the "running" of these United States to the working class in the near future.

No greater mistake could be made. It is essential that the minds of all rebel workers be clear on this point, because their convictions one way or the other will influence all their actions for better or for worse.

In order for the proletariat anywhere under capitalism to become the dominant class two things are requisite: First, the complete break-down of capitalist management of industry, and, second, the existence of a compact, well-disciplined organization of workers, 100 per cent proletarian in structure and character, strong enough numerically and morally to take over industry from the capitalists, to run it efficiently and to keep it under the workers' control. How close does the United States come to complying with the above two conditions?

Capitalism in the United States is virile, and as efficient as its nature will permit it to be. Of course, to the view of an industrial engineer considering capitalist management of industry from a national and international standpoint, it will be revealed as frightfully, criminally, inefficient. But the question is this: Does it "fill the bill," at least partially, irrespective of its inefficiency? Can capitalism in this country be likened to a housewife who has four times as much food as she needs for her boarders, who ignorantly and criminally wastes and spoils by far the greater part of it, but yet puts enough on the table to at least partially satisfy the hunger of the boarders?

We believe that it can. True, millions in the United States at this very moment are denied employment, are suffering from lack of food and other necessities; thousands of farmers and small business men have been ruined thru the greed of the big capitalists, but what of it? Industry is still functioning quite smoothly. In Austria, in Hungary, in the Balkan and the Baltic States industry is in an incomparably worse condition, yet the masters are still in the saddle and the workers starve and—submit. Industry in America will have to attain a much more advanced stage of break-down before we can seriously commence to talk of an industrial revolution. A few thousand suicides caused by unemployment and a few thousand bread-lines will not, by themselves, bring it.

The **average** human being, the workingman not excluded, is a peculiar animal. He is mentally lazy, lacks initiative, and is always willing to let some "savior" do his head-work for him; his mentality is of the "let George do it" variety. He will fight only when forced with his back against the wall. Give every man in this country a steady job at eight dollars per day, with the cost of living what it is, and you will postpone the revolution for at least five thousand years.

To turn to the other condition, which is a strong, well-disciplined, 100 per cent proletarian organization,—it simply does not exist in America. The organized workers in the United States number a few hundred thousand, comprised in the I. W. W., some independent industrial unions and portions of the United Mine Workers. What are a few hundred thousand in a population of one hundred millions? But you will say, how about the four and a half million members of the A. F. of L.? Dear reader, don't fool yourself! For the purposes of the working class most of those A. F. of L. members are in a worse condition than if they were not organized at all. The A. F. of L., as a body, is an asset on the side of the masters. The A. F. of L. is, in our humble opinion, the cleverest trick that the capitalist ever "put over" on the American workingman. But let us "elucidate."

When the workingmen first commenced to talk about organizing the cleverer ones among the capitalists said: "All right, let them organize, we will get our men to occupy the responsible positions, to keep the rank and file down in ignorance, to keep them fighting each other and to sell them out in case they go out on strike. And we will gain the big point: By getting them "organized" in our Federation we will keep them from joining a real working class organization." It must be admitted that the masters have succeeded only too well. In some craft unions they have caused by-laws to be passed

forbidding members to join the I. W. W., upon pain of expulsion. To make doubly sure that all officials are conservative and bourgeois-minded, their salaries range from $75.00 to $230.00 per week; besides, there are "side" and "incidental" incomes. Eugene V. Debs some time ago wrote an article giving the financial standing, at their death, of all the past presidents of the United Mine Workers of America. They all died rich men; exceedingly rich, John Mitchell being worth about half a million. How is it possible for a rich man to fight the battles of a poor working stiff? Will somebody well versed in psychology please explain?

Recently there was a big outcry about the crookedness of Robert Brindell, the labor fakir who blackmailed hundreds of thousands of dollars out of building contractors by "averting" strikes. Nothing to get excited about, gentlemen. It is reasonable to expect that there are hundreds like him in the American Federation of Labor, only they have not been caught. The editor of the labor paper in a big manufacturing city with a population of a million was recently proven to be in the employ of the manufacturers. A score of prominent labor officials in Akron were found to be "finks."

The following quotation is from the series of articles on "The Labor Spy," by Sidney Howard, running in "The New Republic":

"Says Mr. Coach of Cleveland: 'I own every union in this town,' which is to say that he controls the union executives. And there seems excellent reason to believe that this kind of control goes high in the ranks of union labor executives. It is a common plaint that American union leaders are not trustworthy."

We'll say they are not trustworthy; they are downright corrupt! You will say: "How come?" Because the American Federation of Labor never was, and is not now, a working class organization; it is an auxiliary of the capitalist class, and it necessarily functions as such. Practically every strike that the A. F. of L. has undertaken during the last few years has been lost by the workers being sold out. The employers have even directly helped to build up the numerical strength of the A. F. of L., since during the war, when the "cost plus" operating plan was in full swing, it was to their financial advantage to pay big wages; thru the midiumship, of course, of the American Federation of Labor.

Let us now get back to the main argument. Having shown that the A. F. of L. is not a class-conscious workers' organization, we have seen that there are at present only a few hundred thousand organized workers in this country. Before an industrial revolution is even thinkable, there should be at least several millions. What shall we do about it?

We must go to work with a will to educate and to organize the workers. We must do our "damndest" to clear their brains of the cob-webs of bourgeois lies and prejudices, and to line them up in the Industrial Workers of the World, which is the only revolutionary class-conscious labor organization in America embracing all industries. Let us line them up individually and let us take them over in bodies, wherever possible. And, while doing so, let us definitely give up the idea of "reforming" the A. F. of L.; it can't be done. It is so corrupt and so unwieldly for revolutionary working-class purposes that all that can be done with it is to throw it on the scrap-pile.

Before we talk about mastering the technical processes of industry, or, in the parlance of the communists, about "capturing the state," let us first capture the American working class for the one revolutionary labor body in America—the I. W. W. We won't gain anything by being ten jumps ahead of the game. **Education** and **Organization,**—that's where the emphasis belongs at present. In Spain the revolutionary working class organization, the "Confederacion Nacional del Trabajo," has a million members, in Italy the syndicalists have 600,000 members, and yet those workers are not strong enough to take the power away from the capitalists. Let us first get at least a million members in the I. W. W. And after that we will still have plenty of time to study industrial processes and to devise more efficient methods of co-ordinating industry; also, to devise organs for the application of the dictatorship of the proletariat.

Fellow workers, do not be carried away by ill-considered enthusiasm. The revolution will not be here next week, or next month, or even next year. The capitalists of America are virile; they are cunning, well organized, well disciplined; they have their professional labor fakirs, detectives, makers of public opinion; they have at their command all the armed forces of the nation, all the secret lodges, the chambers of commerce, the Ku Klux Klan, the American Legion and a hundred other counter-revolutionary bodies; they have the sympathy of the whole middle class, the professional class, most of the farmers and a large part of the laboring class. The workers are unorganized and apathetic; they have feasted too long at the flesh pots of Egypt; they have not starved enough. Let us go to work with all our might and main to educate and to organize them!

* * * * *

**I have heard so much talk about it being inevitable that socialism must follow capitalism. The socialists especially have emphasized this, and also some of the Wobblies. If that is true, if evolution is going to bring us the New Society anyway, no matter what we do, what is the use of making sacrifices in the class struggle and for the revolution?—Miss A. T.**

Your question is at present especially timely, when in some countries, in England, for instance, the class struggle is becoming very acute. "Evolution" has been the excuse from behind which political socialists have in the past endeavored to keep

the laboring masses from taking any action on behalf of themselves. Now, when the workers in most countries are confronted with the alternative of either starving to death or taking direct action against the capitalists, they have to make a supreme effort to rid their mentality of the evolutionary bunk that has been handed out to them for years by the yellow socialist parliamentarians and pacifists.

Evolution, as applied to society, is but the sum total of the actions of human beings. In order the better to understand the term, let us take an example from biology. When man is born it is quite generally understood that he will grow from the stage of infancy to boyhood, youth, manhood, and, lastly, old age. That process constitutes the evolution of an individual. But he will not grow unless he eats, drinks, moves, walks, talks, in short—**acts.** His growth is the result of the activity of his body and mind as a whole, and of each separate cell constituting his body.

The same principle applies to society. Only thru activity does mankind advance from one evolutionary stage into another.

It was inevitable that in Russia feudalism and capitalism should have been replaced by a system, at least partial, of communism;— inevitable for the very good reason that the change **did take place.** But it took place only **as the result of the acts of men,** expressing themselves in war, suffering, sacrifice, educational propaganda, organizing work, and in a thousand other activities.

Societal evolution is not something above, over or outside the activities of human beings. It is the sum total of men's actions. If men do not do any certain thing that they desire to see done, evolution is not going to do it for them.

Evolution is **not** going to bring us the New Sociey, "no matter what we ourselves may do." The transition from capitalism into industrial communism will come only by reason of our actions. Every action of every individual will either hasten or retard this transition. Speaking about christianity, the Good Book says that "if you are not with us, you are against us." The same applies to the class struggle. Whoever is not actively engaged in the struggle on the side of labor is, by his very passivity, an asset on the side of the masters.

Fellow workers, let us cease talking intellectual nonsense about "evolution," and get down to business. Direct action, and plenty of it, is what will bring the bacon home to the working class.

# Prelude to Propaganda

**Go! my venom-fashioned words,**
**Go! little scorpions:**
**Fly forth and sting!**

**Sting the master, sting the slave,**
**Sting wage slavery to its grave,**
**Sting the serf in mine and mill,**
**Sting him to revolt, until**
**His age-old helotry at last**
**Is buried with the serfdoms of the past,**
**Where Freedom's dawn is red upon the hill!**

**Oh, give me deeper venom for my words!**
**Go! little scorpions:**
**Fly forth and sting!**

**Sting the master, till he bleeds**
**Blood-red drops at every pore—**
**Drops as red**
**As the tears of little children, shed**
**In shaft of mine or on the factory floor,**
**Or as the blood of Labor's martyrs, which has run**
**Red from the slugger's club, the bayonet, the gun—**

**Not him alone!**
**Go, sting the slave!**

**Sting him! as he sinks beneath the load,**
**Sting him! as he writhes beneath the whip,**
**Sting him! deeper than the master's goad,**
**Sting him! till at last the slave lets slip**
**The leash on all the pent-up hatreds of his class**
**And sounds the hour of triumph for the mass,**
**When all the tyrannies of earth go down in one red wave,**
**Where Freedom stands, her foot upon a grave.**

**Go! my venom-dipped ones,**
**Go! little scorpions,**
**Fly forth and sting!**

**S. P.**

# THE BUILDING

The **unimportant** assistant architect who designs the building.

The **unimportant** inventor who invents machinery for drilling and excavating. (Usually dies in poverty.)

The **unimportant** men who do the excavating.

The **unimportant** men who lay the foundation after the stone has been quarried and transported by others just as **unimportant** and common.

The mere wage-earner who risks his life in mid-air with the steel girders, made by **unimportant** steel workers.

The man who carves the stone that gives beauty to the structure —just a humble laborer.—But—

**The Owner—the Man Who Invested His Capital—He's IMPORTANT—in Fact, the Whole Cheese.**

Drawn by Art Young for the Federated Press.

# THE MAJORITY

**A One Act Play. By Ernest Riebe.**

CAST OF CHARACTERS

**Boss** ..... A manufacturer
**Son** ..... Manufacturer's son
**Mr. Block** ..... A worker
**Mrs. Block** ..... His wife
**Mr. Bone** ..... A worker
**Detective** ..... A labor spy
**Mr. Blank** ..... A labor official

**The scene is the storeroom of a factory, containing tools, boxes and barrels. An open door at the back leads into the factory. The noise of hammering, pushing of trucks, handling of sheets of metal, is heard thru the door.**

**Boss and Son enter. The Boss is puffing at a fat cigar, the Son at a cigarette.**

**Son:** What's the use, pa, trying to get me interested in the factory? You know I don't like business; it makes me tired.

**Boss:** Now don't think I am going to interfere with your pleasures. I am not as mean as that. You won't have to work, our fortune is made. But I would like to see you show a little interest because some of these days you may have to run the business yourself.

**Son:** Run the business myself? You're kidding, pa. You never ran it yourself. Didn't you admit the other day that all the work is done by hired men? From the manager down to the common laborer?

**Boss:** You're right, sonny. The actual running of the factory is not done by us, but we have to know how to run those who run the factory. That's the trick, my boy, I am trying to teach you.

**Son:** That can't be much of a trick, when you can hire all the necessary help. I think I know something about the business. You told me once that only at certain times there are what you call labor troubles; but that these are settled by machine guns if necessary.

**Boss:** Machine guns, yes. How well you have remembered, my son. But you must understand that force is used only in extreme cases and only on a very small proportion of the working class. The trick is to keep the majority of the workers in submission without using force.

**Son:** Is it not fear alone that keeps the workers in submission?

**Boss:** You silly kid! It shows how much you are in need of business lessons. We big employers make it our business to keep the workers down and at the same time to keep on friendly terms with them.

**Son** (excited and amused): On friendly terms with those who toil away their lives so we may live in luxury? On friendly terms with those trashy, uncultured menials who are treated like beasts by our police and with contempt by our courts? Those miserable millions without comforts who build our mansions and live in cheap flats and furnished rooms? Do you mean to say, for instance, that these workers with their tired faces in that little department

in there (pointing to door) are contented and on friendly terms with you? I sized them up, and I think they must hate us. Say, this is rich, pa. On friendly terms with us! I can't believe it! If you're not joshing I'd like to ask you to show me the trick.

**Boss** (rubs hands): Ah, interested in business, at last?

**Son:** Sure. I'm ready for business now. Come on! Let's go to the office.

**Boss:** Wait a minute. son. I am afraid if I give you a dry business lecture you'll skip to the golf links or the chickens. You rascal, you have done that before. How about giving you a demonstration right here. You mentioned the two workers in there. They are typical representatives of the working class. Let's use them for demonstration purposes. Watch closely how I handle them. It will explain to you our whole system that keeps the workers in submission.

**Son:** Go, to it, Pa. I'm anxious to learn.

**Boss** (sits down on box): All right. Go and call in one of the two men.

**Son** (goes to door): Say, the boss wants you.

**Voice from factory:** Yes, sir; coming, sir.

(Enter Mr. Block, a worker.)

**Boss** (friendly): I like to have a talk with you, my dear man. What's your name, please?

**Mr. Block:** Mr. Block, sir.

**Boss:** Mr. Block, you have attracted my attention. You are a capable, honest worker. I am looking for men like you. (Puts his hand on his shoulder. Talks slowly.) You are taking your work seriously, and you show rare intelligence.

**Mr. Block:** Yes, sir.

**Boss:** I have been in the business a long time, you know, and when I put my eyes on you for the first time I said to myself: 'Here is a man who will work himself up to a higher and higher position.

He's got it in him; he deserves to do something better than to remain in the ranks of the working class.' Now, listen! I will give you an opportunity to show what's in you. If you do better and more work than the fellow you're working with I will advance you. You know the ladder of success. All rich men have started the way you are starting now. First laborer, then foreman, department manager, and so forth and so forth. Your first advancement would be that foreman job over the fellow you're working with. If you do better than he you get the foreman job. Set the pace, be early on the job and don't watch the clock. And—by the way—keep an eye on that other fellow. You know we can't trust the workingmen nowadays.

**Mr. Block:** Yes, sir, I know. Most of them are lazy, good for nothing bums.

**Boss:** Right you are, Mr. Block. (To son): You see I picked the right kind of man. He will be a success.

**Mr. Block:** I will be worthy of your confidence, sir. I will work harder than ever. How can I thank you, sir?

**Boss** (hand on his shoulder): Never mind, I expect no thanks. I om only too glad to see you succeed. You know we big employers make it our business to push men like you to the front. I tell you, many a sleepless night have I spent scheming for the benefit of men like you.

**Mr. Block** (takes out handkerchief and wipes eyes): Yes, sir. I read in the newspapers that you sometimes break down at your unselfish work, completely exhausted.

**Boss** (elbows son): You see he's reading the right kind of literature. (Son laughs.)

**Boss** (to son): Shake hands with Mr. Block; he's a regular workingman, the best of the whole outfit, a man of high character, no I. W. W. stuff for him. He's a wise guy, a safe and sane, level-headed worker.

**Son** (shakes hand of Block vigorously): I congratulate you, Mr. Block.

**Boss:** Now go, my dear man, and do your best. (Slaps his back and shoves him out.)

**Mr. Block:** Thank you ever so much, sir. (Exit.)

**Son:** Some game you're playing!

**Boss:** You will soon like it. Now call the other fellow. (Son goes to door and returns with Mr. Bone, a worker.)

**Boss:** O, there he is! What is your name, my dear man?

**Mr. Bone:** My name is Bone, sir.

**Boss:** Mr. Bone, I've noticed that you are taking your work seriously and that you are a man of intelligence. I need men like you. When I put my eye on you for the first time I said to myself, 'Here is a man who will work himself up to a higher and higher position; he's got it in him; he deserves to be something better than to remain in the ranks of the working class. Listen! I will give you an opporunity to show what's in you. If you do better and more work than the fellow you are working with I will advance you. You know the ladder of success. All rich men have started the way you are starting now. First laborer, then foreman, department manager, general manager and so forth and so forth. Your first advance will be the foreman job over Mr. Block. If you do better work than he you'll get the foreman job. Set the pace, be early on the job and don't watch the clock. And—by the way—keep your eye on that Block fellow.

**Mr. Bone:** Yes, sir; yes, sir! Thank you, sir!

**Boss:** I expect no thanks. I am only too glad to see you succeed. We employers make it our business to push men like you to the front. Many a night have I schemed for the benefit of men like you.

**Mr. Bone:** Yes, sir. I have read about how unselfish you are.

**Boss:** Very good, very good! Now go, my dear man, and do your best. (Slaps his back and shoves him out.)

**Son:** You're wonderful, pa!

**Boss:** Listen! (Noise in factory, pushing of trucks, running, etc.) The two simps will now work harder than ever, they will try to outwork each other and we will get the benefit out of them to the last ounce of their endurance. This is the way we squeeze the last drop of sweat out of them and when they're squeezed good and dry we throw them away like lemons and get new ones. We play this game on the whole working class. The millions toil away their lives in the hope of a better future. None of them expects to remain a member of that class. Everyone of them suckers hopes to become a capitalist some day.

**Son:** But how is it possible that all these boobs believe and hope to become wealthy some day? Don't they read statistics?

**Boss:** They know, of course, that the percentage of successful working men is very, very small, but, you see, the average workingman is a gambler. He believes that he will be the lucky one in a million and win. We have trained them to be gamblers. In our newspapers we print stories of successful workingmen every day. We keep the hope of better days constantly in their minds. Our newspapers, politicians and movies attend to that. The workers follow all our suggestions. They are led by us as little children and it is easy because these big working stiffs with frames of grown-ups have the minds of children. They think as we want them to think, and they act as we want them to act. They belong to us body and soul: It is almost unbelievable, but it works.

(Mr. Block walks in, cap in hand.)

**Boss** (friendly): What is it, what can I do for you?

**Mr. Block** (twisting cap uneasily): I came to tell you, Mr. Dough, that I kept my eye on that fellow Bone in there. I always knew he wasn't any good, but I never expected that he was an I. W. W. You

know, sir, the Reds have scattered some of their literature all over the factory and I caught Bone reading that stuff.

Boss: A ha! Good for you! (To son): You see, Mr Block is the right kind of man. (To Mr. Block): You're the boy, you're doing well. You're on the road to success. (Slaps his shoulder.) Now I will tell you what we will do. We will not fire that Bone fellow right away. He's still working, is he?

**Mr. Block:** You bet he is, sir! I keep him at it. I am setting the pace. I work hell out of him.

**Boss** (shakes hand with Block, slaps his back wildly): You're the boy! (Shoves him out.) Keep it up, good for you! Fix that Bonehead! Work hell out of him! (To son): Just as I expected. In order to gain a favor or get ahead of one another an average workingman will do most anything. Now I don't believe that Mr. Bone is an I. W. W. He would not read such literature. He's just like the rest of the workers, he reads our literature and votes for our politicians, mostly republicans and democrats. He's a model worker, just as our newspapers manufacture them. Do you see how our game works? We've got them going now. Oh, it's great to play with such grown-up children. They imagine themselves men because they wear long pants.

**Son:** What's next?

**Boss:** There comes the other rainbow chaser. (Mr. Bone enters.) Watch the show, sonny.

**Mr. Bone:** Beg your pardon, sir. I just found out what kind of snake this fellow Block is. I made him work hard by setting the pace and now he's grumbling about the rich, and suggests blowing up the factory.

**Boss** (shakes hand with Bone): I always had my suspicion about that ignorant blockhead. How about his work, is he still at it?

**Mr. Bone:** Yes, sir! I keep him at it. I set the pace and he has to follow; he's almost all in but I won't give him a rest.

**Boss:** Go to it! Show your ability. We can get another man when he's played out. He's not valuable like you, Mr. Bone. Good boy! (Pats his back.) You know what I promised you. Hurry, boy! I can hardly wait till I see you become general manager.

**Son** (shakes Bone's hand violently): Let me congratulate you, I am glad I made your acquaintance.

**Boss:** Go to it, my dear man! You will succeed. (Pushes Bone out.)

**Son:** That dirty snitch! He's playing the same game as the other fellow. Now—according to our demonstration here, the whole working class would act in such contemptible way. I can't believe it.

**Boss:** What you see demonstrated here holds good for the whole working class with the exception of the Reds. You must know that the life of the average worker is a miserable existence. He yearns day and night to get out of the working class. Now, if you put the prospects of getting out before him he will do anything, he is ready for treachery and murder. That is human nature, my son. Men shipwrecked in mid-ocean will practice cannibalism and men in the hell of miserable servitude will do the same, only in a different way.

**Son:** You mention the Reds.

**Boss:** The Reds are a different proposition, my son. Listen! Both our enemies, the Reds, and our friends, the Blocks and Bones, are trying to escape from servitude. But the Reds are trying it by different means. Our friends there (pointing to door) are trying it as individuals at the expense of their fellow workers, whereas our enemies, the Reds, are trying it by uniting the workers and liberating themselves at our expense. The Reds therefore, as a rule, will not snitch in our favor; they preach solidarity and worse than that, my boy, they have even practiced sabotage, such as slowing down on the job instead of speeding up.

**Son:** Those criminals!

**Boss:** Don't bother about them. They are in the minority. Forget them. Let's see how the majority are getting along. (Both move their seats toward door. Noise of work increases.)

**Boss:** Nice scenery, isn't it? They certainly are setting the pace for each other!

**Son:** Wonderful! They are making millionaires out of themselves. (Noise of hard work. Groans and curses. "Get out of my way! Go to hell! Look out! Ouch!" Both Boss and Son applaud mockingly.) Keep it up, boys!

(Enter a detective, from the Eureka Agency.)

**Detective** (excited): At last I have found you, Mr. Dough. I called at your office and then looked all over the factory. Very important business, sir. There's not a second to lose. I represent the Eurika Detective Agency, and—

**Boss:** Well, if it is so important, let's have it right now. What is it?

**Detective** (looking around suspiciously, thru door, into barrels, etc.): The Eureka agency has discovered a bomb plot to blow up this factory. (Son jumps up from box and steps over to listen.) We have trailed a load of dynamite right to this plant, and it may be touched off any time.

**Boss:** How much will it cost to prevent the plot?

**Detective:** That all depends, sir. $50,000 would enable us to continue our work and produce results. It would enable us to get at the ring leaders, who are organized all over the country.

**Boss:** $50,000, hey? Won't you come down a little?

**Son:** For God's sake, pa! Pay! Pay!

**Detective:** But, sir! This is no child's play. It's a dangerous affair. The plotters have mined your own private residence, too. (Son runs in circles.)

**Boss:** Seems to be serious, all right, all right. (Gets out check book, writes and presents check to detective.)

**Detective** (smiles, takes check and reads, expression changes. Reads aloud): "Pay to the order of the Eureka Detective Agency the sum of thirty cents." What do you mean by it, Mr. Dough?

**Boss:** It means that I am very, very generous,

sir. I am making you a present of thirty cents. It is in consideration of your enormous gall trying to continue your game of buncoing us out of our money. You private detective agencies have milked us long enough. Get out, now!

**Detective:** But, sir, this is no fake, the plot is real!

**Boss:** At one time you were able to scare hell out of us with your bomb plots. You fleeced us out of millions of dollars. You overdid the thing. We realize, of course, that the bomb plots are doing some good in helping us to persecute the Reds, but you played the game too raw, you made a laughing stock out of us. To pay enormous prices for such a simple affair as faking up a bomb plot is preposterous. Anybody can do it. We don't need detectives. All we need are the headlines in our newspapers; they are doing most of our bomb plotting. Get out! (Exit detective.)

**Son:** Is it true, pa, that the Red plots are frame ups? Are all those Reds held in prison on conspiracy charges innocent?

**Boss:** It can't be denied any longer that all Red bomb plots and conspiracies are fakes. But the Reds are not innocent; they are guilty of bigger crimes than murder.

**Son:** For God's sake, what can that be?

**Boss:** The Reds are carrying on an agitation amongst the workers of this country. They educate them and teach them to take the industries away from us, and to operate them for the benefit of the workers themselves. They object to our way of running things; they complain about low wages, long hours, unemployment, and all that.

**Son:** The workers trying to run the industries? That is ridiculous, is it not, pa? They can't do it. It takes **us** to run the industries.

**Boss:** Between you and me—let us talk plainly. As we said before, our industries today are run by hired men, from manager down to common laborer, and in Russia the Bolsheviki have demonstrated clearly that capitalists are no longer needed. The Bolsheviki—damn them—kept up production in spite of all the counter-revolutions. And not only that; they carried on big wars when we attacked them on all fronts. We spent carloads of gold and rivers of blood, but they still keep up production. And you know the terrible result. Thousands and thousands of manufacturers, grand dukes and counts are now in absolute misery; they have to work, or starve!

**Son** (staggers): For God's sake, pa! What can be done about it? This is terrible! What can we do to protect ourselves?

**Boss:** Don't get excited, son. There is no danger in this country.

**Son:** But the Reds are still agitating, are they not?

**Boss:** Yes, they are. But the majority of workers will not listen to them. They believe **us.** They believe our newspaper stories, our bomb plots and everything we publish against the Reds. Things look good for us in this country. Have a cigar, my boy, and trust in the majority. (Son lights cigar.)

(Enter Mr. Blank, a craft union labor official.)

**Mr. Blank:** I had some time finding you, Mr. Dough. I've found you at last. I think you remember me, Mr. Dough, I am Mr. Blank.

**Boss:** O yes, Mr. Blank, the union official.

**Mr. Blank:** May I see you at the office, Mr. Dough, about some business?

**Boss:** I'm on my way to the club, and I think we can settle all the business there is between you and me in a very short time. What is it, Mr. Blank? Speak out freely. Don't mind the boy, he's in the business now.

**Mr. Blank:** You know, Mr. Dough, capital and labor must work in harmony, and as far as I am concerned, I will do all in my power to bring this about. I am sorry to say that at present there is considerable restlessness amongst the workers and—

**Boss:** I know your speech, Mr. Blank. Let's make it short. This is about what you have to say: "The workers make all kinds of demands, and are turning Red, but that you will be able to pacify them, if I will see **you.**"

**Mr. Blank:** How dare you speak to me like that, Mr. Dough!

**Boss:** It's because I know you, Mr. Blank.

**Mr. Blank:** You should also know that there are five millions of workers behind me.

**Boss:** Stop right there, Mr. Blank. We know your game. You've played it long enough. At one time when help was scarce we had to come across, but there are millions of unemployed now. Those five millions of organized workers you boast of, may be behind **you,** but they are now also behind **us,** begging for bread. We don't fear those organized job bums.

**Mr. Blank:** Wait a minute, sir. I realize that our positions seem different now, but you are mistaken if you think we union officials have no power. Suppose we turn Bolshevik, or I. W. W., and advocate the same thing as they do—to take away your industries? How would you like it? You know, so far we have always fought on your side against the Reds.

**Boss** (laughing aloud): A nice chance there is for you and your kind, who have lived an easy, comfortable life, to turn Red. You would have to expose yourself to the danger of getting lynched or put in the penitentiary. You know what we did to Tom Mooney and others who turned Red. You can't make me believe, Mr. Blank, that you are longing for a chance to join Tom Mooney in San Quentin.

You will be satisfied with the income you're getting out of the unions. Remember, we are not going to destroy trades unionism altogether, even if we do establish the open shop. We could do this if we fired every worker who continues to pay dues to you. But we will not do so, because you have been useful to us in the past and we can use you again. If you stand by us in fighting the Reds, we will allow the workingmen to keep on supporting you. There

are some redeeming features about you union leaders, Mr. Blank. For instance, your agitation among the workers to reward their friends and punish their enemies at the ballot box in a corker. Keep up your good work, and entertain the minds of the simpletons with fake issues. Good bye, Mr Blank.

**Mr. Blank:** Good bye, Mr. Dough. The time will come when you will call for me.

**Boss:** Yes, yes. Sure. And when I call (slowly) **you will be there.** (Exit Blank.)

**Son:** You seem very assured that you have everything under control. How about some of them politicians? They use very radical language against us sometimes.

**Boss:** Yes, they "raise hell" sometimes about the profiteers. They have to do that in order to gain the confidence of the workers. If the politician is elected, he will do what we pay him to do; if not, we scrap him. We can hire politicians and we can fire them. You know what we did with some socialists in this country. We fire them in bunches. Politics are all right, my son. Should the workers vote for laws beneficial to them, and objectionable to us, we declare the laws unconstitutional. We did this with the eight-hour laws in several states and with the child labor law. You see how easy it is for us. We do not fear the politicians. They always deliver the goods. Remember how faithful the Socialist politicians in Germany were to the employing class over there. They always used radical language against the profiteers, you know. But when they gained control of the government they stuck to the employing class and massacred thousands of workers, who opposed the profiteers. Politicians as a rule are faithful; if not, they go to Leavenworth or Atlanta. (Whistle blows.)

**Boss:** Let's go to the club and then hurry back. You see, our friends are still at it. None of them likes to quit first.

**Son** (mockingly): God bless you, you blessed majority. Go to it and make millionaires out of yourselves! Go to it, boys! (Both walk out.)

(Enter workingwoman with basket.)

**Mrs. Block:** What's the matter, the whistle has blown, and Block didn't quit yet. (Goes to door and calls): Oh, Block! It's dinnertime! (Noise ceases, Block enters, tired, wipes sweat.)

**Mrs. Block:** What's on, didn't you hear the whistle?

**Mr. Block** (sits down, wife takes out lunch): I'll tell you what's the matter. Good news! This is the day of my life! The boss today has recognized my ability, and picked me out to advance me to general manager. Not at once, you know, but gradually. First foreman, then department boss, and so on.

**Mrs. Block** (throws arms around him): Oh, Block! I aways knew that you had it in you. I was always proud of you.

**Mr. Block** (busy with lunch): Yes, it will only be for a short time that we will belong to the working class.

**Mrs. Block:** Oh, Block, how nice! I must tell Mrs. Smith about it.

**Mr. Block** (stands up, link of frankfurters in hand. Straightens himself out): Stop! You will not talk to Mrs. Smith anymore. The Smiths are working people, and we are thru with them.

**Mrs. Block:** But, Block—

**Mr. Block:** But—nothing! You do as I tell you or—listen! (Sits down and drinks from cup.) Listen! Remember, I am now about to enter the class of society where **divorce** is fashionable, and if you queer me in my ambition, I may do something **fashionable**, savvy? (Mrs. Block tries to reply.) Silence! From now on I want you to snub that common working trash. You must change your working class manners entirely. You must put on upper class style. We will have to eat frankfurters and liberty steak only for a little while longer. It may take a little time till I get a raise. We have to wait for porterhouse and all that upper class feed, but as far as upper class manners are concerned, we can start to put them on right now. First of all: No more mix-up and familiarity with common folks. I want you to snub them, you understand!

**Mrs. Block** (arm around him): Oh, Block, don't be afraid of me. I will be a credit to you. I will not talk to the Smiths anymore.

**Mr. Block:** That's it, show your dignity.

**Mrs. Block:** You bet I will. If I meet them on the street I will show my contempt for them, I will make faces at them, I will even stick out my tongue.

**Mr. Block:** That's it. Now you're talking, kiddo! Show your dignity. (Hands in basket. Pulls out small paper package, holds nose.) What the hell is this?

**Mrs. Block:** Oh, it's the rest of last week's liberty steak. I couldn't afford to throw it away. Everything is so high, you know.

**Mr. Block** (eats from paper. Shows signs of vomiting): Never mind! It's not much longer that (swallows hard) I'll have to do this. Here goes! (Swallows courageously.)

**Mrs. Block:** I can't afford to throw things away. It's a shame how high the eats are nowadays.

**Mr. Block** (jumps up excitedly, holds fist under her nose): Say, that kind of talk has to stop now! No more breaks like that!

**Mrs. Block:** What's the matter, deary?

**Mr. Block:** What's the matter? Don't you know that complaining about the high cost of living is cheap working class talk? The upper class never talks that way. I want you to reform. Instead of complaining about the high cost of living and all the so-called outrages of the profiteers, you must find apologies for them. You must show your satisfaction with everything as it is today. You must guard yourself in everything you say and be careful not to offend the feelings of the higher-ups. We will soon be in their class. To hell with the cheap skates.

**Mrs. Block** (affectionately): I understand, deary.

I always hated the common folks. They have such cheap manners. I always despised them. Oh, how happy we will be! Automobiles, swell dresses and all that! I promise you never to make any breaks, never no more.

**Mr. Block:** Listen! The first thing I want you to do when you get out of here is to buy a little flag to stick on your dress. Show that you are a patriot. That's what the rich men like.

**Mrs. Block:** A little flag, sure. I will get one.

**Mr. Block:** You're right, you're learning. Patriotism is the thing. It will help me to land the bacon, the manager's job. Always be patriotic! Make everybody notice it. Whenever you get a chance, curse the Reds, it attracts attention and brings reward.

**Mr. Block** (gulps down his coffee): I must go back to work now.

**Mrs. Block:** The whistle didn't blow yet.

**Mr. Block:** Never mind the whistle! You know what I am after. (Exit.)

**Mrs. Block** (puts utensils back in basket): Oh, I always knew that we wouldn't have to work all our lives.

**Mr. Block** (behind the door): Don't forget that flag.

**Mrs. Block:** I'll buy a dozen, deary. We can eat our mash without the milk tomorrow.

**Mr. Block:** You're right. Get the flags, get the flags. Let the milk go. (Mrs. Block goes, noise on job starts again. Cursing, etc. "Get a move on, you!" "To hell with you!" "Get out of my way!" "Damn you!" "Give me a lift!" "Lift it yourself!" "If you are sick go to the hospital!" "You'll find out where you come off!" etc.)

(Whistle blows. Enter Boss and Son.)

**Boss** (disgusted, holds nose): Those pigs had their lunch in here. Do you smell it? Damn that slop!

**Son** (disgusted, lights cigarette, spits): Awful! It must be some of that famous liberty slop that the workers live on.

**Boss:** Whatever it is, it stinks like the working class.

**Son:** It's remarkable how the workers can get enough nourishment out of such stuff.

**Boss:** Any kind of gut-stuffing will do for them, they are built that way. (Both sit down.)

**Boss:** I see our prospective general managers are at it again. Oh, they are jewels. It is a pleasure to look at them. See how they are fighting one another, how they act like beasts. Isn't it a shame that the Reds are trying to spoil them?

**Son:** Yes, I see we are justified in persecuting the Reds.

**Boss:** Yes, if we can keep the workers unsophisticated, or as our friend Gompers calls it: safe and sane, we can play our game forever.

**Mr. Block** (enters, tired out; limps, hand on kidneys, groans): I knew I could do it.

**Boss:** What's the matter now, Block?

**Mr. Block:** Bone dropped dead. He couldn't keep up with me. My pace was too much for him. He tried to slow down on the job but I wouldn't let him. I made him do his work to the last. And when he died I thought of your interest, sir, and ran as fast as I could to punch his time card so you wouldn't have to pay him more than he really earned.

**Boss:** Well, well. You are showing a little ability as a pace setter. Keep it up. I will get another man in Mr. Bone's place and I hope you will get some work out of him, too.

**Mr. Block** (meekly, stammering): Yes, yes, sir. I am perfectly willing to go ahead to croak another one. But you see (holds his back) I am almost all in myself.

**Boss:** Ah, go on! You're not played out. You must try it again. Don't you know the rules of success? Don't you know what the Friday Evening Post tells you? "Never say quit." And then remember, the salary of the general manager is fifty thousand dollars?

**Mr. Block:** You are very generous, sir; but for God's sake, I can't keep it up. Oh, my bones, my kidneys!

**Boss:** Can that stuff! Don't whine like that. Remember what one of our best editorial writers, Mr. Pressbane, says: The road to success is plastered with bloody sweat, aching bones and kidney trouble. Straighten up now, try it again. Smile, smile, damn you, smile!

**Mr. Block:** It is impossible, sir! I am completely played out. I spent the last ounce of my strength in your interest, sir.

**Boss** (laughing aloud, Son joins): In my interest, you simp. It was in your own interest that you worked. Men like you I can hire by the thousands. Your place, Mr. Block, can be filled just as quickly as Mr. Bone's. There is a waiting list of your kind a mile long.

**Mr. Block:** But, sir. I only made such great efforts and ruined myself in order to please you, sir.

**Boss:** You're a damn liar. You worked for your interest. You were after a higher position and you would have gotten that, too, if you had shown the least bit of ability, but you showed yourself an incompetent, a weakling, who broke down after his first little effort in his career. I have wasted my time on you. Don't think that I am in the charity business. (Turns to son.) Here, boy, this man has quit his job. Go and punch his time card. (Son runs as quickly as he can, falls all over himself.) I am not going to pay you for the time you take telling me your troubles.

**Mr. Block** (staggers back surprised): But sir, but sir. I never expected such treatment from you. I don't deserve it, sir. Please don't fire me. (Son enters.)

**Boss:** You're already fired. (To son.) The card is punched, is it?

**Son:** You bet your life.

**Mr. Block:** Why don't you give me another chance. I'm not dead yet.

**Boss:** Pretty near it, tho. I've got the best out of you, anyhow. I don't eare for what is left. Get out now!

**Mr. Block:** Oh, you heartless beast! How ean you be so cruel!

**Boss** (to son): You see, now he's talking like some of the friends of labor, philanthropists and reformers. **He** wasn't eruel, oh no! It's only **me** who's the eruel beast.

**Son** (pulls Boss aside. Bloek goes to corner and lays down): I don't see any use of this, pa. You're thru with him; what's the idea of pestering him now? He's down and out. You got the best out of that Block. Now give him some easy job so he doesn't starve to death. He will be all right for night watchman in a couple of months. (Bloek shows pains all over, prays silently.)

**Boss:** Let me explain. Under average eireumstances I would **perhaps** give a paee-setting Bloek, who almost killed himself, a eheap job to keep him from starving. I would do this **perhaps** with Mr. Bloek, too. But don't you remember that I used the two workers for demonstration purposes? Keep your mind on the business lesson I am giving you. (Slowly.) I will repeat: These two workers represent the majority of the working elass and I am demonstrating to you how far we of the employing elass ean go with them. We may be eharitable here and there in individual eases. That's done for show. But with the working elass as a whole we aet exaetly as I do with those workers. We treat them like dogs and we make them like it. Remember the war. We told them to fight a war for demoeraey. They fought and bled and suffered; and what did we give them? We gave them the high eost of living, starvation wages and finally unemployment, while we got rieh. We took the Liberty Bonds and they got the liberty steak. And you know what that is. Take another noseful of it. (Kicks paper with foot.) Some of our philanthropic-minded members of our elass say we should slow down a little, that we play the game too raw. They are perhaps afraid of that little minority, the Reds. Now I will prove that there is no limit to this bull game. The majority of the workers will stand for anything.

**Son:** I believe there is a limit to the enduranee of every worker, even Mr. Block. One thing seems sure. Mr. Block don't like you anymore. He will probably be a Red now.

**Boss** (laughs): Don't like me anymore? A Red? You silly kid! What do you know about the majority? There are 99 ehanees out of a 100 that Mr. Bloek still loves me. A child doesn't like the spanking but it loves his parents in spite of it. Mr. Block, the grown-up ehild, does not like the treatment we give him, but he still likes us and our present system. And, by gosh, I'm going to prove it. Let us see where Mr. Block stands. He may kick about me and eall me a heartless beast and all that. That's nothing. The whole working elass is kicking about the profiteers; but they will fight for us and our system. And they will fight against our enemies, the Reds. And furthermore, they will lay down their lives for us if we, for the sake of profits, drive them into war. All we have to do is to wave the flag. With the flag in our hand we foreed them to buy Liberty Bonds by the billion. Just think about that easy money we flagged out of those simps.

**Son:** I am afraid you will fall down with your demonstration, pa. I think Mr. Bloek will not be a patriot any longer.

**Boss:** What's the use of talking, boy. I will demonstrate how we make patriots. Now for the supreme test. (Pulls himself up.) I bet that in a few minutes Mr. Bloek will be a patriot. (Walks up to Mr. Block. Talks seriously.) Mr. Block, when I hired you I was under the impression that you were a patriot; but when you ealled me a heartless beast I knew you were a Red.

**Mr. Block:** But, sir—

**Boss:** Never mind, now, Mr. Bloek, that is I. W. W. language. (Bloek is horrified, grasps his head.) A worker who eritieizes our business methods is against the established order of things. I know our business methods are heartless, beastly and cruel; but we have to live up to them, no matter how it hurts. If things are ehanged, down goes our whole eivilization. It may sound reasonable when the Reds point out the cruelties and the outrages of our so-called eapitalist system. Yes, our present system plays hell with some of us. Today it is you, Mr. Bloek, and tomorrow it will be me. And if it is me, Mr. Bloek, I will take my medieine like a man, I will not turn yellow or beeome a Red. I will still be a 100 per cent Ameriean. If civilization demands a saerifiee we must give it. (Bloek weeps.) You know, the Almighty in his infinite wisdom has entrusted to us, the big employers, the wealth of the nation and we must earry out the divine will and follow the business rules laid down by him, no matter if they interfere with our sentiments or not. There has never been in all history as much danger of eivilization being abolished as at the present time, Mr. Block. It makes me sad to think that there are men in this eountry who advoeate the overthrow of our present, God-made system, of eivilization itself. You know, Mr. Block, who the degenerates are who say that the workers themselves should run the industries.

**Mr. Block** (exeited): I know! I know! Them damn I. W. W.'s, them Bolsheviks!

**Boss:** You know, it is impractieal that the workers run the industries. There is nothing about it in the Bible, and it shows that the Reds are against religion, too. Just think of it, Mr. Block.

**Mr. Block:** But sir, you are mistaken when you think I am a Red. I am not! I was out of my senses when I criticised you and I made that silly remark. It was all my fault that I broke down at my work and lost the ehanee you gave me. If I had never taken a glass of beer or a smoke in my life, may be I would be working yet. Yes, sir! I remember I dissipated a good deal in my younger

days. I used to go to dances and all that, sir. Forgive me, sir. You were so generous to me. I am your debtor, sir.

**Boss:** Now look here. I will gladly forgive you and I hope that it is true that you are a patriot. It is in your own interest. You are of course down and out, but even at that you are not as bad off as if a foreign power would conquer this country and would pull down our glorious flag. Let me tell you, it is very serious nowadays not to be a patriot, we can't afford it. Do you realize that at this very moment some great powers with the assistance of the traitorous Reds stand ready to jump at our flag to tear it down?

**Mr. Block:** Damn the Reds! I hate them. I always hated them and always will. To hell with them! And to hell with them foreign powers, with Mexico, Japan, England and Germany! To hell with them!

**Boss:** Just think of it, what we are up against, Mr. Block. Is it possible that in the face of such a danger there are men in this country who are not patriots? If our enemies knew that we of this country do not care about our flag, they will attack us sure as hell. We must demonstrate and let the world know that we are ready to die for our flag.

**Mr. Block** (jumps up, waves arms wildly): Hurray for the flag! Hurray for the flag! Hurray for the flag!

(While Block is shouting down goes the curtain.)

# To the Labor Organizations of the World! Boycott All Goods Made in Spain!

The Executive Committee of the "Confederación Nacional del Trabajo" (National Confederation of Labor, of Spain) sent out some time ago an appeal to the workers of the whole world to help the Spanish workers in their heroic struggle against persecution. In order to put a stop to the horrible ravages of the reaction in Spain, it was recommended that a world-wide boycott against Spanish import and export goods be declared on January 15th. Thousands of the noblest fighters for freedom in Spain have been arrested, deported and murdered after the manner of the martyr Francisco Ferrer! The Spanish workers have again made an appeal to the German proletariat for solidarity, contained in the following letter brought to us by French comrades:

### TO REVOLUTIONARY GERMANY, GREETINGS!

In order to officially acquaint the French proletariat with the terrible condition in which the Spanish working class finds itself today, I have been sent to France by the "Confederación Nacional del Trabajo."

Our greatest desire would be to come to you and to explain our situation in the same way that it has been explained to the French organizations. At the same time we would like to bring you brotherly greetings from all those who have fallen, day by day, in the struggle, of all those who have been murdered or are held in captivity, be it on the streets of Spain or in "Fernando Po," in Mahon, in Montjuich. You should know that in the last named fortress twenty-five of our comrades, among them **Pestana,** are incarcerated. Altho the situation is desperate, it is not possible for us, no matter how much we may desire to do so, to send delegates to all countries with an appeal for solidarity, which in this case should bind the international proletariat together in a common aim.

As for you, Revolutionary Germany, I greet you in the name of the "Confederación Nacional del Trabajo" and am using the opportunity offered by the visit of Comrade Haussard, to fervently implore you to do everything in your power to keep up the strictest boycott on all products of Spanish manufacture.

Save our Spanish brothers, who today are facing death! They are being murdered every day by the wholesale, as sheep in a slaughter house!

**LEON XIFORT**

**In the name of the "Confederación Nacional Del Trabajo."**

We are sorry to say that up to the present time the desperate appeal of our Spanish brothers has been in vain. But now we must act with a will! We therefore request that all labor organizations at once take steps to initiate co-ordinated action, and that they send us the addresses of their officials, so that as quickly as possible an understanding can be arrived at.

This action will receive international support from the Information Bureau of the Revolutionary Syndicalists and Industrialists in Amsterdam. It should also be the concern of labor parties and other central organizations to give international publicity to the boycott of all goods made in Spain.

**The Executive Committee of the Freie Arbeiter-Union Deutschlands (Syndicalists).**

# The Story of the Sea

By Tom Barker

(Continued from the April Number)

## CHAPTER 7
## THE WAY TO POWER.

THE rank and file of the ships and docks have to create something new and modern if they are to fight the boss with any degree of success. This new form of organization will not come from the trade union jonahs, many of whom have never seen a ship, and can't speak any language except the one they picked up when they were children. Most of these poor old fossils are in their second childhood, for while their legs are alive their heads are dead. I have seen the secretary of the Auckland branch of the New Zealand Seamen's Union come down to the union office in a pony chaise. He was about sixty inches around the waist, and his legs could not stand the strain. The assistant secretary would come out and report how things were going on, after which John would whip up the tired pony, which waddled away with his mountainous load of trade union officialism. That was his day's work.

The craft unions have to be broken up, as they are worse than useless. When they meet the owners they act like a dying duck in a thunder storm. They keep their watery eyes fixed on the ground, and have as many legs as a caterpillar. The idea of DOING anything never occurs to them, and any man who takes trouble up to the union office is an unwelcome visitor. When the unemployed army gets large they cry for unemployed doles, and chase their colored members off ships in order to make room for their white members. If a man with red blood tries to stir things up, the officials will conspire with the companies to boycott him. They have a way of trying to silence the opposition with the assistance of retired pugilists and toughs. Some of the dockers' unions are run on the same system, and the officials are more noted for their physique in a few cases, than for their brains.

### The Meaning of Power.

Modern workers want something more than good old craft unionism has to offer. They want to put the boss to work on the docks and the ships, and to see that his wife is going to nurse her own children, wash her own clothes and her own floor. They want economic freedom, the right to live a full life and to have their material requirements attended to. They want to own the ships instead of being treated as so many slobs when they are aboard.

In October, 1920, some 930,000 miners went on strike in Great Britain. They were on strike a very short time, but that little time stirred things up. Factories closed, railway services were reduced, in fact everyone was more or less affected. The coal mining industry is only a national industry, but a strategic one. Let us have 900,000 marine workers and 1,200,000 dockers in **one** organization all over the world, with the same spirit as the British miners, and how much more **power** could we wield, especially if we had the co-operation of the land transport workers and the miners of the world behind us.

We have, then, to build from the bottom up. Every person working aboard a ship, whether on the bridge, the deck, the firehole, the engine-room, the steward's room and the wireless room must be in the one organization. Everyone is exploited by the same masters, evryone must organize **together** against the common enemy. Each department will elect its own delegate, and the delegate will be responsibe for his fellows, see that they are in good standing, distribute educational matter and see to it that their grievances are redressed. These delegates, as their function extends, and as the power of the workers tends to perfect their organization, will tend to become more and more the administrative body on board a ship. One of these delegates will be elected to represent the ship in the various ports. As soon as the ship arrives in port it will be his duty to render a report at the shore office, and clear the ship to the longshoremen for working the cargo. He will put in a document showing particulars about the ship, the names of her crew, their standing in the union, etc. The combined delegates aboard a ship should act as a **ship's committee.**

### Cards and Officials.

There should only be one dues card, by which means it would be possible for a man to pay his dues in any part in the world, where the World Organization has control. Once a man is a member, always a member. Delegates should also act as messengers between the various countries and districts, thereby guaranteeing the delivery of correspondence of their own and similar organizations. In the case of International Congresses dealing with the people of the sea, the delegates should be required to work their passages to the place of the conference; an end should be put to the system of traveling first class, such as is adopted by the modern jonahs who are retarding the movement.

No union official is worth more than the average wage in the industry that he is organizing. The union members who allow their officials £10.0.0 a

week while they themselves are only getting £4.0.0 are damned fools. If the official wants a raise then let him get busy getting his members a raise, when he will benefit accordingly. No politician should be allowed to hold a union job, nor borrow a shilling, nor ask for a vote. A politician is the rottenest type of man there is on God's green earth. He is lower than a white-slaver, and would pinch the Great White Throne itself, if ever he had the remarkable luck to get into heaven. Which reminds me of a politician who did try to get into heaven. He was turned down and shuffled off to hell. When he was questioned at the gate about his mode of life on earth, he replied that he had been a politician. This was reported over the 'phone to his Satanic Majesty — who was busy frizzling up some respectable ship-owners and seamen's missionaries—who ordered, "We don't allow politicians in hell, otherwise they'd make everybody as bad as themselves. Give him a bucket of pitch and let him go away and make a hell of his own." And thus the gentleman who had scabbed on the unemployed by holding two men's jobs as union offieial and member of Parliament got fixed up for eternity.

### Our Class and Our Boss.

Last year when there was a strike of firemen on the East Coast of the U. S. the ship-owners sent blacklegs on board. As soon as they arrived, the engineers—members of their own craft union —did the manly thing and struck, also. That settled it. Solidarity gets the goods. The secret of success is to stick together, like mud to a blanket. You belong to the **one class** and you are always right when you have your fist under the nose of the human sharks who skin you. The cook's labor is just as necessary as the skipper's, the fireman's energy as the engineer's technique. The boss doesn't employ you because he loves you, for as a matter of fact the rail boss never sees you, and doesn't want to see you, either. There is **profit** in your carcass and he wants to coin it into a bank balance. Day by day he coins up your nergy into golden dividends, and as soon as he has stripped your hide of the last ounce of your nervous and physical power, then he fires you to bum your food along the water-front for the rest of your days.

Fellow workers, get the class idea; our class against their class. Let us consider our children before their children, our women-folk before their women-folk, ourselves before both them and their lily-handed avarice. **And if they want a loaf of bread, let them earn it.**

### Coffin Unionism.

You know, fellow worker, that if you pay off in Genoa from an overseas ship you do not, so far, get protection from the local unions. The same was true in Buenos Aires and Rosario before the Marine Transport Workers were established there. There is no union there for you, and so you are shanghaied or shipped for any old wages at all. Now, fellow workers, we have to put an end to this for once and for all. You know that there are several great international shipping centres in the world that are similar to Genoa. There are Antwerp, Rotterdam, Hamburg, Barcelona, Hull, Newcastle-on-Tyne, Glasgow, Liverpool, London, Cardiff, Melbourne, New York, Philadelphia, San Francisco, Seattle, Valparaiso, Callao and Rio de Janeiro. They are in precisely the same condition to the men working on overseas ships as Buenos Aires was before May, 1919.

Now you know, you British seamen, that even if Havelock Wilson's Union does such a lot for you in the ports of the United Kingdom, he does nothing for you in Helsingfors, Barcelona, or Shanghai. Neither does the Seafarers' Union nor the Hull Union. The Belgian Union doesn't protect its members in Copenhagen, Malmo, or Hong Kong. The International (?) Seamen's Union of the United States has no power in London, Rio, or Auckland, N. Z. When a badly injured Norwegian union-man sent a note from his ship in the Commercial Docks, London, to the delegate of the British Union to assist him in getting justice, he was informed that "the law of this country prevented **their** union from doing anything for him, but that they would work to get an Act thru Parliament that would help poor foreigners when they get hurt." So, fellows, you see how useless this kind of unionism is to the men who follow the deep sea. It is money wasted and time lost. It is the boss'es unionism, for it plays into his hands.

### The Amsterdam Federation.

The Yellow International Transport Workers' Federation has federated no one. Things are in as bad a state as they were in the year 1914. The conference held recently in Kristiania was remarkable for nothing except the banquet. In fact the average international congresses have become little else, except excuses for joy trips on the part of the Labor Generals of the different countries. They are tedious and useless, and couldn't organize a peanut stall. The future of the Marine Transport Workers will circle more round Moscow than Amsterdam.

### Towards Power.

The establishment of **Ship's Committees** is imperative. We have to open offices in all the ports that I have just mentioned. In some places the local organizations will gladly fall into line, and welcome them, for they are tired of carrying half a dozen union cards, and possessing no protection overseas. They require the "International and Universal" form of organization. Every sensible man is ripe for it, whatever his creed may be. While in port the ship's delegates will meet weekly, and arrangements shall be made to overcome

language difficulties, which is the chief obstacle. It would breed a fraternal spirit. Further, such a form of organization would so completely smash the existing national unions that the Vigilance Committees of the longshoremen will fall in line. The Marine Transport Workers would not control the Argentine ships in Buenos Aires, but they would in London, Glasgow or Genoa. The M. T. W. in Genoa would control all non-Italian tonnage and work hand in hand with the "Lavoratori del Mare". By these methods of organization we would encircle the world with a girdle of steel that would render the employers powerless. We would be on the way to control and to posses the ships. And, without being too hard on the theoretical internationalists, we would point out that there can never be an effective, usable World Power of the Workers until this, or some other similar project is launched and perfected. The closet philosophers may disagree with it, and the academicians who never coiled a rope, nor took a turn at the wheel, may see other ways to do it; they may offer opposition, if it merits so much of their attention, but they will not seriously deter it. It is enough to say that intelligent men who follow the sea feel that this method of industrial not-work is the starting point for **the Federated Workers' Republics of the Planet Earth.**

From practical experience it will be found necessary to have paid delegates to visit the ships in port, and to interview all ranks aboard. Men who are staunch industrialists and can speak two or more languages are the most desirable. They must be trained for the work, for they have to impart the ideas of industrial control. Scandinavians, Germans and Hollanders on deep-water traffic generally speak more or less English. In Buenos Aires we found that Scandinavians made the best delegates. For the Latin ships, you have to find men who can speak two or more languages, such as French, Italian, Greek and Spanish.

### Shore Delegates.

It will be the duty of the shore delegates to visit each ship in his area daily, to note how many men have left the ship, and to see that they register at the union office on paying off for further employment. The delegate must see that every ship has a full crew signed on at least three days before the ship is ready for sea, otherwise the dockers must be acquainted and the ship tied up. All employment must go by rotation, and be engaged only at the union office. In Buenos Aires we had three sections, viz., deck, engine-room and steward's. Officers and engineers were also shipped thru the union, when vacancies occurred in the port.

No seamen were allowed to visit ships to look for their own job, nor were they allowed to stay at, or visit non-union boarding-houses or bars. Captains were not allowed to be fastidious about the men that they wanted, for we took the standpoint that every man had a stomach, whether he was small or whether he was otherwise. If a man proved that he was a sailor, then that was all there was to it.

The shore delegates were responsible for the distribution of literature that was printed for the different grades in various languages. Special leaflets were issued to captains, officers and the men in the foc's'le. Whenever, in Buenos Aires, we had a serious fight an explanatory manifesto was issued in Spanish for the dock-owners. When the M. T. W. tied up the Dutch ships in February, 1920, at the request of the Dutch secretariat, the matter was explained in a Spanish leaflet to the dockers, and in a Dutch leaflet to the Dutch crews. Thus two national groups of workers fought together, altho they did not speak a word of one another's language.

### How We Did It in Buenos Aires.

In Buenos Aires we recognized the members of other overseas unions. We transferred them free. If a man was in good standing overseas, he merely registered at the union office for his next job and he paid nothing. All we required was that he should act according to the union rules in the port. This system smashed the shanghaiers out of their business and made it impossible for them to operate. When the dockers boycotted a ship at the behest of our union, they did not return to work until they had been paid for the time they had **not** worked, a fact that was not appreciated by the shipping companies. Doubtful ships and boarding houses were picketed, and the owners of the latter became little puppydogs under the rule of the union, whereas before they had been man-eaters and terrors to the seamen. We built that **power** out of 250 starving men of all nationalities, who had been sleeping in railway trucks, and getting a little food from the ships. They were the finest body of men that ever picketed a consulate or "uppercutted" a shanghaier. If we had 5,000 of such men scattered thru the marine industry today, we would have the boss shoveling coal in no time.

A little conference shows the kind of temper these men had. One day the news leaked thru that a shanghaier had boasted that he was going to bribe the police to get me arrested. A Chinese cook, who was a member of the union, went to his place, and showing him the point of a vicious-looking knife, he said, "If you allest secletally, I bloody well kill you, savvy?" He savvied all right. On the Norwegian steamer that I came north on, the Chinese steward had more wages than the chief engineer who was signed on in Norway. The least paid man on the ship was the third mate, who received about 30 crowns a month less than the Chinese galley boy. Both the Chinese were members of the Buenos Aires local of the M. T. W.

With power in our hands we may have the

# John Bull, the Sacred Cow and the Golden Calf

By J. A. Loeb

TO THE BRITON there is nothing so sacred as trade. He lives by it; it is the foundation of his home, his empire, his philosophy. You may denounce his royal house, his church, his universities, his administration. He will, upon occasion, behead or depose a king, disestablish his church, reform his universities or replace his administrators by others with different complections. But keep your profane hands from British trade. Naturally his trade and his trade-philosophy or religion have become predominant over all other philosophies or religions in the empire, and, because Britain is the classical example of a trade empire, also in all other empires which have striven to emulate her.

And so political economy has become the sacred cow and Adam Smith, Ricardo, Sir George Paish and their kind are her prophets. The sacred books are rather controversial. The disagreement of the prophets is at least as frequent and as contrasting as the accounts of the four evangelists, but then there are many things which may not be questioned. The law of supply and demand, the law of rents, of interest and of foreign exchange, Gresham's law—all of these are entitled to the veneration one accords to the decalogue. From a study of these laws one may, if he is among the accepted orthodox economists, predict what is going to happen in the world markets. In general it is safer to predict after the occurrence; but once in a while one may venture a guess in advance. Sir George Paish predicted the duration of the world war at less than a year and based his prediction on the German rate of exchange. This error would have no greater interest than the predictions of a trance medium were it not that it illustrates so well what makes of political economy such amusing piffle.

There was once a boy who was taking his bar examination. He failed utterly in most branches and when the kindly examiner said: "You do not seem well prepared in the common law; perhaps you have specialized in some branch?" he responded: "Yes, sir, I have made a thoro study of the Statutes." Thereupon the examiner said: "That is fine. A thoro knowledge of Statute law never hurt any lawyer. But what is to prevent some damned fool legislature from coming along and repealing everything you know?"

That is the present position of the economist. Malthus and Smith, Ricardo and Paish know the statute and their trouble is that the statute has been in force so long that they assume that it is the common law. Ever since there has been private property, which is ever since there are records, the statute has held good. The supreme courts of experience have held it constitutional. It was therefore quite natural to assume that the great dicta of the economists were basic—forgetting that what made them basic was the right of property. It was the old error involved in the assumption that man was made for the Sabbath, not the Sabbath for man.

And now we have a glimpse of the damned fool legislature that is going to repeal everything we know. That it is surely coming every one admits. So the best thing for the economist to do is to resist as far as possible the enactments, to take them up to higher courts, to fuss, to quibble, to point out reversible errors because a "t" was left uncrossed or an "i" undotted. It is absolutely necessary to show that a country which disregards the right of property cannot exist, must not exist.

This is all very well for the British economists. There are special reasons prevailing on the tight little isle that are not to be found elsewhere. Let us analyze.

The British Isles house a very dense population. With the most intensive cultivation they cannot produce enough to feed their people nor dig enough out of their mines nor manufacture enough in their workshops to barter for food for their people. Even their carrying trade and their brokerage and their thefts and spoliations from Negroes and Hindoos and Chinese will not supply the deficiencies. It was not always thus. Generations past the Isles were less populous, the British adventurers bolder and their piracies more profitable. They managed to accumulate a surplus which they invested abroad. They built breweries in the United States, bought newspapers, mincs, railroads and plantations everywhere and with the interests supplied the deficiencies at home. For many years they had no competition. The Spaniards learned that their treasure galleons from Peru and Mexico mostly went to feed the inhabitants of Sussex and Yorkshire. The Dutch found that their African colonies could not be held unless they were valueless. When gold and diamonds were found they belonged to the British by divine law. Until the Franco-Prussian war the Ger-

---

pleasure of soon seeing Lord Inchcape going into print again because we are going to compel him to pay the same wages to Lascars and Chinese as he does to the Britishers. He may not like it, but that's his funeral.

**What we accomplished in Argentine can be accomplished everywhere else if the boys will get together and build this movement from the bottom up. We want delegates to give her a start. We are ONE CLASS. We must HAVE ONE UNION, with ONE AIM—the mastery of the ships and wharves, and the establishment of the Dictatorship of the Proletariat on the Ocean.**

man, according to the British humorous papers, was a fat, good-natured, unambitious individual who loved beer, saur-kraut, a porcelain pipe, symphony concerts and philosophy. After 1876 he turned his hand to manufacture. In a few years he earned a surplus above his needs and this surplus he invested abroad. It was a true surplus, one which might not be needed for years to come and could therefore be invested on very favorable terms for the borrower in long term credits, at low rates, under conditions which did not provide a pound of flesh as penalty. Very soon German money began to drive British money from place to place. South America, Africa, even British colonies began to show a marked preference for German loans. Mesopotamia was opened up. We know the sequel.

The present task of the economist is the return to "normalcy." In a world which has been abnormal for six or seven years this will not prove easy. Even African savages have learned that private-property rights are not sacred under all conditions and British miners are becoming almost as intelligent. At the present writing there is a great excitement about the threatened strike of the Triple Alliance in Great Britain. There need not be. Beyond the destruction of a few millions worth of property, which will be paid for by taxing those least able to bear the taxation, and possibly beyond raising wages, which also will be paid for by the weak and helpless, nothing much will or can be done. We have had dozens of threats of strikes since 1914. Each time a compromise was effected, promises were made that no one believed in, and work was resumed. Is this because the British worker is really more timid or less intelligent than the worker elsewhere? Not at all. But he has a different problem. If Britain drops the present economic dispensation without a world-wide simultaneous change there will be, it is estimated, some 15 millions of people on the British Isles who will not be able to live there. There would be no means of supporting them adequately. And that, in short, is why the sacred cow must be sent to slaughter.

Until arrangements can be made for a period of transition in England so that millions may continue to live without producing, until an immense surplus populaton may be transported where they may be utilized or some productive work found for them at home, England cannot drop the present economic system. Wage slavery must continue. The only hope for the British lies in a world-wide revolution.

## *Vive La Commune!...*

A WALL WHOSE STONES ARE ALIVE WITH MEMORIES.

**"The Wall of the Federals," against which in 1871 hundreds of the Paris Communards were stood up and shot.**

# The International Situation

By H. Van Dorn

IN CONSIDERING the international labor and political situation a few salient features stand out in bold relief against the maze of seemingly meaningless and disconnected happenings. By first enumerating them we will be able so much the easier to grasp the full significance of these events.

(1) The lot of the working class is growing steadily worse, not only in America but in all other countries as well. A lowering of wages and an increase in unemployment is in evidence everywhere, with no reason to expect an improvement in the near future.

(2) The capitalist class has shown an utter inability to cope with the situation. Not only have the capitalists and financiers shown themselves incapable of working out a co-ordinated plan of action on the international field, thru the judicious handling of loans, credits, and the import and export trade, but they have also proven unable to manage the industrial situation of their respective countries, considered apart from the rest of the world.

(3) Furthermore, the industrial masters have displayed a truly astounding lack of vision. Instead of trying to alleviate the distress of the people, in order to give an added lease of life to their regime of misrule, they seem to be intent upon doing everything in their power to aggrevate it. By their foolish acts they are making enemies of large masses of the population which were formerly their staunchest supporters. As illustrations, let us but cite the thousands of farmers who were ruined last spring and summer by the cut in the market price of farm products, and by being refused bank loans. In their mad endeavor to retrieve a part of the three billion dollars which they lost by not being able to collect on their exports to war-impoverished Europe, our capitalists and financiers utterly ruined uncounted thousands of cotton, wool, wheat, corn and stock raisers. Another example is their suicidal policy of the "open shop." Pushed to its logical outcome, this so-called "Americanization plan" can have but one ultimate result: The destruction of the American Federation of Labor and other conservative labor bodies, and a corresponding increase in power, prestige and membership of the radical bodies, in America best exemplified by the Industrial Workers of the World. That the United States capitalists are not alone in their imbecility, is shown by the order of the French Government dissolving the Confederation Generale du Travail, the French counterpart of our own A. F. of L. The great truth ,written large over the pages of history, that no ruling class ever benefits by the mistakes of its predecessors, ought to become readily apparent to every student of contempoprary events. Truly, whom the gods wish to destroy they first make mad—and blind.

4) A clarifying of the atmosphere between the two opposing camps of labor and capital is taking place in all countries. The line of demarcation between them is becoming sharper and more distinct. Furthermore, in the camp of labor, both on the economic and political fields, the tendency is "leftward": Those who are radical become more radical, and those who are "yellow" are being exposed in the full, sickening repulsiveness of their "yellowness" as the social-patriots and betrayers of the working class that they are, and are being gradually shoved over into the camp of the enemy. Industrial organizations with revolutionary aims, such as the Syndicalists of the Latin, Teutonic and Scandinavian countries, the Shop Stewards in Great Britain and the Industrial Workers of the World in North and South America, have in the last few months made great strides both in prestige and in membership. On the other hand, the opportunist parliamentary Socialists of practically all countries are on their way to permanent oblivion.

(5) Bolshevik diplomacy has in the last few months greatly weakened the spheres of British and Japanese influence in the Near and Far East, and has definitely established the Soviet power as a world-force of paramount importance.

### Russia

During the last year, and especially in the course of the last few months, a number of events have taken place tending to greatly strengthen Soviet Russia, both internally and externally.

On April 28th, 1920, by a comparatively bloodless revolution the Moslem Republic of Azerbaijan adopted the Soviet form of government.

In November, 1920, Wrangel's army was annihilated, shattering thereby the last hopes of the Allied imperialists of subduing Soviet Russia thru armed intervention.

On December 6th, 1920, the Socialist Soviet Republic of Armenia was proclaimed.

On February 19th, 1921, Georgia turned bolshevist. By adopting the soviet form of government these three Transcaucasian countries have added immeasurable prestige to Soviet Russia in the Near and Far East.

Meanwhile Finland, Latvia, Esthonia and Lithuania, the four new Baltic states that adjoin Soviet Russia on the west, have all concluded peace treaties with the Bolshevist Government. Esthonia was the first to yield to the necessities of the situation, and Latvia and Lithuania followed her example. The negotiations between Moscow and Finland dragged on for months, marked by many breakings off and renewals, but the treaty was finally signed on Oct. 14th, 1920.

On February 28th, 1921, a commercial treaty was signed between Afghanistan and Soviet Russia

Soviet negotiations with Persia and China looking to trade stimulation have been going on for quite some time.

Peace has been signed with Poland and a trade treaty with Great Britain, after long drawn-out negotiations lasting many months.

On March 16th a treaty was signed in Moscow between the Soviet Government and the Turkish Nationalists. By the terms of this treaty the Russians recognize Constantinople as the capital of Turkey, thereby definitely abandoning the desire to make of that city a Russian port, which was a standing clause in the foreign policy of czarist Russia, and was the chief inducement for Russia's entry into the world war on the side of the Allies.

So, after three years of intense warfare on many fronts, Soviet Russia at last finds herself at peace with the world, as far as military operations are concerned, and will henceforward be able to devote her energies to economic reconstruction. The Soviet has lost completely its novel and transitory character and has notified the capitalist world that it has made up its mind to remain on the Planet Earth as one of its permanent institutions, whether the capitalists like it or not.

There are four features in the internal policy of Soviet Russia which give assurance for the expectation that Russia will blossom forth on the economic field during the reconstruction period in a manner that will even surpass the industrial activities of the capitalist states. They are:

(1) Electrification. A plan for electrifying the whole of Russia has been worked out in detail by the Supreme Council of National Economy. Light and motive power for every town and village in that immense land will be supplied by countless electricity generating and distributing stations on the construction of which thousands of workmen are already engaged.

(2) Education. An intensive campaign for educating the peasants and workmen in rudimentary as well as technical knowledge is being carried on. Thousands of elementary and higher schools of learning have been opened, even in the most outlying parts of the country.

(3) Concessions to foreign capital, for the purpose of exploiting vast tracts of land and of mineral deposits, especially in Siberia. This will have a healthy effect in stimulating industrial life and will bring thousands of mechanics and technical exp rts into Russia.

(4) The increasingly greater share that the industrial unions are beginning to take in the direction of the country's affairs. The workers are learning how to administer industry by actual experience.

### Great Britain

Upon leaving Soviet Russia and reconstruction and turning to the capitalist countries we are faced by discord, unemployment and industrial dissolution. In Great Britain the miners have been out on strike since April 1st, and an agreement was reached by them with the other two members of the Triple Alliance, the railroad and the transport workers, that these latter would also come out on April 15th. It seems, however, that at the last minute of the eleventh hour the workers have again been betrayed by their leaders, as the sympathetic strike order has been rescinded. This leaves it up to the miners to fight it out alone.

The situation in Great Britain is not, in the nature of things, very encouraging. The most that can be hoped for is the ousting of Lloyd George and the setting up of a parliamentary Labor government, resembling somewhat the present German social-democratic government. This would be a long step in advance, but it would still leave Great Britain far removed from a genuine working class administration. In the meantime the workers have to develop more initiative and get rid of the incubus of ther present bourgeois-minded leaders.

The Irish people are still keeping up their fight for national independence, and we may rest assured, unless our knowledge of the Irish character is absolutely wrong, that they will keep at it until Ireland has gained complete sovereignty. At the same time the struggle is taking on more and more the aspects of class war. The red flag is no longer a novelty. In some districts it is beginning to assume the significance of the national emblem.

Verily, England's tribulations are manifold. She has been driven out of the Caucasus, her influence in the Near East is fast declining, in Mesopotamia American capitalists are encroaching on her oil rights, the Greeks, backed by her in their war on the Turkish Nationalists, have been utterly routed, the Irishmen simply will not behave as all nice and obedient subjects should, and now along comes Gandhi, a barefoot Hindoo religious ascetic, and starts a "non-co-operation" movement in India. This movement aims at a complete separation of India from Great Britain, and has assumed alarming proportions. It has found its chief support in the working classes, who have declared war on liquor, that staunch old prop of exploitation the world over, are gathering together to talk of freedom and are demanding better wages and working conditions. When we remember that the population of India is over 300 millions, that its raw products, exported to the British Isles, supply employment to hundreds of thousands, and that it is the source of the wealth of many British captains of industry, we will begin to appreciate the immensity of the problem that Great Britain is confronted with.

Can these events be interpreted as forebodings that the glory and the power of the British Empire, on which the sun never sets, are on the decline?

### Germany

The German workers find themselves in a peculiarly unfortunate position. Besides having to slave for their domestic exploiters they also have to satisfy the demands of their foreign industrial masters, the Allied imperialists. On top of that

they are kept from taking any real steps for genuine betterment of their condition and for the overthrow of capitalism by their own purely political and evolutionary ideology, instilled into their minds by many years of tutelage under the guidance of the Social-democratic party.

The Communist uprisings which broke out in several industrial centers during the latter part of March, and which cost scores of lives, were foredoomed to failure, for the simple reason that instead of attempting to capture the factories, mines, railroads, for the **workers**, as workers, they attempted to capture the governmental institutions for a revolutionary **political party**. These Germans make the fatal mistake of imagining that Friedrich Ebert and his assistants are the rulers of Germany, instead of Hugo Stinnes and his group of financiers and captains of industry. When will the workers of industrialized countries learn that only thru strong revolutionary economic organizations will it be possible for them to overthrow capitalism?

Several highly significant events have transpired during the last month or two. The plebescite in Upper Silesia resulted in that province being retained by Germany. Had it turned out otherwise, German industry would have been seriously affected, as this is one of the chief coal and metal regions of Germany.

It has been stated on good authority that the recent workers' uprisings were caused in large measure by the Allied military occupation of the Ruhr coal basin and by the severity of the reparations indemnities. If the Allied imperialists press them hard enough the German workmen may yet be forced to throw off the yoke of wage slavery thru the sheer necessity of self-preservation.

Another cause of worry for the Prussian statesmen is the separatist movements which have arisen in the Rhineland and in Bavaria. These movements are supported, at least passively, by France. As a contrast, there is no better example of the selfishness and stupidity of the Allied imperialists than the provision in the Versailles treaty forbidding the union of Austria with Germany. By being fearful that such union would provide a way for the expansion of German influence thruout the Balkans and the Near East, the Allies have killed Austrian industry and condemned hundreds of thousands of men, women and children to certain death from starvation and disease.

In a note, dated March 29th, sent to the German foreign minister, Dr. Simons, by Secretary Hughes, he declares that the United States "stands with the governments of the Allies in holding Germany responsible for the war and therefore morally bound to make reparation, so far as may be possible." However, there is no indication that the Harding administration intends either to sign the Versailles treaty or to join the now existing League of Nations. The Knox resolution for a separate peace with Germany was re-introduced in the Senate on April 13th and there is an even chance that it may be passed.

Unemployment is as much on the increase in Germany as anywhere else. Reports show a decreased output in practically every industry, with the consequent laying off of help. The textile, paper and china porcelain industries especilly have been severely hit.

The much-heralded "war after the war," for the rehabilitation of German industrial supremacy, has begun in real earnest. A fifty per cent tax on German imports into Great Britain has been fixed by the British parliament. To retaliate for this great efforts are being made to boycott all British, French and Belgian made goods, and to withdraw all the ships from the German lines to France, Great Britain, Belgium and their colonies and put all the craft thus released into the trade with neutral countries, particularly the United States and South America. The German manufacturers are also trying to outbid their "enemy competitors," and as a good beginning in that direction the Krupps have secured an order for 10,000 railroad car wheels from the Argentine government.

Germany is also making strenuous efforts to get the first pick of the trade with Soviet Russia, and a trade commission with far-reaching powers has been sent to Moscow, which amounts practically to a recognition of the soviets.

### France

To prove that in modern economic wars the workers always lose, no matter which side wins, we can cite no better example than France. Unemployment and suffering are about as great there as in Germany, and conditions are growing steadily worse. The French worker cannot purchase for his present wages as much as he could before the war since, according to the latest reports, his living costs him just six times what it did in the spring of 1914.

We would be mistaken, however, in thinking that in France the capitalist order of society is in any great danger of being thrown overboard at an early date. The French working class is as little organized, in a revolutionary sense, as that of other nations, and as much under the guidance of reactionary leaders. One would think that following the dissolution by order of court, on January 19th, of the General Confederation of Labor the workers would swing sharply to the left, but, to judge by latest reports, such has not been the case. The syndicalist minority within the confederation, numbering about 300,000, and the communists are doing good work, but the results are not very noticeable.

The overthrow of capitalism in France will be especially hard on account of a large proportion of the population being made up of the petty bourgeoisie, shopkeepers and small peasant proprietors. The French workers still have many weary months of suffering and privation ahead of them.

France is today the bulwark of world reaction,

and her people should therefore perhaps be congratulated because the imperialists have been meeting up with one setback after another. First the collapse of the Polish war and of Wrangel, backed by Franch gold, then the sovietization of Azerbaijan, Armenia and Georgia, and now British rivalry for colonial and export trade. On top of that, according to one of the foremost French authorities on finance, Ernest Thisserand, France is in the midst of an unprecedented financial collapse and is facing a banking crash.

### Italy and Spain

The two European countries in which the proletarian revolution is most likely to take place first are **Italy** and **Spain.** Unemployment is as acute and conditions as bad here as elsewhere, and the workers are developing a genuine spirit of militancy. Also, the left-ward trend in the ranks of labor is more noticeable in these countries than anywhere else. Another healthy sign is that the workers have abandoned to a large extent, especially in Spain, any hopes that they may have entertained of being able to fight capitalism thru parliament. The biggest labor body in Spain, the **Confederación Nacional del Trabajo,** is committed to strictly revolutionary syndicalist principles. In Italy the syndicalists number some 600,000 members.

Of late many encounters, sometimes sanguinary, have taken place between the **fascisti,** the Italian nationalist white guards, and the revolutionary workers. In Spain the persecution of members of the revolutionary labor unions continues unabated. Pestaña is still in the fortress of Montjuich and other workers are being arrested by the hundreds and persecuted and maltreated most severely. The boycott against Spanish-made goods has not been put into effect with any degree of success. From last reports it appears, however, that the Moscow Red International is doing everything in its power to help the Spanish fellow workers.

### Other Countries

Two hundred thousand workers are reported to be out of work in little **Switzerland.** Unemployment is becoming acute in the **Scandinavian countries.** But the workers of these countries are still under the spell of political socialism and have a long way to travel before their organizations will turn into militant bodies with revolutionary aims.

The problems presented by most of the **Balkan States** are so complicated that it is hard to give an accurate analysis of their present condition. However, in at least one of them, namely, **Bulgaria,** the revolutionary movement is virile and the outlook hopeful.

In **Hungary** and **Japan** the White Terror continues unchecked. In **China** one of the most appalling tragedies in the history of mankind is taking place. Some twenty million people are doomed to die from starvation. The crop devastated, hunger affected region ordinarily contains forty million inhabitants. Under the wall of Tientsin 25,000 men, women and children lie waiting for death.

It was reported on April 8th that Dr. Sun Yat Sen, who became provisional president of China after the overthrow of the Manchu dynasty, has been elected president of the republic of South China.

There is no better way to end this article on the international situation than by reproducing a news item from **Argentine,** which shows the splendid spirit of solidarity that prevails among the **Marine Transport Workers of South America,** organized along industrial union and I. W. W. lines:

> Buenos Aires, April 5, 1921.—The so-called port soviet, which has ruled shipping here with a high hand for more than a year by declaring strikes and boycotts against vessels, commodities and individual houses, is now in direct conflict with the United States government as a result of a strike of firemen aboard the Munson liner Martha Washington.
>
> Members of the engineroom crew, who struck when the steamer arrived here two weeks ago, immediately were supported by Buenos Aires stevedores and ship supply laborers, with the result that the steamer could not be unloaded.
>
> The American consul, after several conferences with the port leaders, told them that the United States government forbids recognition of port unions and that the firemen must treat with the consul direct. The port unions then notified the Munson line officials that unless the men's demands were met within forty-eight hours they would boycott all Munson line steamers, including mail boats.

ALWAYS THREATENING—ALWAYS FALLING!

# Revolution: A Creative Process

**A Book Review: By S. P.**

**Creative Revolution: A Study of Communist Ergatocracy: By Eden and Cedar Paul: New York: Thomas Seltzer: $2.50.**

> "Revolution is the highest form of creation, the re-creation of the animate matter of the social organism."—J. R. White.

IT IS to be doubted if a good many self-styled "revolutionists" are really familiar with the essential nature of the revolutionary process. "Revolution" is an easy word to use. It rolls glibly off the tongue, requiring searcely any accompanying effort of thought. Now, however, that the close of the world-war has made the collapse of the capitalist system seemingly inevitable within the eurrent century, now that revolution has become a matter of decades, rather than of eenturies, and perhaps, not of decades but of years, it has become increasingly necessary to elarify our understanding of the word.

Radicalism signifies a going to the roots of things, and if we are to be radically revolutionary, we must traee the roots of the process in the soils of philosophy, psyehology, and natural science, as well as in those of economies and soeiology. That is what these two English writers, Eden and Cedar Paul, attempt to do. Their book, sub-titled "A Study of Communist Ergatocracy," and dedieated to Lenin, is in reality a text-book, eompiled with exemplary clearness and eoneiseness, of Left-ism—at least, of British Left-ism, tho the point of view is by no means narrowly British, as a ehapter, headed by a quotation from the I. W. W. Preamble and devoted to "Soeialism Through the Class Struggle" will testify.

The authors plunge into the midst of things (always the best way of making a beginning) with a ehapter on "Communist Ergatoeracy." The latter word may take the reader's breath away at first with its novelty, but it is soon found to be a very good word, indeed, and one which ought to be popularized, being much better than the eumbersome "dietatorship of the proletariat." The single word—literally, "workers' rule"—means praetically the same thing.

In this first ehapter, we find the eargo eonsiderably lightened at the outset when, without a whimper, the idea of "demoeraey" is summarily dumped overboard:

"Stop talking about demoeracy. You think you are demoerats, but you are not. You think you want demoeraey, but you don't. You are ergatoerats, and you want ergatoeraey. Demoeracy is the method of the outworn era of eapitalism, and 'democracy' is a term that has been soiled by all ignoble use. Leave demoeracy to the liberal bourgeoisie and to the Laodieeans among the socialists. Your objective is ergatoeracy."

The preeeding quotation from Bernard Shaw's play, "You Never Can Tell" indicates that the authors may have picked up their word from a man whom the mareh of things appears to have left behind.

The remainder of the chapter is devoted to the drawing of a distinction between socialism and eommunism, an attempt at a definition of socialism, and finally, a definition of the word, revolution. These definitions and distinctions may be regarded as a preliminary clearing of the ground. One sentence is of interest: "Left wing socialism has an anarchist sub-flavor." Revolution is defined in the words of Engels as "a total soeial change," further deseribed by the authors as "ostensibly rapid and very thorough." The question as to whether or not the revolution may be brought about by peaeeful means is raised but left for such answer as is given it later in the book.

In eoncluding their introductory chapter, the writers take a mild slam at those who are inclined to believe in the infallibility of Marx and Engels.

"As from the gospels, so from Marx and Engels, the adherents of conflicting schools can readily select isolated passages which seem to justify their respeetive views by the **ipse dixit** of a master. 'But they did not know everything down in Judee,' and each generation must make its own eontribution to the fires of human progress."

Having broken ground with this essential idea, that revolution means the bringing of the workers to power, the exponents of ergatocraey go on to present us with views of the various trends in the modern revolutionary movement.

The idea of "Soeialism through Soeial Solidarity," an idea exemplified in the Fabian philosophy, an essentially British manifestation, but one wheih has its ramifications elsewhere, is first discussed. It is, as the authors say, the philosophy of "Bring soeialism, but not in our time, O Lord." It is the philosophy whieh leads to state soeialism and which masks itself in the parliamentary dilly-dallying of the British Independent Labor Party. The ehapter eloses with the eonelusion that parliamentary forms are outworn, that "the growing eeonomic power of the workers must fashion new forms of political expression," and that "the main impetus of advance must be the vital impetus of the elass struggle."

This brings us elosely home, for it brings us to the philosophy of the Wobbly Preamble.

"Class-war socialists believe that men are generally guided by eeonomie elass-interest when they are **aware** of it. The objeet of the working of bourgeois political and edueational institutions is to prevent proletarians from becoming aware of the meaning of the proletarian status, to persuade them that they are 'eitizens of the state.' On the other hand, the objeet of sueh teachings as that eontained in the

**Preamble of the I. W. W.** (that 'pernicious organization,' as A. G. Gardiner termed it not long ago in the 'Daily News') is to convince them that they are proletarians first, last, and all the time; that the citizenship of the capitalist state is of value solely to the beneficiaries of capitalism; and that there is no possible community of interest between a class that lives by ownership and a class that lives by labour."

To the class-conscious Wobbly, this may seem like a repetition of his A B C's, but he will find much in the chapter to interest him. He will find, for example, a discussion of criticisms of the constructive side of syndicalism. On the whole, it will prove one of the most interesting chapters of the book.

Next comes a discussion of the British Shop Stewards' movement. The significance of the Shop Stewards as the "counterpart of the Russian soviet organization" is brought out. In this connection, the words of Lenin, quoted in another part of the book, may be recalled:

"Strikes and soviets. If these two habits once get hold, nothing will keep the workmen from them. And soviets, once started, must sooner or later come to supreme power."

"The shop stewards' movement," the authors tell us, "aims primarily at perfecting the machinery of industrial unionism, and at securing the control of industry by the workers through workshop control . . . the movement is before all revolutionary . . . in Britain, as in Russia, it will once and forever abolish the rule of those who live by ownership and will substitute for that dominion the rule, or rather, the administration, of those who live by labour . . . it will replace bourgeois democracy by communist ergatocracy."

By this time we are finding the word, ergatocracy, no longer such a bogey as it may have appeared in the first pages of the book, and its meaning has been considerably cleared. The method by which, in the opinion of the writers, the revolution is to be accomplished and an ergatocracy established also becomes clearer:

"We must concentrate our energies upon organizing and educating our fellow workers, so that when a favourable moment comes there may be an adequate revolutionary minority able to avail itself of the new instrument, and a mass psychology which may at least not be hostile to its employment."

In other words, the revolution must be led and, in the end, accomplished largely by a vanguard of the working class, composed of proletarian intelligentsia—for the proletariat must ultimately develop its own intelligentsia.

Early in the book, the authors have pointed out the two main currents into which the stream of modern socialism has divided. They distinguish these currents as those of evolutionary socialism and revolutionary socialism. Here, perhaps, in the doctrine of the "favourable moment" and the "adequate revolutionary minority," we have the point of meeting of the evolutionary and the revolutionary streams. Revolution is still seen as a process of evolution and must come as the inexorable result of the working of evolutionary laws, but, nevertheless, if it is to be the sort of revolution we want, it may not safely be left to evolution alone. We must plan and organize, in order that there may be that "adequate revolutionary minority" when the "favourable moment" comes. In other words, revolution, after all, must be an essentially **creative** process.

Creation in connection with revolution is no new thing in the realm of natural science. The theory of "Creative Evolution" has been evolved by Bergson, the title of whose book the authors have parodied in naming their own. A later chapter of the present volume is devoted to a further exposition of this point.

In a passage quoted some paragraphs above, the phrase occurs: "the rule, or rather the administration, of those who live by labour." This phrase is significant. The idea of democracy—'government of the people, by the people, for the people"—has, as we have seen been thrown overboard. In its place is to bet set up an ergatocracy, or rule of the workers. But the **rule** of the workers, according to the theory elaborated in this treatise, is—ultimately, at least—to be supplanted by the **administration** of the workers. Not the rule of persons but the administration of things, in the interest of the working class, i. e., in the interest of all socety, for all society will then belong to the working class—is to be the aim of the communist state or that which follows it.

In the conclusion of the chapter on the Shop Stewards' movement, a movement which Lenin sees as the "microbe" of English Bolshevism, occurs a passage which should appeal to industrial unionists:

"But the industrial union is likely to survive throughout the period of transition. It is futile, therefore, to talk of scrapping the trade unions which will grow into these great corporations of the future. This is no matter of pure theory. In Russia, just as the co-operatives have not merely survived but have played, and continue to play, a role of supreme importance, so also, after the revolution, will there be abundant scope for the activities of what, in the new Russia, are termed 'professional unions.'"

Chapter titles will serve to indicate the ground covered in the remainder of the book: "Historical Significance of the Great War"; "The Russian Revolution"; "The Third International"; "The Dictatorship of the Proletariat"; "The Iron Law of Oligarchy"; "Socialism Through Parliament or Soviet?"; "Creative Revolution"; and "Freedom."

One of the three great contributions of the Russian revolution is found to be the overthrow in the radical mind of the idea of pacifism, or rather the clarification of the idea. Pacifism in a master-class war is seen to be something quite different from pacifism in the world-wide class struggle. The other great contributions of the Russian movement, as our

authors see them, are the idea of the soviet as the form of organization in the transitorial communist state, and the body of revolutionary principles evolved by the Third International.

The latter is discussed at length in the chapter devoted to it. In their chapter on the proletarian dictatorship, the writers, while evidencing a determination all along not to be Marx-bound, draw upon the great leader for principles in support of the theory.

One of the most interesting pertions of the entire work is the chapter on "The Iron Law of Oligarchy." It is an idealistic, semi-poctical sort of thing. After the revolution, what? After the establishment of the socialist or communist state, what? These are questions we all of us often ask. The answer here given may be startling to some.

Just as our idea of democracy was scrapped, so here we are asked to discard some of our old ideas of human "freedom." At the close of the chapter we are just about convinced that an oligarchy, i. e., a dictatorship, however mild, in some form or other — will always be necessary. The theory of "an elite, self-appointed, like the 'voluntary nobility of H. G. Wells,'" a free association of the good and the wise for the direction of the rest of society—all this provides at least interesting reading, tho all such discussions, even Lenin's picture of "proletarian democracy" and the "withering away of the state," seem a trifle premature.

It is not always bad to dream, however, and it is always good to think.

The question of parliamentarian socialism is again raised in Chapter X, with a distinction between "parliamentary" and "political" action.

In the chapter on "Creative Revolution," the authors take up once more the thread of their main thesis and bring it to a conclusion. The contributions of Newton, Darwin, Marx, Bergson, and Freud to revolutionary theory are considered. Here, we dive into natural science, philosophy, psychology, and even metaphysics.

It is, indeed, on the metaphysical note, largely derived, it would seem, from the Freudian wish-theory, that the book ends. In the final anlysis, we are going to have revolution because we **desire** it.

Schopenhauer gave us "the will to live." We have had the "will to believe," and what not. Come the Pauls, who give us, as a triumphant last note, the "will to revolution."

# General Defense News

**By John Martin**

NEVER before was the need of solidarity and concerted action in behalf of our imprisoned fellow workers greater than it is now. On Monday, April 11th, we were informed that the United States Supreme Cort had refused to review the Chicago case. A few weeks previously, a similar refusal by the same court in the Sacramento case was made public. All hope for the release of the fellow workers involved in these two cases thru the action of the courts has ceased. Only by Labor's united action can we now hope to save our fellow workers from serving the savage sentences imposed upon them. Workers, act today! Demand the immediate release of all industrial and political prisoners! Let the powers that be know that you stand solidly behind these workers and that you will continue to demand their release until the prison doors swing open for them, and not be put off by mere promises.

The refusal of the Supreme Court to review the I. W. W. cases should remove whatever illusions that may still linger in the minds of the workers as to "equality before the law." It should prove to all, beyond a doubt, that there is one kind of law for the packers, the Silverthornes, and the masters in general, and one—or none at all—for the workers. Compared with decisions in other cases, it shows that the offices of the meat trust and the lumber kings must be held immune from search and seizure while those of the I. W. W. may be raided at any time in the most illegal way imaginable.

The Wichita case is still pending in the Appellate Court. We are not entertaining any hope that the decision which will be rendered in it will in any way differ from, or be mare just than, those rendered in the Chicago and Sacramento cases.

### Arrests and Dismissals

Two fellow workers, Robert Olson and John Walzell, were arrested at Omaha, Nebraska, for putting up posters advertising an amnesty meeting. Walzell was later released while Olson was fined $50. The local committee has appealed his case.

On March 19th, two fellow workers, Frank Boggio and Wm. Hines, were arrested at Memphis, Tennessee, charged with attempting to hold up a local grocery store and wounding the owner thereof. From what we are able to ascertain, these two fellow workers are absolutely innocent of the charge against them. They have engaged a local attorney to look after their interests, and we have requested him to obtain a postponement in this case in order to give one of our attorneys time to investigate the full details pertaining to it.

Attorney Mulks has been sent to Los Angeles, California, to defend Fellow Worker W. Gibbs, in his second trial, and also to take charge of the criminal syndicalism cases pending in that city. Gibbs was, up until his arrest, a very active and well-liked delegate in and around Mecca, California. On February 19th, four men entered and robbed a construction camp six miles out of Mecca. Altho every-

body knows that Gibbs was in Mecca at the time the robbery occurred, he was nevertheless arrested and charged with having participated in it. He was later tried on that charge, but the jury disagreed and a new trial was ordered, the date of which was set for April 13th. We have not yet received any information as to the outcome of it.

The charge of criminal syndicalism against Fellow Worker William Danton has finally been dismissed, and he was released from the county jail at Lyons, Kansas, on April 5th. Warren Lamson's case, which has been pending at Marion, Kansas, under the injunction order of that state since June 10th, 1920, may also be dismissed. Fellow Worker Lamson has been at liberty on bond since shortly after his arrest.

The attorney general of Oklahoma has confessed error in the criminal syndicalism case against Jack Terrell, who was convicted and sentenced on that charge to seven years in the Oklahoma penitentiary on February 16th, 1920. The case was appealed and the only reply the prosecution could make to our briefs was to confess error. We are now awaiting the final dismissal of the case.

In the case of Fellow Workers Tom Foley and High Delaney, who were arrested at Florence, Kansas, March 5th, on a complaint charging them with both criminal syndicalism and vagrancy, the trial resulted in a jury disagreement, after which the case was dismissed and the fellow workers were released.

**Bond Needed for Fellow Worker Tonn**

As it will be remembered, Fellow Worker Henry Tonn, a member of I. U. No. 310, was convicted of criminal syndicalism on March 2nd, 1920, at Marion, Iowa, and sentenced to three years in the state penitentiary. His bond, pending appeal, was at that time set at $3,000.00. In the very near future the brief in his case will be filed with the Supreme Court of Iowa and it is very likely that it may take that court a long time before it renders its decision, and should Fellow Worker Tonn, in the meantime, have served his sentence, a decision may never be rendered. Under no circumstances can we afford to run the risk of such a possibility since the winning of this appeal will have a far-reaching, beneficial effect on other similar cases. If we obtain Tonn's release on bonds, his sentence will not expire and the court will consequently be forced to render a decision in his appeal. We therefore request all fellow workers to send us the names of persons within the State of Iowa who may be willing to place their property or cash as bail sureties for Fellow Worker Tonn. Cash or Liberty bonds from outside the State of Iowa will also be acceptable.

**Financial Help Still Needed**

We should not let the refusal of the Supreme Court to review the Chicago and Sacramento cases dishearten us. We must remember that our imprisoned fellow workers' needs must be taken care of, also their wives and children. We must not cease our efforts in their behalf. There are also still many state cases to be defended and these things cannot be properly attended to unless you give us your financial help. The I. W. W. has in the past always proven its solidarity and courage in the face of adversity and we are sure that our fellow workers will face the conditions now confronting us with the same spirit of solidarity and courage as was shown in the past.

**Make your donations payable to the General Defense Committee and send them to John Martin, 1001 W. Madison Street, Chicago, Ill.**

# THE RIVER

**The gray clouds that float above me soften with a silvery light;**
**Earth and sky each vie in beauty as day mellows into night.**
**In the valley, there, the river thru the woodland winds its way,**
**The sky's beauty is reflected in its water all the day.**
**In the distance a small row-boat gently floats upon the tide,**
**And I hear a banjo's music, played by lover to his bride.**
**On the hillside, gently sloping, hidden half by knoll and tree,**
**Are the homes of sturdy settlers, men who love the strong and free.**

**But the river flows on swiftly, past my hesitating feet,**
**And my fance sees the city built where fresh and salt waves meet;**
**There I see the sky's rare glory reflect in a temple's domes,**
**There I see the sick and needy, living in their tragic homes.**
**I see mansions, terraced, vineclad; streets so wide and shining white;**
**I see hovels, dark and dismal; alleys crime-stained, like the night.**
**In a mansion youth is dancing! in an attic age asks bread;**
**And a mother, by a bedside, sits and watches with her dead.**

**Julia C. Coons.**

# Wasteful Methods of Distributing City Milk

**By the I. W. W. Bureau of Industrial Research**

ONE of the major wastes chargeable to the present industrial system is found in chaotic methods of distribution. Roughly one half the cost of all finished products delivered to the consumer lies in distribution and selling. The raw materials, and the expense of actually making the product ready for sale constitutes the other half. Here is an appalling leakage.

The main elements in the present high cost of distribution are these:

1. Selling expenses of manufacturers.
2. Expenses of wholesalers and jobbers.
3. Expenses of retailers.
4. Transportation and delivery.
5. Advertising.
6. Speculation.
7. Dumping and spoilage.

All along the line from the point where the finished product stands on the manufacturer's shelves, or in the farmer's barn, to where it is taken by the ultimate consumer, a host of middlemen, salesmen, jobbers, brokers, speculators, carriers, stand, each doing his level best to buy cheap and sell dear, and make all the profit possible, utterly regardless of the final cost to the consumer, or the most efficient method of delivery. As a result a great section of the working population of the country is diverted from the field of primary production or straight line distribution, to serve the chaotic ends of these wrangling middlemen. Uncounted thousands of clerks, bookkeepers, drummers, salesmen, advertising copy writers, railway workers, truckmen, storekeepers, storage house employes, together with vast amounts of good raw material, flow into this rough and tumble of distribution where perhaps a tenth of the workers and a tenth of the raw material could provide for the whole mechanism, if distribution were only put on a straight line engineering basis.

Today, the situation may be likened to a woman who has just made a pile of hot griddle cakes. Her hungry family is seated around the kitchen table eagerly waiting for them. She takes the pile out to the woodshed and drops two or three; she lowers them down the well for a while; she throws some to the chickens; she stands and admires the view; she goes down the road a piece; she makes a tour of the house, and finally pushes what is left on to the plates of the patient family, taking care to give one favored child more than to all the rest combined. Of course, no woman outside of a madhouse delivers hot cakes on this schedule. But that is about the way in which the present distribution system delivers them.

The whole question is so vast, that to be understood, it must be studied, a section at a time. It is the purpose of the present review to survey only one small item in the chaos of distribution—the milk supply of cities.

Milk is one of the most important of all food products. Today it represents about 15 per cent of the diet of the American people, and it could to advantage represent more. Milk contains all the elements necessary to maintain life—the protein, the fat, the carbohydrates, and particularly those little-known substances called vitamines, which protect the body from serious deficiency diseases, such as scurvy. Babies and children need milk particularly, but to adults it is also a most necessary and wholesome food.

Milk may be made into many products, of which the chief are:

Butter,
Cheese,
Condensed or Powdered Milk.

Roughly half of all milk produced on the farm goes into the manufacture of these products, while the other half is consumed as fresh milk or cream by the farmer's family, or shipped to the cities to be similarly consumed. When a farmer outside of New York City has milked his cows and placed the milk in cans to cool, the following is what happens to it before the city consumer finally drinks it. The equipment figures for New York delivery are shown as well as the main points in the journey:

**The Flow of Market Milk Into New York City**

| Agency | Number and Description |
|---|---|
| 1. The cow. | 450,000 cows supplying New York with milk. |
| 2. The dairy farm. | 40,000 dairy farms locatted in 6 states and in Canada. |
| 3. The farm wagon. | Carries the milk from the farm to the country milk station with loads varying from 10 to 800 quarts. |
| 4. The country milk station. | 1,150 stations, 350 of which are equipped to pasteurize. |
| 5. The railroad milk car. | 13 railroads carry milk into New York,—32 milk trains and 259 cars daily. |
| 6. The city terminal. | 13 terminals, 6 in Jersey and 7 in New York. |
| 7. The ferry. | About 50 per cent of New York's milk has to be ferried over from Jersey. |
| 8. The milk truck. | 1,500 trucks carry the milk from the terminal or the ferry to the city milk station. |
| 9. The city pasteurizing or distributing station. | There are 32 pasteurizing plants and 197 distributing stations. |
| 10. The wholesale wagon. | 1,500 wagons take 35 per cent of the milk to retail stores, restaurants and hotels. |
| 11. The retail wagon. | 5,000 retail wagons take balance of fresh milk to consumers' doors. |
| 12. The consumer. | About five million people in New York using 2 millian quarts daily. |

The flow of market milk in other cities follows much the same course, tho no other city consumes such great quantities, or has such elaborate facilities for handling milk.

The costs of this New York milk given in terms of percentage was found by the N. Y. Legislative Committee on Dairy Products in 1916 to be approximately as follows:

| | |
|---|---|
| Paid the farmer | 42.2% |
| Country charges and hauling | 6.6% |
| Pasteurization | 4.4 |
| Bottles and caps | 2.2 |
| Freight | 10.0 |
| City delivery expense | 26.7 |
| Administration expense | 3.3 |
| Dealers' profit | 4.6 |
| Total distribution cost | 57.8 |
| Selling price | 100.0% |

While the percentages will vary somewhat from year to year, they show in a general way the chief items of milk cost. It is seen that the farmer receives less than half the price the consumer pays (42 %); city delivery expense consumes more than a quarter of the final price—27 %—and freight a tenth—10 %. Dealer's profits account for 4.6 % when this particular study was made, tho this ratio will vary considerably according to the time of the year and according to individual dealers.

### Wastes in Country Handling of Milk

One of the chief wastes in country handling is the lack of co-ordination in hauling milk from the farm to the country milk station. Mr. Irwin G. Jennings in his study of the "New York City Milk Problem," found that in 25 such stations the average number of quarts per wagon hauled by the farmer varied from 35 to 337, and the average quarts per horse varied from 22 to 195. He quotes a case of one station with 76 farmer patrons, where 50 men and 60 horses were required to bring in the 3,300 daily quarts. The superintendent of the station estimated that he could gather the whole supply by proper routing with 12 men and 24 horses, thereby saving the labor of 38 men and 36 horses! In other words, a co-operative hauling system would greatly reduce the waste of men and horses in this field.

Again the Mayor's Fair Price Milk Committee found that there were too many country milk stations involving needless duplication of plant and equipment. One witness before the committee testified that from his farm in Orange County there were seven stations in a radius of six miles, and that only one was necessary.

### Wastes in Freight Hauling

There is a tendency for milk to come from ever increasing distances from the city. This holds true not only of New York, but other cities as well. Some New York milk comes from points 500 miles away. Often it comes from areas that properly belong within the supply radius of other cities. Thus Philadelphia milk is collected from stations a few miles from Buffalo, Rochester, Elmia, and Erie, Pa. There has been little attempt to balance the load in supplying cities with milk. The routes criss-cross, duplicate, overlap. The railroads do not care because it means more freight revenue for them. The dealers do not care if they can make a profit on it. The farmers do not care if they can get the dealer to pay their price.

Furthermore, in the loading of milk cars, considerable inefficiency has been found. The many separate competing dealers have their milk shipped in less than car-load lots, and much waste in loading and unloading results.

Finally the proper allocation of inward transportation between railroads, trolley lines, and motor trucks has never been adequately worked out for any city. Could it be, large transportation wastes could undoubtedly be saved.

### Wastes in City Distribution

The largest element of waste is found, however, in the city distribution of milk. The Mayor's Milk Committee of New York in 1917 found that there were practically 5,000 retail milk wagons being used at that time. The capacity load of an average wagon was 428 quarts—or a total daily capacity of 2,140,000 quarts. The wagons were actually delivering, however, only 704,000 quarts on the average per day. **They were only loaded to 33 % of their capacity.** In other words, a third as many wagons could have delivered the whole supply if they had been under unified operation.

In the same way it was estimated that the number of wholesale wagons could be cut from 1,522 to 300 if capacity loads were carried. The report recognized, however, that 100 % capacity loads were not always feasible in every case even under unified operation.

The reason for these excess wagons and small loads is that milk is distributed by scores of competing dealers. Each dealer has his milk routes and they often duplicate the routes of other dealers. So we find anywhere from four to twenty half-loaded wagons all delivering milk along the same street in the same day. A dozen milk men will run up the same pair of stairs each with a bottle of milk or two, when one man with a dozen bottles in a tray could do the whole job. And the dealers not only compete in the physical sense of delivery, but they hire large staffs of salesmen and go to great advertising expense to get customers away from one another. Says the New York Legislative Committee on Dairy Products (1917):

> Everything that can influence the customer or make it easy to reach him or control his trade is bought and paid for. An army of solicitors and sales agents are maintained to go about from block to block to procure customers. Not only do we find in a single block six wagons and horses and drivers, where one might well do the work, but on the same day we find six solicitors, six route superintendents, six staffs of clerks and bookkeepers . . ."

These "procuring business" expenses on the part

of one milk company reached $200,000 in a year, according to the Dairy Products Committee report.

Mr. Jennings, already referred to, made some very careful studies of the actual number of wagons per block and the duplication of routes in New York City. He analyzed the routes of 32 drivers selected at random. The miles driven varied from 1.5 to 13.8, the average being six. The number of milk wagons of other companies paralleling one driver's route varied from 36 to 4. The number of different wagons per block varied from ten to two with a mean of seven. The number of "points" delivered varied from 405 to 162. A "point" of milk is one quart bottle or two pint bottles, or ½ pint of cream or one pound of butter.

The drivers of these wagons were asked how many points they could deliver if each had a monopoly in his own district and could load his wagon to capacity and deliver in a straight line. Their replies were so striking that some of them are recorded as follows:

| Route Location. | Present Max. Points. | Unified System Max. Points. | Waste Under Present System. |
|---|---|---|---|
| 59th St. and 5th Ave. | 243 | 500 | 257 |
| 18th St. and 5th Ave. | 200 | 500 | 300 |
| 58th St. and 5th Ave. | 420 | 700 | 280 |
| Green and Myrtle Sts. | 165 | 450 | 285 |
| Stagg and Morgan Sts. | 175 | 500 | 325 |
| Slocumb and Lafayette Sts. | 165 | 500 | 335 |
| 111th St. and 5th Ave. | 190 | 400 | 210 |
| 60th St. and 5th Ave. | 198 | 400 | 202 |

The Mayor's Fair Price Milk Committee in 1919 found that "certain city pasteurizing and distributing stations are not operated to their full capacity, and if they were so operated a number might be discontinued." It also appeared that the investment in some of these plants was largely undertaken for advertising purposes. "It is certainly unnecessary to have great elaborate show places which have no bearing upon the quality of the milk, and the existence of which can only result in increasing its cost."

Meanwhile, the Fair Price Committee made a study of school children and found 18,883 out of 67,929 examined, or 32.6 %, suffering from undernourishment! While milk wagons went meandering criss-cross all over the city, while salesmen perspired and show plants were built, the children starved!

### Conditions in Other Cities

What holds true in New York holds true in practically all other American cities. Perhaps the most striking exhibit of milk distribution wastes ever prepared was that made by Dr. John R. Williams in Rochester in 1912. He had his examiners visit 5,000 homes in the city, as well as survey existing facilities of delivering milk to these homes. He then worked out a plan for unified distribution and what it would save in horses, men and money, with the following result:

**Cost of Milk Distribution (Daily), Rochester, 1912**

| | Under Present System. | Under Model System. | Saving. |
|---|---|---|---|
| Numbers of dealers | 273 | 1 | —— |
| Number of quarts del. daily | 63,000 | 63,000 | —— |
| Men employed | 356 | 90 | 266 |
| Horses employed | 380 | 50 | 330 |
| Wagons employed | 305 | —— | —— |
| Trucks employed (horse drawn) | —— | 25 | —— |
| Daily miles traveled | 2,509 | 300 | 2,209 |
| Investment in milk room equipment | $76,600 | $75,000 | $1,600 |
| Investment in horses and wagons | $108,000 | $30,750 | $77,250 |
| Daily cost of distribution | $2,000 | $600 | $1,400 |
| Yearly cost of distribution | $720,000 | $220,000 | $500,000 |
| Distribution cost per quart | 3.2c. | 1c. | 2.2e. |

The cost of distribution yearly was $720,000. It could be cut to $220,000, a saving of half a million dollars, or over two cents on every quart!

Another milk survey was carried on in Rochester in 1919. At this time the daily consumption was about 82,000 quarts. It was again found that if distribution were put on a unified basis, a saving of 2 cents per quart might be made in the consumer's price.

The Food Controller of Canada investigated city milk supplies in 1917. He found the spread between the price paid farmers and the price paid by consumers varied from 7.75 to 6.5 cents per quart. In many cases the spread was held exorbitant because of the excessive number of distributors. In Ottawa where one dealer handled 75 % of the total supply, the spread was only 3.25 cents, while in Toronto, where there were 90 dealers, the spread was 5.25 cents. The controller finally estimated that if the milk distribution of all Canadian cities were put on a unified basis, the average saving per quart would be 1.12 cents per quart, or a total of $1,500,000 a year.

The University of California investigated the market situation in the cities of San Fransisco Bay in 1917. It was found that the same wastes of distribution obtaining in the East were in operation. A driver was found traveling 40 miles a day to deliver 121 quarts and 110 pints of milk. He re-traveled the same street as often as 8 times a day, and averaged only two customers to a block. In one case he went three quarters of a mile outside his route to deliver milk to one customer. On a zone system, he could have delivered all his milk in less than four blocks and saved 35 miles of travel. One block was found served by 18 different distributors. In Oakland, 8 distributors served one apartment house daily. "Everywhere that this matter has been studied, there is a great duplication in milk routes."

Duplication and inefficient use of pasteurizing plants was also much in evidence. In San Fran-

cisco there were found 25 plants, in Oakland and Berkeley, 12 additional plants. For this large investment in many instances no adequate return was received. One of the plants was found to be operating only 2½ hours a day. "It could pasteurize five times the amount of milk that it now treats with very little increase in investment or operating expense." Large losses from bad debts and heavy bottle losses were in evidence due mainly to competitive bidding for customers.

We cannot better conclude this survey of wastes in the distribution of milk than by quoting the final statement of the University of California report:

> "It cannot be expected that individual dairymen or individual distributors will be greatly concerned about the general welfare of the city where they sell their products. Jones, the dairyman, conducts the business for what he can make out of it for Jones. Brown, the distributor, is moved by the same impulse. Each occupies a restricted field. He has no power to control the general result, whatever his public spirit may be. Furthermore, there is a continuous and powerful incentive on distributors to enter on a cut-throat competition to secure exclusive fields, and where this has been accomplished, to exploit the separate and unorganized producer. It is an economic warfare in which the third party, the milk buyer, is sooner or later the victim. It is a primitive method of meeting a universal and vital need of all large cities which our civilization has outgrown. No nagging of producers on distributors, no negative action will give to mothers and children of wage earners the relief needed.
>
> What is needed is comprehensive and expert public oversight that will study the needs of a city as a whole, and co-ordinate the work of producers and consumers so as to eliminate inefficiency and waste, and insure prices based on the value of the services rendered. Provision for the feeding of the people of great cities is the most neglected feature of our economic organization."

## *A New I. W. W. Book*

# The Lumber Industry and Its Workers

**This book gives facts and figures about the great lumber industry in America. Contains a graphic description of how the I. W. W. lumberjacks won the eight-hour day in 1917. Shows why the only salvation for the working class lies in the One Big Union of all the Workers.**

**Should be read and studied by every lumber worker in this country.**

**96 pages. Paper cover. 15 illustrations.**

**PRICE, 25 CENTS**
**Special Prices on Lots of Ten or More**

**Send All Orders to General Secretary-Treasurer**

**THE INDUSTRIAL WORKERS OF THE WORLD**

**1001 West Madison Street, Chicago, Ill.**

# A Criticism

**By Card No. 473009**

In a well written and very instructive article on **organization,** appearing in **The Industrial Pioneer,** for April, James Kennedy makes one very erroneous statement of economic fundamentals. He says: "The wealth produced on the job is divided in two parts. Part goes to the worker in the form of wages and part to the capitalist in the form of profits. The share of each is determined by the amount of control they exert over the job."

The wealth produced on the job is usually divided in many parts, and, one part is certainly used for the payment of wages. It is, however, a grave mistake to infer that the worker receives a **share** of the product.

The worker sells **labor power.** When he has delivered the goods and received the price the transaction is closed. The values produced by labor power are owned **entirely** by the purchaser of labor power, and are divided, **by the owner,** in such parts as circumstances compel.

Neither does the wage received by the worker bear any fixed relation of percentage to the values produced, but is determined (as Kennedy points out) by the relative economic power of the contracting parties, and may be any sum not greater than the total value of the product.

The common practice of speakers and writers in referring to "labor's **share** of the product" is very reprehensible; it appears to support the idea of a **partnership** (and, by inference, **an identity of interest**) between capital and labor.

It is extremely difficult to find language more clear than that employed by Marx himself, and it would be of great advantage to the movement if we would use more verbatim quotations and not attempt so many improvisations.

# An Extraordinary Offer to Our Sub Hustlers

**With the view of getting "The Industrial Pioneer" into the hands of as many workers as possible, we are making an offer to our sub hustlers only, to last till the first of June this year.**

**If you have no sub book, get one from the secretary in your locality. Start in today and get as many subscribers as you can. For every yearly sub you send in to this office you will receive a book in return. You will be surprised in how short a time you will have a library that any worker can be proud of.**

For one yearly sub that you send in, we will send you any of the following books:

**Cloth Bound**

| | Value |
|---|---|
| The End of the World. By Meyer | $0.75 |
| Evolution of Man. By Boelsche | .75 |
| Evolution of Property. By Lafargue | .75 |
| Origin of the Family. By Engels | .75 |
| Social and Philosophical Studies. By Lafargue | .75 |
| Value, Price and Profit. By Marx | .75 |
| The World's Revolutions. By Untermann | .75 |
| Positive School of Chriminology. By Ferri | .75 |
| Labor Movement in Japan. By Katayama | .75 |

**Paper Bound**

| | |
|---|---|
| The Centralia Conspiracy. By Chaplin | .50 |
| The I. W. W. in Theory and Practice. By Ebert | .50 |

For every two yearly subs we will send any of the following cloth bound books:

| | |
|---|---|
| Ancient Society. By Lewis H. Morgan | $1.50 |
| Critique of Political Economy. By Marx | 1.25 |
| Economic Causes of War. By Loria | 1.25 |
| Essays on the Materialistic Conception of History. By Labriola | 1.25 |
| Marxian Economics. By Untermann | 1.25 |
| Philosophical Essays. By Dietzgen | 1.50 |
| Positive Outcome of Philosophy. By Dietzgen | 1.50 |

For five yearly subs we will send you:

| | |
|---|---|
| Volumes I and II of "Ancient Lowly." By Ward | $5.00 |

For six yearly subs we will send you:

| | |
|---|---|
| Great American Fortunes, Volumes I, II and III. By Gustavus Myers | $6.00 |

For eight yearly subs we will send you:

| | |
|---|---|
| Capital. Volumes I, II and III. By Marx | $7.50 |

**Send all orders to "The Industrial Pioneer," 1001 W. Madison St., Chicago, Ill.**

# What Our Readers Say About "The Industrial Pioneer"

Please send me 20 more copies of The Pioneer, as I have already sold out the 20 you sent me. Make the May number 100 copies.

**Alfred Tikkanen, Sec. Hibbing, Minn., Branch.**

***

Enclosed find one dollar for the Pioneer. Will continue sending you dollars. I am 77 years of age, but I am not too old to learn. Keep sending me the Pioneer.

**W. H. Cundiff, Hartford, Ky.**

***

Particularly I was delighted in perusing The Industrial Pioneer. I regard it as the best publication the revolutionary movement has produced so far.

**Wm. Mead, Portland, Ore.**

***

The April number of The Pioneer is sure a hummer. It has a fine appearance, and the stuff inside is great. Too bad money is scarce.

**Chas. Gray, Seattle, Wash.**

***

The Pioneer sure is fine this number, keep it up.

**F. C. Smith, Shenandoah, Pa.**

***

Think The Pioneer is improving every issue.

**Fritz Rudd, Sec. Minneapolis Br.**

The April issue is good and we should be able to get the widest circulation.

**Pat Noonan, Br. Sec., Omaha, Neb.**

***

Your magazine is up-to-date and gives the worker an industrial education.

**John McEnteer, Sec. Butte Br.**

## "WHERE I PUNCH THE CLOCK"

Starting with the June issue The Industrial Pioneer will have a new department, entitled "Where I Punch the Clock." In it will be printed communications from our readers dealing with shop conditions, the sentiment that prevails there, etc. Write us and tell us about the places where you work. Be sure to indicate how you want your communications signed, with initials, full name, or no signature.

## NOTICE TO READERS

Owing to the circumstance that "The International Council of Trade and Industrial Unions," by A. Lozovsky, has been published in pamphlet form, and is being widely circulated, The Industrial Pioneer has decided to discontinue its publication. The greater part of it has already been printed and what remains consists of arguments pro and con on subjects that have already been discussed in our publications at great length.

### TRUTH

We are taking this opportunity to inform our readers that there is being published in Duluth, Minn., a weekly working-class newspaper that is a humdinger. It is called "Truth" and it certainly does credit to its name. It contains more truthful information in one number than two truckloads of capitalist sheets. And, what is more, it advocates revolutionary industrial unionism and always has a good word for the I. W. W. Price, 5 cents per copy. Address: "Truth," Duluth, Minn.

### WANTED, BACK NUMBERS OF O. B. U. MONTHLY

Requests are coming in for bound volumes of the O. B. U. Monthly, but since we are short several numbers we cannot comply with them. Our readers are asked to send us copies of the following issues, if they have them: April, May, June, August, 1919, and January and February, 1920. Special efforts should be made to secure the April and May, 1919, numbers and the January, 1920, number.

# The CENTRALIA CONSPIRACY

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class has interests in common with their employers.

These conditions can be changed and the interests of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

# George Hardy's Report to the Convention

WHEN George Hardy, the General Secretary-Treasurer of the I. W. W., was sent last fall by the General Executive Board to Europe to attend the Berlin conference of industrial and syndicalist unions, it was the intention of the organization that his trip would result in closer co-operation being established between the American and the European revolutionary labor movements. Fellow Worker Hardy returned to the United States during the first part of May, before the beginning of the Thirteenth Convention. He submitted to the Convention a lengthy report, covering 30 pages. In this report he takes up in detail everything that transpired at the Berlin Conference and at other conferences that he attended in Moscow.

But first let us consider the circumstances leading up to the Berlin Conference. This is taken from Fellow Worker Hardy's report:—

"Most of you know that at the last convention of the I. W. W. it was decided to call a conference of all revolutionary and industrial unions from all over the world, and bring them together for the purpose of creating an Industrial International free from all political domination, and that after the last convention, a Sub-Bureau of the Third International had already been established in Amsterdam, which had taken steps toward creating such an Industrial International. In view of this, the old Board decided to postpone the sending out of a call from the I. W. W. Due to the action of the Third International, this call was never sent out."

A preliminary conference of delegates from various industrial and syndicalist unions all over the world was held in Moscow during the months of June and July, 1920. At this conference a tentative program was worked out and plans were made for enlisting the support of as many unions as possible. The readers of the Industrial Pioneer have been acquainted with what transpired at these conferences through the pamphlet by A. Lozovsky, which has been printed serially in our magazine. The first Congress of this Red Industrial International will take place in Moscow in the month of July of the present year.

### The Berlin Conference

At the Berlin conference were assembled delegates from the industrial and syndicalist labor unions of the following countries: the United States, Germany, Czecho-Slovakia, Argentine, France, Holland, Sweden and England. The Italian and Spanish delegates had been prevented from appearing at the conference, due to their imprisonment. Denmark sent a letter of approval but could not be present, owing to financial difficulties. Altogether, the delegates represented a membership of over 1,000,000.

The conference was in session from December 16th to December 21st, 1921. The first problem to discuss was whether or not the delegates should go to Moscow upon the ending of the conference; in other words, whether the labor bodies represented in Berlin should make an attempt to form an Industrial International separate from the one initiated in Moscow in June, 1920, which was an outgrowth of the Third International, or whether they should become an integral part of the Moscow Industrial International. During the first part

of the conference all of the delegates expressed themselves in favor of going to Moscow, with the exception of the Germans and the Swedes.

It is not necessary to take up in detail the reasons that the last two groups of delegates offered for not wanting to affiliate with the Moscow International. It was apparent throughout the discussion that their actions were chiefly motivated by the failure of the Socialist and the Social-Democratic parties to serve the working class. They, therefore, wanted to have nothing to do with any organization that may be even remotely associated with a political party, in this instance the Communists. However, they at last came over to the point of view of the rest of the delegates and the resolution to go to Moscow was passed unanimously. The attainment of this unity of action was one of the chief successes of the conference.

The rest of the discussions were centered around a resolution setting forth a program containing six points. These points have been previously published in the Industrial Pioneer, as well as discussed at length by Bouwman, the Dutch delegate to the conference, and, therefore, need not be entered into here in detail. However, it is necessary to touch upon the more important ones.

The first point reads as follows:

"That the Revolutionary Industrial International be based on the class struggle and the domination of the working class."

Fellow worker Hardy has this to say concerning it:

"The German Syndicalists are idealists, and the Swedish Syndicalists were backing the Germans. They thought that a dictatorship of the proletariat is too ruthless a method to carry on a revolution. That is a peculiar thing to say, but nevertheless there were arguments put up to me by prominent men in the German movement as to why free speech should be allowed in Russia and why Russia should not imprison people . . . I personally said this for the I. W. W.: 'The I. W. W. has not officially gone on record for the dictatorship of the proletariat, but the spirit of the I. W. W. favors it. However, we would be opposed to any political party getting into control and fastening upon the workers some system that they do not want.' . . . Franz Severin of Sweden moved the amendment: 'The domination of the working class,' seeing that he could not support 'The dictatorship of the proletariat,' so 'The domination of the working class' was accepted, with Jack Tanner, delegate of the British Shop Stewards, voting against it and for 'The dictatorship of the proletariat,' because he was instructed to do so by his organization."

The second point was as follows:

"That the Revolutionary Industrial International shall fight for the destruction and removal of the economic, political and moral system of the capitalist regime and the state, and stands for the creation of a free communist society."

Fellow Worker Hardy interpreted the above resolution as follows:

"All I. W. W.'s will agree that it is all right. I think that it is absolutely in harmony with I. W. W. principles. We are trying to create a condition which shall make it possible for the workers to take over the control of the industries; we also know that if we get control of the factories we would have to create some means of protection against the capitalist class. Finally, however, society would be in such a condition that a state power would not be necessary. Even in Russia, with its present powerful political state, the workers admit that it will ultimately disappear."

A good deal of discussion was occasioned by point five, which reads as follows:

"That the Revolutionary Industrial International shall be an autonomous body independent of any political body, and in case the Revolutionary Industrial International has decided upon some question, and a political party or some other organization agrees to it, or vice versa, then the execution of the decision can be carried out together."

The passing of this resolution was a great step forward towards unity in the ranks of organized labor. Although the German delegates were the ones who offered the

strongest arguments against it, in no other country more than in Germany has there been in evidence the necessity of some kind of an understanding during critical periods in the class war between the revolutionary economic and political groups.

"The first thing that strikes one in Germany is the enormous amount of antagonism between the various organizations. In the 1919 Revolution investigation showed that the Syndicalists had no co-operation with the Communists. They called for the Communists to co-operate with them in the Ruhr Valley, but the Communists refused to do so. The Syndicalists then went into action and lost 1000 of their best men, killed by the bourgeoisie. The Revolution was lost."

"The Communists have three or four different groups: the Communist party, the Communist Labor Party, etc., all these disagreeing among themselves and saying: 'We are the real Communist Party,' the same as the Communists do in this country. There were also the Independent Socialists, a group which claims that it has the right program. So that when in 1919 the workers arose, they all lacked solidarity and a center for directing their Revolution. The Social Democrats were able to crush the Revolution out of existence, but the revolutionists are now getting together again. It was in consideration of conditions as outlined above that caused the delegates to pass this resolution."

The sixth point of the resolution appealed to all revolutionary organizations of syndicalist and industrial unions of all countries to send delegates to Moscow to the first Congress of the Industrial International.

After the conference was over, all the delegates felt that a great step forward had been taken for solidifying the forces of labor the world over. The results attained were especially significant in view of the circumstance that some of the delegates at first wanted to set up an International separate from the proposed Moscow Industrial International.

**Hardy's Visit to Soviet Russia.**

"Now as to the reason I went to Russia. When I got to Berlin, I learned the first congress of the Red Industrial International was to be held on the first of May, but later it was postponed to the first of July. I was to return to America immediately, but I found there was so much misunderstanding in Europe as to the I. W. W. position, as a result of the issue created by the O. B. U. Monthly, that I felt justified in going forward to Russia to see what had happened there and what they were thinking about the I. W. W."

It will be hard for some of our fellow workers to believe the tremendous amount of damage that John Sandgren had done to the I. W. W. by printing attacks in the magazine on the American and Russian Communists and the Soviet form of government. Wherever Hardy went in Europe, he was confronted by people asking him to explain the position taken in the magazine. He, therefore, had to take a very definite stand to counteract the evil effects of Sandgren's propaganda. Hardy also learned that some of those articles had been reprinted by the European bourgeois press and were being circulated as Anti-Bolshevik propaganda.

When the General Executive Board took office they worked out five rules to be followed by all I. W. W. editors, which they consented to do. One of these rules was that no personal, slanderous attacks of any kind or description be printed in our press.

"I asked John Sandgren why he did not stop attacking the Communists in the official press of the I. W. W. He agreed to do this, and when he received the Anarchist document from the Swedish publication "Brand" he reproduced it. It is a most misleading, slanderous article, and should never have been published by the I. W. W. In Berlin I met the Russian delegate Belinky, had a talk with him and convinced him that the I. W. W. does not stand for some of the stuff that was being printed in the magazine. I also told him of the official stand of the General Executive Board."

Fellow Worker Hardy met Shapiro, a prominent member of a Russian Anarchist group, and he denied the authenticity of the Anarchist document printed in the O. B. U. Monthly. He further said that in Russia great numbers of the bourgeoisie and bandits call themselves Anarchists in order to escape persecution by the Soviet Government.

Sandgren had also published that a committee of metal workers from Sweden, sent to investigate Soviet Russia, had sent in a report as being opposed to the Soviets. This is what Hardy has to say on the subject:

"A committee of metal workers from Sweden went to investigate Russia. There were eight, but one of them, Ingstrom, who had spend three years in Russia and who, they thought, might be favorable to the Soviet Government, was dismissed, which left seven. Five of these favored the Soviet Government and two, Carlson and one other, were against it. I cannot give all of their names as I lost my notes. The meeting held in Stockholm which was supposed to be a protest against the Bolsheviki can be dispensed with as a joke. I believe that the Swedish workers are for Soviet Russia."

It was therefore in order to set the Russians right about the position of the I. W. W. that fellow worker Hardy went to Moscow.

**Interview with Lenin.**

"In my interview with Lenin he said that I was the first to come forward for the I. W. W. and that he had been waiting to see an I. W. W. for a long time. In Lenin I thought I was going to see a man who was worried, with a big weight on his shoulders, but I found that while he is very sincere he is large-hearted, with bright eyes and smiling, and when he told me to sit down he drew his chair close and looked at me closely. I thought I would interview Lenin, but he interviewed me. The first thing he said was: 'Are you a Communist?' I answered: 'No.' He said: 'Do you believe in Communism?' I answered that the I. W. W. is an Industrial Communist organization, just the same as we used to say that the I. W. W. is an Industrial Socialist organization, but that now we are Industrial Communists and are working for the establishment of Communist society."

"He asked me what I thought of the Communist parties. I said: 'What I am going to say does not only apply to America, but to the rest of the world as well. The Communists are too busy coining phrases intended for consumption in Moscow instead of their own country.' He said: 'You are correct.' The Communists coined phrases thinking they sounded extremely revolutionary in Russia, but Lenin says that if a man cannot use tactics he is not a Marxian and does not understand Marx, and that the Communists are not using tactics in America."

**Hardy's Address Before the Executive Council of the Third International.**

When Hardy met Zinoviev, the president of the Third International, the latter suggested that he give a talk before the Executive Council of the Third International. Before doing so Hardy asked him if John Reed had not written the "Appeal to the I. W. W." Zinoviev answered "Yes."

"I asked Zinoviev what he expected of the I. W. W., as I wanted his viewpoint before going before the Executive Council. He said: 'We expect you people will take your place on the Industrial International.' 'How about the "Appeal"? I asked. 'Do you not intend us to affiliate with the Third International?' 'Absolutely no,' he said, 'we do not expect that. If you take your place in the Industrial International, that is where you belong.' That was a surprise to me."

When Hardy appeared before the members of the Executive Council, he told them that it was impossible for the I. W. W. to co-operate, under the circumstances, directly or indirectly with the Communist parties of America, for the reason that they had rendered their organizations illegal, whereas the I. W. W. is an economic organization operating legally. He also told them that the I. W. W. had been persecuted by the capitalists more than any other organization in America, but that it was impossible for the I. W. W. to endorse

the armed insurrection clause in the "Appeal." He characterized the reference to the building up of a hundred percent organization as ridiculous. "There is no official of the I. W. W., or even any of its members, who think we can build a one hundred per cent organization, even though we state in our Preamble that we must 'build the new society within the shell of the old.' In fact, the working class of no country can be organized one hundred percent before the collapse of capitalism, and in America the chances of doing so are less than in any other country."

Fellow Worker Hardy also told the Council that the I. W. W. is in favor of the dictatorship of the proletariat, since the capitalist class of America had always used force, and it is reasonable to expect that the workers will have to do likewise in order to defend themselves.

**The Drawing up of an Appeal to the I. W. W. and the American Working class.**

"Zinoviev asked me whether I would consent to collaborate with two members of the Executive Committee in drawing up a document addressed to the American workers. This I agreed to do."

Since Hourwich of America and Rosmer of France, the two Executive Committee members who had been assigned to the job, were busy, it devolved upon Fellow Worker Hardy to draw up the document.

In discussing the subjects touched upon in the document with officials of the Executive Council of the Third International, their opinions on matters of great importance were brought to light. Fellow Worker Hardy found, however, that they agreed with him to a much larger extent than he had anticipated. In writing about the revolution in highly industrial countries, his stand was as follows:

"Those who control the economic organizations will control the revolution, and these workers will not submit to a bureaucracy. This latter would have to be driven out of existence. Economic organizations aiming at controlling industry will be the ones to upset the capitalist system and to institute a proletarian state.

"In this connection it was brought out that Zinoviev, Rosovsky, Tomsky and others, all agreed that the Communist parties of America, particularly in the matter of armed insurrection propaganda, had done themselves harm by rendering themselves illegal. Lenin said he would write to the Communists in America, in order to change their tactics.

"Tomsky is president of the International Council of Revolutionary Trade and Industrial Unions, and he looks upon the I. W. W. as the revolutionary movement of America, and he wants also an independent Industrial International."

**How Industry Is Administered in Soviet Russia.**

In his report Fellow Worker Hardy tells about a number of visits that he made to different factories in and around Moscow. These factories are at present under the direction of the "Management Committees." In most cases these are composed of three members, one appointed for his ability to manage industry, one representing the Government from the Commissariat of Public Economy, and one representing the workers. They have for their aim the speeding up of production and the introduction of efficiency. Besides the Management Committees, every factory contains also what are known as Workers' Committees. To be elected to a Workers' Committee it is not essential for one to be a Communist. When any members on the Workers' Committee think that a change should be made in the management of a factory they go to the Management Committee, take up the various points in detail and effect the necessary changes, if such be advisable. They look after conditions as to housing, clothing, food, etc.

The industrial unions in Soviet Russia, which are known as "Professional Unions," number some six million five hundred thousand members. They do not function as organs for the prosecution of the class war but rather as organizations for the operation and co-ordination of industry. Of late a movement has arisen which has gradually gained in strength during the

last year, for giving the unions a greater share in the management of the industries and in the responsibilities of the State. This question was taken up at great length in the April issue of the Industrial Pioneer, and therefore it will not be necessary to discuss it here in detail. The chief spokesmen for this new point of view, which corresponds very closely to that taken by the I. W. W., are Schlapnikoff and Alexandra Kollontai. Lenin takes a middle ground, and Trotsky maintains the necessity of strict discipline in the carrying on of the work in mines, mills and factories. Fellow Worker Hardy in his report comments on this new angle in Russia's internal affairs as follows:

"The railroad industry met in conference in Moscow and decided by 38 votes for the position taken by Lenin, 4 votes being cast for Trotsky and 4 delegates not voting.

"The miners voted 15 for Lenin's viewpoint, 8 for Trotsky's and 8 for Schlapnikoff's. The metal trades voted 8 for Lenin's, none for Trotsky's, and 57 for Schlapnikoff's. The above three industries contain large masses of workers.

"'Schlapnikoff's scheme would not work in Russia now, and although I would like to see his plan go through I feel that the Russian workers are not ready to control industry. The best of the Russian working class went to the front and got killed, so they are lacking the necessary technical ability to go ahead. Lenin's plan has now been agreed to."

While in Moscow Fellow Worker Hardy met a number of I. W. W.'s from this country who are occupying positions of responsibility in the Soviet Government and in the management of industrial enterprises. He refers in particular to an I. W. W. foreman in a factory employing 500 workers, who is doing his share of the grand work of "building the new society within the shell of the old."

### Educating the Children.

Fellow Worker Hardy also delivered several addresses at mass meetings and before the Technical Club of the Moscow Trade Unions, wherein he told the Russians about the struggles of the I. W. W., the persecution that we have been subjected to since the inception of the organization 16 years ago, and the prospects of lining up the American working class on the side of the forces struggling to abolish wage slavery. In his intercourse with the Russians—civilians as well as officials—it was made plain to him that the I. W. W. is generally accepted in Soviet Russia as the revolutionary working class organization on the American continent.

Fellow Worker Hardy, while in Moscow, visited the schools where children are taught according to a new system of natural pedagogy. The children are taken out in the fields and in the woods and requested to make original observations and to set them down on paper to the best of their ability. Through this method their powers of observation are sharpened, their senses quickened and their minds developed to a much greater degree than by the old fashioned method of instruction. The children are well taken care of, well fed and well clothed, and mortality among them has greatly diminished during the last year or so.

In referring to the much debated question of freedom in Soviet Russia, Hardy has this to say:

"We must understand that under the dictatorship of the proletariat we cannot let every Tom, Dick and Harry print anything he likes . . . They suppressed everything in Russia that did not agree with the proletarian viewpoint. They are not going to let anybody run anything in opposition to their system over there. However, this does not mean that free discussion is not allowed on the public platform, in unions and in other places of assembly. The Russian Press Review Magazine publishes every other day articles covering all the things that are pending in the trade unions of Russia."

### Where Does the I. W. W. Stand?

"There are many members of the I. W. W. who do not understand their own organization, except from the American viewpoint, but there is no other organiza-

tion in the world having the same influence and looked upon with the same interest as the I. W. W., that is, from the revolutionary viewpoint... The I. W. W. should, therefore, lead the way from now on and look at things from a broader angle... We have the support of the Italian Syndicalist movement, which is stronger and better organized than ours, but it looks to the I. W. W. for leadership. The Germans are also looking to the I. W. W. The Scandinavian countries have squabbles among themselves as to which is the nearest to the I. W. W. Both the Danes and the Swedes claim to have a form of organization nearest to ours, but the difference between the two is that the Danes have a centralized organization using "boring-from-within" tactics, and the Swedes have a decentralized and a federalist form of organization."

Hardy's recommendation is that the I. W. W. should keep strictly on the industrial field and should not get mixed up in controversies with any political group.

**Problems Confronting the I. W. W.**

In his report Fellow Worker Hardy brings out some of the problems that at present are confronting the organization, among others the following:

The necessity of closer unity in the ranks of the organization; the creation of a Bureau of Industrial Research; better methods for spreading our propaganda; the question of how to deal with the colored workers, and a program for meeting the unemployment situation.

It will not be necessary to dwell here on the suggestions put forth by Fellow Worker Hardy in his report relative to the above questions, since they will be entered into in detail in articles and reports about what transpired at the Convention.

Fellow Worker Hardy recommends that all I. W. W. delegates to foreign countries should be credentialed by the General Organization, and not by any subordinate part thereof. While in Europe, he had found that a certain amount of confusion had been caused by members representing themselves as accredited delegates of the General Organization, whose credentials had been issued by branches or by industrial unions instead of by the General Administration.

**The I. W. W. Favors Soviet Russia.**

In his report Fellow Worker Hardy makes the following recommendations to the Convention:

"The I. W. W. has always stood behind Soviet Russia in its struggle against international imperialism, but owing to certain things that happened in our organization, such as an unfavorable editorial in the "Industrial Worker" and the attitude of John Sandgren in the O. B. U. Monthly, it behooves this Convention to pledge itself to do everything in its power to help the Russian working class to maintain Revolutionary Russia."

Fellow Worker Hardy winds up his report to the Convention with the following observation, which should be given serious thought by all of our members:

"Now, in conclusion, I wish to state that I hope this Convention will be one of the most successful ever held in the I. W. W. Bring into existence a new spirit. Get rid of the insular point of view. Create discipline in our ranks, to the end that we may have a bigger and better I. W. W. This is the only way to help Russia and ourselves."

**H. Van Dorn.**

# Notice to Branches

Elmer S. Smith, the Centralia, Washington, lawyer, who was one of the defendants in the Centralia case and one of those acquitted, will start on a speaking tour for the General Defense Committee on July 1st. Smith will deal with the inside story of the tragedy which occurred at Centralia on Nov. 11th, 1919, and also the farcical trial, which resulted in a 40-year sentence for seven fellow workers.

All branches wishing to arrange dates for the Smith meetings are requested to get in touch with Geo. Williams, Secretary of the General Committee, at once. Address: 1001 W. Madison Street, Chicago, Ill.

# Flashlights on Labor and Revolution

## An Interview with Jack Tanner

JACK Tanner has arrived in the United States as a fraternal delegate to the Thirteenth Convention of the I. W. W., representing the National Workers' Committee Movement of Great Britain. The desire uppermost in his mind is to develop the spirit of solidarity between the workers of Britain and the rest of Europe with their fellow workers of America.

"In union there is strength," but this union can only be achieved through mutual understanding. To this end the workers of one country should be informed of what the workers in other countries are doing and are intending to do.

Fellow Worker Jack Tanner has a long record of faithful service to the working class behind him. For the last thirteen years he has been a member of the Amalgamated Engineering Union, which has a membership of 400,000, and of which Tom Mann was the acting secretary until April of this year. In 1913, Jack Tanner acted in the capacity of chairman at the first International Syndicalist Conference ever held, which took place in London, England. During the last four years he has been the editor of "Solidarity," the official organ of the National Workers' Committee Movement of Great Britain.

### The Berlin Conference.

Jack Tanner represented the National Workers' Committee Movement at the Berlin Syndicalist Conference, held in the month of December, 1920. When inquiries were put to him as to the main differences of opinion that prevailed at that conference and that were brought out to some extent by Bouwman in a recent issue of the Industrial Pioneer, he offered information of which we had not previously been aware. The controversy about the "Dictatorship of the Proletariat" was not caused so much by a difference of principles as by the interpretation of the clause; the German and Swedish delegates contending that "Domination of the Working Class" should be used instead, because in Russia the Dictatorship was exercised through a political party. Tanner brought out that the Swedish and German delegates should not be looked upon as being more conservative than the other delegates; as a matter of fact, they considered themselves the more revolutionary, if anything. To put it in Tanner's own words:

"The Germans and Swedes are inclined to be less practical, more theoretical, and greater disciples of Bakunin than of Marx. This is, of eourse, caused by them having been disappointed by the orthodox Socialist and Social Democratic parties, who have elaimed for all these years to follow the teachings of Marx."

He also cleared up a point about the struggles of the German and French Syndicalists which is not generally understood in this country. The French Syndicalists number in the neighborhood of about 200,000 members, but they do not form an absolutely separate organization outside the General Confederation of Labor. They function within the ranks of the already existing unions, although, of course, they are linked together through committees—the Committees of Revolutionary Syndicalists.

The German Syndicalists, on the other hand, have formed an organization outside of the old German trade unions. They are of the opinion that these unions are so much under the control of reactionary leaders that it is altogether hopeless to try to bring them around to a revolutionary point of view. The Syndicalists number at present around 150,000 members, and have become highly influential in some industries, especially among the miners and the seamen.

When asked whether he was more in favor of separate revolutionary organizations being formed outside of the already existing trade unions or of propaganda being carried on, instead, within these unions, Jack Tanner had this to say:

"That depends altogether on the circumstances. In Great Britain it would be foolish for us to attempt to form other organizations, for the simple reason that 85 per cent of the workers there are already organized. It is impossible to tear them away from the organizations to which they now belong. This is the main reason why the I. W. W. has never made any headway in Great Britain. In the United States, however, where the great masses of the workers have not as yet been organized, it is only logical to attempt to line them up into Revolutionary Industrial Unions." In this he justified the tactics adopted by the I. W. W.

"Of course, the I. W. W., in my opinion, should also take advantage of any opportunity that may offer itself within the craft unions to switch them over into the organization. As I said, these tactics should be governed altogether by conditions. But propaganda **must** be carried on within the unions at all times."

### The British Trade Union Congress.

When asked what other labor organization in Great Britain besides the Workers' Committee Movement would send delegates to the Congress of the Red Industrial International which will be held in July at Moscow, he answered that strong propaganda was being carried on within the different unions to have them send delegates there. To his knowledge, however, only the Fife miners so far

had definitely decided to do so. In connection with this propaganda, a peculiar misunderstanding has arisen. Practically all the British unions are affiliated to the Trade Union Congress. This Trade Union Congress is officially affiliated with the Yellow Amsterdam International. The trade unionists in England for a long time were under the impression that in spite of their affiliation with the Amsterdam International through the Trade Union Congress, they would be able to affiliate to the Red International. At present, however, separate unions cannot withdraw their affiliation from Amsterdam without withdrawing from the Trade Union Congress; this will meet in September of this year, when the whole matter will be thrashed out. Notwithstanding this technical difficulty, it is expected that quite a few delegates will be sent to the July Congress in Moscow.

### The Red Industrial International.

Fellow Worker Tanner was highly enthusiastic about the ultimate outcome of the coming Industrial Congress.

"As a result of it," he said, "the prestige of the revolutionary minorities in all countries will be greatly increased. Think of the added strength it will give to the now numerically weak syndicalist minority in France! Instead of having only 200,000 members, they will, after the Congress, have a backing of about 10,000,000 workers all over the world. The reactionary unions in other countries will be more than anxious to get rid of their stand-pat leaders and to flock under the banner of the Red Industrial International. I have definite information that many unions numbering hundreds of thousands of members are only waiting to see what will take place at Moscow in July before throwing their reactionary leaders overboard and affiliating with the Red Industrial International."

Next I asked him whether, in his opinion, the Communist parties would play the leading role in all countries when the crisis comes. I pointed out to him that in countries like Spain, Italy and South America the Syndicalists at present play the leading roles and the Communists are an almost negligible quantity. To this he answered:

"It really does not matter under what name the militant minority may be known. Why should the members of the Communist parties be expected to be the leaders in countries which are already, at the present time, under the guidance of a revolutionary industrial minority? The main thing is to have a program, the necessary initiative, and a directing center to carry out this program to the letter. If the workers of the Latin countries prefer to do this through their industrial organizations, instead of through political parties, well and good. I see no reason why their form of organization should not attain the necessary ends the same as any other. This applies to the United States as well."

### The Workers' Committee Movement.

When asked to point out what constituted the main difference between the British Shop Steward Movement and the Industrial Workers of the World, he said:

"The I. W. W. is a self-contained organization functioning as a labor union, it is separate and not connected with any other body. The Workers' Committee Movement is primarily a movement within other organizations; it is an extra union organization. Members of the Workers' Committees are at the same time members of their respective trade unions. In Great Britain they may be likened to the militant minority on the industrial field."

He further explained that the main function of the movement was the organizing of the workers on industrial lines by establishing shop, pit, factory and vigilance committees, etc. These shop committees are elected by all the workers in any shop and meet at stated periods to discuss problems affecting working conditions. Delegates from shops in the same industry within a certain district are elected to what is known as the District Council. These delegates again in their turn elect representatives to the Divisional Councils. There are National Committees for each industry, which appoints some of its members to sit in the National Administrative Council—which is similar to our G. E. B. The purpose of the work is to center the immediate problems affecting the workers into the hands of their own delegates, who are in close touch with conditions in their respective industries.

At present the Workers' Committee Movement is strongest among the miners, the transport workers, the engineers and the construction workers. Its influence is being extended more and more into other industries. A congress was held in April, 1921, at which a co-ordinated program was worked out and greater unity established between the different sections.

### The Outlook in Great Britain.

When asked what he thought of the collapse of the Triple Alliance, Fellow Worker Tanner said:

"It is but another lesson to the workers for reposing too much power in their reactionary leaders. The Triple Alliance has a membership of approximately two millions, distributed as follows: The miners, about 1,000,000; the transport workers, about 500,000; the railway workers, another 500,000. These unions, when united by a spirit of solidarity, are practically invincible. If the Triple Alliance had taken action, even if its demands had not been attained in full, the experience would have been worth a great deal to the British workers. The capitalist class in Great Britain is day by day becoming less able to manage the country. Several millions of men and women are practically on the verge of starvation, the Russian revolution has been a great inspiration to the British workers, and the capitalists realize the crash to be near at hand."

In Fellow Worker Tanner's opinion the main

problem before the British workers at the present time is to get rid of their bourgeois-minded leaders. As soon as the affairs of the unions get into the hands of the revolutionary rank and file, we may commence to look for great things in Great Britain. The powers-that-be are making ready for that day, and at this very moment thousands of volunteers from the middle and upper classes are being prepared to meet an emergency call whenever it may be sounded. The workers, of course, on their side, are not idle, either.

It would, in Fellow Worker Tanner's opinion, be a mistake for the British workers to take too hasty steps for the abolition of capitalism until their forces have been more completely co-ordinated. The British capitalists are very well organized. The British Federation of Industries has a backing of around $5,000,000,000. Capital's control over the industries has not as yet been impaired to any noticeable degree, but the economic condition of the people is getting worse day by day, and is bound to continue so, as no relief is in sight. Even should trade with Russia be started, it would only relieve the situation to a comparatively small extent. The British workers will soon have to take the destiny of the nation into their own hands, or suffer starvation and slavery. In Tanner's opinion, the revolution in Great Britain may come in the course of the next few years, if the revolutionists will concentrate their activities on the industrial field. When it does come, we may rest assured that the British working class will have taken the greatest care to make sure of its success. An intensive propaganda is at present being carried on in the army and navy. The British Isles are so situated that any part of them can be shelled by dreadnoughts. It is, therefore, self-evident that steps must be taken so that this shelling will not take place.

When I offered the observation that British labor must have done everything in its power to help the cause of Irish freedom, Fellow Worker Tanner sat up in his chair.

"I am sorry to say, to the eternal disgrace of the English labor movement, that the British trade unions have not helped the Irish in their fight for freedom. British labor has not, up to now, realized the importance of the struggle going on in Ireland. The signs are, however, that they are waking up. They are beginning to realize that if labor loses in Ireland, labor also loses in England; and that the same methods used to crush the Irish workers: scientific militarism, ruthless and brutal, will be used against the British workers."

### What Tanner Saw in Soviet Russia

In the spring and summer of 1920 Jack Tanner spent four months in Soviet Russia. When asked what were his first impressions of the condition of the people and of the spirit manifested by them he answered:

"The thing that struck me most in Russia when I came in contact with people of all ranks was the quiet determination to see the fight through to its bitter end. It would not be exactly accurate to describe this attitude of theirs as enthusiasm; they had got past the shouting stage. It was rather a deep-seated conviction and a determination that in their struggle against capitalist imperialism they would finally come out victorious. The term 'doggedness' would probably describe their frame of mind better than any other word that I may think of."

Fellow Worker Tanner further said that he was pleasantly surprised because the appearance of the people was much better than he had expected to find, judging from the information he had received. There was no lack of clothing in evidence anywhere, although the clothes could not be described as being "smart." "Lounge suits are not the fashion in Russia, anyway," said Tanner.

All the children are very well taken care of and educated on the most modern principles, which he saw by visiting many schools and institutions. They are well dressed, in that respect there being no comparison between them and the miserable barefooted waifs Tanner had seen on the streets of London.

In addressing workshop and factory meetings he found the workers quite on a par with the average British worker in physique and intelligence.

Although the Soviet Government is subjected to a good deal of criticism by the workers, this is not offered at all in a spirit of wanting to do away with it in order to substitute another regime in its place. The greatest critics of the Bolsheviks are the Bolsheviks themselves. The policy being worked out by the Communist Party has the solid backing of the large masses of the people in its general outline.

### Preliminary Conferences of Industrial International.

While Tanner was in Moscow the initial steps were taken for the foundation of the Red Industrial International. The conferences started in June and were continued even after the adjournment of the second congress of the Third International. Tanner was in almost daily consultation with the delegates from different countries, as well as with the representatives of Russian labor, who played a leading part in the elaboration of the program for the council; such as, Lozovsky, Tomsky, Schlapnikof and others. At the same time he was in constant association with the international delegates to the second congress of the Communist International.

The discussions that took place at these conferences have been related somewhat in detail in Lozovsky's pamphlet on "The International Council of Trade and Industrial Unions," the greater part of which has been published in past issues of the Industrial Pioneer. In Fellow Worker Tanner's opinion the interchange of ideas that took place did a great deal towards bringing about a better understanding between the Communists, Trade Unionists and Syndicalists in most countries.

The membership in the Russian Trade Unions is

at present in the neighborhood of six and a half millions, whereas the actual strength of the Communist Party is only about six hundred thousand. The movement of greatest significance in Soviet Russia at the present time, in Jack Tanner's opinion, is that embodied in the aspirations of the unions to have a greater share in the direction of the nation's destinies. This movement is little by little beginning to bear fruit. The labor unions are today playing a much more active role in the administration of industry than they were a year or two ago. This increases month by month as the workers gain more experience of industrial methods and confidence in each other.

### Interviews with Lenin.

Fellow Worker Tanner gave a vivid description of the interviews he had with Lenin.

"If anybody goes up to see Lenin with the intention of interviewing him, he very quickly finds out that Lenin does the interviewing himself. All who meet him are forced to admit that he possesses a wonderful brain. Many have described him as being a genius, but I wouldn't apply that term to Lenin. Geniuses are usually persons who have a natural aptitude for doing certain and special work; some particular faculties of their brain are more developed, which gives them inspiration and extraordinary ability in a certain sphere.

"Lenin seems to have all his faculties well developed and in action; they work together in complete harmony, each helping the other.

"He can understand and appreciate the value of detail and its relationship to the whole. I never met a man who was so interested in what is happening in other countries, or understood so well when he was told.

"He is a glutton for information and can classify and retain what he absorbs.

"In telling him I was opposed to parliamentary action, he said: 'The workers' hatred of "politics" in its ordinary sense, was well founded. It is a real proletarian outlook. It may lead them to make some mistakes in tactics, but on the whole it is justified.'

"He particularly stressed the importance of the workers, especially in highly developed industrial countries, getting the support of the technical and administrative workers, and he pointed out the difficulties they had experienced in Russia owing to lack of it.

" 'You can win through probably without their help, but it's going to be much more difficult and will take a longer period. If you can't get their active support; you must break down their opposition—this is very important.' "

### Russian Leaders.

Tanner met most of the prominent officials in the Soviet Government and the Russian Communist Party, Trotsky, Radek, Lunacharsky, etc. He also had several talks with Peters, who was the chairman of the Extraordinary Commission immediately after the revolution. He has been likened to a wild and ferocious animal by the capitalist press.

"Peters struck me as being a very mild sort of man, and he seems to have shown more mercy than discretion on occasions.

"He gave me documents and information which, if I made them public, would put some of the British government's representatives in an unsavory position.

"At the time I was in Russia, very few of the Bolsheviks understood clearly the position of the industrial organizations in the English-speaking countries. Lenin was surprised when I told him of the power of the officials in the craft unions and the difficulties in removing them."

Besides investigating factories and workshops Tanner had an opportunity to study the conditions of the peasants. He made a trip on the Volga, visiting small towns and villages with the official labor delegation. He said hard things about some members of this delegation, his mildest expression being "bourgeois crabs."

### Impressions of the U. S. A.

Although Jack Tanner has visited most countries in Europe and also in the East, this is his first visit to the American continent. Asked what were his first impressions of America, he said:

"I am certainly struck with the rushing and tearing tactics that are employed. The people seem to be so busy making profits for the bosses that they have no time to think about themselves, except perhaps how they themselves can become "bosses" in some shape or form. It strikes me that the workers in America can be more easily stampeded into a course of action likely to be harmful to them than the workers of most European countries.

"I am certainly not disappointed in my previous idea of what the country and its people were like."

Tanner was asked what, in his opinion, should be the best tactics to advance the cause of the revolutionary working class.

"That, of course, is a big question and can't very well be answered in a few words. It's a truism, of course, to say that we must get power. The workers must unite their somewhat divided forces against the common enemy. And I don't mean by this that we must compromise on questions of principle. It is a matter of being able to use tactics, to adapt ourselves to changing conditions. In our fight with the capitalist class we have not only got to use our physical or economical power, we must use our brains as well.

"The second day I was in Chicago I saw a parade on Michigan Boulevard of boys and young lads from different settlements, as you call them. The idea I gathered was that it was to propagate the need for 100 per cent Americanism. They carried great numbers of the Stars and Stripes. Every time

one passed the crowd on the sidewalk lifted their hats in reverential awe. That quite impressed me, and I thought of the thousands of leaflets advocating 'armed insurrection,' which have, I am told, been distributed.

"Our revolution in England is going to be 100 per cent easier than yours here. We know how hard our work is now and will be, and the tremendous task still ahead of us. Nobody in England talked 'armed insurrection' even during the recent Triple Alliance crisis, in spite of the fact that the government had mobilized all the forces of the state against the workers. Although the parade I saw was a patriotic one, a large battalion of police was present, each 'officer of the law' armed with a bloody big club. This only goes to show that the capitalists have full control of the machine and are going to work it full speed in their interests.

"Courage and audacity are absolutely essential, but without a certain amount of power, more organization than exists at present, more ability to take advantage of conditions as they present themselves, the workers cannot hope to accomplish anything of a permanent nature."

### Problems Facing the I. W. W.

That Jack it quite well acquainted with the history and present position of the I. W. W. was brought out when asked his opinion about the prospects of the organization for the future.

"Good, extremely good," he replied, "provided the membership's outlook keeps pace with the times. I think the I. W. W. is the organization for this country, but it must get into closer and more direct touch with the world movement.

"It has a deserved, world-famed reputation as an aggressive and revolutionary body. It has set a standard which is recognized in every country, and now that there is to be an Industrial International it must throw in its whole weight and influence. I hope and expect it will do so. Coming from England, where the labor movement is more deeply entrenched and solid, it strikes me that the I. W. W. has been too fluid in the past. It has taken in large numbers of members but has not held them, although its principles have not altered, its policy and tactics have, I think, too frequently—this, of course, from an organizational standpoint. More attention must be paid to educating the new members and holding them. This may be a difficult proposition, but it must be tackled successfully before the I. W. W. can get real power."

Regarding unemployment Tanner said there was no possibility in his mind of getting back to what could be termed normal conditions. "We've had it to contend with ever since the capitalist system began, and it will remain with us while this system lasts.

"Trade with Russia would probably somewhat ease the situation in England as well as in America.

"To organize the unemployed the practical problems must be tackled and a great deal of propaganda can be done at the same time, which would make for potential members of the organization."

The ideas and point of view put forth by Fellow Worker Tanner should give food for serious thought to all who have the future welfare of the working class at heart.

**H. Van Dorn.**

# Proud of Our Class

### By Covington Ami

**Yes, we class-conscious workers are proud of class.**
**Why shouldn't we be?**
**It is the only class on earth that does anything worth doing.**
**Without it there would be nothing—**
**No wheat, no bread, no cotton, no clothes, no homes, no transportation,**
**No science, no music and no education.**

**Yes, we are proud of our class.**
**Why shouldn't we be?**
**We are the salt of social life.**
**Without us society cannot move, breathe, live, have or come into being.**

**Yes, we are proud of our class.**
**Why shouldn't we be?**
**Everywhere we have bested your class, the capitalist class—**
**In every field you dare no longer meet us brain to brain—**
**Everywhere you resort to violence and suppression,**
**Thus acknowledging us your intellectual and moral conquerors.**

**Yes, we are proud of our class.**
**Why shouldn't we be?**
**What if we haven't yet shaken off all our slave psychology?**
**We will do so tomorrow if not today.**
**If we do not, our children will.**
**We shall conquer, not only ourselves, but you and all the Worlds.**

**Proud of our class?**
**Sure!**
**Why shouldn't we be?**

AN EDUCATIONAL POSTER ISSUED BY THE RUSSIAN SOVIET GOVERNMENT

## TURN TO LIGHT AND SCIENCE, YOUNG PROLETARIANS

**1st Picture:** The book, the newspaper, the printed word—previously these were in the hands of the bourgeoisie, but now they belong to the youth of the peasants and workmen.

**2nd Picture:** Art and science are at present within the reach of the working class youth. Go to your school and develop your talent.

**3rd Picture:** Now the young worker and peasant is taught in his club all those sciences which will develop his mind and body.

**4th Picture:** Possessing a strong mind and healthy body, the workers are invincible. Up, youth of the working class, and to work! You must know how to defend your future!

## IN UNION THERE IS STRENGTH.

LIVING conditions in America are fast becoming intolerable for the working class. As the days go by, more and more men and women find themselves without work—and without bread, clothing and shelter. A few weeks—or months—without a job, and what little money a working man may have laid aside will have been used up. And then—what?

Yes, there is the big question that keeps countless workers awake nights, trying to find an answer to it. "Then—what?" With things going as they are, how about next winter? And next spring? Where is the bread coming from to feed the wife and children? And the money to pay for shoes and hats, coal and rent?

And those who are still lucky enough to have work—are they making enough to provide their families with a decent living? Have not wages been cut much faster than the drop in living costs? And what guarantee do they have that to-morrow they will not find themselves in the ranks of the great army of the Unemployed?

There are no prospects of a betterment in the economic situation of the country. For the workers, there is but one way out: To band themselves together in the One Big Union. Only through the exercise of their economic might will they be able to shake off the shackles of wage slavery, with all its evils.

In single-handed combat against the forces of capitalism, the workers are as helpless as new-born babes. In union there is strength.

## DISCIPLINE.

FIFTY thousand men, each of them acting on his own initiative in accordance with his personal desires, constitute a mob; fifty thousand men, acting according to orders from a directive center, and disciplined to act in unison with each other for the attainment of like ends, constitute an army.

The difference between the two consists in that the former has no power, and the latter has. The strength of a mob of fifty thousand is the strength of each individual man. The strength of an army of fifty thousand is the combined strength of fifty thousand men.

If a labor organization is ever to attain power it must form itself into an Army of Labor. In the carrying out of its economic program, each member must act in harmony with his fellow members. Personal differences must not be allowed to interfere with the execution of the program. All members must consider themselves as acting under orders from a directive center, the rules for the guidance of which they themselves have formulated in the constitution and at their conventions.

It is absolutely essential that in order to effectively carry on the work of an organization such as the I. W. W., **discipline** be strictly enforced.

# A Rallying Call to All I. W. W. Members

IN VIEW of the changed economic conditions confronting the working class today, it becomes imperative for the Industrial Workers of the World to re-affirm its adherence to the fundamental principles of its Preamble and to outline a program based on those principles in conformity with the requirements of the present situation.

During the war period an abnormal condition prevailed in the industries of this as well as other countries. The tremendous requirements for waging the war had to be filled, which gave employment to countless millions who otherwise would have had nothing to do. Work was plenty, wages were "high" and the class struggle was, for the time being, lost sight of.

Now the whole world in returning back to normal times: there is no "crisis" today. Unemployment, long hours, low wages, strikes, starvation, suffering, are the inevitable consequences of capitalism; in fact, they are part and parcel of it. And the class struggle is its very soul.

"The working class and the employing class have nothing in common. Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system."

It is easily seen by the above quotation from the I. W. W. Preamble that the mission of the working class, imposed upon it by capitalism itself, can only be carried through by a **revolutionary economic organization.**

The need of the hour in America, therefore, is a strong revolutionary organization of labor which would serve as a center of mobilization for all the militant, class-conscious, aggressive workers in this country. No organization which has for its aims merely the bettering of the workers' living conditions can perform that function. The working class of America is beginning to learn that the **only way** to better bad conditions is to destroy them; that the only way to cure capitalism is to **destroy it.**

Furthermore, besides being revolutionary that organization must also be industrial. The capitalists are our present masters by reason of their ownership and control of the industries, thereby controlling the means of life of the whole nation. The workers can become masters of themselves only by taking the industries away from the capitalists, and by operating them for use instead of for profit. To accomplish this they must be organized industrially on the economic field.

The only revolutionary industrial organization in America is the Industrial Workers of the World. For fifteen years it has waged a relentless warfare against the powers that be. Although it has been persecuted as no other labor body in American history—with hundreds of its most stalwart fighters confined today in the dungeons of capitalism—yet it emerges from that struggle stronger and healthier than ever.

Besides its traditions of revolutionary activity in the past the I. W. W. commands, as well, the moral support of the great unorganized mass of labor in this country. And its prestige is not confined to America alone: It is universally acknowledged as the one fighting, militant labor body in America by the workers of all countries.

Not only is the I. W. W. revolutionary in character, it is revolutionary in structure as well. Founded on the principles of industrial unionism, with the purpose of uniting labor in the One Big Union of all the workers, it is fitted by its very form of organization to wage war against capital more efficiently and with a better show of eventual success than any other economic labor body. On account of being split up into countless small groups, craft unions are utterly incapable of putting up a real fight against capitalism.

It therefore is apparent that it is the duty of the members of the Industrial

Workers of the World to become the vanguard of labor's army in the great fight for the abolition of wage slavery. But capitalism is still strong, its resources are boundless, its servants are a legion; we are few in numbers, and our strength is but a small fraction of the strength of capitalism. What, then, shall we do?

We must, first of all, push our work of revolutionary agitation to the utmost of our ability. We must consolidate our ranks. We must obtain unity of purpose and unity of action between the different parts of our organization. We must exert all our strength and sagacity, taking advantage of every opportunity as it offers itself, to increase our membership by enlisting in our ranks the most intelligent and militant workers. **Let the fighting minority of the American working class be the I. W. W.**

Capitalism is not going to collapse next month, and therefore, in order to be able to put up a good fight, we must have, as a final consideration, a powerful, numerically strong, organization. What immediate steps should we take to attain these ends?

Educational propaganda is the very life of an organization such as the Industrial Workers of the World. The toiling masses cannot join us unless they are first made class-conscious and know exactly what they want. We must therefore place our literature in the hands of every workingman and woman in the country. In order to do that means must be found to give greater financial support to our press; we must bend all our efforts to put out more and more papers, leaflets, pamphlets, of a kind that will "hit right home."

On the other hand, having found through bitter experience, that legal expense has in the past availed but little to keep our members out of prison, we should aim in the future to spend as little money as possible on this phase of the struggle, diverting, instead, the major portion of these funds for educational purposes. But we should, however, in conjunction with other labor as well as liberal bodies start an intensive nation-wide agitation for the purpose of creating sentiment, leading up to determined action, for liberating all class war prisoners.

All these activities must help, in the final analysis, to strengthen and to build up the organization, which is the big task before us. We must cover the country with a network of organizers. Wherever the old conservative unions crumble away before the assaults of capital, as they are doing everywhere at the present time, we must step in with our program of revolutionary industrial unionism and become the directive force in labor's struggle for liberation. We must ever be on the alert to point the way to members of craft unions who become dissatisfied with their inefficient and bankrupt organizations, and we must be ready to amalgamate such other bodies into the Industrial Workers of the World should the local conditions make this action possible and advisable.

But our main efforts should be concentrated in organizing and assuming the leadership among the unorganized masses, especially within the pivotal industries, such as mining, lumber, transportation and the steel and iron industries. The sentiment among the workers for revolutionary industrial unionism is good and the conditions are rotten ripe.

The time for action has arrived. United with one purpose, the overthrow of the capitalist system of misrule, presenting a solid front and firmer than ever in out conviction of the correctness of our position, the Industrial Workers of the World appeals to the American working class to solidify its ranks in order to take the industries away from the capitalists and to inaugurate the new day of Labor's Commonwealth.

# Open the Shops and Factories

By Mary E. Marcy.

WHEN I read the eulogies on our present "civilization" appearing in the daily newspapers, aiming to prove that the existing form of society is the best the world has ever attained, or could ever hope to evolve into, I feel an overwhelming desire to enumerate some of the fruits of "civilization" from which we suffer every day of our lives.

Even the capitalist class, and the bankers and financiers, who occupy a comparative point of vantage on the economic scale, are admitting that there are a great many new and disturbing conditions in all the "civilized" nations. But we have never found one of them who would admit that the whole trouble lies in the contradictory capitalist system of exploitation itself.

Even the capitalist editors know there has been a great world-war, and admit that in Poland, Austria, Hungary, Belgium, in all the little European nations, in Germany, and even in France and England, there are hundreds upon hundreds of thousands of working people who are actually starving at the same time when American farmers are facing ruin because they cannot dispose of their last year's crops.

And now and then we see it admitted in the capitalist papers that there are in every European nation vast hordes of men and women who can secure no work—millions upon millions of idle hands and empty stomachs; families huddled in one room, because of the housing shortage—on one side of the picture.

And thousands of factories, shops, mills and mines lying idle while people are dying for the things they could produce in them if given an opportunity to work—on the other side.

And every day conditions in Europe, as well as in America, are growing worse. In our own cities we see hungry, shabby men and women crowding before closed factory doors for a chance to work. We see the final, the perfect flower of capitalism, or modern "civilization", in the masses of hungry workers who need everything that makes life possible and endurable, beside the idle tools of production they may not use.

What is the trouble? What sort of society is this which permits its sons and daughters to stand helpless before the tools that mean life to them?

What sort of a civilization is this that teaches democracy when you write your name on a ballot, and permits the autocrats of industry to say when you shall work and when you shall starve?

If this were the best man could produce after fifty thousand years of striving, it would not be worth the price. Life would be only a colossal failure.

But this is not the end. We mean to make it but the beginning of a new and orderly society wherein those who work shall reap the rewards of their own labor, and where it will not be the private profits of individuals that shall determine when things shall be produced, but the workers themselves.

We always knew that capitalism was torn by contradictions. We used to believe that the day would come when the capitalists of the various nations would have grabbed up all the "backward nations" and have the world markets salted away in their pockets. Then we expect to see long wars, fought in the interests of the various capitalist groups to seize the markets from their successful rivals, or to hold on to their own.

And we knew then that no matter which group won, capitalism would try to grow, to expand—for capitalism must always expand, always reach out, always find new industries in which to invest new capital—or it cannot be capitalism.

To meet these conditions we used to think it would be necessary for every class-conscious worker to carry on the work of

education in every quarter of the globe. We thought the day would come when capitalism would have no more new market-lands to conquer and that then the capitalists would close the doors of their factories, and unemployment and hunger would force the working classes to revolt.

But the new contradiction that has arisen in the old system is not going to give us time to educate everybody. It is, comparatively speaking, rushing capitalism to its final dissolution faster than I had ever believed would be possible. This new contradiction in the capitalist system is the failing gold supply. It is tying capitalism up in an unbreakable knot, and we had best realize this fact and do what we can to reach the workers; for our time is growing short.

Of course, you know that, as the population of a city (a nation or a world) increases, it requires more and more commodities to feed, clothe and shelter it. It takes more **values.** Capitalism requires an international medium of exchange, a universal measure of value. The one commodity that can serve this purpose under capitalism, is **gold,** and the gold supply has been decreasing for six or eight years.

Capitalism **must have gold** for the circulation of commodities. The more people, the more commodities—the more gold is needed for circulation. Capitalism not only needs more and more gold to circulate the increasing volume of commodities, it needs gold for building new railroads, more factories, shops and mills for new instruments of production and distribution.

Capitalism is growing more entangled in its own ruin, more helpless and inefficient every day. Gold production is growing less adequate every year. The bankers lend money only in their own interest, to industries in which they are involved, to their friends and—unfailingly—to those monopolistic capitalists who can afford to pay the very highest rate of interest.

Why does not industry start up again in Europe where the people need everything that Nature and the hands of men can produce?

Because the European capitalists have even less gold than the American bankers. They all tried printing paper notes that were not represented by gold, which merely diluted the currency and forced prices up in proportion as money was inflated. But they found there was no help in calling ten cents a dollar. They found they just had to pay ten dimes to buy a real dollar's worth of anything.

And now the capitalist class is trying to get back somewhere within hailing distance of the gold basis again. They are trying to un-dilute the currency a **little bit.** This makes money **tight.** The bankers have to refuse credit to half the capitalists who want it, to continue in operation. And of course, the bankers discriminate against the little fellows.

There are two **vital** necessities of men which are already being affected by this policy of the bankers. These are in the matter of **houses** and **foods.** Housing distress is now with us—and growing worse. The food pinch is on the way. The bankers cannot (or will not) lend money at even **more** than the legal rate of interest—to the real estate capitalists who desire to speculate in building. They can get more interest elsewhere.

And the farmers, who can scarcely dispose of their products this year at the price of production, will **next** year be in a desperate condition. They will be less able than ever to pay **increased** interest rates on mortgages and on loans for the buying of fertilizer, seed, tools, machinery, etc., etc. In just a little while we will all be feeling the effect of the farmers' divorcement from the land in rising food prices, and even, if Europe begins buying again, in—perhaps—a scarcity of food supplies. For many of the American farmers are in danger of being pinched out by the bankers.

Now what are the capitalist "statesmen" doing to relieve this situation? Are they considering the welfare of the majority of working people and passing laws in an attempt to relieve them?

Certainly not! As usual our "statesmen" are waiting orders from Higher Up, and even the Higher Ups scarcely know how to proceed to their profit and advantage these days. Some of the new banking laws enable

a banker to lend twenty times as much money as he possesses. But it is impossible to extend these credits further without going back to currency inflation again, which only means endless additional inflation.

## OPEN THE SHOPS.

Just now the capitalists who are temporarily in a somewhat secure position, are doing all they can to crush every semblance of unionism in this and many other countries. They are lengthening the working hours, and ruthlessly cutting wages. They mean to reduce the workers to serfdom if they can.

We need to realize that there are now innumerable workers who would turn toward class industrial unionism if we could reach them. I am finding the men out of a job more interested in knowing what we would do for the unemployed, if we had the power, than they are in some of our subtle theories.

A jobless man asked me the other day what the I. W. W. would do to relieve unemployment—if it had the power.

"Open all the shops, mines, mills and factories," I replied. He appeared amazed and delighted. I fancy he thought we were too busy thinking about the Industrial Society of the future to be interested in his small problem.

John MacLean, one of the greatest revolutionary organizers in England, said a splendid thing at the time when he organized the miners to demand a six-hour day.

"Get the workers to unite and **fight** for something they want and which the capitalists cannot, or **will** not, grant them"—he said—"and you **may see history speeded up a little.**"

**Open the shops** ought to be our slogan today, and with conditions growing more desperate for the workers every week, we may be able to initiate a working class campaign that may blosom into something far bigger.

Besides we want our jobless friends to know that our **first** cry is to relieve the **present disperate** needs of our own class.

Agitate for the opening of shops, mills, factories, mines. Soak it into the mind of every jobless man and woman that **work** is the real remedy for unemployment.

If the capitalists close their shops and factories because they see no profit in present operation, **what about the workers who built the plants** and produced every commodity that ever came out of them?

Shall the lives of these jobless men and women depend upon the profits of the **boss?**

Are their **lives** less important than the **dollars** of the **boss?**

We have a great rallying cry. If we keep at it, we can soon send it ringing across every state in the union:

**Open the shops**, the **mines** and the **mills!**

For the **lives** of the **workers must** and **shall** come before the **dollars** of the **boss!**

Mr. Working Class: "What's this? Another string on me? Well, well! One good pull will fix that!"

# The Irish Labor Movement

By Thomas J. O'Flaherty

WHEN the Irish Trades Union Congress was established in 1894, the entire membership of the Irish unions did not exeeed 11,000. Today there are 300,000 workers enrolled in the Irish Trades Union Congress. Organized labor in Ireland has not only inereased numerieally; in point of organization and goal it holds a eommanding position in the ranks of the revolutionary working elass of Europe. As far baek as 1895 a resolution was introduced at the Cork Congress deelaring for the nationalization of land and all the instruments of production, distribution, and exehange and that the co-operative Commonwealth is the only solution to the labor problem. This resolution was defeated by the reformers, but it reeeived 25 votes at the eonvention. In the following year James Connolly, then twenty-six years old, started on his revolutionary campaign for an Irish Soeialist Republie, which he eontinued to earry on in Ireland, Seotland and Ameriea until his death at the hands of a British firing squad on May 12, 1916.

Connolly's agitation did not have any immediate effeet on the labor movement in Ireland. As elsewhere the workers were steeped in the superstitions of the past, and the thought that the present system of society was only a passing phase in world evolution appeared to them like a dream. They looked for relief to the Irish Parliamentary Party who were begging for concessions in Westminister. Under Home Rule everything would be fine and poverty would trouble them no more. They never thought that under Home Rule the Irish capitalists would have the pleasure of exploiting them under the cloak of patriotism while now they were somewhat handieapped by laws pased in favor of their English eompetitors. The Irish labor leaders acted in mueh the same manner as the leaders of the American Federation of Labor do today. They had their friends in Parliament who would every onee in a while introduee a bill to improve the eonditions of the workers and just as often get defeated.

Until 1907, there was no real labor movement in Ireland. Most of the unions had their head offiees in England, and when they struek against the boss the labor fakirs on the other side of the ehannel paid very little attention to them. Jim Larkin eame to Belfast in 1907. From then on the Irish labor movement took on a militant aspeet. Jim talked and agitated. He did not advoeate peaee with the bosses. Larkin was an organizer for the National Union of Doek Laborers, with headquarters in Liverpool.

In 1908 there was a strike in the eity of Cork at whieh considerable dissatisfaction was expressed with the poliey of the exeeutive eommittee of the union in Liverpool. Scabs were shipped to Cork and paid thirty shillings per week while the Cork workers had to get along on 22 shillings and sixpenee. Larkin went down there, settled the strike and formed the first braneh of The Irish Transport and General Workers' Union. At the same time the Dublin eoal workers were locked out, and the Doekers Union exeeutive ignoring them, Larkin raised money in Cork and sent it to the Dublin workers. For this he was hailed into court and eonvicted for misappropriation of funds. It was elaimed that the money belonged to the Dockers' Union and that Larkin should not have given it to aid the Dublin strikers. During Larkin's trial in New York in April, 1920, Alexander I. Rorke seeured a report of this eonvietion from Dublin Castle which aided him in seeuring a eonvietion from the jury. Larkin was senteneed to seven months' imprisonment for standing by the Dublin workers but labor seeured his release in three months. His power among the workers was inereased and from that moment The Irish Transport and General Workers' Union beeame the leading labor organization in Ireland.

The old and eorrupt labor leaders detested Larkin, but the young men took kindly to him. His methods were new in Irish labor disputes. The struggle of any group of workers against the bosses was considered the business of the Transport Workers. He introdueed the "sympathetic strike" into Ireland and by the guerilla taeties adopted, the Transport Workers demoralized the eapitalist organizations until they at last determined to make a deeided stand against any further advanees by this fighting union.

James Connolly returned to Ireland from Ameriea in 1910 and was at onee appointed an organizer for The Irish Transport and General Workers' Union. He was put in eharge of the Belfast offiee. Religious intoleranee was always an obstaele in the way of organizing the Belfast workers, and so Connolly set himself the task of clearing away the differenees that kept the workers apart. He sueeeeded in seeuring the same rate of pay for workers on the Belfast doeks as were paid on the British Channel. Direct aetion was the method used in bringing the bosses to their knees. There were no long drawn-out parleys, but without a moment's notiee the workers "downed tools" and pretty soon the bosses had to give in. It was this movement that the bosses set out to smash in 1913, when the employers of Dublin issued an order that all workers earrying the red badge of The Irish Transport and General Workers' Union should be refused employment.

William Martin Murphy, boss of the industrial life of Dublin and publisher of many newspapers, one day ealled into his presence the dispatch staff of the Independent and told them that if they wanted to eontinue in his employ they must tear up their cards in the Irish Transport and General Workers' Union. They refused, and were fired. Next the news agency employees refused to handle the Independent, and his tramway employees, sore over the dismissal of their comrades, struck during Horse Show Week. Soeiety people were shocked that the "lower classes" should thus interfere with their pleasures. However, the workers stood solidly by their dismissed eomrades, and the battle was on. Police batoned the strikers who held meetings in the streets, and the workers retaliated by forming The Irish Citizen Army, and met force with force. From then on the bullets were flying both ways.

An incident of the struggle worth noting was the attempt on the part of a charitable lady to take the children of the workers to England and have them fed and clothed during the strike. This aroused the clergy of Dublin to a high pitch of fury, as they pretended to see in this move an effort to proselyte the children. Arehbishop Walsh was more candid. He said that taking away the children to comfortable quarters would make them dissatisfied afterwards with their poor homes in Dublin. Thus the clergy, while deeply concerned over the spiritual welfare of the poor starving children, had no consideration for their starving bodies. As usual they lined up with the employers against the workers who formed the bulk of their congregations.

The struggle lasted eight months and ended indecisively. Some of the unions gave up the fight. The One Big Union, as the Transport and General Workers' Union was known, held out to the end. Larkin dwelt on the necessity of having all the workers in Ireland, regardless of industry, in one union. Today there are 150,000 members in The Transport Workers, and recently another organization was formed in the engineering trades with which the Transport Workers have reached an agreement for common action. The Transport Workers' Union is mainly composed of unskilled labor and until recently the skilled workers refused to join the unskilled. Failing to induce the engineers to join the Transport Workers, the latter organized the engineers into The Irish Engineering Union, and by a flank move accomplished their purpose. This adds sixty thousands more to the Transport Workers' Union, making the total membership now over 200,000.

After Larkin's departure for America in 1914, James Connolly was left in charge of the Union. The 1913 battle left many scars; the treasury was almost exhausted. Nothing daunted, Connolly and William O'Brien proceeded to systematically knit the seattered forces together. It was uphill work. The war in Europe was on and all the ageneies of eapitalism and imperialism were at work seducing the workers from their allegiance to their class and dragooning them into the trenehes of Flanders. A sign was hung over the Headquarters of the Irish Transport and General Workers' Union which read "We serve neither King nor Kaiser."

The Citizen Army, the armed wing of Irish labor, prepared for action, and in 1915 entered into an agreement with the Irish Volunteers to fight for an Irish Republic. In 1916 the die was cast. The declaration of Irish Independence was drafted and Connolly was made Commander-in-Chief of the Irish Republican Army. The outeome of that venture is too well known to need the relating of it here, but the consequences of Connolly's sacrifice are worth recording.

The membership of the Irish Transport and General Workers' Union was only about 8,000 in 1916. Connolly's death sanctified the movement and the rank and file of the Irish workers, hitherto hostile to Connolly and the Transport Workers' Union, were convinced by his death that he was made of heroic mould, and were ready to make the greatest saerifice for the faith that was in him. Not alone did they flock to the standard of the One Big Union in large numbers but they brought with them the fighting spirit which has enabled the Union to lay the foundation for the future industrial commonwealth—the Republic of Labor.

A few instances of the manner in which the Irish O. B. U. fights the bosses may be of interest to members of the I. W. W., which is organized on practically the same lines as The Irish Transport and General Workers' Union. In 1918 the farm laborers of the County Meath had a dispute with the employers. The latter refused their demands. When the farmers proceeded to send their cattle to the English market, the railwaymen refused to handle them. The farmers then called in the drovers to take them on foot to the port of Dublin. The drovers, who are also members of the O. B. U., declined. The farmers themselves, in desperation, drove the cattle to Belfast, hoping that the Protestant workers would scab on the workers from the south. They were again mistaken. No Belfast workers could be induced to put the cattle on board ship. They brought the cattle back again to the plains of Meath. The result was the unconditional surrender of the farmers.

Another instance. In the little town of Knockalong, near Limerick, is located a creamery where butter and cheese are manufaetured. The bosses refused the demands of the union for increased pay and shorter hours. The seeretary of the union, who was an employee of the firm, was fired. The O. B. U. seized the faetory, placed the union seeretary in charge as manager, drove out the bosses, and flew the red flag and the flag of the Irish Republic over the faetory, took down the sign of Cleeves Brothers, and in its plaee hung out in large red letters the name "The Knockalong Soviet Creamery." They paid the workers the scale of wages refused by Cleeves Bros. and shipped the butter and cheese to Belfast and other market

cities with the name Knockalong Soviet Creamery boldly displayed on the boxes. In a short time the bosses came back and asked for terms. They were allowed to take possession on condition that the union wages be paid, and it was made quite clear to them that the workers returned the factory only for the time being, the moment not yet being opportune for the final taking over of all Irish Industry.

Irish labor has consistently refused to handle shipments of ammunition, troops, or armed police, and it had the British military in such a dilemma that the latter were obliged to organize a transport system of their own. The English unions have to a great extent failed to co-operate with the Irish workers, and while they talk of solidarity they continue to ship arms and ammunition with which to shoot down their fellow workers across the channel.

The Irish Transport and General Workers' Union has sent a delegate to Moscow to attend the first Congress of the Red Trade Union International. Thus it can be seen that while the Irish workers in America are still steeped in the mire of craft unionism and are following the Gompersian parade, their comrades at home are occupying a forward position in the ranks of the revolutionary workers of Europe. The Irish Trades Union Congress is controlled by the One Big Union. The President of the Congress, Thomas Foran, is also President of the I. T. & G. W. U. The secretary of the Congress, William O'Brien (who voted for affiliation with the Third International at the last meeting of the Congress in Cork) is also treasurer of the Transport Workers, and the treasurer of the Congress, Thomas Johnston, is Secretary of the Transport Workers. Realizing that it takes a very long time to teach Marxian economics to all the workers the revolutionary leaders of the Irish labor movement face conditions as they find them, and have built the organization accordingly. In some Irish communities all workers, from schoolteacher to blacksmith, are in the O. B. U. Political action is used when considered necessary, and the military arm is not lost sight of. At the present time the political struggle in Ireland takes the centre of the stage, but the working class is only waiting for the solution of the national struggle to put its plans into operation. The revolutionary workers of England have recently declared their readiness to render assistance to the Irish workers in their struggle for independence, and this in our opinion marks the beginning of a closer relationship between the revolutionists of Great Britain and Ireland for the overthrow of the common enemy in both countries and the establishment of a Workers' Republic.

**Editor's Note: Thomas J. O'Flaherty, the author of the above article, is editor of "The Irish People," the official weekly organ of the Irish American Labor League, with headquarters at 262 West 23rd St., New York City. "The Irish People" is the only publication in the United States upholding the cause of freedom for Ireland from the point of view of the revolutionary working class. It stands not only for freeing Ireland from British military and industrial domination but also for the abolition of capitalism the world over. "The Irish People" ought to be read by all true working class rebels in America.**

"IS THERE AUGHT GREATER AND MIGHTIER THAN LABOR?"—De Tocqueville.

# Scenes From a Rank-and-File Convention

ALL kinds of rumors had been filtering through the ears of the Wandering Wobbly as to what the organization had been doing in the years since he began roaming around on the Eastern side of the earth.

"Every I. W. W. is in jail," said one report in a far away newspaper.

"The I. W. W. is smashed," was the triumphant headline in a second paper seen in another port. Further down in the text of the artiele was the statement that those who were not in jail were too busy trying to get the others out to be feared. Then along eame an old eopy of "Solidarity," dated May of last year, in the poeket of a sailor, telling of a series of great strikes in the Roeky Mountains, and of further I. W. W. progress in several industries.

It was all very conflicting, and the Wandering Wobbly saw that the only way to get the facts was to return to the broad land he had left several years ago and to find out whether the job delegates were still aetive in the shops, mines and forests that lie between the surges of the Atlantie and the broad swells of the Pacific.

Arriving in a Western port he ran plump into a six foot lad with a bundle of "Industrial Workers" under his arm, and five minutes later was arm in arm with a job delegate who was keeping track of all incoming sea-faring men. The delegate took him around to the loeal headquarters, and he saw at once that there was something wrong with those newspaper reports, at least so far as this plaee was eoneerned. Here was a seene of aetivity, delegates coming in with reports and going out with literature and stamps. Some were off to the lumber eamps, others out to eonstruetion jobs, and still others taking armfuls of literature for use in the lodging houses that roomed the unemployed.

By this time the Wandering Wobbly had time to read the "Industrial Worker" and get the news of the General Convention about to be held in Chieago, May 9th. The stuff sounded good to him and, as he had a small stake and was independent of the employment sharks for the time being, there was nothing to it but that he should take the first train for the eonvention and thus get an aeeurate line on the organization as a whole. Things surely were humming in the movement on the Paeifie eoast but he wanted to see what plans were being made for gaining power in the heart of American industrialism.

### Lads from Far-Away.

This is the substance of the story told to the writer by one of the visitors to Phoenix Hall, as we staeked up together against the eounter of the luneh room adjaeent to the Convention floor, which three Wobblies are running for the eonvenienee of the delegates. My new fried was just one of many wanderers from different parts of the world who had eome on eushions or by pick ups to get the lay of the land in the organization. It is typieal of the I. W. W. that its rank and file have to see things for themselves. Sitting aside the writer at the table where we take notes, is a young fellow from Australia where the I. W. W. has been the rejuvenating foree in the labor movement. He has just roughed it from New York, in three weeks of the hardest kind of traveling, to get a first hand report to forward to his fellow workers in the Antipodes. It did one's heart good to see his eyes brighten from day to day as the eonvention proeeeded, and now he tells me that he is going on west to the harvest fields, the metal mines and the forests, where he can see the members funetioning right on the jobs from which these delegates have eome.

And right from their jobs at the posts of industry they have all come, exeept those who had temporarily lost their jobs in the unemployment shuffle. The men who draw their livelihood direct from industry make all deeisions in I. W. W. eonventions. Executives are allowed a voice but no vote. It is a ease of the rank-and-file of the membership, from all parts of the eountry, meeting faee to faee to thrash out the polieies and programs of the organization on a straightaway give and take basis.

### From Forest and Mine.

Sitting around the long horseshoe table in Phoenix Hall are lumber workers from the virgin tall timber of the vast forests in the Puget Sound eountry and Oregon, and the short-log lands that run from Eastern Washington to Wiseonsin. Then eame muekers and miners from the Roeky Mountains, who have ranged with the job from the borings of Arizona and the shafts and tunnels of Nevada, to the damp eorridors thousands of feet below the surfaee in Butte, Montana. These are followed by rangy migratory workers from the harvest fields of Kansas and the Dakotas, the eonstruetion eamp men from the midwestern and far western states, and the men who pluck the golden oranges of California. They are a virile, deep chested crowd, with bold eyes, who are set straight ahead for the goal of industrial freedom.

It is a western outfit for the most part, but not entirely. There are some delegates from the docks, textile mills, metal fabrieating plants and miseellaneous industries of the east, besides the railroad workers. These Eastern delegates are just as keen a lot, though of different physical make-up and manner, because they have been bred in the eity instead of the camp and the field.

### All for Action.

I wish that some of those students of modern sociology who love now and again to take a whirl

at the I. W. W. and to point out their alleged abnormalities could see these lads collected together in Phoenix Hall. They are just a healthy and active body of workingmen, who think. The fact that they are more aggressive and possess more "pep" than most other thoughtful workingmen is because their ways of life have brought such qualities to the fore, and without this abounding energy and determination they could not have kept going through the terrific persecution of the last few years.

You very seldom hear these boys telling about what they did, but they tell what the organization is doing in their locality. And the reports back up their statements. What I heard a logger telling a visitor the other day is a sample of what is going on in many other places. He was telling of the I. W. W. organization in Spokane where the work is going right on in spite of the fact that the possession of an "Industrial Worker" or "Solidarity" may mean sixty days in jail, and the discovery of a card subjects one to several different kinds of charges.

"Men who are fighting through such conditions," he finished, "are fighting because they are heart and soul in the movement. They are not just emotionalists who come and who go when the thrill comes and goes, but men who are so determined that nothing can stop them.

This deep seated determination does not find expression in a lot of wild talk or revolutionary jargon. These men are too busy with the practical details of the revolution to fan the air with phrases. In fact the word "revolution" has been hardly mentioned in the convention, as indeed, why should it be? A war is not won by talk of "war" but by the systematic capture of trenches according to methods worked out by careful planning.

### Organization the Watchword.

"Organization" is really the watchword of the convention. Everything else is subordinated to that in the minds of the delegates, because they have learned by experience that nothing else gets them anywhere. They tell me that the 1919 Convention was more or less of a defense convention. The delegates were thinking of getting the boys out of jail as much as of organizing the industries, and no wonder, with harrowing stories reaching them every week of the tortures inflicted in the revolving hell at Wichita and in the other prisons scattered over the land. And the 1920 convention, also, leaned very much in the same direction. But here and now in Phoenix Hall organization is supreme. The carefully prepared reports of John Martin and George Williams, Defense Secretaries, received due consideration in passing, and then the convention went on with organization work.

There was just a flash of the 1919 psychology the second day of the convention, when a delegate made a sudden motion that telegrams of good cheer be sent to all class war prisoners. But he was cut short, just as suddenly, by an impatient delegate who shouted:

"What's the use of burning up good money on capitalist wires. They can't eat it and we can't organize with it."

No telegram was sent, though the hat was passed for some physical comforts for the men in jail, and the organization business went on.

Phoenix Hall at present is like a mirror of the industrial movement because it has brought together from all parts of the country the rank and file who have nothing to conceal from each other. The outstanding characteristic of them all is this practical, hard-hitting attitude of mind. It is a pleasure to walk around from one to another, and to listen. I was talking the other day to a sturdy, gray haired lumber worker from the Pacific coast whose class struggle battles go back to his Massachusetts carpenter days in 1880. He did very little reminiscencing. His conversation ran to the future. He was planning a march on the upper reaches of British Columbia with other job delegates. New timber lands are being opened there and he saw the necessity of building the organization up with the industry. Then another lumber worker came along with the facts about the wonderful forests of lower Oregon and Northern California where intensive development is about to begin and which the union, looking ahead, is already preparing to organize.

### Industrial Strategy.

Then I listened in on the conversation of two copper miners who were debating as to whether the evidence showed the Coeur d'Alenes would be worked out in a few years or not. They wanted their foot-loose job delegates to go where permanent organization could be built. A lumber worker joined them, and they all agreed that the I. W. W. from now on should pay stricter attention to the actual facts of industry so that energy could be centered on the strategic places.

This emphasis on industrial strategy was shown by a Duluth chap, among others. He was not thinking in terms of herding a lot of workers together off the job, nor of having a society of rebels merely, such as a lot of off-the-job revolutionists think of, but of getting power through control of industry.

"Up there," he was saying, "we are in the iron mines. Now some boys are doing good work in the railroad lines that carry the ore away. When we have the mines and the railroads that carry the iron we have the steel industry by the neck."

Just the day before a big check had come from Duluth for literature.

### A Textile Worker's Map.

Another day a delegate from the textile mills of New England was exhibiting a set of colored maps, prepared by himself, showing the location of the woolen and cotton branches of the textile industry. This is his method of convincing his fellow Wobblies that the headquarters of his industrial union should be located in the East where the industry is centered, rather than in Chicago. Whether he is wrong or right is not the question

here: the interesting thing is that he knows the I. W. W. well enough to waste no time in making any kind of an argument about industrial union tactics without the proper industrial data to drive home his point.

"Talk about volunteer bureaus of industrial research!" said one of the delegates who had been arguing that every union should have the basic facts on its industry, "look at that."

The actual carving out of the program of action for the coming year, which is being expectantly awaited, will begin this coming week. During these first six days of the convention the time has been largely spent in receiving and discussing reports of the work of the last year, and laying down measures of discipline. It is interesting to note, in this connection, that the delegates made thorough work of what disciplinary jobs came up for action.

Two full days were spent in hearing all sides of the much talked-of "Philadelphia case" in which the General Executive Board, last December, suspended a branch of Marine Transport Workers for charging a twenty-five dollar initiation fee in violation of the constitutional clause calling for a universal two dollar entrance fee. The Convention voted by a large majority to sustain the Board.

**Way Open for Return.**

This decision to keep twenty-eight hundred water front workers, who load the ships along a full twenty-eight miles of Delaware River docks, out of the I. W. W. was not entered into lightly, and immediately after the disciplinary action had been taken the Convention went on record for the reinstatement of the Philadelphia branch as soon as it would agree to conform to the constitution.

These longshoremen, grain ceilers and checkers have been a part of the I. W. W. for years, and last summer went through a vigorous seven weeks' strike which is well remembered on the Atlantic seaboard. But the policy of turning the union into a "job trust" by a twenty-five dollar barrier against other workingmen, aroused such protests from so many parts of the I. W. W. that the G. E. B. felt itself obliged to act, and last October the local was notified that it must conform to the constitution. On the Philadelphians refusing to give up the twenty-five dollar fee they were automatically suspended until the General Convention should meet.

Similar action was taken with the strong little Italian baker's local of New York City, which has "job control" of some twenty bakeries and was suspended for insisting on a fifteen dollar initiation fee.

**Seeing Their Job.**

Turning from "job control" to the more essential matter of industrial control the Convention is adopting, as this is being written, a resolution calling for a survey of industrial resources and the co-operation of the engineer and technician in preparation for the actual administration of industry by the workers themselves. The Lumber Workers' Convention held in April adopted a plan for a volunteer bureau of industrial research for that industry and the whole trend of industrial unionism today is towards a more definite industrial basis. Capitalistic production is breaking down and the intelligent worker is equipping himself for the crisis.

Another resolution declares that all I. W. W. propaganda, during the unemployment crisis, must be directed towards the control of industry by the workers.

**Irish Workers Greeted.**

So that's that, as the Wandering Wobbly said; but before this winds up let's see what the Wobblies think of Ireland. You know Fellow Worker Jim Connolly who led the armed workingmen of Dublin in Easter Week, 1916, was an I. W. W. organizer in the early days of the movement over here. And the Irish Transport and General Workers' Union which he and Jim Larkin helped to bring into existence is now the most vital force in Ireland and is on a thorough going O. B. U. basis. And it is being persecuted with all the rigor used against our boys on the west coast. So what could the Convention do but give its endorsement to the "struggle which the Irish workers are now waging against world imperialism," to quote the special resolution brought in from the Butte branch and passed.

**Jack Tanner Here.**

The Industrial International and the question of knitting the revolutionary labor movements of Latin America with the I. W. W. will come up later. When the across-the-seas issues are on the floor we will hear something from a quiet English workingman who has been sitting in as a fraternal delegate. This is Jack Tanner, representative of the Workers' Committee of England, a live industrializing movement.

An interview with Tanner is found on other pages of the "Pioneer."

This will be all for the present, but if you read your "Pioneer" next month you will get the organization program which the boys are working out. It will be a 1921 application of the ever useful doctrine of "direct action at the point of production," and if you are not a Wobbly and able to guess what they will do just read and find out.

And now again, good-bye for the month, but first let me give you a tip, I'd still be talking if I were not so anxious to get back to the Convention floor with the boys who do things, those live wires, the Industrial Workers of the World.

A. S.

# Siberian Reminiscences

**By Capt. L. M. Beilin, M. D.**

FIELD Hospital No. 4 of the Ameriean Expeditionary Forces in Siberia was attaehed to the 27th Infantry. In the summer of 1919 we were stationed at Verkhne Udinsk, a town of about 20,000 inhabitants near Lake Baikal, about 2000 miles in the interior of the eountry.

Contrary to our expeetations, the summer was very hot, with the mercury elimbing up to about 100 degrees during the day, and eoming down to 60 in the evening. Our camp was loeated on a hill amidst a thick, virgin pine forest on the banks of the Selenga River. It was an ideal spot for summer outings. This was the farthest point west reached by Ameriean forees and eonstituted "the zone of advanee." Frankly speaking, none of us knew exaetly why our post was dignified by such a high sounding name, nor where we were advaneing to, and still less why we were there.

As the weather was extremely salutary, the Medieal Staff of the Field Hospital, in the absence of "business," was merely marking time. The only busy spot in the hospital was the G. U. or Urologieal Department. Our Regiment eonsisted of old-time regulars from the Philippines, a large pereentage of whom were infected with the so-ealled "Soeiety Bugs," representing all the known varieties of diseases "peeuliar to men."

Under our jurisdietion was the Ameriean Seetor of the Trans-Siberian Railway, and the 27th Infantry was doing guard duty on the railroad. Our guards were stationed at the railroad depot, at the bridge over the Selenga River, the water works and other points of strategic importance, to prevent their eapture by the Bolsheviki.

At first, when the game was still young, mueh expeetaney and some interest were displayed by our men over the possibility of sudden attack or night raids by the terrible "Bolshies," which had been predieted by the men higher up, at headquarters, but alas! as time went on and these attaeks failed to materialize, the Russian bear making no appearanee, guarding lost mueh of its prestige and military signifieanee, and our men had beeome prone to take their duties in a lighter vein.

Naturally, when a body of men have no real work to do and plenty of time to do it in, their so-called "morale" as well as morals suffer eorrespondingly. The C. O.—that is, the Commanding Officer—and our Regimental Padre, Chaplain W., exhibited grave eoneern over the rapidly deteriorating moral status of their floek, and were at a loss to find the proper remedy. A spirit of ever-increasing restlessness hung heavily over the eamp; the usual ery of our doughboys, "I want to go home!" was heard everywhere.

News that a company of Ameriean troops (eompany "I" of the 21st Regiment) had mutinied on the Arehangel front somehow reached our camp and ereated a profound impression. The situation was getting rather tense! We were all awaiting orders from headquarters, and no orders eame. But vodka—to which our men had taken very kindly—and women who, in return, took kindly to our men—saved the situation.

Thus had Americans earried the Gospel of Demoeraey and Freedom to barbarous Russia. "O Tempora! O Mores!"

On July 15th I was ordered to proeeed to Vladivostok in eharge of a detail of sick men. At our Field Hospital we had only emergency equipment, and those seriously ill or ehronieally disabled were shipped to the Base or Evaeuation Hospital at Vladivostok. There were twenty men, all "slightly damaged," who were going away for "repairs," and some for "diseharge"; they were the "backwash of war." An old dilapidated eoaeh of the fourth class—Russian railway eoaehes were divided into four classes—was eommandeered by us. We had improvised a eook stove and drew our rations for sixteen days. We placed the very ill into lower "berths," while the two upper tiers were taken up by the others. This "sanitary" eoaeh of ours was attached to the rear of a long proeession of box cars earrying Russian refugees, Japanese, Czecho-Slovaks, Cossaeks, soldiers and other travelers de luxe. In better days, this trip of 2000 miles would have taken about five days to make, but at this time the road was badly erippled and we were expeeted to be at least two weeks en route. The prospeet of this extended journey was accepted by our men with mixed emotions, though most of us were glad to break the monotony and weariness of eamp life, and were looking forward with pleasant expeetation.

The Siberian summer was at its height. Our "ark" rolled along at a rate of 15 miles per hour. The side-door Pullman, as our ear was ehristened by the men, squeaked and jerked as it rolled over the rusty rails. It is diffieult to appreeiate the beauty, the immensity and the possibilities of Siberia unless one travels over this vast territory. This part of Siberia is thinly populated by about one million people, mostly Cossacks and Russian eolonists. We traveled for hours and hours without seeing a living soul, with here and there an oeeasional village station, a straw-covered hut or a log cabin. We passed through vast, limitless steppes, grain fields, grazing lands and rich virgin forests. We zigzagged around mountains and hills whose tops were covered with everlasting snow. We passed

Group of Russian Peasant Girls.

through numberless tunnels. As we rode through the Gobi Desert we saw long caravans drawn by camels or oxen, laden with raw materials—hide, fur, silks, and other merchandise from Mongolia and China. The air was charged with oriental lassitude and sweet, infectious languor. Space and time had ceased to exist.

Here and there we could discern in the distance the framework of a lone, neglected mine. Some foreigner, a Frenchman, German or Belgian, had perhaps attempted to explore these vastly rich mineral deposits, but war and revolution had halted his efforts. Untold quantities of platinum, gold, silver, iron, tin, aluminum, copper, lead, petroleum and coal lay dormant in the ground. What wealth was lying here beneath our feet, waiting patiently for a better day, for someone to rescue it from the bowels of Mother Earth! In our minds we gazed upon these wondrous gifts of Nature, and contemplated the hidden treasures with mixed feelings of sadness and regret.

Reality, indeed, is stranger than fiction, and facts are often more complex than theories. Russia is a land of paradoxes and Siberia is a country of contrasts.

Here, amidst these wondrous riches of Nature, we saw everywhere misery, poverty and desolation. On rocks of gold man built his decaying civilization. Misery, in fact, was so universal here that it had lost its novelty and sting. The masses who always had been poor were stripped of their last worldly possessions by war and revolution.

People everywhere were dressed in worn, torn garments, and were often shoeless. Their facial expression bespoke ages of misery, of suffering and of pain. Immense growds of refugees were seen at every depot, railway yard and station. With their clothing, bedding, food and the inevitable tea-kettle strapped to their backs they passed in endless procession, riding box-cars, passenger trains, on mule or ox-driven carts, or on foot. In a constant, never-ending stream they went on and on, whereto we did not know and, alas! they often did not know themselves. It was a huge human wave surging without apparent aim or destination. The Civil War was on and they were driven back by the retreating Kolchak Army. They left behind them their worldly possessions and many perished on the way from hunger and exposure. It was a great mess of "just folks" who were longing for peace and the opportunity to cultivate their strips of land. The majority of them were old men and women, since the young and able-bodied men had gone to war. This was the great, patient, long-enduring Russian people.

In the glorious sunset they often gathered in small groups crooning their old Slavic folk-songs or chanting Gregorian humns. Here and there along the roadside we saw figures of peasants bending over the earth and cultivating it in the same primitive manner as their forefathers had done some thousand years ago.

"After all," we sadly mused, "the mills of God do grind, but they grind exceedingly slow," for here we saw civilization practically at a standstill.

Our engine moaned and groaned as it pulled up the hills. We stopped at every little station and cross-roads, and changed our engine at every division point. We were talking a "close-up" of the country and its people. Everything was enveloped in war clouds. The evidences of the class struggle were present everywhere. We met many of the old "intelligentsia" who had sacrificed their youth and their lives for the promise of a happier Russia. paving the way for the present revolution. They were the advance guard of the army of revolt, the few remaining survivors of the party of "People's Will" of the middle Seventies. They were the torch carriers of the new freedom, the real Nestors of Revolution.

On closer observation we soon discovered that most of the peasants we met had organized themselves into fighting bands, which came to be called Partisans. The Partisans, as a rule, were very poorly armed, badly officered and scantily clad. They were not a regular fighting body, and from the military standpoint could not seriously be considered as constituting an army. They were engaged mostly in guerilla warfare and knew nothing of modern military tactics and organization. They had but

Ataman Semenoff (In the Centre) and his Staff.

"Navigating" Across the Gobi Desert.

vague acquaintanee with the Bolsheviks and their principles. In faet, they were often openly antagonistie to the eommunistie sehemes and were opposed to the nationalization of the land. However, the majority of them, though not Bolsheviks, were in full aceord and sympathy with the Soviets.

To our Yanks all this was quite a revelation. Ignoranee of world events and international politics is eharacteristie of Amerieans. They were vietims of the Allied eampaign of ealumny and "Schreehliekeit" and of our unconquerable "Sehadenfreude"—the will to believe the worst.

Siberia was passing through the pangs of parturition, and her two self-appointed **accoucheurs**—the Japanese and the Cossaeks—were administering Twilight Sleep.

The Siberian Cossaeks—the marauding bands of Russo-Mongol hordes—were a law unto themselves, recognizing no superior but the wild, young relie of Genghis Khan, the pieturesque, brutal brigand ehief—the Russian Villa—Ataman Semenoff. The Cossaeks were crowding the big eities, theatres, eabarets, and were parading down the streets in their freshly imported English and Japanese aeeoutrements. They never went near the front, and served as the "rear guards"—the guardians of law and order. Their eruelties and inhumanities beggar all deseription. With their guardian angels and proteetors, the Japanese, they were torturing and terrorizing the eivilian population.

The Siberians we met, notwithstanding their eharaeteristie multiplicity of eontrasts and contradictions, were all in unison on one point. They were all united by a common hatred for the Japanese. This hatred was at times so intense, that it almost simulated religious fervor. It was not a matter of racial or religious antipathy, sinee they lived in perfeet harmony with their other neighbors, the Chinese, Koreans and others. The indignities and outrages of the late Russo-Japanese war were not yet forgotten by them, and now, like a serpent, like a boa-eonstrietor, Japan had eneireled in her ghastly grasp the prostrate giant, and had crushed his very baek. Japan's present **modus operandi** is quite simple—those who seem undesirable to the Japanese are declared to be Bolsheviks or Korean revolutionists, whieh is synonymous with being outlawed. We witnessed wholesale executions by the Japanese at Khabarovsk, Spasskoe and Blagovestehensk.

In some plaees the Japanese eompel the suspected Bolsheviks to dig their own graves, before beheading them. Punitive expeditions, singly or in eo-operation with the Cossaeks, scour the country, leaving behind them a trail of death and desolation. The terrorized population would take to the hills, willing to meet death in an unequal fight with the cruel Siberian elements, in preferenee to the iniquities and inhumanities of their perseeutors. The Nikolaievsk massaere is but an eeho, a natural outeome of the pent-up fury and hatred of the natives for the Japanese.

To the Japanese, Siberia evidently is not a Russian problem but an integral part of their Far Eastern poliey. It is a field for the realization of high ambitions.

At the time we departed for Ameriea life in the Far East was dying away eompletely. The railroads were not funetioning because the railway men were being terrorized, abused and brutalized by Japanese soldiers. The workers quit the factories and fled to the hills, in order to get away from the horrors that were reigning at the places oeeupied by the soldiers. They preferred death to servitude to Japan.

On May 9th, 1920, all Soeialist organizations at Vladivostok issued the following appeal:

"We appeal to you, workers of the world, to help us bring our revolutionary fight to a vietorious end. Japan, together with other interventionists, has sent her troops to Siberia. The Governments of all these eountries that partieipated in the intervention bear responsibility for the horrors that we are enduring here at the hands of Japan. Demand of your Government energetieally to interfere and eompel Japan to withdraw her troops, thus sparing the population of the Far East the terrors of the Middle Ages."

# FACTS

WE OF the I. W. W. must always unflinchingly face facts. There has at all times been a tendency among us to lose sight of facts in our advocacy of theory. We must realize that all real theories are products of facts, proven by experience and experiment. We must accept no theory that has not been so proven. And when the facts show that some particular theory which has been generally accepted in the past will no longer hold good in the light of present day facts that theory must be discarded or amended to jibe with the facts. Otherwise we cut the foundation from under our own feet and render ourselves objects of ridicule.

The science of chemistry is based on theories which are the result of experiment; that is, it is based on facts. Many of the theories held by chemists twenty years ago as infallible have in late years been discarded or amended, as new facts, resulting from continual experiment, were brought to light. A true scientist follows his work with an open mind, guided by all theories which have been demonstrated to his satisfaction, but bound by none of them; never trying to force facts to fit into a pet theory.

Let us examine a few of our most quoted theories and see if they follow logically from demonstrated facts.

Many of us in the last two years have proclaimed that the capitalist system will fall of its own rotten weight and that the task of the I. W. W. is to educate and organize the workers so that when this collapse occurs the workers can take over and manage and operate for themselves the mines, mills, factories, etc., that comprise the industrial life of the capitalist system. The implication, sometimes spoken, sometimes left unsaid, is that we have no intention of forcibly overthrowing the capitalist system, and that such a change can be accomplished without bloodshed.

This is a very comfortable assumption, based rather upon a demonstrated theory than present day facts. Marx has shown that the capitalist system contains within itself the seeds of its own destruction. Add to this our own belief that the structure of the new society can be formed within the shell of the old, and it is easy to deduce that our chief task is to continue the work of education and organization among the slaves until the time comes for the capitalist to step out and the worker to step in. This would presumably also make us a "legal" organization, under the capitalist laws "theoretically" free to do business without being interfered with or persecuted.

A brief quotation from an article in One Big Union Monthly for October, 1920, by Sandgren, on "Solving the Social Problem through Economic Direct Action," is a case in point. In this I am not singling out Sandgren, for the writer himself on several occasions has implied this solution of the social problem. The quotation follows:

"The very presence of social organs like the ones we are building will in the final crisis be sufficient to make desperate people turn to the solution we offer. If people keep their self-control and adopt our program, no political revolution such as contemplated by the "communists," is needed. Any set of fools can make a bloody revolution, but it takes a sensible man like the I. W. W. to attempt a complete economic revolution without bloodshed."

In stressing this idea, this theory, are we sure of our facts? If the theory follows logically from proven facts, then the present day crises (I. W. W. strikes, demonstrations, etc.) should be as free from bloodshed, arrests and other trouble, as the "final crisis" promises to be. What do we find? Deportations, beatings, arrests, killings, lynchings, Lawrence, Bisbee, Tulsa, Everett, Butte, Centralia. And why? Because, as far as lies in its power, the capitalist system will not allow any organization of workers to exist which even remotely threatens the existence of the capitalist system. That it is not able to prevent the growth of the I. W. W. and other radical organizations, does not change the fact. The capitalist system uses and will continue to the last to use force to maintain itself, and therefore any organization of workers presuming to pit itself against this system which maintains itself by force and violence, must be **an organization prepared to fight its way from the start,** and prepared to face capitalist force with a superior force when the final crisis is at hand.

In presenting this, I am not swinging over to the communist theory of political mass-action. Neither am I advocating that we discard the work being done at present in the line of educating the workers so they will have as nearly as possible a complete knowledge of the industries in which they are working. This line of work is of great present and future value, and should be continued and enlarged upon as rapidly as funds and circumstances will permit.

There is no dispute as to the Marxian theory that capitalism contains within itself the seed of its own disintegration, and must eventually collapse, whether overthrown by superior working class force, by its own inability to continue operation of the industries, or by the crash of its pyramided financial system. I would like to be fully in accord with our Preamble that "by organizing industrially we are forming the structure of the new society within the shell of the old." But if, in the face of the bloody struggle which the workers in all organizations are today engaged, we fool ourselves by claiming that we can afford to wait for the collapse of the

capitalist system and by that time be ready to peaceably take possession of the industries, as far as the I. W. W. is concerned the new society within the shell is apt to die of inanition before the shell is ready for the pecking.

Theories and blueprints of our future operations are all very well and the academic discussions arising therefrom are very interesting. But the I. W. W. is a fact today because from the start its members have been fighters. Our history has been militant and we have at all times shown our greatest strength when hardest pressed.

In our battles we have made mistakes, a good many mistakes, and through these mistakes we have benefited. The lesson driven home to the rank and file of our members during strikes and persecutions is that the workers must build up and concentrate through industrial unionism, a force sufficient to overcome the force of the boss in a local or general contest, and sufficient to overcome the force the capitalists have at their disposal when the "final crisis" is upon us.

The "war" between the capitalist and the worker, the class struggle, started with the coming into power of the capitalist system. It has been for the most part guerilla warfare, with occasionally a pitched battle. When the I. W. W. came into existence it provided for the workers in America their first real opportunity to fight the boss with weapons nearly as efficient as his own. Of late other organizations have been formed which put forward theories and claims that they equally as well or better than the I. W. W. function as the fighting organization in which the rank and file of the workers can offer battle to the boss with the best material results for themselves.

And the rank and file of the workers will not be won over by theories, blueprints and academic discussions. They intuitively sense the class struggle, and they will instinctively go to the organization which proves by its everyday acts that it is best fitted to fight and win the workers' battles. You cannot fool them as to the facts. The boss knows that any organization of workers he cannot absolutely control is against his interests, and he will fight that organization, either openly by force or covertly in the attempt to gain control. The workers in the basic industries know that they are being robbed in their fight for existence and, even if only vaguely, know that robbery is committed at the point of production. Education among these workers is necessary but the education that will bring the best results for the I. W. W. is the acknowledgment by the workers in general that **the organization is committed to a continuous tactical and physical struggle against all that the capitalist system represents**—off the job, on the job, day after day and year after year, until that "final crisis" gives them the opportunity to take over for themselves all they themselves have created. Peaceably?—Not while there is a remnant of the capitalist class capable of fooling simpletons into fighting its battles. Then, as all the facts point the way for us, by a force superior to the force of the capitalist.

As an organization we have much to lose and little to gain by glossing over the facts of the class struggle. With our heads in the clouds of theory as to the future development of the organization, our eyes may be unable to discern the pitfalls spread at our feet. **Let us keep firmly on the basis of the class struggle, ready at all times to fight the battles of the workers. Our organization will take form as we progress as a fighting organization. Any attempt to make the organization appear "legal" will be of no avail. If it is pronounced "legal" by the capitalist system through their courts, it will be in fact "illegal" for the workers, for it will then have passed under the control of the boss. When we fight, we grow, in spite of prosecutions and persecutions. And as we continue to fight we will attract to our banner the best of the militant workers who have not yet thrown in their lot with us.**

# A Convention of the Union of Union Officials

**Reported and Illustrated by Our Special Correspondent I. Shothemup.**

ARRAYED in gaudy garments (with the Union Label conspicuously sewed on their coat lapels) the delegates from the "Conglomerated Mixture of Union Employees" met in the Soup Slopper's Auditorium on the first...no, dear reader, not the first of May, but on the much more appropriate date, the first of June.

Among the delegates present was that old battle-scarred war-mule, Mr. Dandruff Bumpers. It is said by malicious persons that he is so fond of scrapping that the economic world with all its terrors cannot provide him with sufficient pastime, and so he has again delved into the unknown quantity (the land of matrimony) in order to have his pugnacious appetite somewhat appeased. We wish him success. We know, Mr. Bumpers, it will be recalled, was lately re-elected to the munificent position of President of the Ancient Federation of Button Pushers. His striking success in the election was partly due to the singular fact that he was—whether there is any documentary evidence to substantiate the claim we do not know—the only candidate for the office. It has been alleged, presumably by persons of a slanderous turn of mind, that the "Slugging Crew" (whatever that may be) used exceedingly persuasive methods in inducing all other would-be candidates to withdraw in favor of Mr. Bumpers. The election, it is said, indicates the popularity of Mr. Bumpers in his union—with the "Slugging Crew."

**Dandruff Bumpers, President of the "Ancient Federation of Button Pushers."**

**Slimy Waters, Secretary-Treasurer of "Dishwashers' Helpers Union."**

On glancing around the hall, I was much surprised to notice the celebrated Mr. Slimy Waters. Mr. Waters has just recovered from an acute attack of "Exageratus Dishwashitis," received while performing his bounden duty of collecting

John Crokem, General Organizer for the "Door Knob Polishers' Union."

dues—and over-dues—from his constituency. The miserable conditions under which his "lambs" labor are so gruesome that Mr. Waters was really overcome with grief and nausea. He has promised to poke his nose into the business of the Hotel Owners and see if things cannot be remedied—as dues are coming in pretty slow and the expense of keeping his spirit toned up to the proper pitch becoming to a man occupying his exalted station in life is rather high. The Eighteenth Amendment has certainly turned upside down many an orderly man's life.

No one who had known him in childhood would have believed that some day John Crokem would rise to the position of General Organizer for that famous army of public servants, the Door-Knob Polishers. Here is a brief summary of Crokem's philosophy as told by himself, and which, as a matter of fact, is told every time he has occasion to address his fellow union members, which occurs as often as there is a meeting:

"Say, you guys, if you think dat dis union ain't like it aught to be, you jes get up here an' say so. When I was a kid down at der stockyards, we dint take no guff from nobody. We jes says, says we, dat tings is all O. K., and der guy wot don't tink so too, don't ever tink any more, no, an' he don't do nuthin' else any more either. See, get me? We's running a reglar union and anybody wot don't like it can get out."

The next delegate to attract my attention was Mr. Dennis McCrackin, made famous by George McManus of "Bringing up Father" fame. Dennis is neither eloquent nor elegant, but Lor' love us, when it comes to fixin'-up those "unortherized strikes," Dinny has no equal. He just expels all the unruly agitators and replaces them with loyalists. His supporters claim that Dennis is a credit to the Irish race, but I have it on the authority of a son of Erin fresh from the old country sod that the Sinn Feiners would proclaim him a native of Zululand by a unanimous vote.

"The idea," says Dennis, "of those divils

Denis McCrackin

Bluffem Moore, Candidate for Congress on the "Friends of Labor Party" Ticket.

Sacrificial Savant, Editor of "Labor's Friend."

breakin' their sacred conteract when it took me and Paddy Murphy, Mr. President, a week to arrange it. There'll be no stroikes unless I say so."

We take pleasure in mentioning the presence of Mr. Bluffem Moore. Knowing how inadequate our power of description is, we will let Mr. Moore speak for himself. The following is a stenographic report of a speech delivered by him at the opening of the Convention:

"Mr. Chairman Bumpers and fellow citizens:

As I glance over the intelligent countenances of you assembled delegates (loud applause) I boil with enthusiasm for the great cause of labor. (Hear! Hear!) I have always felt a deep sympathy with you down-trodden workers; in fact, I am one of you. (Highly emotional applause.) Your cause is one of righteousness and justice, and your unions are doing a grand and noble work (outbursts of cheering and hand clapping), but unless you send me to Congress to safeguard the interests of the weary toiler, I am afraid all of your heroic efforts will have been in vain." (Long and continued clapping and shouts of "Good old Bluffem, the grand old man! We'll elect you, old pal!" etc.)

We have heard of some wonderful acts of self-abnegation, but never of such a one as that of Mr. Sacrificial Savant, the editor of "Labor's Friend." Mr. Savant is a member of the aristocracy, and was once very prominent in society. He held the dignified position of editor of a well known Furniture Catalogue but gladly gave it up in order to become editor of "Labor's Friend." He is an altruist of the first water and religiously believes that the working class will only be saved when "Society," meaning the 400, will condescend to come down to its rescue.

# Unemployment and the Way Out

By Jan Rus

UPON one thing the employers of this country are united, and that is the dissolution of the trades unions and other labor organizations by fair means or foul. To bring about the demobilization of the workers in specific incidents the employers do not fail to use whichever method promises most. In this they are aided by the governments, state and federal, and by national detective agencies; the former by means of injunctions, repressive laws and by furnishing troops as strike-breakers, and the latter by playing both sides of their own peculiar game against the middle. These are two fields the employers have learned to cultivate. With labor once beaten to the ground it will be an easy matter to reduce the workers to a state of peonage. By the creation of unemployment periods, of industrial depression and panic, by forcing the men and women who keep the wheels of industry going, into accepting any terms, the employers already are well on their way to realize their undertaking.

The workers find themselves in the position of outlaws in their own land and more and more it is being demonstrated that they have no country they can call their own. Dispossessed long ago of any permanent stake in the country of their birth or adoption they turn in vain to leaders who shall realize for them their hopes. Their unions, for one reason or other, fail them. Promises go by the board and disillusioned in that direction they easily fall prey once again for the political pimps and prostitutes, who, in turn, are swayed hither and thither by pressure exerted by the real rulers of the nation, the men who control its industries and commerce.

The fetishes of nationalism serve to draw attention from the primary cause, the accumulation of profits. Now and then the stake becomes too big for the conjuror and his mystery is shown up for what it is—trickery. The first exposure the people forget; the second, forgive, but the next one, when they see they are being victimized, will prompt them either to refute the conjuror and substitute another or else to turn from this diversion to realities and the more potent issue of attending to their own miserable plight.

These controllers of the nation's produce, mines, mills and transportation are at present making a great appeal to their staunchest supporters, the members of midle-classes, those deluded beings who see as their only hope for happiness in the world the accumulation of wealth. That being so they cannot fail to see in every move the money-possessors make the only salvation for a superficially peaceful nation in a turbulent world. And the banner under which they are being urged to march is inscribed "The American Plan." Others recognize it as the "open shop," still others as the closed shop, closed to organized workers.

This plan, ostensibly appealing to the "fairness" supposed to be inborn in all native Americans, is making greater inroads into the American labor movement than most of us think. It has the endorsement of all the chambers of commerce, of the banks and the trusts, the Sherman and Lever acts notwithstanding. Now, with the increase of unemployment due to the closing down of shops and factories, it is a comparatively easy task to compel the workers to accept wages far below the standards of living set by the United States Bureau of Labor Statisties. Once this is gained the next step is to refuse to employ union labor. What is the result? The unions, weakened by the nonpayment of dues and a decrease in membership, find themselves in the position where they are unable to control conditions, let alone dictate them. How can they function in industries only partially unionized? And that is what the employers are after; to weaken the labor organizations so that they will fall to pieces of their own accord. When the labor power of the country is no longer a unit, or composed of several interlocking units, the way to a complete subjection of the worker is simple.

There is not an industry of importance in the United States that since the war has not suffered a general reduction in wages. There is not an industry in the country that is not squarely facing unemployment. There is not an industry in the country in which the "open shop" issue is not to be met. The employers are organized through the banking system to fight labor to a finish. And the workers are not organized.

Were unemployment the general thing, rather than the exception—for after all 4,000,000 is a small minority of the nation's population—there might be some grounds for expecting an overthrow of capitalism and the rebuilding of society upon an equitable foundation. But the fact is far otherwise. With the workers forced in the long run to accept wage reductions the submission gives the capitalists the weapon they need, a telling argument against starvation and the futility of the strike. This is being well illustrated in the case of the railroad workers.

Representatives of the railroad workers from time to time appear before the United States Railroad Labor Board to argue against any wage reductions. Their main line of argument is that the present living costs do not warrant any cuts, inasmuch as before the war wages were by no means commen-

surate with the cost of living. No decisions as yet have been made but a striking example of what the carriers may do in the event of, for them, adverse decisions, is the Atlanta, Birmingham and Atlantic Railway.

The A. B. & A. over a month ago posted up receivership notices and an order signed by a judge of the United States District Court in Atlanta announcing that wages had been reduced; this after the Railroad Labor Board had ruled it could not act in the controversy. This may be regarded in the light of a test case, especially in view of the threat of General Atterbury of the Pennsylvania railroad that the roads of the country were facing bankruptcy. And figures submitted by directors of the A. B. & A. showed that trackmen in the South are getting 90 cents a day.

Wages in the steel industry, employing over 200,000 men, have been cut. Coal mines in many places are closed. The Seamen's International is facing a crisis. The building trades are practically at a standstill, contractors preferring lockouts rather than continue to pay $1.25 an hour to mechanics, a by no means high wage. In the cotton belt imported Mexicans are starving.

The garment workers in the East are on strike, have been for several weeks, and the Amalgamated Clothing Workers face damage suits running into millions of dollars, filed by the manufacturers on the trumped-up charge of restraint of trade. Forty-thousand clothing workers in Chicago a month ago were compelled to accept a revision of wages downwards by a decision of the impartial chairman of the joint board of manufacturers and union representatives. The packing industry, it is safe to assume, will face a cut next fall when the packers will apply for the abrogation of the three-cornered agreement between them, the workers and the government. So bad have conditions become in Arizona that in many of the towns in that state men are offering themselves for three meals a day, willing to forego remuneration of any kind rather than face starvation.

International May Day found 315,000 men in important industries in the United States out on strike, as follows: Merchant marine workers, 140,000; paper mill workers, 25,000; printers and allied trades, 50,000; and building trades, 100,000. Wade H. Skinner, acting director-general of the United States Employment Service has this to say on unemployment:

"Despite popular belief that unemployment throughout the country has gradually lessened over the April period, actual figures compiled by the United States Employment Service of the department of labor reveal that conditions at the close of April are four per cent worse than at the close of March."

Iron and steel dullness has been practically responsible for much unemployment in Pennsylvania and Ohio. Plants show a decrease of employment of 30,055 or seven per cent for the month. In many cities continued stagnation in building trades, due to combined high costs of materials and unsettled wage controversies between employers and workers, has affected large numbers and in general retarded increased activity in other lines. This same dullness in building has been reflected in either suspended or part-time operations in western coast lumber producing regions.

According to William Green, secretary of the United Mine Workers, 150,000 miners are out of work, and 300,000 working only two or three days a week besides.

Yet while hundreds of thousands of men go hungry and beg for bread it is a fact that the country is richer than ever before. The per capita money circulation of the nation, according to recent statements put out by the treasury department, is $55.60 as compared with $31.71 on March 1, 1913. That represents an increase of 63 per cent, and in 1918 unemployment was the exception. Why, then, when the vaults of the United States treasury are bulging with gold and when there is more money in circulation than ever before, should men, women and children go half-starved and unclothed?

The case of the seamen will show that the very life of the unions is being threatened. Not only are the shipowners bent on breaking the backs of the unions but the government, of which Admiral Benson, as chairman of the United States Shipping Board, is the mouthpiece, is directly behind them.

Secretary of Labor J. J. Davis held half a dozen conferences in the first week of the struggle which began May 1 with the leaders on both sides. Admiral Benson, with 47 years of training as a naval officer, was not much interested in mending the break he had caused between the organized seamen and engineers and the shipowners. It was he who later announced that he would take over every one of the ships belonging to steamship lines that signed up with the unions at the old rate of wages. This hostile move of Benson's can be construed only in one way.

President Harding has not called upon the shipping board to be even neutral in the dispute, nor has the president undertaken seriously to settle the strike. He permits Benson, on the one hand, to try to smash the union by boycott upon fair employing companies, and on the other he permits Secretary Davis to plead with the Marine Engineers and Seamen to submit to a reduction in pay and a lowering of standards in the industry. If President Harding wants the strike settled on terms which will permit the unions to live he can settle it by a word to Benson at any moment. If he withholds that instruction it is because he chooses to experiment in breaking the maritime workers' organization; after the maritime workers who may be next to feel the mailed fist of "normalcy?"

Is there a remedy for conditions like these? Yes, if the workers are prepared for still harder times. A way out is indicated by District No. 2 of the United Mine Workers. John Brophy, president of

District No. 2, is issuing pamhlets advocating workers' control of the coal industry of the nation. Workers' education is one of the essentials, although to be sure, the workers may be the most highly educated persons in the world, culturally and industrially and socially, without thereby gaining control of industry. There is only one way, and the people of America must face the fact. Only the seizure by them of land and the industries can bring Americans back into their own. All the rest is opportunism, dabbling, compromise. How then are the workers to put themselves in the position of seizing and retaining what they seize?

More solidarity in the ranks of labor is the desideratum. When this is attained injunctions will be useless, and injunctions even now in Kansas are not the terrible instruments they are, say, in West Virginia. And the reason is not far to seek. The miners in Kansas have a closer organization. Another difficulty at present in the way of a workers' democracy in the United States—and it is one labor as a whole does not care to face—is the cumbersome machinery of trade unionism, splitting the unions into as many parts as there are crafts. Individual strikes should not at present be undertaken. Only when labor as a unit is willing to throw down its tools will a strike accomplish anything really worth while.

What does the strike do now beyond embarrassing the employers? It does nothing of a constructive nature. And therein lies the weakness of trade unionism. Trade unionism is on the defensive.

It is the unification of unionism that is wanted in America today. This, and a plan of action are the prime necessities. The mapping of industries, a knowledge of cost accounting, markets; these are some of the things with which labor must acquaint itself if ever it is to administer the nation's business intelligently.

Again, this information can only be obtained where an interlocking system of organization is possible. These are some of the preliminaries to the taking over of all the industries that shall be operated by all the workers.

Let every workingman and woman in America therefore do everything possible to help build the One Big Union of all the Workers.

# Organize!

**By G. Mills.**

IN WORKING class history it is a well-recognized fact that both employed and unemployed have been decidedly apathetic and ignorant.

For these failings the workers are not entirely to blame. Environment and economic pressure, through the capitalist machinery, and chloroform, through the press, are mainly responsible. This, however, is no excuse why the workers should any longer continue in this strain.

What is needed is organization to assist them in obtaining their emancipation as workers. However poor the average worker's education is, there is ample opportunity for our class to raise itself far above the mental and organized status that is in existence today.

It is obvious to the eyes of the workers that conditions socially and economically are decidedly at fault. Nothing short of a complete change in the constitution of international society will alter the worker's condition.

We must sacrifice all individualistic theories and aims to the cause of human betterment and universal emancipation. We must, when and where we can, constantly urge and agitate for a stronger and more substantial system of co-operation in our efforts. We of the unemployed must remember, if ever we obtain work again under the present system of society, that the question of our dehumanization is far from being obviated. We must not think that because conditions are temporarily better, that we have solved the problem of the poor, the idle parasitism of the rich. Unemployment must ever exist under capitalism. Often we reach a state of self-satisfaction and are thereby placing our ideals and visions of a natural life, further beyond our reach. We must not, however, think that even the most complete form of organization is the ultimate object. It is, rather, one of the means to an end. When once the workers have learned the secret of building a sound theory for the future on the ruins of their mistakes, nothing can impede their progress.

Here then lies the potent power of working class energy. Do not let us have any scruples in considering the capitalist tyrants who dominate our lives from the cradle to the grave. Remember: at all times these parasites of humanity have never had one tiny scruple regarding the lives of our comrades in the huge army of industrial wage slaves.

Then, fellow workers, let us make one final rally for the cause of justice, liberty and true freedom, with a system of society representing emancipation of a crushed and down-trodden class.

# A Heart to Heart Talk with Railway Workers

FELLOW WORKERS!

DO YOU remember what happened in the railroad yards and the railroad shops of the United States in the Spring of 1920?

It was just about a year and a half after the signing of the Armistice, which marked the end of the World War and the beginning of the collapse of world capitalism. The United States was still, as it is today, in the throes of what the capitalists call "reconstruction". Prices were the highest they had ever been, and they were going higher every day. The end was not in sight.

Did **wages** keep pace with the **high cost of living?** You, who drew the family pay envelope and paid the family bills, know they did not. Every time you went to the butcher shop to buy a mess of pork chops, every time you bought a new pair of overalls or a new jumper (you probably couldn't afford a new suit of clothes), you found that a little bit more had been tacked onto the price. But when pay day came, your envelope was just the same.

Meanwhile, your wife doubtless was going around with last year's dress and year-before-last's hat while Johnny's shoes were sticking out at the toes and there were holes in Mary's stockings.

What was the natural thing for you to do? Ask the Boss for more money, of course.

All through the war, you and your families had been getting along the best way you could, scimping and doing without the bare necessities of life, "borrowing from Peter to pay Paul," and going into debt, besides.

When you had hit the Boss for a raise in war time, as some of you did through your unions, he had appealed to your "patriotism"; he had begged you to "help win the war" by keeping on at the same old scale. You were told to "manage somehow," save all you can," and "buy more Liberty Bonds."

Being good citizens, you did as the Boss told you in this case. You did manage somehow to scrape through those two trying years.

But the war was over. Conditions in industry were "getting back to normal," but the long predicted drop in prices had not come. Instead, prices of everything—foodstuffs, clothing, shelter—were going higher all the time. It simply couldn't keep on much longer. Something had to be done.

The railroads were doing the biggest business in all their history. It is to be supposed that they were making more money than they had ever made before. With wages still practically what they were before the war, they must have been making the **biggest profits** they had ever made.

And so, having helped to win the war, having bought your quotas of Liberty Bonds, you decided to take the Boss at his word and, now that the war was over, hit him once more for a raise. (He had implied all through the war that, when the war was over, Labor would get its dues.)

You were union men. You believed in the power of organized labor. Naturally, it was through your unions that you proposed to put it up to the Boss.

But in most cases, you never got to the Boss. You never got any farther than your union heads.

What did your union chiefs tell you?

"We have contracts with the roads. Those contracts are sacred. We cannot violate them."

That is what they told you.

Most of your contracts had been made, either before the war, or before the after-the-war rise in prices and the cost of living, and most of them were long-time contracts. It was in vain you workers pointed out that conditions had changed since those contracts had been entered into, that prices had soared almost unbelievably, and that it was a practical impossibility for you to eke out any longer even a bare existence on the wages you were then receiving.

"We are sorry," your chiefs replied, "but there is absolutely nothing we can do. We cannot violate our sacred contracts with the roads."

The rank and file of your organizations **wanted to strike.** There is no doubt of that. But your "leaders" refused.

"There are more ways than one of killing a cat." If you couldn't strike, one thing you could do—you could at least quit your jobs. There was no law against that—though, it is true, under our modern system of legislation by court injunction, it is coming to be illegal for a man to quit his job, when the Boss, with all the weapons of a boss-controlled government and all the forces of "patriotic" prejudice at his command, wants him to go on working.

And so, that is just what you did do. You began, one by one, to **quit your jobs.** That was all the thing amounted to in the beginning.

The yardmen in the Chicago district started it. They began walking out, one by one, at first, then by hundreds, then, as the fever spread, by thousands.

"If we can make a living railroading, we'll make it some other way." That was what you heard on every side. Remember? Hundreds of your number did get jobs at something else. Hundreds to this day never have come back to their old jobs.

As the **walkout** spread, with yardmen and other railroad workers leaving their posts all over the country, the capitalistic newspapers at once came out with scareheads about the "strike," which was variously referred to as "outlaw," "runaway," "un-

authorized," "rebel," "illegal," and even "renegade" (though just what a "renegade" strike is, it would be hard for even a boss-press prostitute to explain.)

The renegades in the case were your brotherhood chiefs, the men whom you had chosen to voice your interests, but who, as you now know, had steadily betrayed them from the first. It was not long before the labor world was afforded the edifying spectacle of "labor leaders" casting in their lot openly with the bosses and using every means in their power to defeat the men who were fighting for the right to work and the right to live.

As the walkout, which soon became a real strike, progressed, the brotherhood chiefs, after conferring with the bosses to whom they had **sold out**, would send out daily, often hourly, bulletins to the kept press, "playing down" the strike, asserting that its "backbone is broken," that the men "are returning to work in increasing numbers," that "the strike will end by tomorrow night," etc., etc.

It was then you realized how completely you had been betrayed. You had known for some time, however, that your brotherhood chiefs were not playing square with you. Indeed, it was only when you had lost all hope of bettering your conditions through the efforts of your delegated representatives that you had quit, first your jobs, and then the "old-line" organizations.

At one of your strike meetings, held in Chicago, a speaker, referring to W. G. Lee, president of the Brotherhood of Railway Traimen, said:

"Bill Lee isn't working for you any more. He quit working for you long ago and signed up with the railroads."

The stand taken by your "leaders" was expressed by A. O. Wharton, secretary of the Railway Employes Department of the American Federation of Labor, as follows:

"The American Federation of Labor stands by its contracts. Its affiliated organizations will take no part in unauthorized strikes. The eight international unions composing the railway employes department are working under contracts and we expect to fulfill those contracts as we expect the railroad companies to fulfill theirs."

At this point, Mr. Wharton might have been asked one or two pertinent questions:

1. Why shouldn't the Boss keep his side of the contract, when he has **the best of the bargain?**

2. How long would he keep it, if he **didn't** have the best of the bargain?

Is the case of an employer breaking his contract with labor an unheard of thing?

One thing we workers usually forget is the fact that the Boss **never guarantees us a job.** The most he ever does is to guarantee us a certain wage, **provided he has a job to give us.**

All contracts between us and the Boss, fellow worker, are onesided. Certainly, such unforeseen circumstances as the almost unbelievable rise in the cost of living attendant upon the World War are enough to justify us in breaking our contract with the Boss, when that contract calls for us to go on working at a wage which does not meet the new conditions and on which we can scarcely exist.

The **right to live** and the **right to work,** the right of the worker to **a living wage** are fundamental rights. They take precedence over all other rights and contracts. As John Grunau, "outlaw" leader, told his followers:

"You simply quit your jobs because you weren't getting enough to live on. The demands we have made are not unreasonable, because for us living costs have been advancing and the wages of other workers have risen, but we have not received enough to live on."

Having quit your jobs, you rail workers began resigning from the brotherhoods. That was your next logical step. Then came the question: Since we are no longer members of the old brotherhoods, we are no longer bound by their contracts: why, then, should we not form a new union of our own and call a strike?

And so, the C. Y. A. (Chicago Yardmen's Association) was born.

By this time, your walkout had become nation-wide. The transportation system of the country had been practically tied up; a general paralysis of industry was threatened; food and fuel supplies were endangered. On this point, the Boss Press was becoming more bitter every day. Finally, the thing which might have been expected happened. Forced by "public opinion"—that is, by kept-press opinion, which is nothing more nor less than boss opinion—the United States government—in this case, President Wilson and Attorney General A. Mitchell Palmer—intervened.

You know what happened then. Were you surprised? You shouldn't have been.

"Federal intervention," in one form or other, a logical outgrowth of the anti-strike injunctions which started individually with one or two high-handed judges, has now become so common as no longer to create surprise in the minds of the working class. They feel that it is scarcely worth while to voice a protest any more. It is something they have come to expect in their war with the master class. They know that, in that war, the boss is going to use every weapon at his disposal, just as they themselves will do, if they are wise. They know that, under a boss-controlled government, every weapon of that government—the policeman's club, the militiaman's bullet and bayonet, the court injunction—everything up to the treacherous Federal Board of Arbitration—is going to be used against them.

And so, you yardmen probably were not very much surprised when you heard that Federal warrants had been sworn out for thirty leaders of your "outlaw" strike. Twenty-three of them were arrested in Chicago. The charges preferred against them were: violation of the Sherman Act, through

interference with inter-state shipments; and violation of the Lever Act, through interference with the food and fuel supply of the nation. The Chicago "raids" followed a conference held in Washington between President Wilson and Attorney General Palmer, following which Special Assistant Attorney General Harry Mitchell was dispatched to Chicago. The latter, on his arrival in Chicago, gave out this statement:

"These men have interfered with the health of the entire nation by causing its food shipments to be delayed and stopped. They have caused industry to stop because of a lack of fuel, and we are convinced there was a conspiracy to aim a blow at the government."

Because, with your families to support, you had refused to go on working for a wage on which you could not feed and clothe them, but had decided to find better paying work elsewhere, you were, according to Mr. Mitchell, "aiming a blow at the government" and were guilty of "conspiracy." The essential falseness of the government's position in the whole matter was evident from this absurd charge.

**Any one who demands anything that may mean a reduction of the Bosses' profits is a "conspirator" these days.**

After all the others had been released on bond, seven of your leaders who were still being held were released without bond by United States Commissioner Lewis F. Mason, who told them:

"I am about to do an unheard-of thing. I have heard today that you are good American citizens, that in the present walkout you have endeavored to prevent violence, and that you have conducted yourselves as gentlemen throughout. This conduct urges me to leniency."

What Commissioner Mason says he had learned is true. Despite the lying headlines with stories to match in the prostitute press, there probably never was a strike conducted with less violence.

The real reason, however, for Commissioner Mason's act was that the government was **not sure** of its position in the matter.

It was not until some four months later—in August (the walkout had occurred in April)—that a Federal grand jury returned indictments against a number of your leaders.

By this time, you had virtually won your fight. You had at once won and lost. The yardmen's strike was won as most pitched battles in the class war are won: The workers gained, by great loss and sacrifice, a few hard-earned concessions from the enemy.

The "public" was beginning to be afraid it would go hungry. Bosses in other lines were losing some of their precious profits. And so, pressure was brought to bear upon President Wilson to rush through the long-delayed appointment of the railway labor board, which Congress had authorized. Even so reactionary an anti-labor organization as the Illinois Manufacturers' Association urged the newly appointed board to "consider the demands of the rebels."

The result was, railway workers all over the country were eventually given a retroactive wage increase. It was not what you had asked, it was not what you desperately needed, but still, it was something. In this sense, fellow workers of the yards, your strike was a victory.

Your leader, John Grunau, issued a statement declaring that the strike had resulted in a "great victory." But was it a great victory?

You accomplished much. You forced President Wilson to do several things he did not want to do. You received your increase before the time set by law. But—

In each district you went back on the best terms you could secure. Most of you were not given your seniority rights at first. Some of you the bosses of the roads would not take back on any terms. These, as usual, were the ones who had been a little bit too prominent during the strike.

If you are one of the fortunate ones who went back at the increased rate of pay and who have by now, perhaps, had your seniority rights restored, don't forget the men on the blacklist, many of whom are now walking the streets, looking for a job. They were the men who were responsible for your raise.

Fellow workers of the roads, are you going to sit down quietly and be satisfied with this sort of "victory"? What are you going to do when wages and working conditions again become unbearable, as they are sure to become, sooner or later? What are you going to do when the **next fight** comes? For there will always be a next fight. As long as men work for a boss, there will be a constant war between the workers and the Boss. You are enjoying a truce at present. You and the Boss have signed an armistice. But it wan't last forever. It can't.

What was it defeated you in this strike—for, after all, **weren't you defeated?**

It was not alone Federal "intervention," or the interference of boss-controlled government, which led to the doubtfulness of your victory, though that was a powerful weapon, as it always is, in the hands of the Boss.

In the first place, you were betrayed by your own constituted "leaders" in the old-line craft-union brotherhoods. (Do you know that some of your chiefs were receiving salaries as high as $15,000 a year in addition to the graft which many labor leaders find it so hard to resist?)

You were betrayed, too, by "organized labor," which has not yet learned that "an injury to one is an injury to all."

But most of all, you were betrayed by **your fellow workers in the same industry.** As always in the history of strikes, where workers are "organized" along old, out-worn craft-union lines, we saw members of one union scabbing on another. Though their fortunes are bound up with the strikers, the leaders of one group, and only too often the

rank and file, are almost always ready to turn fink on another. This for the reason that they are actuated by a selfish desire to grab for themselves whatever petty crumbs they can from the bosses' table, not stopping to think that some day the tables will be turned. And so it goes, around and around, in a vicious circle, labor getting nowhere, and the Boss always getting the best of it.

The Boss knows this will happen. He counts on it. It's a part of his game to play off one union group against another.

The thinking vanguard of labor long ago discovered the truth of the principle, "In union there is strength." The result was the craft-union labor organization. The thing which a large percentage of labor—including "organized" labor—has yet to realize is that—

**The greater the union the greater the strength.**

Here, fellow worker, the Boss has beat you to it. There was a time when he was afraid of "organized labor" (that is, craft-unions). He's not very much afraid of such organizations any more. He has learned how to beat the game by going you workers one better on organization. The Boss has learned the lesson of the **One Big Union**, and that is the lesson **you** will have to learn. **Capital** today is organized along the lines of national and international **solidarity.** How long will it take **labor** to find out that it has got to organize on the same lines?

What is meant by the **One Big Union?** It means that **all the workers in an industry** must be organized in the **same union**, and that there must be a solid, democratically centralized organization of **all the workers in all industries.**

It means, to take your own ease, that if the switchmen and yardmen go out on strike, or quit their jobs and walk out as a body, the engineers and firemen must do the same. So must the conductors, brakemen, shop craftsmen, machinists, blacksmiths, boiler makers, electricians, carmen, telegraphers, maintenance-of-way men, railway clerks, freight-handlers, signalmen, stationary firemen and oilers, sheet metal workers—all the workers employed by the road or roads.

It means, too, that if any of these groups or any of their members stick to their jobs, they are seabbing on the others.

It means, finally, that no group or individual can dicker with the Boss as to terms of going back, until **all** are ready to go back.

How long, fellow worker, do you think the Boss could hold out against such a strike as that?

How long do you think the **boss class** could hold out, if the **solid working class** went out on strike?

Such a strike, in an industry or on a larger scale, would be a supreme test of strength. And there would not be much doubt as to the eventual outcome, for you, the workers of the world, possess the **economic strength of the world**, a strength greater even than that of the Boss.

In your strike, railway workers, what would have happened if, for example, the shopmen alone had **stuck it out with you?** As it was, some of them went out, only to **accept the Bosses' bribes** and go back. Others considered going out, but they, too, fell for a few crumbs in the way of concessions and promises—chiefly promises. The same was true of the railway clerks, the telegraphers, and other groups.

Why, fellow worker, you might just as well try to fight it out alone and single-handed, as the wage earners did in the old days, as to rely on such an undependable weapon as the craft-union form of organization. The latter was all right once, but it has served its time. It's out of date now. You might as well take a rusty old rifle and go out and try to fight a battalion of modern machine guns.

The Boss is wise. He's not taking any chances. He's got the latest, most up-to-date weapon, the **One Big Union of Capital.**

Workers, **arm yourselves industrially!**

If the Boss can't beat you by the easiest way, that of pitting one craft-union against another, he'll **beat you from within** by **betraying you through your own officials,** who will **"outlaw"** your strike. It is a comparatively simple and easy thing for the "leaders" to betray the workers in a single craft. It is an altogether different thing when it comes to betraying all the workers in an industry—much more, all the workers in all industries. For One-Big-Unionism means **constant democratic rank and file control.**

Why is it, fellow worker, that the Boss is so anxious to have you believe all sorts of stories about the I. W. W. (the Industrial Workers of the World)? Why, through the lying boss-press, is he always trying to make out that the "Wobblies" are such terrible fellows, accusing them of everything from murder and treason down? Why is he always appealing to your patriotic prejudice in an effort to crush them, as was manifested particularly during the war?

It is simply the **principle of One-Big-Unionism** for which the I. W. W. stands. The Boss is deathly afraid of that. He knows that, if the workers once get that into their heads, it is the beginning of the end for him.

**The Boss doesn't want the workers to arm themselves with his own weapon.**

However, fellow worker, a little reading of I. W. W. literature, a little acquintanee with I. W. W. organizers and the rank and file of the organization, and above all, membership in the organization would soon serve to open your eyes.

Already, you've got the One Big Union bee in your bonnet. You may not know it, but you have. Already, if you listen closely enough, you can hear it buzzing around in the yards and the shops.

Already, there has been some talk of the C. Y. A., the machinists and some other groups that have

had the A. F. of L. blinders struck from their eyes, uniting to form a One Big Union of their own.

But why another O. B. U., when you've got ready to hand an organization which for years, under almost insurmountable obstacles, has been functioning with marvelous efficiency?

That organization is the I. W. W.

The I. W. W. welcomes into its ranks any member of the working class or any organization of such members that can subscribe to its principles.

But, you say, if we join the I. W. W., it will give us a bad name.

Suposing it does, fellow worker. Could you have had any worse name than you had during your "outlaw" strike? Could you have had a worse deal, if you had been members of the I. W. W.?

After all, which is more important, to keep a good name with the Boss and get kicked out of a job every time you ask for a raise, or to get a bad name with the Boss, if necessary, but to GET WHAT YOU WANT?

Think it over, fellow worker.

# On the South Side

**By Jan Rus**

BEHIND the mills on Carson Street and reached by way of an iron bridge spanning the railroad tracks and an unlighted tunnel is situated a settlement of workers, employed for the most part either on the railroad or in the steel plants. The closely built wooden houses and hovels are altogether hidden from civilization (if this can be called civilizaton, this grime and filth) fringed as they are on the one side by the low-lying, ragged, barren hills and on the other by the high railroad wall and roundhouse wherein the engines emit their foul smoke which hangs between the strcets and the sky like a pall, dimming the sun by day and the stars by night. Even those living on this side of the tracks are strangers to the settlement, which is regarded as a kind of No-man's-land, the iron-way seeming to form a barrier which is never crossed; a veritable Great Divide. Indeed, as most of the inhabitants are of foreign birth, they form a community whose ways are alien to American ways. Ask an American for directions to a particular street there and he will reply: "Gosh, don't ask me; them furriners name their streets after themselves." These Poles and Czechs and Slavs live apart.

The settlement itself by night and by day is ugly. The streets are narrow and unpaved, boardwalks serving as a protection from the unevenness of the ground. Built against these forlorn-looking hillsides the shacks ramble in all directions. It seems as if the most advantageous spot had been selected and there a foundation laid upon which the structure itself was dumped. The houses are continually overlaid by the soot from the engines and particles of steel, sparkling like so many diamonds in the sun, deposited by the vomiting stacks. They are like so many anthills, inhabited as they are by innumerable children and their elders and boarders.

An inspection would reveal that the beds are never unoccupied. As soon as those on "dayshift" leave, their places are taken by men returning from work. The womenfolk are constantly on the go providing for these breadwinners. Only the children know the meaning of play as they frisk about like so many intractable young animals and shout to one another before bedtime.

It is at night that the loneliness of the settlement, dropped here on the outskirts of a hive of a city, becomes most apparent; that its aspect of being shut off altogether from the larger world that embraces the totality of its existence in steel and iron and coal is revealed in its strange hideousness. Should it be approached from the hilly background, from above the dirt and smoke, the city on the other side of the river would be seen to be stretched out in row upon row of twinkling lights, beckoning, alluring, picturesque, although the initiated would know that these lights indicate mean, narrow streets and hide grime-covered buildings and homes. Trailing slowly down the stream, oily and discolored, a moving ribbon of light, with here and there a speck of green and red, dimly outlines a stern wheeler. On the bridge the street cars are seen to pass in a broken procession. Over on the Northside a sky-sign flashes its message in the dark. To the south the lessening array of twinkling lights is proof that the suburbs are being reached. Closer still, on this side of the river, the Southside, where the bigger mills are situated, the steel industry is in full blast. Huge tongues of scarlet and yellow flames seem to lick up and up into the serene, star-spangled sky; they die down and in a moment spring into life. All ths is attended by the noises of furnace and engine, the attuned ear being able to detect even the various processes thru which the metal is passing.

Then the deseent begins. First the lights on the far bank are lost to sight. Less and less is seen of the flames. These, too, vanish. Further down the rickety wooden steps, whieh with the exeeption of an upward trudging figure earrying a tin dinner pail, will be traversed alone; the darkened houses beyond the railroad grow seareely diseernable in the fog that clings to the ground. Only in the distanee will be seen the staeks that everlastingly pour forth their filthy, pea-soup eolored smoke. Here, below, the first sign of life is the barking of a eur straining at its ehains as it hears the shuffling of feet on the boardwalk. The baying is the signal for a general chorus and the stranger's steps are heralded to the very end of the pathway and the straggling houses that are prevented from extending themselves by the unproteeted iron rails along which a ereaking freight train is being shunted to the aeeompaniment of hoarse shouts and whistles and the waving of lanterns.

If the evening is still groups of men squatting on their doorsteps are passed. Their speeeh for the time being is stopped as they turn their heads to see what the stranger is about. Sueh an intrusion on their privaey—one feels that it is privaey that is being violated for here no evidenees of publie ownership are to be found—is unknown. The group is perhaps approaehed and information as to where so-and-so lives asked. The men glance at eaeh other as if seeking to find from a eompanion's eyes what this portends. It is almost as if a feeling of fear were being engendered by the question. Sign language is brought into play and with a few words whose aeeents betray the speaker's nativity direetions are given. Further on and from behind shuttered windows eomes a babble of many tongues. A woman leans from an upper story eonversing with a friend who stands aside to let the visitor pass. His presenee has a dampening effeet on their talk, whieh ceases until he is well without earshot..

From some of the dwellings issue the smell of deeayed garbage and the fetid odor of stale food and yesterday's eooking. Behind and around hangs an atmosphere of depression and gloom. Always there is the distant boom and throb of the mills. They are the mainspring of the community. The only link with the outside world is the eorner grocery. There are men who never have crossed over to the city from one year's end to another. Humans in this plaee are so many units. They do their allotted tasks for the most part uneomplainingly. To earn suffieient to keep body and soul together; that is the only thought that urges them on. For the rest . . . They hardly, if ever, move out of their small world. Their wives buy all the neeessities of life from the groeery; their children seldom deviate from the orbit between home and sehool, home and ehureh, sehool and home, ehureh and home, unless it may be now and then to visit a movie. Life is a monotone of gray. It is less than primitive.

Onee, in a deeade, a strike is called, by whom they seareely know. Why? They will tell you it is to get more pay. Yet a strike, tho it be lost, as it invariably is, takes these toilers, these foreigners, to another mode of existenee. For a whole month, if they hold out so long, they know the meaning of home-life and its eomforts, sueh as they are. They ean play with their ehildren; they ean talk long hours with their friends. They live—for a time! What trifling savings had been aeeumulated are eaten up and hunger drives them baek to the unending grind.

Or perhaps the evenness of events is interrupted by a seandal. A woman runs away with another man, most likely with a boarder who had been doing "dayshift" while her husband worked at night. Then the women gather and expostulate, forgetting even their pressing household duties in the enjoyment of another's daring. The ehildren for the time being are left to themselves. Tiring of the amour the woman may return; and the family life is resumed as if nothing had intervened. Failing this the man will take to himself another wife, legally or by mutual eonsent. In any ease the community life proceeds, birth and death raising hardly a flurry in this harrowing environment, altho eaeh furnishes some with its own exeitement. More disturbing still will be the sudden news that one of the have elaimed another vietim and the mills have men has met with an aeeident. The railroad will ended the aetivity of another unit; their plaees are immediately filled by eager souls waiting for the opportunity to step into another's shoes, heedless of attendant dangers.

On the other side of the railroad after the damp, steneh-filled tunnel has been negotiated and the bridge erossed the high railroad wall shuts all from view. For the easual passer-by the settlement is non-existent.

# The Ownerless Slaves

**By Lestor.**

THE gaunt wolf of unemployment is stalking throughout the length and breadth of the capitalist world, leaving starvation, misery and death in its train. In every city of the North American continent, in Australia, in Britain, and in all capitalist Europe the hideous creature exists. Men and women are walking around like ghouls, asking charity, and processions of workless men and women are to be met everywhere, begging, "by permission of the police."

A few weeks ago, in the city of Vancouver, British Columbia, a meeting of unemployed numbering 1,000, were asked to vote for a resolution which reads as follows:—

"That this meeting of unemployed desires to protest most emphatically against the proposal of Lloyd George, to bring large numbers of the unemployed of Britain into this country. We consider the unemployed problem in Canada should first be solved, before any attempt is made to bring more immigrants, etc."

The unemployed refused to vote for the resolution, and when it was submitted, it was unanimously turned down. The cry was: "Let them all come. It will make no difference to the problem whether they are here or there, for it is an international problem.'

This was the correct stand to take, because capitalism is international, and under capitalism, unemployment is inevitable.

What is the cause of the trouble?

Everybody knows that the British working man is free. He feels that every time he sings "Rule Britannia," and so he is—free from property. He doesn't own anything, and in order to live, he sells himself. He can call himself free if he chooses, but what was there ever to slavery anyhow? The slave owner could command the services of his slave and take from him what he produced.

Is there any difference now?

When the master's voice calls in the shape of a steam whistle, you know that means you, if you are wanted.

The capitalist can command your services, and the failure to comply means death from starvation. The moment you step on the job you begin to deliver what you have sold: the energy of your body, and when leaving the place where you have been employed, you leave the wealth you have produced in the master's possession. It is plain that you would not get the loan of a job if the employer couldn't make something out of you. You must produce more than your wages, and so you do, much more.

Notice all those people who live in wealth and affluence without working. They are never employed, and yet they live on the best. It all comes out of your hide. The capitalist, however, cannot do exactly as he choses; he is in business for profit, and profits are not made until goods are sold. If you produce four articles and only get enough mony to buy back one, three of those articles must remain on the market unsold.

This is the position of Britain.

The goods produced by the working class cannot be sold to the working class, because it has not received enough in wages to enable it to buy back what it has produced. Foreign markets have previously enabled the capitalist class to keep going; but it is becoming harder and harder to find foreign markets, because as soon as they are found, they become competitors, owing to the fact that they start the same system in these foreign countries.

There was a time when Britain was practically the only capitalist country, but look around you now; France, Germany, the United States, Japan, and a host of others have all become capitalist countries, and they are all seeking foreign markets, and although a great war has just been fought as a result of the fact that all the capitalist nations had to expand and there was not room for them to expand except at each other's expense, the problem is just as great as ever.

What is to be done?

It is either war, war, and more war, or revolution. The capitalists want war; the class-conscious worker, revolution. A revolution is a transformation. It does not necessarily imply bloodshed, but it means a fundamental change in wealth production and distribution. We must bring about the change or perish. This is the historic mission of our class.

If you go on to any job where large numbers of men are employed, you will see that every man is co-operating with every other man to produce wealth.

There is a co-operative production today. When the wealth is produced, however, it is not the property of the producers. Those who obtain possession of it have to sell it because it is no good to them personally, and on the market they are in competition with each other. "Our goods are the best." "Buy from us," etc. In the workshop and factory, co-operation; on the market, pandemonium and anarchy, with war as the result.

"The forces of production have risen in revolt against the forces of exchange."

The revolution that is necessary, is to bring the forces of distribution into harmony with the co-operative methods of production. The working class will be compelled to take power from the hands of the master class in order to effect this fundamental change. The line of demarcation between the master class and the working class is ownership. This is the class struggle, and this is where you can line up with your class. The capitalist keeps the worker in bondage because he owns those things that are necessary to the worker's existence. The class-conscious working man, therefore, whether employed or unemployed, whatever his race or color, is lined up with every other worker who stands for the "working class ownership of the means of life." Line up with your class!

Great Britain was the first country in capitalism, and the impotency and helplessness of her statesmen is a sign that the end is near.

Another factor is this vast army of workless men and women. Against the united advance of the working class, the capitalist class is absolutely helpless. The battle cry is: "All power to the working class," and the signs of the times indicate that in this generation the worker will enter into possession of his own. The working men in all countries are uniting for the last great struggle. Workers of Great Britain, you are lagging behind!

Forward! Your place is in the van.

Capitalism is played out.

The end is at hand.

Let the working class of the world now strike one united blow at its enemy, and capitalism is down and out forever.

Reprinted from "Out of Work," published by the London District Council of Unemployed.

# "Go Find a Master"

### A FAIRY TALE FOR WORKING GIRLS

**By a Rebel Girl**

"HUNT the Thimble" is an old game, as old perhaps as thimbles themselves—and it's quite probable that before the days of thimbles it was known to prehistoric children as "Hunt the Bone"—who knows?

It has always been the children who played "Hunt the Thimble" —or "Hunt the Bone"—but when they grew up and felt too old and dignified to run around after thimbles and bones they still wanted to hunt something because it was the one thing they had really learned well when they were young, so the grown men got together and invented a new game called "Hunt the Job"—that is, the men called it "Hunt the Job" and the women called it "Go Find a Master."

At first the men took it all as a joke, and only played at it sometimes, when they felt like it, but presently some of them began to take it quite seriously and to play all day long.

Then one day when they were all sitting in front of the cave smoking and talking and the women were inside the cave making soup for supper, one of the men said:

" 'Hunt the Job' is a good game, but none of you take it seriously enough. Why not learn how to play it properly. Let's take half a dozen clever men and let them be masters all the time—then they'll learn how to run fast and play all sorts of tricks and we'll have lots of fun chasing them, and in order to make it worth their while to be chased all the time we others could easily get together and pay them handsomely for their trouble."

This man's name was Crafty, and he had a little body and a big head, and they all looked up to him because they thought he was so much cleverer than the rest, and when he saw how pleased they were with his suggestion, his little black eyes began to shine, and he licked his thin, red lips softly with the tip of his tongue like a cat, and said:

"If you chaps really think it's a good idea, I'd be willing to do you a kindness and be your first master."

So they all shouted with pleasure and said what a fine fellow he was, and beat their hairy hands on the backs of their bone plates and made no end of a fuss of him—all except two men whose names were Courage and Foresight, and they knocked Courage on the top of the head with a stone battle axe, and put a knife into Foresight's heart, and that was the end of them!

Then one man whom they called Pinhead because he had a little head and a big body, got up and said:

"Gentlemen"—the ladies were not included in those days, they came later— "Gentlemen, I'm sure we all feel most grateful to dear Crafty for offering us his services. I suggest that we accept his kind offer and make him our first master, choosing three or four other worthy men to act in a like capacity, and that each man amongst us give a portion of everything that is his to pay our masters for their trouble."

Then they chose the other masters and made speeches and got horribly drunk to celebrate, and

the Chief Stenographer in Heaven took it all down in shorthand, and sat up all night reading it off to the Chief Recorder, who took down an enormous book marked "Mankind" and, resting it up against a cloud, wrote until he had horrible cramps in his hands and arms, which were of course partly due to the dampness of the other cloud he was sitting on. However, it was the biggest entry he had yet made in that book marked "Mankind."

Now for some time the men had a great time playing "Hunt the Job" or "Go Find a Master." Then they began to grumble amongst themselves. Lots of them thought it would be much more fun to be masters themselves, but when they mentioned this the masters just laughed and said that was quite impossible, because there was only room for a very few such highly specialized persons.

So day by day the masters grew fatter and craftier, and somehow their children looked prettier and seemed cleverer because they never had to do any work, and it began to be a terrible burden on the others to pay them enough for their services. So the Men killed Pinhead because he had first approved of Crafty's suggestion, but that didn't do a bit of good because by this time they'd got so used to playing "Hunt the Job" and "Go Find a Master" that they couldn't live without it, and so they went right on grumbling and playing, and playing and grumbling, and always giving the masters the biggest part of everything they had.

At last the masters got so proud of themselves that they moved to another cave with their wives and all their children and belongings, and after that the two sides never talked to each other except when they were playing, and their children never spoke together at all until they got old enough to join in the game.

Then at last the women looked up from the soup pot they were always stirring and began to ask questions. Then they told the men they had muddled things badly, and that they could do ever so much better themselves, and because the women were right the men got very angry and said:

"All right, if you know so much better than we do, come on out and help us play 'Go Find a Master' . . ."

* * * * *

That is why I have been going from office to office this week, listening to the same old phrase:

"No, we have no vacancies. If you care to fill out an application form . . ."

Girls, Working Girls, we haven't done any better than the men! Let's talk to them about it. Let's realize once and for all that tho in the work we do our hands may stay white and clean we are no less slaves than the man who sweeps the crossing or who tends the machine till his hands are black with grease and dirt and covered with half-healed wounds and jagged scars. Let's add our voice to theirs. Let's throw in our strength with theirs. Let's get together, men and women, boys and girls, and put an end forever to the oldest, cruellest and most ruthless game that was ever played.

# The Truth

WITH the press, platform and pulpit resounding to the lies which are told to deceive the people, it is well that we should consider the truth.

What are the vital things for us?

We are not concerned about who won the war; we are far more concerned about who is getting the butter.

We are not concerned about indemnities which will not go into our pockets, but will be used to still further increase misery and unemployment at home, while adding to the luxury of the rich idle class.

How can the unemployed question be solved? That is one of the most vital things to us.

This is the truth, and it is worth remembering.—

Unemployment will never be solved until the working class takes control of the country—of the whole of industry—and runs things in its own interests.

There you have the plain, blunt, honest truth, and nobody can get around it.

If we are wrong in stating this, the capitalists can easily show that we are wrong by solving the unemployment question. There is the chance for them.

We claim that they are so greedy and corrupt and that their industrial system is so rotten, that it condemns thousands of our class to unemployment and misery and the rest to toil and insecurity.

The capitalists are in control. Let them reply to our challenge by dealing with the problem if they can.

They will not even try. Congressmen cannnot deal with unemployment. Individually they are too greedy to do anything except through fear; collectively they admit their incapacity. They will not respond to our challenge to solve the problem which their system has created.

# WOBBLES

PATTY MeQuiek was telling us the other day that he got a job working for a Seventh Day Adventist, and got "bowled out" for reporting to work on Saturday. Patty thinks the Adventists have the greatest religion on the earth, and is setting out as a missionary among the employers.

Go to it, Fellow Worker! We're with you to a man! We are not only going to eonvert the employers to a five-day work week for the workers but for themselves as well!

**
*

At the Trade Union Congress in London a few weeks ago two delegates were overheard in eonversation.

One, an eleetrieian, said to the other, a miner: "Your program is all "ums", you have maximum, minimum, and datum, we've only got one."

Said the miner: "What's that?"

The electrician: "—— um.'

**
*

Have pity on "ye poor editors"! Here is part of a letter received from a fellow who writes bad prose about sex and insanity and dubs it "poetry." In our opinion it is the ehoieest pieee of writing he has produced so far:

"But what's the use arguing with a dumb ass and counter-revolutionist like yourself? One of these days I'm going to pull your damned bourgeois hide off and taek it to the barn-door for the flies to peek at."

**
*

A rieh New England real estate dealer, noted for his high-handed way of doing business, died recently and a monument with the following epitaph was set up at the head of his tomb:

"Strangers, behold, as you pass by,
As you are now, so onee was I,
Where I am now, there will you be,
Prepare for death and follow me."

A week later somebody had written underneath:

"To follow you I'm not eontent
Until I find which way you went."

**JOY RIDING**

Don't boast that you use your head instead of your hands. Woodpeekers do that right along.

# "High Spots" of the Thirteenth I. W. W. Convention

**Compiled by Roy Brown.**

THE Thirteenth Convention of the Industrial Workers of the World was called to order on May 9th, 1921, at 9 A. M., by Roy Brown, the Chairman of the General Executive Board.

### Seating of Delegates

E. W. Latchem was elected temporary chairman and J. J. McMurphy temporary recording secretary, after which the Convention went into the general routine of electing a Credentials Committee and Rules Committee. The Convention then adjourned until the Credentials Committee could bring in its report.

The afternoon session was called to order at 1.40 P. M. to hear the report of the Credentials Committee. The following is the report:

List of uncontested delegates and vote of each:

**Agricultural Workers' Industrial Union No. 110**
Albert Bare 28 — Ed Donnelly 28 — Thos. Connors 28 — Tom Wallace 28 — J. H. Snyder 28

**Lumber Workers' Industrial Union No. 120**
Nels Olson 59.6 — Dan Murray 59.6 — Chas. Craig 59.6 — W. Smith 59.6 — J. J. McMurphy 59.6

**Metal and Coal Mine Workers Industrial Unions No. 210 and 220**
Thos. Bones 50 — Ben Decarso 50

**General Construction Workers' Industrial Union No. 310**
Ed Archibald 27.6 — Jesse Sigal 27.6 — W. W. White 27.6 — P. Ryan 27.6 — Roy Leonard 27.6

**Building Construction Workers' Industrial Union No. 330**
John Jackson 8

**Metal and Machinery Workers' Industrial Union No. 440**
Fred Bowerman 22 — Wm. Stockinger 22 — Frank Peterson 22

**Printing and Publishing Workers' Industrial Union No. 450**
Mm. Kinsberg 4

**Marine Transport Workers' Industrial Union No. 510**
J. Michaelson 14

**Railroad Workers' Industrial Union No. 520**
E. W. Latchem 14 — M. Carlson 14

**Public Utilities Workers' Industrial Union No. 650**
A. J. Carroll 2

They were all seated with the exception of A. J. Carroll of the Public Utility Workers' Industrial Union. Carroll was not seated on account of not being a wage worker.

Then came up the proposition of whether or not they would seat the three delegates representing the Philadelphia Branch of the Marine Transport Workers. On motion they were given a voice but no vote in discussing the matter of the Philadelphia Suspension.

### Election of Committees

After this the convention went into permanent session and elected the temporary chairman E. W. Latchem as permanent chairman and Tom Wallace as permanent recording secretary.

The Rules Committee reported that they had drawn up a set of 21 rules to govern the Convention, practically all of which were accepted, with the exception of a few, which were amended. The rest of the day and most of the next day were taken up in the election of various committees to attend to the business of the Convention.

### Collection for Class War Prisoners.

On the afternoon of the second day a motion was brought up to elect a committee of three to send telegrams of cheer to the class war prisoners. Upon argument that the prisoners could not eat the telegrams and that this would only be giving good money to the capitalists, in paying for the telegrams, the motion was made to take up a collection for the benefit of the class war prisoners, which was carried. The sum of $53.00 was collected to buy little necessities for the boys in jail.

### The Suspension by the G. E. B. of the Philadelphia M. T. W. Branch and of Bakers' Local No. 46 Sustained by the Convention.

The next question on the floor was the suspension of the Philadelphia M. T. W. Branch. The Philadelphia Branch was charged with violating Article 6, Section 3, of the Constitution, by charging a $25.00 initiation fee. There was a lengthy debate on this question, it being argued from every angle from the afternoon of the second day until the morning of the 4th day. The motion was made "that we sustain the General Executive Board for suspending the Philadelphia Branch of I. U. No. 510 for not living up to the Constitution". The motion was carried with 20 yeas and 3 nos. On the demand of a roll call vote, the motion was carried by 774 yeas and 96 nos,—26 votes not voting.

The same action was taken with regard to the New York Bakers, known as Local 46. They were also charged with violating the constitution with regards to high initiation fees, which were $15.00.

**Report of Defense Secretary.**

John Martin, Secretary of General Defense, gave a review of the past activities of the Defense. He reported that a large number of fellow workers were still in penitentiaries and that funds were needed to give those fellow workers and their families relief. He also reported the denial by the U. S. Supreme Court of a review of the Chicago case, and that the defendants who were out on bond had been ordered back to the penitentiary. He stated that "Out of the 46 fellow workers who had been released on bonds, all reported at the penitentiary with the exception of the following nine: Wm. D. Haywood, Vladimir Lossieff, J. H. Beyer, Herbert McCutcheon, Grover H. Perry, Charles Rothfisher, Leo. Laukki, Fred Jaakola and George Andreytchine. Haywood, according to the reports received, has left the country and it now in Russia. His reasons for leaving the United States are unknown to me as I had not the least knowledge of his departure, nor even of his intention of taking such a step, until the day I was informed by a Federated Press reporter that he was in Russia. The whereabouts of the others above mentioned are not known and it is to be expected that the government will in the near future forfeit their bonds".

Owing to Fellow Worker Martin having to return to Leavenworth, George Williams was appointed as his successor to the secretaryship of the General Defense Committee. Williams reported the following:

"According to a list compiled by Fellow Worker Martin from accounts of former secretaries, a total of $41,342.27 was collected as loans to the Bail & Bond Fund and a total of $23,228.91 refunded. In addition to the above amount of $23.228.91, the sum of $16,789.45 was put up as bail in the form of cash and Liberty Bonds. This amount ($16,789.45), as near as I can tell by the records, represents cash originally collected by the Defense Committee and used to buy Liberty Bonds for bail and distributed in the following manner:

| | |
|---|---|
| E. J. McCutchion | $ 4,000.00 |
| J. H. Beyer | 10,000.00 |
| Laukki and Jaakkola | 600.00 |
| V. Lossieff | 564.45 |
| Wm. D. Haywood | 1,625.00 |

Fellow worker Williams offered the following suggestions for reimbursing the bond money:

"That the General Executive Board, after the approximate shortage has been definitely established, shall be empowered by this Convention to issue a compulsory assessment stamp, of whatever denomination would be advisable under the circumstances, and the funds from this source be kept exclusively for the purpose of paying back anyone holding receipts for money loaned to the organization as bail on the Chicago defendants and that all money collected over and above the amount needed to meet our obligation on the Chicago case be used as directed by the next Convention.

"That cash refunds be made on the basis of sixty per cent and a further receipt be issued against the fund that is to be collected by the G. E. B. In connection with this, it is, of course, understood that any money left over in the present Bail & Bond fund, by being uncalled for, would be reverted to the fund to be collected by the G. E. B. mentioned before. However, the matter of paying back Liberty Bonds cannot be handled in the same way, because those holding receipts calling for a specific Liberty Bond with a certain number is their personal property and cannot be held after it is demanded. Those who hold receipts for bonds which were placed on those defendants who jumped bail will have to be paid from the special fund mentioned before at their face value.

"Another thing which should be considered by this Convention is a setting of a time limit on the repayment of all cash and Liberty Bonds. It is certain that some cash loans and even Liberty Bonds, will never be called for, and therefore, if no time limit is set for collection by those holding receipts, the residue of the present Bail & Bond Fund would be carried for years. In view of this possibility, I suggest that a limit of six months from the date of the release of bail be set, and after that date all cash and Liberty Bonds received as loans and remaining still uncalled for, be turned over either to discharge obligations pending against the organization for bail, or be turned over to the Defense Fund, or to the Rehabilitation Fund.

"A point has been raised as to our responsibility to those individuals who have furnished bonds for those who have skipped. There are some who think that inasmuch as those who jumped bonds were members of the I. W. W. that we are in duty bound to stand good for losses of this character. About this I have no suggestion to offer. But a declaration of policy concerning this is needed to settle any argument that may arise in the future.

"There are many other problems which will perhaps arise concerning the Bail & Bond Fund, but I think if the matter is handled according to the suggestions made herein, we can terminate the whole matter to the satisfaction of everybody concerned.

"There remains to be dealt with the matter of the future policy of carrying on the Defense work. There is no doubt that in the past there has been both a waste of money and effort in carrying on the work. This condition is not the fault of any individual but it arises, I think, from the loose manner in which relations are maintained with different parts of the country. The present branches of the Defense Committee, with a few exceptions, work entirely independent of the General Defense Committee and in some cases there is a decided hostility between the

branch and what is supposed to be Headquarters. Of course, much of this can be traced to certain conditions and feeling existing between individuals. It must be apparent to anyone that much waste of money has been borne by the organization in handling its affairs. Each branch generally hires its lawyers without regard to the fact that other lawyers could be secured who are already on the payroll of the General Defense Committee. A systematic handling of legal talent by a centralized committee would, no doubt, remove much unnecessary expense from the branches and the organization as a whole. The lawyers are the heaviest expense, and something should be done to cut down the outlay for counsel fees, etc., by adopting an intelligent, systematized method of handling the legal end".

He also suggested the plan of establishing a Rehabilitation Fund for the purpose of taking care of fellow workers upon the expiration of their sentences, in order to give them a chance to recuperate after their long terms of confinement.

### Report of the General Executive Board.

Next the members of the General Executive Board reported their past activities in behalf of the organization. In regards to sending out the referendum to endorse the Third International, they stated that the previous Board had endorsed the Third International and that the last Convention had endorsed the Board's report. Consequently, the present Board was at a loss to know where the membership stood, but after the question had been thoroughly discussed in the organization press, the ballot was declared void.

The Board then brought out the necessity of establishing a Bureau of Industrial Research and stated that it had endeavored to do so, but that owing to a lack of finances the work had to be postponed.

The rest of the report dealt principally with such past activities of the organization with which the membership is already familiar. The important thing in the report was the emphasis laid on the necessity of eliminating inefficiency and wastefulness within the organization to as great an extent as possible. To that end the Board offered the following suggestions:

"In order to have a successful fighting and efficient organization, order, system and discipline are absolutely necessary, and to make this possible we hereby present for your consideration the following recommendations:

"(1) That all Industrial Union Headquarters be centralized in General Headquarters.

"(2) That each Industrial Union be in charge of the Chairman of the General Organization Committee representing said Industrial Unions. Each Industrial Union having a Chairman who will operate the affairs of the organization.

"(3) That financial transactions be taken care of by the General Secretary-Treasurer, who will employ such assistance as is deemed necessary to properly handle the accounts of the Industrial Unions. The accounts of the Industrial Unions be kept separate, indicating just what they have to work with.

"(4) Through the perfection of the present system of handling the accounts of the Small Industrial Unions, the burden of accounting will be taken off the shoulders of the Organization Committee, allowing them more time to function on organization matters.

"(5) The selection of Secretaries of Industrial Unions can be eliminated, as the General Organization Committee would control the Industrial Unions and the Chairman would be left in the office to handle organization work.

"(6) The Chairman of the General Organization Committee should be the member of the General Executive Board representing his industrial union. This would result in the G. E. B. being in close communication at all times, and be under the control of the Industrial Unions.

"(7) The General Executive Board would hold monthly meetings and in case of important issues coming up, a special meeting could be called, for immediate action to be taken thereon.

"(8) The office of the Chairman of the G. O. C. should be located at General Headquarters.

"(9) The Chairman of the G. E. B. would be selected by the members of the G. E. B., as is done under the present system, and the alternate of the member selected as Chairman of the G. E. B. should serve as Board member and Chairman of the G. O. C.

"(10) The General Secretary-Treasurer of the I. W. W. should be selected by the G. E. B.

"(11) The duties of the General Secretary-Treasurer should be to manage the General Office and supervise the accounts, and he should have the qualifications necessary to efficiently carry on this work.

"(12) All branches to function direct with General Headquarters and all delegate and branch accounts be accurately kept at all times.

"(13) To give efficient and prompt service to distant districts ordering supplies, etc., it may be found necessary to establish supply stations. These stations, however, would not keep any accounts. By shipping literature and supplies in large enough quantities to go by freight, transportation cost would be reduced and would permit the branches in such immediate vicinity to be promptly served.

"(14) The One Year Service Clause for officers will have to be abolished in time, and the sooner the better. An executive position requires executive ability".

### Reports of "The Industrial Pioneer"

The afternoon session was taken up in the reports of the manager and editor of "The Industrial Pioneer". The manager, Harry Feinberg, reported progress in regards to increased circulation and finances, and concluded with the following:

"The Industrial Pioneer" is the only magazine in the country that advocates clearly and uncompromisingly the ideas of revolutionary industrial unionism, and with the co-operation of the membership there is no reason why it should not be made the most influential labor publication in the country."

The editor, Henry Van Dorn, reported that he was employed to assist John Sandgren on the magazine and that after Sandgren was discharged he was selected by the G. E. B. to take the editorship of the magazine. He reported, in part:

"In the course of the next few weeeks we found that it would be essential to make several far-reaching changes in the magazine if we were to continue to issue it at all. Money was not coming in as fast as it should, and many of the branches had positively refused to handle the magazine, especially the December issue, on account of its reactionary attitude. We had to do something to create favorable sentiment and to improve the finances.

"The first step taken in that direction was the changing of the name to "The Industrial Pioneer". This had to be done as the magazine could not be sold any more under the old name".

He also made a statement in regards to getting the magazine out in a more elaborate and economical manner, as well as the following:

"As far as the policy of "The Industrial Pioneer" is concerned, I have tried to get away from all personal attacks and controversial squabbles, and to print educational propaganda along the lines of pure I. W. W. principles.

"The magazine still continued to point out the fallacies of revolutionary political organizations as represented by the Communist parties, but this was done in a scientific spirit for the purpose of educating our readers, instead of in a spirit of personal and unjudicious attack.

"One of the changes in the policy of the magazine was to lay more emphasis on the necessity of militant direct action and less on the evolutionary exposition of the class struggle. In my opinion what we need at the present time is not philosophy but ACTION. Evolution is not going to get us anything unless we get it ourselves".

### Communication from Christensen

A communication from the Defense attorney, Otto Christensen, was read before the Convention in which was stated that the Organization was in debt to Christensen to the extent of $9,000.00 or $10,000.00. The communication was turned over to the Grievance Committee.

Following this the G. E. B. members made verbal reports, all of which were accepted.

### Telegrams from Philadelphia and R. T. U. I.

A telegram was received from the Philadelphia branch of M. T. W., reading as follows:

"Impossible to hold meeting. Instruction of body if not reinstated after Philadelphia controversy: Return home at once. Body knows change means suicide. Answer requested".

At the morning session of the 6th day a telegram from the American Bureau of Red Trade and Industrial Unions was read, as follows: "In the name of the R. T. U. I. we send greetings to the 13th Convention of the I. W. W. We feel confident that out of this Convention the I. W. W. will emerge with full solidarity with those workers that have already affiliated under the banner of the R. T. U. I."

The greater part of the morning session was taken up in discussion over the past activities of some of the G. E. B. members.

### Report of "Tie Vapauteen"

In the afternoon session Rosa Knuuti, the business manager of "Tie Vapauteen", our monthly Finnish magazine, reported that the vast majority of the Finnish membership wanted the magazine taken from New York and placed in the General Headquarters in Chicago; and that since this was done it has proven to be a good move both financially and editorially.

She stated in part:

"One of the substantial reasons for the above action, was the effort to undo the antipathy that the publication had created by publishing articles either too critical of the 3rd International, on the one hand, or lacking discretion in lauding the aims and purposes of political enthusiasts, on the other, which seriously threatened the existence of the magazine. The circulation of the publication, which at its best ranged from 5,000 to 6,000, came down scarcely 3,500. It was at this figure when the G. E. B. took it over; since then it has recuperated and now with the May issue reaches the 6,500 mark. This is apparently due to the changes made in editorial policy, and the moral backing of Headquarters, which has increased the circulation in general.

"In connection with the printing of the publication at Headquarters, very little trouble or handicap has been experienced.

"As to the future of the magazine: The importance of a monthly publication as a propaganda medium among the Finnish workers cannot be over-estimated. The very life-blood of the organization lies in its current public actions, and emphatically so, in regard to its foreign issues. The philosophy of the I. W. W. is gaining more ground every day, and its literature is not only accepted, but it is being demanded by the workers as logical and consistent teachings for the solution of their social-economic problems.

"Tie Vapauteen" has not as yet become the interest of the whole I. W. W. membership, to the extent that it should, but it is the wish of the Finnish Press Committee, under whose eharge and supervision the magazine is edited, that the membership at large take steps toward increasing the eirculation, aiding it with artieles and taking a real interest in their own publication".

**Resolutions Passed.**

The rest of the afternoon was taken up with resolutions, most of whieh were turned over to the various committees. The following were carried:

"Resolved, that any member who accepts nomination for an official position and declines after name has been plaeed on the ballot, shall not be eligible for any office for two years, unless good eause is given, such as siekness or being in jail.

"Resolved, that the G. E. B. shall see that all I. W. W. papers are pursuing the same editorial poliey of Industrial Unionism.

"Resolved, that we preaeh the general strike as the only means for the liberation of class war prisoners.

"Resolved, that in the future all speakers for the I. W. W. shall be routed by and bear eredentials from the Distriet or the General Organization Committee, or from the G. E. B. of the I. W. W.

"Resolved, that all I. W. W. agitation must be towards the eontrol of industries, more so during periods of unemployment, as at present."

This being Saturday the Convention was adjourned until Monday, May 16th, whieh was the 7th day.

**Greetings to Irish Fighters for Freedom.**

Immediately after opening the morning session a resolution was adopted, whieh read:

"Resolved that the 13th Convention of the I. W. W., assembled in Chieago, Ill., in May, 1921, extends greetings of good will and encouragement to the valiant Irish men and women who are putting up such a splendid fight for the abolition of wage slavery".

**Resolutions About Bulletin, International Affiliation and Press Fund.**

These other important resolutions were passed:

"Resolved that the G. E. B. be instrueted to issue a bulletin once a month to contain matters pertaining to eharges, internal affairs and personal disputes, whieh are of no interest to nonmembers. No articles of this nature to be published in any other I. W. W. publieation".

"Resolved that any international affiliation of the I. W. W. that may be decided upon shall be ratified by a referendum vote of the membership, before beeoming effeetive".

"Resolved that eaeh industrial union of the I. W. W. pay a per eapita tax of 5 eents for eaeh due stamp sold into a fund for the upbuilding and maintaining of a more efficient I. W. W. press".

**The G. E. B. Sustained in Removing John Sandgren.**

During the afternoon session, John Sandgren, the ex-editor of the One Big Union Monthly, was given the floor to explain his position. After a thorough examination of all parties concerned, the G. E. B. was sustained in removing him.

**More Resolutions.**

During the morning session of the 8th day, the following important resolution was concurred in:

"Resolved, that we proceed without delay to an inventory of all industrial equipment, embraeing its produetive eapaeity, its sourees of raw material, and the transportation avenues by which the raw material eomes, and the finished product is distributed. That there be a parallel inventory of all the workers neeessary to operate this equipment, with a view to organizing production and the distribution of the product to the produeers, and, be it further

"Resolved, that we eompile the entire proeess of the production and distribution of the food supply of the country, and as an immediate step, be it further

"Resolved, that the delegates ask their district organization to ascertain at onee:

"A. The supplies of such staple products in their districts as meat, fish, flour, milk, butter, eggs, potatoes, and all staple vegetables and fruits, canned goods and fuel.

"B. The extent to which eaeh district supplies its own wants.

"C. The source of the rest and the means by whieh it is transported.

"D. Loeal records of all warehouses, where food is kept or whenee it is distributed, and, be it further

"Resolved, that the general organization be instrueted to take up an inventory of packing houses, flour mills, canneries, etc., whieh produce food on too large a seale for the loeal investigators."

"The eommittee of Braneh 1, N. Y., I. U. No. 440, elected to draft this resolution, also reeommends that the Convention instruet the general organization to ask each local to ehoose a member to serve on the eommittee to undertake detailed organization of this work."

The afternoon session of the 8th day was taken up by the report of the Constitution Committee. No aetion was taken on the constitutional resolutions.

**Resolutions Concerning Defense.**

The morning session of the 9th day was taken up with resolutions coneerning defense and bond matters. After the Ways and Means Committee brought in their report, the following resolutions were adopted:

"Resolution No. 1: The Committee of Ways and Means considers the I. W. W. honor bound to pay back those who loaned the organization money and bonds, so therefore, we suggest that the G. E. B.

shall be empowered by the Convention to issue a special voluntary assessment stamp of $1.00. The funds from this source to be kept exclusively for the purpose of paying anyone holding receipts for money loaned to the organization as bail on the Chicago defendants, and that all money collected over and above the amount needed to meet our obligations on the Chicago case be used as directed by the next Convention. This fund to be handled by the G. E. B.

"Resolution No. 2: Resolved that owing to the shortage in the Bail and Bond Fund the paying back of all cash loans be made on the basis of 60%, and another receipt issued for the remaining 40%, same to be paid out of the fund to be raised for the purpose of paying off the shortage.

"Resolution No. 3: Resolved, that on and after January 1st, 1922, all funds remaining in the present Bail and Bond Fund, and still uncalled for, shall revert to the Rehabilitation Fund.

"Resolution No. 4: Resolved, that the General Defense Committee be instructed to handle only cases arising out of organization activity".

The afternoon session was taken up with the report of the General Secretary-Treasurer's office and the report of the international delegate, George Hardy.

An account of the report of the international delegate will be found elsewhere in this magazine.

### Report of General Office.

The report of the General Office follows, in part:

"The financial statement for the fiscal year (April 1st, 1920 to March 31st, 1921) will be found in the General Office Bulletin for April, 1921, on page 2. You will find therein total receipts amounting to $79,653.30; total expenditures, $50,508.98. The difference of $29,144.32 was used to advance the publications and the International Printing Company. This account is the real account of the General Organization.

"The total receipts from publications, International Printing Company, General Recruiting Union and Small Industrial Unions, personal deposits, etc., amount to $187,186.75, and the total expenditures, including withdrawals and advances to the various publications, small Industrial Unions, etc., amount to $183,595.30, leaving balance of $3,591.45.

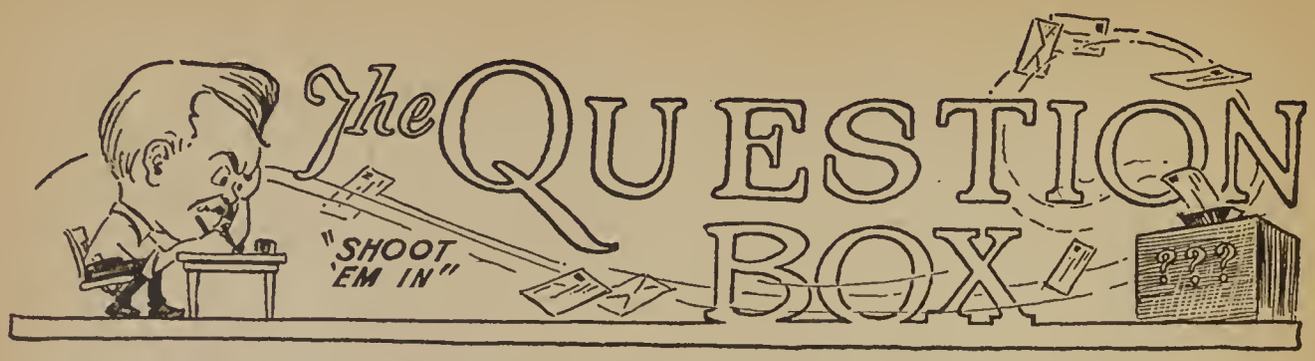
"Cash on hand April 1st, 1920, was $4,690.30, which leaves a balance in the bank April 1st, 1921, of $8,281.75. At the end of the fiscal year there was $9,531.32 belonging to the Small Industrial Unions, the General Defense, publications and personal deposits, which leaves the General Organization a deficit if $1,249.57. The cause of this deficit is on account of various publications and industrial unions, and the International Printing Company owing a large debt to the General Organization.

"You will find our total resources, which takes in the inventory, such as supplies and literature on hand, to be $8,803.28, and the actual debt owing Headquarters from the Industrial Unions, publications and the International Printing Company, amounting to $64,927.73, and the balance on hand in the bank and petty cash, $8,306.75, making the total resources $82,037.76. This total includes the cash on hand of $8,306.75, less $25.00, petty cash, leaving $8,281.75 which does not belong to the General Organization, but, as previously stated, belongs to the Small Indusrial Unions, Defense, etc. You will find that we have entered this in our liabilities of $9,531.32, which leaves an actual debt due the General Organization of $72,506.44.

"The supply account was the actual cost of supplies delivered to the Industrial Unions. The General Organization does not make a cent profit on supplies. Due books were previously sold to the Industrial Unions at 20 cents each, which is practically the actual cost. Since the International Printing Company had machinery installed to manufacture these books they are delivered to the General Organization for 10 cents, to which we have added 3 cents for everhead expenses, such as numbering, stamping, shipping, etc. It is up to the Convention to decide whether the General Organization should stand the full loss of supplies in the field, or whether or not the Industrial Unions should stand for the loss. The General Organization does not get any supplies on credit, but pays the actual cost on delivery. You can readily see by studying the financial report that when Unions do not pay the per capita, the 50% of the assessments, and the cost of supplies and literature owing the General Organization, it cramps the General Organization to such an extent that it takes practically all of the receipts to cover the actual expenses it takes to maintain the General Organization, leaving nothing for education or organization work, which is the function of the General Organization.

"You will find under the caption "Indebtedness of Industrial Unions" that there is owing to the General Organization $12,333.20 for per capita tax alone. This is for dues actually collected by the Industrial Unions from the membership since January 1st, 1920, and $7,839.75 for General Organization assessments that were actually paid for by the membership during the same period.

"When the members pay dues they are expecting the per capita tax to go to the General Organization, also when they buy an Organization Stamp they expect the 50% to go to the General Organization, and without this the General Organizaion cannot accomplish anything in educational and organization work. Again, if the Industrial Unions do not pay for supplies received, the General Organization has to take from whatever per capita



**Do you think that labor, in the long run, will be benefited by "going into business", as has been done in St. Paul, Minn., and other places by some labor unions?—J. S. P.**

We can best answer this question by first seeing how these business ventures, on the part of labor unions, operate. Let us take a concrete example. The St. Paul Building and Loan Association solicits deposits from working people on which an interest of 5½ per cent is paid. This money is then lent to prospective home owners at the "current rate of interest." The People's Construction Company takes some jobs on a profit basis, and others on a time and material basis, and pays the workers the current rate of wages.

Thus we see that these enterprises are managed the same as any others under the capitalist system. The men employed by the company will be expected to work harder than if they were working for a private contractor, under the pretext that they are working for "themselves." These companies are as much liable to go bankrupt as any others, in which case the deposits of these poor workers would go up in blue air.

If these enterprises should happen to be successful, it would be even worse, from the point of view of the class-conscious worker. Instead of making for the eventual abolition of capitalism, the investors, that is to say, the workers whose savings have been deposited, would have a tendency to become bourgeois-minded.

For the workers, it is impossible to fight capital by the use of capitalist institutions. As weapons, big union treasuries, legislatures and congresses, and capitalist courts, are utterly useless. Likewise, it is ridiculous to even attempt to fight the big contracting corporations by the workers themselves turning into contractors, that is, employers of labor guided by the capitalist code of rules. It is impossible to fight fire with more fire.

The sooner the working class cuts loose from all such half-baked, bourgeois notions for improving its conditions, the better off it will be.

**
*

**What is meant by normalcy?—Miss M. S.**

"Normalcy" is derived from the adjective normal, and denotes a state of society where everything is "normal"—from the point of view of the capitalist.

"Normalcy" and "civilization" are synonymous. By these signs you shall know them, wherever you may set your foot:

Millions of men and women working ten, twelve and fourteen hours per day.

Other millions, with gaunt figures and sunken cheeks, walking the streets looking for an ever-elusive "job."

Barefooted, undernourished children, clothed in rags, working in factories or playing on dirty streets, robbed of the life-giving balm of nature's presence.

Starvation wages; mothers praying to Heaven to ease their troubled and despairing hearts.

Robbery, arson, murder—these are the choicest flowers of capitalist civilization.

Graft, degradation, prostitution—these are the finest products of bourgeois democracy.

Big dividends, brazen-faced "society," scabs and thugs, suicides, bread-lines, despair and death—behold, oh, behold, the beautiful, the enticing picture of "normalcy"!

---

and assessments are paid in to cover the cost of the supplies rendered to the Industrial Unions.

"The literature debt to Headquarters is light compared with the other accounts. It is $1,614.01. You will find in this statement that the Industrial Unions owe the General Defense $20,957.12. A great portion of this debt they should be given credit for on account of different branches and districts of the Industrial Unions remitting defense assessments and donations to some of the local defense committees, and the Industrial Unions, not rendering any statement or receipts of these transactions, did not receive credit, but the rest of the statement of indebtedness is accurate".

A complete financial statement will be printed in the complete minutes which will be distributed to the membership .

Owing to going to press we are forced to close this article; the balance of the Convention will be reported in the next issue.

# The Premier's Dilemma

**By Francis Davis**

THE truce in England has come to an abrupt end and the workers and owners, the latter supported by the Government, are again at war.

By the re-entry of the railway and transport workers into the fight, the recent Lloyd George victory has been turned into a sharp defeat and that gentleman, speaking for the private owners, is now in a disperate position. Checkmated in his attempt to split the force of the workers by the solidarity which the rank and file is showing, in spite of the leaders, Lloyd George is now making frantic efforts at settlement. On the first of May he reopened the wage conferences and has now offered a fifty million dollar Government subsidy and is even reported to be considering granting the profits pool which is demanded by the miners.

If he does not grant the profits pool, the premier will have civil war, for the miners have rejected any other settlement, and starving men burdened with starving families cannot be kept in a conciliatory mood for long. There are over one million miners involved in the lockout and the total army of unemployed is reported to be more than two and one half millions. This means that approximately one man in three is idle in England. The others are largely working part time. Who will feed the forty-five million people in Great Britain if the lockout lasts? The nobility. The Bank of England? The merchants? If the workers are not fed, they will very shortly step out and take the industries and feed themselves, and if they move to take the industries there will be open war.

The miners do not want war. They ask only a living wage and assurances that in a few months they will not lose it. They ask a national standard and, to guarantee payment, they ask a pool of all profits. Today there is no standard and no guarantee against reductions. The wage is placed at the lowest level which the miners in the poorest pit can be forced to accept. The reduction which the owners are attempting to force will cut wages to a level nearly fifty per cent below the actual cost of living and far below the pre-war level. The miners do not want war, but the ridiculous demands of the owners may force the workers not only into war but to the seizure of the industries as a matter of self-protection.

The Government has made a great gesture of generosity in offering a subsidy, but the offer is full of weasel words. The subsidy will last only until August and it is conditioned on accepting the owners' terms and on abandoning the national scale and the national pool of profits which will guarantee the payment of that scale. The workers have had enough hollow victories. They have had nothing but hollow victories since 1912. Astute politicians have always tricked them out of their demands. But now it is the workers who have turned astute, and by the power of their numbers and the force of their unshakable solidarity they are after what they want without condition, and they are determined that in this settlement no politician will laugh at their expense.

The owners say that profits cannot yield, but the workers know that the owners lie. They know that all the coal properties of Britain have been paid more than twice over out of the earnings they have surrendered in "profits," and they are waking slowly to the conviction that if profits cannot yield there shall no longer be any profits.

And who can break them?

The owners? The mines cannot operate without workers and as long as the Triple Alliance stands firm, supported by the dockers of Belgium and Holland and other countries, the pits will be idle and the American and Silesian coal in the harbors of London and Liverpool and Bristol and Glasgow will lie untouched and useless. Dependent factories will one by one be closed and industry will be at a standstill.

The politicians? They have been reduced to helplessness by the stiffened front of the workers. A million laws cannot force the miners to return to wages which will not guarantee them the food, clothing and shelter they require. They have worked long hours under revolting conditions long enough. They have never done anything else but toil for their noble masters and they have reached a point where the word of the masters and the word of the law, which amounts to the same thing, no longer hold any qualms for them. They will not be broken except by overwhelming power.

The army? Everything hinges on the army. It always does, for when the master's word and the lawyer's word lose force, rifles can be counted upon for action. The workers of Britain are beginning to see that if they are ever to pull themselves out of the mire of their present condition, they will some day have to face the bayonets and machine guns.

But the army is discontented; the morale is crumbling. Reserves which were called up for home duty have suddenly been sent abroad for service in Germany and Poland. They are through with war in Germany and this action angers them and their fellows who remain behind. Moreover, the pay is halting. The Government is finding difficulty in the sixtieth day of the strike in meeting the one million dollars per day which the regular home army is costing, and the reserves are already in arrears. Even the loyal middle class is swinging

**A farewell meeting held in Chicago on April 24th, 1921, which was addressed by I. W. W. class war prisoners on the eve of their departure for Leavenworth Penitentiary. Among the speakers were fellow workers Dan Buckley, James Rowan, Harry Lloyd, Charles Plahn, Giovanni Baldazzi, Pietro Nigra and Clyde Hough.**

to the side of the miners. The arming of the Island, an old policy for India, is a new one for the faithful at home and it is beginning to alienate the affection of the plain folks who have to bear the discipline and pay the taxes. A few weeks ago Lloyd George could call up thousands of reserves and clamp down war time restrictions at will, but the times are rapidly changing and if he orders hostilities today, it is quite probable that he will find the rifles turned on his own walled-in Downing Street.

Something is going to crack in England. The tension has reached a point where a crisis is apt to be precipitated at any moment and where a compromise seems no longer possible. If profits do not yield quickly and concede the miners' entire position, the miners are apt to lose patience and seize the pits and the factories and precipitate a war to the end. There is a growing conviction that it may as well come now as ever.

Whatever the result of the next few weeks may be, the workers of the Triple Alliance have gained a new confidence in the power of their numbers and they are gradually becoming conscious of this fact —which is hopeful—that British industry and British politics and the continuance of the empire rests entirely upon their decision and that the empire itself is theirs for the taking.

# Special Notice to Branch Secretaries and Delegates

The Thirteenth Convention of the I. W. W. in session at Chicago, Ill., adopted on May 19th, the following resolution:

**That all defense and relief stamps, donation lists, receipt books (for donations) and Bail and Bond books now in circulation (issued prior to May 19, 1921) be declared void and called in.**

Job Delegates and Branch Secretaries are requested to turn in all matter as described in the resolution adopted at the Convention as quickly as possible. A new stamp of one dollar, of a different color and design, will be issued immediately.

**Geo. Williams,**
**Defense Sec'y.**

# Defense News

**By Geo. Williams**

ON MONDAY, May 16th, the bonds put up on Wm. D. Haywood, Vladimir Lossieff, J. H. Beyer, Leo Laukki, Fred Jaakkola, Grover H. Perry, Herbert McCutcheon, Charles Rothfisher and George Andreytchine were declared forfeited by the Circuit Court of Appeals of Chicago.

The amount of bonds forfeited is about $65,000.00, of which about $20,000.00 is sustained by the organization.

The problem of raising this amount to repay those who have loaned us their Liberty Bonds and cash has been settled by the General Convention. A Special Voluntary Assessment Stamp of one dollar denomination has been ordered printed at once to raise the money needed. (Read the special notice regarding this in another section of this paper). The policy regarding this stamp will be to call it in as soon as sufficient funds are collected.

It has been reported that parties are already in the field with spurious lists soliciting donations to make good the loss on Bail. No such list has been issued by the General Defense Committee and none is intended. Anyone meeting parties who are attempting to raise money to pay Bail losses in any other way than the sale of the Special Stamp mentioned before is urged to act promptly and effectively. The policy of the General Defense Committee will be to eliminate the Donation List as much as possible, if not to do away with it altogether. All Donation Lists and Receipt Books issued prior to May, 1921, are called in. All future lists and receipt books issued by the General Defense Committee will bear date of issue and will bear the seal of the General Defense Committee. Donate on all others at your own risk.

It will require from a week to ten days from the time the bail is exonerated on those who have returned to Leavenworth to get it in shape to pay back. A large amount of checking will have to be made with the accounts to clear up matters so that the repayment of loans can be made without mistakes.

An article was published broadcast by the capitalist press quoting a fictitious person named Roy Martin as Secretary of the General Defense Committee as saying that Haywood was responsible for a shortage of $35,000.00 in the accounts of the Defense Committee. This is an absolute falsehood and hardly needs a denial. Neither John Martin, the former secretary, nor his successor, have found such a shortage, and none exists.

### Nineteen Wichita Defendants to Be Released.

The U. S. Circuit Court of Appeals in a decision handed down on May 14th, 1921, has thrown out the first count in the notorious Wichita indictment. Their release will be effected about the first of June. Under ordinary circumstances where criminals would be involved this action would mean the immediate release of the men involved in the case. But U. S. District Attorney Robertson is throwing every legal obstacle he can in the way and therefore more red tape is necessary to send the liberating order to Leavenworth. The next meeting of the court to settle all matters will be on May 31st.

Every possible effort shauld be made by job delegates everywhere to push the sale of the Special Voluntary Assessment Stamp to pay off the bail shortage. These stamps will soon be in the field. We must pay back everybody who has loaned Cash and Liberty Bonds for bail. Every member should have at least one of these stamps.

**A GROUP OF I. W. W. CLASS WAR PRISONERS.**

**Picture taken just before they returned to Leavenworth Penitentiary.**

Top row, left to right:—Ralph Chaplin, Wm. Weyh, Joe Gordon, Walter T. Nef, J. Graber, Francis Miller, E. F. Doree, Thomas McKinnon.

Bottom row, left to right:—Jack Walsh, Wm. Lewis, Harrison George, Jack Law, Chas. Ashleigh, John M. Foss, Pietro Nigra, Ben Fletcher, (M. J. Smith).

# Special Notice

## TO THOSE WHO HAVE LOANED CASH AND LIBERTY BONDS TO THE BAIL AND BOND FUND:

The following action was taken by the General Convention of the I. W. W. in session at Chicago, on May 18th, 1921:—

**"That the G. E. B. of the I. W. W. shall be empowered by this Convention to issue a special voluntary assessment stamp of one dollar, the funds from this source to be used exclusively for paying anyone bonding receipts for money loaned to the organization as bail on the Chicago defendants."**

**"That owing to the shortage in the Bail and Bond fund the paying back of all cash loans be made on the basis of 60% and another receipt issued for the remaining 40%, same to be paid out of the fund to be raised for the purpose of paying off the shortage."**

**"That on and after Jan. 1st, 1922, all funds remaining in the present Bail and Bond Fund and still uncalled for shall revert to the Rehabilitation Fund."**

The above matter means that those holding receipts for money loaned to the organization will be paid 60% of their loan from the present funds on hand and will receive another receipt for the additional 40% payable by the G. E. B. of the I. W. W. as soon as funds are secured from the special stamp to be issued for that purpose.

The probable loss from defaulting of bail will run close to twenty thousand dollars (including the Northwest Bail and Bond) and the payment of 60% was decided on so that loans could be repaid back on the most equitable basis possible. Those who hold receipts for money loaned to the Bail and Bond Fund and who can afford to wait a while longer will do the organization a great favor by delaying their demand for repayment as long as possible, not forgetting, however, the provision set forth by the Convention that they must present their receipts before Jan. 1st, 1922. After that date all loans still uncalled for will be placed in the Rehabilitation Fund.

Anyone holding receipts for loans made to the Bail and Bond Fund who wishes to donate whole or a part of the loans to help meet the existing shortage can arrange this by communicating with the General Defense office; or money can be donated from loans to the Rehabilitation Fund which has been started. This Rehabilitation Fund is for the purpose of furnishing the Class War prisoners who are released from jails and penitentaries upon the expiration of sentences with enough money to get on their feet and recuperate from their health-breaking confinement.

It is impossible at this time to tabulate a complete list of the Liberty bonds lost by default. As soon as the list is completed and checked those who have Liberty bonds coming will be notified. Those whose Liberty bonds are included in bonds defaulted will be given receipts on the General Executive Board, who will in turn either replace the bond lost or reimburse in any other way suitable to both concerned.

Those who have receipts for bonds and money loaned to the Bail and Bond Fund are urged to leave them with the Defense Committee for use in cases now pending. If you wish to leave it with us write in at once and we will give another receipt.

GEO. WILLIAMS, Sec'y-Treas.,
General Defense Committee.

# Book Review

By S. P.

## Empire, War and the Workers.

**"The American Empire," by Scott Nearing, New York, 1921; The Rand School of Social Science. 50 cents, paper; $1.00, cloth.**

THOSE of us who were of a thinking age at the time the present century was a-borning, should have little difficulty in recalling exactly when, how, and by whom the word "imperialism" was first injected into common American political parlance. The Spanish-American war had been fought and won; our benevolent "protectorate" over Cuba and the other West Indies had been established; and the Philippines had been gently gobbled up "for their own good"—Aguinaldo and his followers to the contrary on this latter point.* Imperialism, insidiously nourished under the republican forms of a capitalistic government, had by this time attained to such proportions that it was no longer possible to ignore it, save for those whose supreme interest it was to do so.

It was, it will be recalled, the silver-tongued orator of La Platte, whose attention has since been diverted to graver pursuits, such as the demolition of Demon Rum and Darwinism, who first made "imperialism" a catch-word in American politics. With Bryan and his following, however, it was merely a convenient cockle-burr to place under the saddle of a Republican administration, one which might possibly cause the steed to turn broncho and ditch the rider.

The imperialism which they had in mind was not the imperialism which is visioned by the modern Marxian. The ailment as they diagnosed it was essentially political, the danger which threatens the cherished institutions of any republican people who have come to extend their sway over other peoples to whom they will not or cannot grant the autonomy which they themselves enjoy. The "Great Commoner" had not been the first to sense this danger. It had been pointed out before him by Goldwyn Smith and, earlier still, by James Anthony Froude, in connection with the downfall of the republic of ancient Rome.

The imperialism, on the other hand, which is viewed by the great proletarian economists of today, is not essentially political, but economic and financial, one which has its roots in the same exploitation, the same cancerous greed for gain which enslaves the working class the world over. This is the imperialism which provides the subject matter for Scott Nearing's latest book, "The American Empire."

This is a book which "left-wingers," "centrists," and "right-wingers" may read with equal interest and profit. Indeed, one need not be a radical at all to start with; all that is required for its reading is that rather rare intellectual phenomenon, an open mind, and the ability to assimilate the material which the writer presents. Herein lies the greatest value of the book, its propaganda value; for, after all, they that are converted need not a messiah. "The American Empire," with its opening section on "The Promise of 1776," starts off as orthodoxly, to all appearances, as a school history. With a little amplification and a little condensation, it might be made into a radical text-book on the subject.

The orthodoxy with which the book opens is, however, only seeming. The first clause, "The genius of revolution presided at the birth of the American Republic," should be enough to put the wary bourgeois heretic-hunter on his guard. It should prepare him somewhat for the cumulative kick he is bound to receive as the treatise progresses. But what can one expect of a college professor who has been outlawed for speaking the truth?

Beginning with the wholesale theft of a continent from the Indians—the original "100-per-centers"—Prof. Nearing traces the stream of American exploitation thru Negro slavery and the Mexican war to its flood tide at the close of the Spanish-American war. The rise of American plutocracy and the building of a great industrial empire is depicted. The author points out how the principle of the divine right of kings, overthrown by the American and French revolutions, has come to be superseded by the principle of the divine right of property. The world war, with its economic and financial aftermath, and the alignments of international imperialism following the war are outlined. This brings us to the crux of the whole matter.

"This monstrous thing called war will occur again!" Read the passage, lyrical in its intensity, on pp. 241-2. This passage was quoted in a recent issue of the **Industrial Pioneer** and need not be reprinted here. It alone is worth the price of the volume. "Again the truth-tellers will be mobbed and jailed and lynched"—how well we know what this means!

That those who drenched the world in blood for the sake of a route to Bagdad are preparing to repeat the ghastly performance for the sake of a few oil fields or a few trade routes in the Pacific, and that they will do so, unless the working class of the world, rising in revolution, prevents them, those who read the signs cannot doubt. And the thing is not far off. In another place, Prof. Nearing tells us: "The American people committed themselves to an imperialist party when they elected Mr. Harding to the presidency." Premier Briand was not far from wrong when he said: "International politics today are oil politics."

The words of Kameneff, in an address to the Sec-

* "The Philippine War was the last political episode in the life of the American Republic. From February 4, 1899, the United States accepted the political status of an empire. —Nearing, p. 72.

ond Congress of the Third International, may also be recalled:

"The danger of a new world war is imminent. It will be for the control of the Pacific Ocean. The conflict will be between the ancient allies, England and America. Japan will be on the side of England. It may be foreseen that all the capitalist nations will become involved in this new conflagration. Only the action of a world proletariat can prevent this disaster."

It is on this note that Nearing ends his book:

"If the United States follows the course of empire, the workers of the United States have no choice but to pay the price of empire—pay it in wealth, in misery, and in blood. But there is an alternative. Instead of going on with the old system of the masters, the workers may establish a new economic system—a system belonging to the workers, and managed by them for their benefit.

"The workers of Europe have tried out imperialism and they have come to the conclusion that the cost is too high. Now they are seeking, thru their own movement—the labor movement—to control and direct the economic life of Europe in the interest of those who produce the wealth and thus make the economic life of Europe possible.

"The American workers have the same opportunity. Will they avail themselves of it? The choice is in their hands.

"Thus far the workers of the United States have been, for the most part, content to live under the old system, so long as it paid them a living wage and offered them a job. The European workers felt that, too, in the pre-war days, but they have been compelled—by the terrible experiences of the past few years—to change their minds. It was no longer a question of wages or a job in Europe. It was a question of life or death.

"Can the American worker profit by that experience? Can he realize that he is living in a century whose rulers have adopted an imperial policy that threatens the peace of the world? Can he see that the pursuit of this policy means war, misery and death to millions in other countries as well as to the millions at home? The workers of Europe have learned the lesson by bitter experience. Is not the American worker wise enough to profit by their example?

Is he? One wonders. Certainly, waiting until we get a majority of the working class to vote a political ticket seems a futile means of averting the imperialistic cataclysm. Waiting until we get a majority of the workers lined up in One Big Union seems almost equally futile, at times. Still, there is Russia, with her lesson of the militant minority and the opportune moment. Who knows?

Prof. Nearing's book ends where another vital volume might begin. We are told that only the worker can avert the deluge. We are not told **how** he can do it. It is to be doubted if the technique of revolution is precisely the same in America as in Europe.

Still, it is just as well, perhaps, that the writer stops where he does. By so doing, he keeps his book altogether out of the realm of revolutionary dogmatism, confining it to the presentation of historical and statistical data. Such generalizations as are made are so obvious as to be almost indisputable.

The material of the volume is not highly original. Much of it—in far less accurate form, of course—has been the staple thunder of the radical soapboxer for years. As a compilation, however, as a really needed text-book on the subject of modern imperialism, it is extremely valuable.

The author's literary style leaves much to be desired. He impresses one as writing at a fairly breathless speed. For one thing we should be thankful: it is not in a professorial style. It is popular, almost oratorical at times.

The make-up of the book, due, perhaps, to an effort at compression, is rather heavy and uninviting. A compensating feature is the price, which might well serve as an example to other publishers.

**A "Free Union," by Mary E. Marcy.—Chas. H. Kerr & Co., 341 East Ohio St., Chicago, Ill., — Price, 50c.**

A clever one-act comedy suitable for production in "Little Theatres". Is very well written, with a great abundance of humor, and points out a sorely needed lesson in the relations between men and women.

# What Our Readers Say About "The Industrial Pioneer"

You may increase next month's issue as our sales are increasing, and had I used good judgement I would have increased this month's order.

ERWIN LEISCHER, Br. Sec'y.

* * *

Permit me to congratulate you. The May number is at hand and has been read and re-read. It is superb. I at first thought to give special mention to the best features; but, I find it hard to choose between different examples of near perfection.

JOHN McSLARROW, Everett, Wash.

* * *

But The Industrial Pioneer is something par excellence, for education or the funny side of life, it absolutely cannot be excelled. It is a very hard matter for me to laugh, it is an effort, but believe me, it's no effort when we have the Pioneer. My wife and I laugh our heads off and should be produced on the screen. Keep up the good work. Wishing you success.

E. McINTOSH, Hoquiam, Wash.

* * *

The Industrial Pioneer is getting better every issue, it's a pity money is so scarce.

H. H. DETWILER, Br. Sec'y.
Pittsburg, Pa.

We also received one I. W. W. magazine and the February, March and April numbers of the Pioneer. We return thanks so much more heartily, as we find the contents exceedingly interesting. Particularly the essay on Marine Transport Industry by Tom Barker is highly clever. That's the way to learn from one another.

DEUTSCHER SCHIFFAHRTSBUND
Hamburg, Germany

* * *

You have made a great improvement in The Pioneer over the O. B. U. Monthly, not only in editorials and articles, but in its style and appearance. In your article "For a Concerted Plan of Action" you have hit the keynote, and said something which should be seriously considered and adopted by many radicals.

W. J. LEMON, Mexico City, Mexico.

* * *

I can find no words of praise for this month's issue, for my vocabulary is too poor to express the praise I have for it, so keep up the good work and I hope we will be able to achieve the thing we are fighting for. I like most of all the Question Box.

A. DACLIN, Delegate, St. Louis, Mo.

# Have You Ordered Your Next Month's Pioneer ?

IF NOT, order it now. **The Industrial Pioneer** is fast becoming the best revolutionary magazine in America. It is improving with every issue. Last month's issue was sold out days in advance.

Here are a few of the good things you will find in future numbers of the magazine:

**The Unpublished Prison Writings of Karl Liebknecht.**

**The Experiences of an Army Surgeon in the Orient,** by Capt. L. M. Beilin, M. D. Illustrated with photographs taken by the writer. Here is an army officer of whom war made a revolutionist.

**Economics as Taught in American Universities,** by Max Lippit Larkin, formerly professor in Leland Stanford, Jr. University. Mr. Larkin (he objects to the title of "professor") was the man who was appointed to succeed Prof. Thorstein Veblen, when the latter became too radical for Leland Stanford. The first thing Mr. Larkin did was to require each student in his classes to read and report on a book of Veblen's.

**The Confessions of a Boss-Press Prostitute.** First installment of an expose of capitalistic journalism which, if we were inclined to imitate the jargon of the C. P., we might well call "sensational." The writer, at present employed on a metropolitan capitalistic newspaper, prefers to remain incognito for the time being. He presents not theories, but facts, gathered in years of experience. And they are **inside** facts. He says: "My series might be called 'Addenda to the Brass Check,' if it were not my belief that, as a practical newspaper man, my opportunities for observation have been even better than Upton Sinclair's. The latter was never a practical newspaper man; he was a step higher—a journalist. I believe I know some things that Upton Sinclair never dreamed of."

**The White Collar Stiff and Other Stiffs** (with a Few Remarks on Overall-ed Snobbery), by one of the former. Here is an article which will stir up a lot of discussion—some of it a little heated, perhaps.

These are only a few. There will be many other articles of equal interest. And in addition, there will be bull's-eye revolutionary editorials, authoritative surveys of the world labor movement, articles on organization, industrial management, etc., as well as the regular departmental features, including reviews of the best and latest revolutionary books, the Question Box, and Wobbles.

**Can You Afford to Miss All This? Take No Chances. Order Now!**

Can Labor Unions Function as Revolutionary Organizations?

The Class War in West Virginia

The Lesson of the British Betrayal

"The Hoosierfied Can"
By RALPH WINSTEAD

PRICE 25 CENTS

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class has interests in common with their employers.

These conditions can be changed and the interests of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

# The Class War on the Railroads and in West Virginia

By Jan Rus

NO TWO industries in the United States are more replete with arguments for working class solidarity than transportation and coal mining. Could the workers in these two industries be so correlated as to act in unison on all questions involving the rights of each, there would be a speedy end to such tragedies as are enacted from time to time in the West Virginia coal fields—Labor's Valley Forge. America needs no Triple Alliance to tie up her industrial life. Practically self-sustaining and of vast inland distances, the dock workers do not hold the strategic position of the dock workers in, say, Great Britain.

The failure of unity between these powerful industries is nowhere better illustrated than in West Virginia. The miners strike. Scabs and thugs are imported. Coal, if only in small quantities, is produced, ready for hauling to the steel plants in Ohio and Pennsylvania. And union engineers and train crews haul scab coal for the sim[illegible]e reason that, did they refuse, their brotherhoods would penalize them, and did they still persist in acting on their belief that an injury to one is an injury to all, their places would be taken by other union men. That is the sorry state of affairs in which the workers in the United States find themselves. An obsolete form of organization holds back a coming day.

Even within the transportation industry itself there is that lack of harmony characteristic of the whole American labor movement and so welcome to the men whose business it is to make one dollar do the work of twenty dollars, and to find at the end of a year that the twenty have swollen to a hundred. Schism and secession are the order of the day. Nor could it well be otherwise. Having no aim beyond a fair day's pay for a fair day's work, compromising with the enemy when any dual organization shows signs of activity, how is it to be expected that the American Federation of Labor can hold together over 2,000,000 railroad workers?

Events during the "outlaw" railroad shopmen's strike of last year showed how out of sympathy the heads of the Railway Employes' Department of the American Federation of Labor were with the rebels; showed, in fact, more than this. In Pittsburgh, for example, one of the brotherhoods invaded the city, camped there for several weeks, sent out organizers to discredit the striking yard and trainmen, and conferred daily with heads of the Pennsylvania, the Baltimore and Ohio, and the Lake Erie roads, to see what could be done to preserve the "morale" of the disgusted men. This sort of thing was going on everywhere, despite the quite phenomenal outburst of resentment all over the country among the rank and file, as was evidenced by the comparative unanimity of the strike.

It is yet too early to say what the action of the brotherhoods will be in regard to the reduction of wages, effective July 1st, as announced by the United States Railroad Labor Board last month. Ballots have been

sent out. Meantime the labor officials remain silent on the subject of the 12½ per cent cut.

The abrogation of the National Agreements bodes ill for the future. The lack of security the new local agreements offer the men is shown by the recent strike vote of Pullman employes after the company had refused to join in a conference with a view to arriving at suitable rules and working arrangements. B. M. Jewel's organization, the Railway Employes' Department, refused to authorize the strike ballot, which was only halted by the appearance on the scene in Chicago of a government conciliator from the Federal Department of Labor.

What is the exact meaning to the organized railroads of the canceling of these National Agreements? In the first place, the use of local agreements materially reduces the possibilities of a national strike, the only kind of strike that really counts. National strikes are not only combatted, but a localized affair can be broken up with the employment of thugs and strike-breakers.

Local agreements undoubtedly will work to the disadvantage of the men in that the machinery for their enforcement will be so cumbersome that by the time one grievance is redressed others will have accumulated to the extent of discouraging the men to hope for anything like an approach to industrial democracy, something to which the American Federation of Labor is strongly opposed. Local agreements, on the other hand, might well mean the disintegration of the brotherhoods and the setting up of more militant organizations, possibly one such organization, something which far-sighted men in the labor movement see in the future as the only hope of the American railroad workers. Local agreements must signify a loss in dignity and power of the brotherhoods, whilst they are, at the same time, detrimental to the workers themselves.

In considering the possibility of the amalgamation into one powerful industrial unit of the present craft forms of railroad unions, it might be well to recall what Foster says in his "The Railroaders' Next step":

"The supreme advantage of the amalgamation of all the railroad unions into one industrial union would be, of course, the enormous increase in economic power coming from the greater scope of activity, intensified solidarity and clearer vision of the large body."

A one big railroad workers' industrial union would not only gain in fighting power over the present craft organizations by the elimination of internecine strife, it would effect, as well, a saving both in time and in organization expense. It is quite probable that were such an amalgamation in existence now there would have been no talk of local agreements and reductions. The 2,000,000 railroad workers standing together as one body, not only would be able to hold what little gains had been made but would be within measurable distance of industrial control, of operating transportation effectively, of compelling recognition of the right, not only to their own necessities, but to the necessities of that larger body of workers dependent under our system of society, upon the continued operation and development of the transportation industry.

* * * * *

To understand events in West Virginia it might be well to go back a few years. Cabin Creek, Paint Creek, Matewan, Logan, Holly Grove, Tug River! These are only a few of the names that rise up to haunt us with their toll of miners' lives; the days of anxiety in the hearts of their women and children; the evictions, the tent colonies, the Baldwin and Felts armed detectives, and the whole paraphernalia of the law, which the operators are so capable of calling into being and dematerializing, whichever best suits their purposes.

Of the fifty-five counties which comprise the state, thirty-nine have coal areas aggregating 9,500 square miles (6,080,000 acres). The estimated tonnage, 60,800,000,000, represents a latent wealth of $60,000,000,000. The average pay of a union miner in the Kanawa district varies, for different kinds of work, from $5 to $7 a

day. Non-union men get anywhere from a half to a third less. The coal is of the highest quality and is easy to mine, there being but few shaft mines in the state; the increase in the productivity of West Virginia coal has been rapid. The insignificant output of 609,000 tons in 1870 now has increased to well over 60,000,000 tons yearly. Employed in and around the mines in West Virginia are approximately 92,000 persons; of these 55,000 are organized.

The reason for this disparity in numbers and union membership is not far to seek. The operators employ such repressive methods that it is a wonder the United Mine Workers are as strong as they are. Such measures as they find it convenient to adopt are too well-known to need repetition in detail.

Prior to 1902 the miners of West Virginia were fairly well organized, though their organization was not recognized by the operators, as they refused to meet the miners' representatives at a state convention held that year in Huntington. The miners determined to make a vigorous attempt to compel recognition. They prepared a scale of wages and called upon the operators to accept it or to meet the union in a joint conference to discuss a new wage scale. In accordance with their policy the operators ignored the demand, and a strike ensued. After some scrimages the men returned to work again, no better off than before.

Subsequent to 1902 there was no disturbance in the Kanawa district for two years. In the fall of 1904 a strike was called upon the refusal of the operators to take union dues from the men's pay envelopes and pay them into the U. M. W. It lasted ten days and resulted in the union losing all of its organization along Cabin Creek. Immediately thereafter the operators employed four men to act as mine-guards to preserve "order" and to prevent union organizers from coming into the district and mingling with the men. Conditions remained unchanged until the spring of 1912. (Since 1902 and the partial recognition of the union, wages in the district increased about seven per cent, except in completely unorganized Cabin Creek, where smaller advances were doled out by the operators.) In that year serious disturbances again broke out.

The miners formulated their demands and presented them to the operators on April 8th, the opening day of the Kanawa joint conference. The demands included: (1) The Cleveland wage advance; (2) a uniform workday of eight hours; (3) pay every two weeks; and (4) an unlimited "check-off." These the operators refused to grant, but offered to renew the old scale and old conditions. Finding the coal-mine owners firm the men dropped all the demands except No. 1. This was also refused and a strike followed on April 19th, when all the mines in the district closed, excepting the non-union Cabin Creek. There was no violence.

On May 1st of that year a compromise settlement was arrived at, except in Paint Creek, where the miners resented the importation of mine-guards. It was after their arrival on May 7th that violence began.

In the middle of May the company posted eviction notes, which were enforced. Gathering together their few belongings the miners and their familes started a tent colony in Holly Grove. Hostilities already had broken out, and the operators posted a machine gun and otherwise generally fortified themselves at Mucklow.

From that time on for fourteen months intermittent shots were fired that by July 29th, 1913, had ended the lives of thirteen persons. On that day, and effective until April 1st, a truce was called by which wages remained practically unaltered and conditions the same as before.

Operations continued in a state of volcanic quietude until May 19th, 1920, when eleven men were shot to death at Matewan in Mingo county. They were counted as follows: Seven detectives, three miners and one official.

At the beginning of May the miners formed local unions which brought in a membership of 2,000. As fast as the men joined, the company pushed them out of the company-owned houses. The coal companies in West Virginia own everything,

from religion, on which they maintain a lien, down to the canned peaches the miner's wife buys at the company-owned store.

Once again tent colonies were erected and in these the workers lived all through last winter, supported, in part, by union subscriptions. Hostilities were suspended for a year. On May 12th of this year began the assault on Blackberry City. President Frank Keeney, of District No. 17 of the U. M. W., and other union officials, told the labor committee of the Senate that the recent "trouble," which cost several lives, is the climax of the coal operators' attempt to crush unionism in that territory. He told them that this attempt is in line with the policy of the United States Steel Corporation in every other locality and industry under its control, to reduce the workers to industrial slavery by the use of violence.

Thus nearly twenty years of unionism in West Virginia finds conditions today much as they were at the beginning of the century. Nor are matters different in other parts of the country. This is by no means a localized question. Conditions in the Alabama coal mining fields are no whit better. During the strike there from September, 1920, to February, 1921, the whole power of the state government was thrown against the workers to crush their efforts to obtain decent conditions and the right of organization. The governor sent in eleven companies of state militia under command of the adjutant-general of the state, who dominated the district during the strike. He forbade public meetings and issued orders violating rights guaranteed by the constitution.

The strike was ended by an arbitrary and one-sided award on the part of Governor Kilby, who disregarded altogether the claims of the miners, and regardless of merit, rendered an award favorable to the operators. The decision settled no issue whatever, and the economic conflict remains unchanged. In the meantime 18,000 miners, their wives and children are homeless, having been evicted from the company-owned houses.

The mining-towns around Birmingham are for the most part company-owned. Workers cannot even own their own homes, even though they might be in position to buy them. Some of the villages are surrounded by high barbed-wire fences, and guards prevent persons from leaving or entering without permits. A spy-system is maintained by the employers to single out workers joining the miners' union, and a relentless anti-union blacklist has forced hundreds of men into idleness and pauperized thousands of women and children.

The coal miners of Oklahoma are starving because of the unprecedented number of mines that have been shut down. In the entire state of Texas only one coal mine is in operation. John Wilkinson, president of District 21, of the U. M. W., estimates the average total earnings of miners in his district at less than $60 a month.

In West Virginia it is the same old story. Coal operators keep on their pay rolls public officials and pay directly to the sheriffs big sums of money for immunity from unionization. The companies also pay one cent a ton to the funds of the coal operators' association for all purposes. This, of course, includes financing "open shop" propaganda, and generally is used as a fighting fund against unionism. In Logan county, for instance, with its population of 60,000, there are 25 deputy sheriffs and three constables. It has been estimated that for the money paid thugs and such luxuries the coal consumer is taxed three cents a ton.

The value to the operators of keeping unionism out of West Virginia was demonstrated in the 1919 miners' strike, when Logan and McDowell counties worked at full blast and broke the back of the strike.

Absentee ownership, the sort that Ireland knows only too well and which is familiar to the workers of India, is not foreign to the miners of West Virginia. These absentee owners, concerned over nothing but dividends, are paid a tonnage royalty varying between eight and twelve per cent. The system only serves to emphasize the evils of an order of society that every-

where, except in America, is on the verge of ruin. So fastened into a community is this curse of private ownership that in places a county road constitutes the only public property. To this vicious phase of paternalistic management can be laid all the abuses heaped upon the heads of the workers, not only in coal mining but in all industries.

And investigations, gubernatorial reports and senatorial inquiries accomplish nothing of a lasting nature. A famous Y. M. C. A. leader made a searching report a few years ago into the West Virginia situation. What happened to it? It was filed away in the archives of the Department of Labor and there it reposes to this day, overlaid with dust. The senatorial investigation of the steel strike of 1919 is another notorious example of the futility of hoping for amelioration from that quarter. A Senate sub-committee will spend a few days along the meandering Tug River, ask a few questions maybe, and return to Washington, later to make a voluminous report that no doubt will make interesting reading for those who care to read that sort of thing. It will expose enough of the methods of the companies to crush unionism, and should make a vivid supplement to the Inter-church report on the steel strike. But who would be foolish enough to claim that it will be of any lasting benefit to the miners?

Yet, curiously enough, the miners are not altogether despondent. Their faint belief that a Congressional investigation may remove at least a part of the thug army reigning in the Pocahontas-Thacker field is based upon two previous senatorial investigations, the first in Cabin Creek and Paint Creek in 1912, and the second following the Ludlow massacre in the Colorado Fuel and Iron strike of 1913-14. They look forward to such an investigation with a little more opportunistic spirit, but with no more illusions, than did Robert Smillie, who, during the British coal crisis in December, 1919, said:

"The miners were very reluctant to submit their claims to a commission, for their previous experience of such bodies had led them to believe that commissions were usually appointed to get rid, for the time being, of some ugly questions which it was not the intention of the government to deal with seriously."

The hope of political action, also, vanishes into thin air. According to the admission of the very Republican chiefs who saw the present governor, E. F. Morgan, into office, the miners' candidate, S. B. Montgomery, received 160,000 votes at last November's election, almost twice Morgan's poll.

Nothing short of amalgamated industrial unionism, with its concentrated power, will in any way rectify the iniquities that for years a machine-ridden civilization has fastened upon the workers.

# Wesley Everest

### By Ralph Chaplin

**Torn and defiant as a wind-lashed reed,**
**Wounded, he faced you as he stood at bay;**
**You dared not lynch him in the light of day,**
**But on your dungeon stones you let him bleed;**
**Night came . . . and you black vigilants of Greed, ...**
**Like human wolves, seized hard upon your prey,**
**Tortured and killed . . . and, silent, slunk away**
**Without one qualm of horror at the deed.**
**Once . . . long ago . . . do you remember how**
**You hailed Him king for soldiers to deride—**
**You placed a scroll above His bleeding brow**
**And spat upon Him, scourged Him, crucified . . . ?**
**A rebel unto Caesar—then as now—**
**Alone, thorn-crowned, a spear wound in His side!**

# The Lesson of the British Betrayal

By Jack Tanner

THE FAILURE the the Triple Alliance to take action in support of the miners has been looked upon as a great setback to the British labor movement. The fact that a united blow was not struck was certainly a great disappointment. However, after carefully weighing the situation, it is safe to say that more has been gained than lost. The whole affair has been of great educational value to the mass of the workers and a spur to the class-conscious minority. The feeling of the rank and file, since the retreat was sounded by Thomas and Williams on April 5th, now known in labor history as Black Friday, has become more crystallized, and especially bitter against the leaders. This spirit of disgust and resentment is being transformed into action, particularly amongst the railwaymen.

Steps have been taken in various centers to create unofficial machinery which, as stated at one meeting, is for the purpose of "taking collective action in order to bring pressure to bear upon the Executive Council to pursue such a course as in our judgment is in the best interests of the organization, and in view of the overwhelming expression of support for the minority by the rank and file of the National Union of Railwaymen, we feel it our duty to set this machinery in motion immediately."

Black Friday has been a stimulant to the unofficial workers' committee movement. The revolutionary and industrial union ideas expressed by it will receive much greater attention since the hard lesson of of the failure of the Triple Alliance, due to the treachery of its officials. To those who are acquainted with the character of the self-styled "leaders," their treachery came as no surprise, and even the most sceptical were unable to see a way by which they could crawl out of a proposition into which the rank and file had forced them. Hodges' desire to shine as a statesman at the meeting of the members of Parliament in the House of Commons furnished the necessary loop-hole, and Thomas was quick in taking advantage of it.

The days preceding April 15th were inspiring. Discussion was rife in the ranks of labor, as to the possibilities of a strike. Questions were asked: If the Alliance acts what will it mean? Where will it end? The possibilities were great and prophets there were who believed we were on the threshold of a revolution. Although Thomas and other leaders particularly stressed the point that it was purely an economic issue, a matter of wages, and that no political question was involved, yet had the strike taken place there is little doubt that these men, members of the Labor Party, would have fallen into line with Lloyd George and tried to take advantage of the situation and make it a political and parliamentary issue, and appeal to the country for political power—Labor versus Coalition. However, they were afraid of taking chances to bring that about, being doubtful as to whether once the strike began they would be able to control it.

Whatever the developments and results of the strike—and I am not one who prophesied revolution—it would have been of inestimable value to the labor movement not only in England but in the whole world. But the leaders of the Triple Alliance had not the slightest desire for a strike, and even if they had had there was no conception of its vast possibilities nor would any preparations have been made to carry it through so as to gain the fullest results. The Government, as is now the usual custom in labor disputes, had taken all possible steps for the securing of supplies and the distribution of foodstuffs, etc. All the resources of the state were called into operation. Military and naval forces were mobilized. Reserves were called out and the National Defense Corps was formed. Capitalist papers carried full page advertise-

ments setting forth the Government's and the coal owners' case. Bill-boards were decorated with twelve foot posters—appeals from Lloyd George to the nation, which aroused but little enthusiasm. The Government took no chances and was better prepared than labor to go into the fight, but Lloyd George was fully aware of the situation, as shown in a speech he made in March, 1920:

"Four-fifths of this country (Great Britain) is industrial and commercial; hardly one-fifth is agricultural. It is one of the things I have constantly in mind when I think of the dangers of the future here. In France the population is agricultural and you have, therefore, a solid body of opinion which does not move very readily and which is not easily excited by revolutionary movements. That is not the case here. This country is more top-heavy than any country in the world, and if it begins to topple, the crash here, for that reason, will be greater than in any other land."

No one can say what would have happened if the Triple Alliance had taken action, but even if the edifice of capitalism had not crashed it is pretty certain that some of the top hampers would have got shifty. Capitalists and their flunkeys, the labor leaders, have realized that and have succeeded in preventing it for the present.

On the eve of the time set for action the revolutionary elements were considering the position from the point of view of taking control of the industries, but no definite or concerted plans were adopted. Propaganda was made and leaflets issued urging the workers to set up workers' committees and to re-form their Councils of Action which, in many districts, have been dissolved since the Polish peace with Russia. A call was sent out by the Workers' Committee Movement, for the workers to prepare and take stock of the various industries, obtain information as to food supplies, means of transportation, etc. In England the workers have gained some little experience in the control of industry insofar as individual work shops and factories were concerned, but no real effort up to the present has been made on anything like a big scale, to get the necessary facts and understanding regarding the relationship of one industry to another. No statistics or data have been compiled regarding the amount of raw material available, where located and where needed, and how it could be most economically distributed and used. This vital duty has not yet been tackled. No real effort has been made by a movement in Great Britain to obtain this knowledge. The trade union movement has not even considered the question.

Who could expect that? Its officials are not looking to the time when the control of industry will be a practical problem for organized labor to face and to handle, when this will be a real and perhaps a deciding factor. These matters have up to now been considered as belonging in the dim and distant future, but the mobilizing of the Triple Alliance and the likely developments, if action had been taken now, brings them into the realm of realities. These questions must not be left alone until a similar situation arises, as it surely will in the near future. The joint Executive Council did set up certain committees to deal with various phases of it, such as publicity and propaganda, the co-operative side of the movement, the granting of permits for special kinds of work, etc., but their organization would have been totally inadequate to deal with the situation. The all-important question of food was hardly considered at all. The Triple Alliance, which would have been forced to accept responsibility in this matter, left it entirely to the Government.

Great Britain is dependent upon other countries for its food, and upon the sailors and firemen to man and run the ships, in bringing it to its ports. At the present time the Sailors' Union is in the hands of the most reactionary labor leader, J. Havelock Wilson, M. P. It is true that his power is waning, but until it is broken little support can be expected from the Sailors' organization in the way of bringing food in a time of crisis. Much valuable experience would have been gained had the railway men and the transport workers joined the miners. There are a number of lessons

which must be learned even from their failure to do so.

It must be a duty of the revolutionary element to get down to the real hard work of preventing a similar debacle in the future. The very first essential is to remove the officials who have shown their weakness, incapacity and treachery to the workers—Thomas, Hodges and Williams. Thomas will be the most difficult. He, as General Secretary of the National Union of Railwaymen, a centralized industrial union, has control of the machine and knows how to use it. Hodges, as has already been decided, shall leave as soon as the miners' strike is settled, and it is pretty certain that he shall do so. The attitude of Williams has lost him all support in the active and revolutionary minority in the labor movement, and there will be no place for him, particularly as twelve of the thirty unions in the Transport Workers' Federation have recently amalgamated and he has not been appointed as secretary.

The next step logically follows: To change the structure and form of the transport workers' and miners' federations into real industrial unions. This has already been taking place to some extent and the process will be accelerated as the result of the failure of the Triple Alliance, which was largely due to looseness in the organization.

# A Preacher's Solution

**By Hal Brommels**

An orthodox sage of this money-mad age
Was heated to white in a red-damning rage.
Nor God nor the devil could smother his ire,
His words were so hot that they flamed into fire.

He shouted and spouted: "The Reds must be caught!
They must be deported and driven and fought!
We'll lynch them and pinch them and clinch them by law;
We'll trip them and rip them..and whip their backs raw!

"They're foreigners, heathens; ..and pagans and Jews—
But wait till we get them and give them their dues!
We'll take them and break them and send them to jail!
We'll keep them from friends and deny them to bail.

"O, God, why on Earth did you give us the Red?"
Moaned Reverend Right, as he raved in his bed.
No sleep could he get for the vision that loomed
Of Capital crushed and his leisure-life doomed.

He worried and wished till he weakened, all worn—
For ev'ry Red prisoned two others were born.
He looked for no reason nor dug for a cause,
But thought an effect could be blotted by laws.

The struggle is on like it always has been,
The goal has been set and the People will win.
Old Reverend Right must awake and must see
That slaves of all nations are bound to be free!

# The British Miners Come Back

**By Francis Davis**

A GENERAL strike looms again in England. After being sold out by their leaders in April, and after accepting what appeared to be a defeat at the hands of Lloyd George, the rank and file of the Triple Alliance has come to the support of the British Miners and has forced the most serious tie-up of industry in British history.

The government has practically exhausted its resourcefulness in trying to settle the miners' strike by force and trickery. The last Lloyd George effort was a proposal to give a ten million pound government subsidy to the industry and a "commission to adjust" the wage differences. The vote on this proposal has just come in, and it is an overwhelming "Nay" on the part of the miners' rank and file. The final count shows nearly a five to one refusal to accept the government's terms.

The miners have had enough experience with "commissions to adjust". They have learned their lessons well since 1912 and they remember with a blush of shame the settlements they received at the hands of the Sankey Commission and, again, the Commission of last November. They are not in a mood to submit to further Commissions appointed by the masters and bound to make masters' decisions. If any Commission is appointed, they insist, that Commission will be a Workers' Commission, which will install the principle of the National Board and the National Pool and a guaranteed weekly wage.

Every proposal which the government has yet made has adroitly refused to concede the principle of the National Pool. The owners assert that they will be willing to fight to the last ditch rather than grant this principle, for they understand that it will be a first step to extending the workers' power over industrial affairs. The miners, on the other hand, will accept no other settlement and they declare that they will stay out ten weeks more, if necessary, to obtain that one demand.

The "commission to adjust" is only one of the several ruses to which Lloyd George and the owners have resorted in their attempt to break the back of the miners' solidarity. They have circulated every kind of vicious rumor in the press; they have spent thousands of dollars on attractive bill posters announcing the end of the strike and inviting the miners to go back to work while they still could; they have attempted secret conferences with the miners' executives in the hope of bringing them to reason behind the backs of the rank and file, and they have finally spent huge sums of money in attempting to import foreign coal with which to starve the miners into submission.

Every ruse has failed. The miners have maintained a morale and a discipline in their own ranks as effective as any discipline during the war. Through the London Daily Herald they have kept the membership fully informed of every development, have raised forty thousands pounds for the support of miners' wives and children, and have maintained a splendid courage and full confidence in their program.

The starvation policy has been very effectively checkmated by a thorough-going blockade against "scab" or "black-leg" coal. They have had the loyal support of the other crafts in this blockade—particularly of railway men, who are not only refusing to handle any foreign coal, but are refusing, further, to work with "scabs," and have declared that if any one of their members is victimized for supporting this position, a general railway strike will be called immediately. The railway men say that the miners' fight is their fight and that the importation of "black-leg" coal during this period is the same as importing "scab" miners. They refuse to betray their fellow workers.

Even the transport workers, whose leaders fell away when they had an opportunity in April to win the strike for the miners,

are supporting this blockade. On the Clyde, where dockers, members of the Transport Workers' Federation, have been given the choice of unloading foreign coal or quitting the job, several thousand workers have gone out. Strangely enough, this vigorous action on the part of the Transport Workers' rank and file has now the full sanction and support of the Transport Executives!

Word comes from Belgium that Belgian dockers are refusing to handle "tainted" coal bound for England, and that the Belgian miners will refuse to mine coal destined for England. The German and French miners have asked the British workers to call upon them also for any assistance they can give, and have agreed, if necessary, to go out on strike, to stop the importation of Continental coal into the British Isles.

This solidarity is not by any means confined to the "Big Three" in the Triple Alliance; even the workers in the gas and electric plants are refusing to unload or use "black-leg" coal of any character. It has been the hope of Lloyd George that he could keep the public utility industries operating with imported fuel and starve out the mine workers by merely sitting tight until their funds were exhausted. The action of the railway, transport, and utility workers not only defeats this starvation policy completely, but it leaves England facing a momentary shutting off of light, heat and power. It does not require a statesmanlike mind to understand what this event will mean.

One of the most trying problems for the miners has been the suppressing of English "scab" work. The land owners have encouraged the English unemployed to work out-cropping (surface) veins of coal by promising them the full proceeds of the sales. The miners now report that they have induced these workers in practically every field to abandon the veins and even to fill up the holes, so that today there is practically no English coal being mined even by "scabs."

The result of this workers' embargo may be observed in the financial column of almost any daily newspaper. The government estimates that nearly four million British workers are now unemployed, due to the shutting down of industry. Steel production today has fallen to six thousand tons for last month as against six hundred thousand tons for the same month of last year. Last month only fourteen thousand tons of cast iron were produced as against seven hundred thousand tons in the same month last year. Cotton mill owners are glad to continue the wage dispute with their workers and are not eager to resume operations. Industry after industry shows this same ruinous effect of the solidarity of the British workers.

The miners are not hypnotized by phrases. They are perfectly willing to accept a counter-proposal of settlement on any basis that will guarantee them the principle of the National Board and the National Pool and the weekly guaranteed wage. They are, however, disillusioned about the good intentions of the owners, the reformers and the politicians. They are through with charity and have concluded that firmness and solidarity is the only language which the government and the owners can understand.

In all this the miners know exactly where they stand. They know that owners' profits have increased from twenty one million pounds in 1913 to twenty seven million pounds in 1920. They know that fourteen companies, with a combined capital of twenty million pounds, paid an average of 134½% in cash dividends from 1913 to 1919, or twenty seven million pounds, and that some of these companies paid, in addition, 200 per cent or more in stock dividends. The miners feel that under these conditions they are entitled not only to the standard of living of 1914, below which the owners propose to reduce them, but to a material increase over this standard. They feel that if profits cannot come down and if the profit system can no longer guarantee them a living—there must no longer be any profits.

This deadlock between the miners and the owners is not likely to be broken by conferences. The British crisis hangs on

a slender thread of time and waits only for one side or the other to take the offensive. If the miners advance and try to operate the pits they know that they will be met by machine guns; if the owners become aggressive and try to break the lockout by importing "scabs," or the blockade by importing foreign coal, they may be met by a general strike and, it is asserted in some quarters, by even more revolutionary action. The owners and their spokesman, Mr. Lloyd George, have exhausted their resourcefulness; the miners have almost exhausted their patience, and there hangs over England the dead silence of an approaching storm.

# The Rebel Lads Who Won't Come Back Again

By Richard Brazier

NO MARTIAL music blares for them; no bunting decks the lane;
No cheering crowds greet their return, to give ovations vain;
For them no flags with stars of gold, in windows by the way;
For them no Arch of Victory that blazons in the day;
For them no woman's kiss, no chidren's clasping arms;
For them just sleep, long sleep,—and peace without alarms.

For them no flaunting ribbons gay, no medals silver bright;
No hero's name, no soldier's fame, won in some bloody fight.
For they were only workers who manned the ships of grain
That fed War's starving innocents,—sad orphans of the slain.
They were the men that stood the watch through lanes of lurking death,
And sailed the argosies of food across sea's trackless depth.

They were the men that kept the fires in many and many a ship,
And tore from the throats of babes wild hunger's strangling grip.
They were the men who knew: when death stole through the night
They would die like drowning cattle, die in the gray morn's light.
They knew that terror waited in their speeding, foaming path
And 'neath every wave might silent be a thing of horrid wrath.

And yet they sailed on many seas, these bravest of the brave—
And knew full well that for them lay perhaps a sailor's grave.
And thus it was, in dark of night, or some grey hour of dawn
That Death came hurtling, swift and sure; and shattered, maimed and torn
They sank beneath the reddened waves to rest forevermore
Beyond the pale of din and strife. For them the fight was o'er.

For them the bugles will not call, nor solemn music play,
No flowers will bloom upon their graves—they sleep far from the day.
But joyful tears of babes and wives shall bless the food they brought,
And they shall dwell in rebel hearts and live in rebel thoughts.
And the moaning seas a rebel dirge shall sing for rebels slain
For the sailor lads, the rebel lads, who won't come back again.

# A Worker Looks at Reparations

**By Hugo Schurtz**

A YEAR ago there appeared in the London Nation a startling revelation of how the metallurgical kings of Germany and France had controlled the war operations on the western front. A great mass of documentary evidence was presented in which it appeared that a few families not only dominated the coal and iron supply upon which the several armies relied and had distributed this supply so that the war might be continued with profit to themselves, but that they had forced the immunity of a large territory in "No Man's Land" from fire. No shells fell in this territory, no mining property was destroyed and no casualties were reported. One of these families had a son in the Reichstag and another son (who was director of munitions for the French Government) in the French Chamber of Deputies. Armor plate made in Germany was distributed in France and coal and iron manufactured in France was distributed to the German armies. The firms concerned were allied in a great, French controlled, continental metallurgical trust, and dividends were accumulated on both sides of the battle line for distribution after the war. The articles were entitled "Where Iron Is There Is the Fatherland."

Today, while the press of the continent is worrying about what Germany will pay, these families are still directing and extending the metallurgical Fatherland. Basically the metallurgical kings are not concerned about what Germany will pay; they are concerned only about developing an iron-clad monopoly of their industry.

On May 1st the French armies were prepared to occupy the Ruhr basin and, except for the intervention of Lloyd George, who does not want a French industrial monopoly in any field which will threaten British interests, the French would now have full title to these most valuable properties.

The iron kings want another field—Silesia. Silesia today contributes a large part of the coal which feeds German, Polish, Austrian and Italian industry. If the French monopolists can control this field they know that they will have not only a sufficient supply of fuel for all their own purposes, but that they will have an unassailable control over the entire steel industry of the continent. They will be able to cripple their German rivals, particularly.

Blocked in their offensive on the Ruhr basin, the French have turned all their immediate attention to this Silesian field. They do not mean to abandon the Ruhr—they have only postponed that offensive. They know that if they can keep Germany engaged with military operations in Silesia, they will sap German resources to such a degree that the Germans cannot hope to meet the reparations payments. As soon as one payment is defaulted, they will have an irresistable excuse for seizing the Ruhr and possibly Silesia also as security.

Nobody expects Germany to pay and almost nobody cares. Even the lowest reparations figure is so high that to meet it the German owners would have to abandon all profits and the workers would be reduced to less than a subsistence wage.

Perhaps there are French politicians who want the Germans to make good on reparations in order that they may save face with the French people and hold their jobs, but the steel kings want profits, and a surplus in the French treasury means nothing to them. They want the Ruhr and they want Silesia, they want their competitors reduced to dependence and the German workers to such poverty that their mills will be fed with cheap labor. This situation means profits to the steel kings—huge profits—and as for the future, well, "After us the deluge." They have gambled on long stakes with revolution before and, somehow, the revolution has never come.

In the meantime, while the diplomats and the statisticians dash off reams of figures and the French armies prepare to advance, the German workers are taking a last hitch in their belts. They have been reduced from the best paid and the best fed workers in Europe to the rations of the poor-house. It is said that the German workers are immobile because they are overorganized, but they are only tired, exhausted and without hope. They have borne the heaviest privations of the war and are today at the mercy of the Allies' Hoover System, which feeds them, and they are not ready to fight. The Socialist organization has lost face with the German workers, the Trades Unions are disorganized and the Communists have split wide apart into warring factions. It is interesting that most of the revolutionary activity, however, has been conducted in the Ruhr region.

Undoubtedly the French offensive, on whatever excuse, at this time or within the next few months will be successful. The Germans are not a match for the French war machinery, and the French workers are still innoculated with revenge and still not enough awake to their class interests to refuse to conquer their German fellow workers for the French masters. The policy of the steel kings bids fair to succeed.

But this success will, at best, be temporary. The exploitation which the French masters will inflict upon the defeated and vassal German workers is bound to reduce them to even greater penury than they now endure. Time will knit the German organizations, and nationalistic as well as class hatred will bind them together in an unconquerable solidarity. Out of their privations they will emerge with a Plan of Action, and when the next uprising in the Ruhr basin occurs the German proletariat will be the victor. The steel kings are making a very valuable contribution to the cause of the Proletarian Revolution.

# The Revolutionary Movement in India

THE political situation in India at the present moment is very revolutionary, and is becoming more so every day, says the Bombay correspondent of the London Communist. During the last two years the movemcnt in India has been developing two distinct characters, viz., (1) the nationalist revolutionary movement of the educated middle class, and (2) the economic struggle of the workers in the big industrial centres. Lately the Indian Movement has developed another phase—the peasant revolt. All these three taken together embrace more than half of the entire population.

The bourgeois nationalist movement is divided into two main camps, viz., the Constitutional Democrats and the Extremists. The Constitutional Democrats belong to the upper middle class, including rich lawyers, doctors, a certain element of native capitalists, and the progressive landowners. Their program is rather modest; it advocates the continuation of the British rule, but agitates for constitutional and administrativc reforms.

The Extremists or Nationalist Revolutionaries stand for the complete separation of India from the British Empire. The ranks of thc Extremists are swelled by the lower middle class studcnts, and declassed intelligentsia. Thesc are undoubtedly the most numerous, powerful, and influential elements in the Indian bourgeois revolutionary movement. But the Extremists have two points of view in their ranks. One section thinks that Home Rule or Self-Government should be first secured in order to have a widcr field of revolutionary activities; while the other maintains that Home Rule will never be granted to India and that therc is only one remedy —the overthrow of the British Rule by an armed national uprising.

The Extremists constitute a great force as agitators but as organizers they have not been able to do much since they have not adopted a program. The anxiety to preserve the unity of front as against the British Government has prevented them from formulating a program. What they want is to inspire the whole country with anti-British feeling, and in that they have succeeded admirably. Except the rich, land-owning class, big capitalists and high government officials, the entire people of India, irrespective of class, is in a decidedly rebellious mood against British rule.

The real strength of the Indian movement is the growth of revolutionary spirit among the masses. This has been achicvcd not so much by the propaganda of the bourgeois revolutionaries as by the objective conditions. During the years of the European war, India has gone through a tremendous economic transformation. In the last four years, capitalism has been developed with great rapidity. India today is no longer an exclusively agricultural country. Great industrial centres have sprung into existence, accumulating a growing proletarian class. The Indian proletariat on account of its short life has not been altogether separated from the villages wherefrom it originally came. A great number of the city workers still work partly in the city and partly in the villages. Thus they serve the purpose of transmitting the revolutionary spirit that they acquire in the industrial centres. In this way the revolutionary propaganda which, till a few years ago, was mainly confined to the cities, is penctrating to the villages and disturbing the passive resignation of the peasantry.

The growth of the Indian proletarian class is indeed phenomenal. Before the European war, the number of city workers in India hardly exceeded 2,000,000. In 1918, it came up to 5,000,000. Since then it has increased by fifty per cent. On the other hand, owing to the exorbitant rate of taxation and chronic indebtedness, the poor petty-peasants are being rapidly deprived of their lands, thus creating a huge army of agricultural workers, whose number has reached as high as 32,000,000. These millions of exploited workers, industrial and landworkcrs taken together, are being pushed into the revolutionary movement by force of economic necessity. And it is this background which has given such a powerful impetus to the revolutionary movement in general.

The revolutionary movement in India has developed a very strong press. There are more than fifty big daily papers, both in the English and native languages, published from the different cities. These papers are published legally, though they are often suppressed and their printing apparatus confiscated. Besides, there are a number of illegal presses which produce revolutionary literature, mostly of nationalist character.

**The Workers' Challenge.**

## NOTICE TO READERS

In the June Pioneer announcement was made of a number of feature articles that would appear in future issues of the magazine. Owing to unforeseen circumstances we are not able to publish any of them in this number. However, some of them will be printed in the August and September issues of the Pioneer.

On account of lack of space, an installment of "The Story of the Story" did not appear in the June number. The publication of the serial is resumed in this issue and will be continued untill completed.

## INDUSTRIAL DEPRESSION

IN DISCUSSING business readjustment in America, a writer in a recent issue of the Economic World, a manufacturers' journal, says:

"If the disturbing features in the general situation were of domestic origin and application alone, it would not be difficult to indicate the course of improvement. As things actually are, however, the entire world is involved in the problem. Any improvement, therefore, must involve the re-establishment of normal political and economic conditions abroad, as well as a dependable situation with respect to international credit and exchange. It is idle to think that we can prosper to the full extent of our capacity if deprived of the foreign markets; nor, it may be added, can we prosper if we rear up an insurmountable wall against the importations of the products of Europe, South America and the Far East. In other words, with the horizon thus obscured by all manner of difficult problems, there is little to indicate that the general readjustment of business in the United States will be other than a tediously slow process."

When the master class itself admits that "the readjustment will be a tediously slow process," the workers might as well make up their minds that there will not be any "readjustment"—in the sense of a let up in the unemployment situation. If business enterprises cannot find customers for their products, it stands to reason that production, since it is carried on for profit only, will be stopped altogether or will continue on a part time basis.

Writes Edward G. La Bart in Printer's Ink: "There is enough wool in the United States to supply all demands for two years if not another sheep was clipped. There is enough cotton in the South to supply every want for the next two or three years."

A similar statement could be made about a great many other necessities of life. But that is only half of the truth. For is there a workingman who could not use another suit of clothes for himself, or another dress for his wife and sister—if he had the price? The surplus wool, cotton, leather, food, etc., is on hand largely because the working class has not the money with which to purchase the necessities and luxuries of life. And this brings us to the vicious circle:

Less consumption, less production, more unemployed, wage cuts, still less production and still more unemployed.

Men are now laying steel on the railroad tracks for 27½ cents an hour, while only a year ago they were getting 48½ cents. Advertisements are appearing in the Southern papers for men to work for their board. If a worker who formerly earned $40.00 per week is at present getting only $25.00, it is self-evident that the $15.00 which he now does not have to purchase commodities with will throw some other worker out of a job.

What will this lead us to? If there are five millions out of work now, will not the number be doubled a year, or two years, from now? And then what?

A few possibilities are looming on the horizon which may, to a certain extent, give new life to our industries: Resumption of trade with Russia; war with Mexico; war with Japan. But at any rate, they would offer only temporary relief.

The future, as it unfolds itself for the working class in the United States, is this: Ever-increasing misery and eventual starvation, or—control of industry by the workers for use instead of profit.

Working men and women of America, take your choice!

# Can Labor Unions Function as Revolutionary Organizations?

By H. Van Dorn

THERE appeared in "The Industrial Worker" a few weeks ago an article entitled "Can Unions Act?" written by Walker C. Smith, in which he contends that labor unions cannot function at the same time as revolutionary organizations. The point of view that he sets forth is that a mass organization of labor, which has for its immediate object the obtaining of shorter hours, bigger wages and better working conditions, cannot, in the nature of things, act as an instrument for the eventual overthrow of the capitalist system.

This article was reprinted in a number of radical newspapers and, in my opinion, must have created a good deal of confusion, owing especially to the circumstance that it was written by a well-known member of the I. W. W. It is for the purpose of clarifying the issue raised by Fellow Worker Smith that the present article is written.

It is worthy of note that in presenting his case Fellow Worker Smith does not mention a single instance in the history of the labor movement, nor does he quote any facts or figures to uphold his theory. The whole thing is a plausible piece of metaphysical reasoning, based on apparently logical premises, but bound to fall to pieces as soon as facts are brought into the argument. For instance, one of his paragraphs reads as follows:

"When members are recruited without distinction as to race, color, sex, age, creed or social views, as is proper and necessary in a labor-power combine, it follows that conservatism will dominate the union just as it does the mass of the workers. Despite this obvious fact, industrial unions as well as other unions continue to lay their greatest stress upon organization, assigning to education a minor place."

It would be interesting to know just what it was that led Walker Smith to this brilliant piece of reasoning. If he were the least bit acquainted with the history and the present structure of the world labor movement, he would know how erroneous his declaration is. Instead of it being an "obvious fact" that conservatism always dominates labor unions, the very opposite is true in the case of unions counting millions of members.

Let us, therefore, in order to substantiate the above claim, consider the labor movement in some of the European countries:

In **Italy** about 80% of the industrial proletariat is organized into labor unions. The General Labor Confederation has a membership of two and a half millions. While in radical sentiment and mentality the workers belonging to this Confederation are far in advance of the members of our own A. F. of L. and other craft organizations, we will not, for purposes of argument, call them revolutionary or even radical; but besides the Confederation there are in Italy the Italian Syndicalist unions with a membership of 700,000, the Railway workers with a membership of about 130,000, and the Toilers of the Sea, numbering approximately 70,000. Thus we see that these three organizations contain some 900,000 workers—almost a million strong—and they are as revolutionary as the Communists, or the I. W. W. of the United States.

That such is the case has been demonstrated time and again by recent events in the Italian labor movement. In all their literature the three last named organizations come out squarely for the overthrow of capitalism and the establishment of industrial communism. In the near revolution last fall it was the syndicalists who played the leading role. The fury of the **fascisti**—the Italian white guards—is di-

rected as much against the syndicalists as against the Communists.

Perhaps had Fellow Worker Smith been informed of the above facts and figures he would not have made the statement that it is an "obvious fact that conservatism will dominate the unions."

It is safe to say that in **Spain**, a country with a population of 20,000,000, by far the greater part of whom are agricultural workers, at least 75% of the industrial proletariat is organized. Of these organized workers, about 1,000,000 belong in the revolutionary **Confederacion Nacional del Trabajo,** while only some 250,000 belong in the conservative **Union General de Trabajadores,** which is dominated by the reactionary Socialist party. It would be curious to know how it will be possible for Fellow Worker Smith to square the above facts with his theory that a mass organization of labor cannot be revolutionary. The workers in this country have come to look upon the political Socialists as radicals, whereas over there they are considered as being so far behind the times as to belong legitimately on the side of the enemies of labor.

When we come to other countries, we find that again the facts refute Fellow Worker Smith's contentions that "labor unionism cannot be revolutionary," and that "labor unions are designed to perform an entirely different function than that of initiating a complete social change." Starting from these contentions, he advocates the formation of an educational body, entirely distinct from any labor union, whose function would be to spread general propaganda for doing away with the present system of capitalist exploitation.

When we look at the labor movement in **France,** we see that in the General Confederation of Labor, with a membership of 1,250,000, the revolutionary Syndicalist Committees count close to 300,000 members, comprised within about a thousand regional groups. These revolutionary Syndicalists act as the militant minority within the Confederation; in other words, they are an organization within an organization. And yet at the same time they remain industrialists, instead of being members of a political party. We, therefore, see that, contrary to Fellow Worker Smith's contention, such a body **can** act as a militant minority to guide the masses, both within the unions and outside of them.

What has been said about France can, with a great amount of justice, be said about **Great Britain** as well. There the function of the French Syndicalist minority is performed by the National Workers' Committee movement, and by radical groups within the existing unions. In the case of some of these unions, where revolutionary sentiment is strong, they are entirely under the domination of this radical minority. This is especially true of the miners.

In **Germany,** where the workers are practically 100% organized the same as in Great Britain, the **Freie Arbeiter Union Syndicalisten** number some 200,000 members. The other unions, which have close to 9,000,000 members, are permeated with revolutionists.

It seems to the writer that the above figures ought to prove beyond the shadow of a doubt that labor unions can and naturally do function as revolutionary organizations. The only reason why revolutionary labor unions have not attained power or numerical strength in this country, up to the present time, is because conditions have not been favorable. Just as long as prosperity, of a kind, holds sway in any country, and living conditions are tolerable, just so long will unionism remain conservative. As conditions get worse, as unemployment grows, as actual misery and starvation begin to invade the homes of the workers, revolutionary unionism gradually replaces its conservative predecessor and grows strong in prestige and in numbers. Such conditions have been the order of the day in the European Latin countries for years past and, coupled with the naturally volatile and rebellious spirit of these peoples, have produced the strong revolutionary labor unions enumerated above.

Let us now consider the **United States.**

There are in the neighborhood of 20,000,000 wage earners in this country. Of these only about 5,000,000 are organized. We thus see that by far the great majority of the workers in this country form an unorganized mob. Therefore, whenever we compare our labor movement with that of other countries, we must keep in mind the unique condition that prevails here. Outside of the skilled trades, practically no organized labor movement exists in this country.

What, then, are we going to do with those 15,000,000 unorganized workers? Is anybody foolish enough to believe that changes of any consequence, which would tend to replace the present chaotic system of society with a sane and orderly system under the domination of the working class, can take place while these 15,000,000 remain unorganized? Walker Smith has this to say on the subject:

"The slow process of getting member after member in the manner used to build up labor unions, or even in enlisting them in groups during a strike is **less hopeful** from the viewpoint of social change than the idea of wide-spread educational propaganda to be followed by spontaneous uprising."

In other words, Fellow Worker Smith puts forth the idea that a mob of unorganized workers will be able to fight the army of strongly organized and disciplined bourgeoisie. Can anything be more ridiculous? In this modern age, when everything depends upon efficiency and organization, we see advocated, as a method of defense and offense, unorganized mass action. Such tactics may have been alright at the time of the French Revolution, but today they are deplorably out of date. The only way to oppose the organized might of the capitalists is by the stronger and more efficiently organized might of the workers. "Spontaneous uprisings" can result in nothing but a futile slaughter of the innocent.

Fellow Worker Smith indicates the necessity of spreading educational propaganda of a revolutionary character. Has it not been the experience of the labor movement ever since the inception of capitalism, that the revolutionary character of the working class is best developed while the workers are engaged in actual struggle against the masters? A well-conducted strike will do more towards developing class-consciousness and radical sentiment than ten tons of revolutionary propaganda of a general nature. Will Fellow Worker Smith tell us how the working class can engage in actual struggle against the capitalists on the economic field except through labor unions?

This again brings us back to the 15,000,000 unorganized workers in this country. What are we going to do with them? Are we going to line them up in the boss-controlled A. F. of L.? Should we not rather have them join a radical labor organization such as the I. W. W.? No objection can be raised to revolutionists permeating the A. F. of L. and other labor bodies at present existing, but they are so weak numerically, in comparison with the whole of the American working class, that this should not be looked upon as the main problem. The main problem is the organizing of the now unorganized fifteen million workers.

# Proclamation

We praclaim war! Don't be alarmed but be prepared. We, the workers, proclaim war now against the capitalist system in order that when the enslaving system is destroyed we may proclaim a real and universal peace. Unemployment, poverty and degradation must be wiped out.

Every little child must be born to a life of freedom and happiness. Workers, your emancipation is in your own hands, and you can make America a land fit to live in. What is your answer?

Are you centent to be wage-slaves always? If not, then see you do your bit.

# The Thirteenth Convention of the I. W. W.

THE Thirteenth Convention of the I. W. W. opened in Chicago on the 9th of May, 1921, and closed on the 27th of May. In the opinion of those who attended it, it was one of the most successful conventions held by the I. W. W.

Delegates were present from all parts of the country, representing about a dozen different industries. However, most of them were from the Northwest and Far West, and were representing those industries which play the greatest role in that part of the country, namely: the lumber, construction, mining and agricultural industries. This, of course, gave these delegates a preponderance of votes as well as made of them the determining influence thruout the Convention.

A spirit was manifested from the opening day of the Convention, to take a determined stand in favor of upholding those principles which have made of the I. W. W. the foremost exponent of revolutionary unionism in this country. It was evident from the beginning that the desire of all delegates was to emphasize, as much as possible, that clause in the Preamble which states that the working class and the employing class have nothing in common. This principle has worked out, in practice, in the I. W. W., through the adoption and the carrying out of the following tactics: The universal transfer system, which insures solidarity between workers in different industries; the low initiation fee and monthly dues, whereby all workers may gain admission to the organization; the refusal to sign contracts of any kind with an employer, which sets out vividly in bold relief the deep-seated conviction of the organization that the capitalists cannot be depended upon to keep their word; and the advocacy of taking the industries away from the capitalists and running them for the benefit of the whole working class for use instead of for profits.

In view of the spirit of the Convention, it was fitting that the first order of business should have been the taking up of the Philadelphia controversy. The Philadelphia branch of the Marine Transport Workers of the I. W. W., which at one time numbered some seven thousand members, had adopted, presumably in order to maintain job control, an initiation fee of $25.00, which was contrary to the I. W. W. Constitution. Several months ago this branch had been requested by the General Executive Board to reduce its initiation fee to $2.00 in order to comply with the Constitution, but had refused to do so. As a consequence, that branch was suspended until the coming of the Convention. Since the decision of the controversy involved one of the vital principles of the organization, the discussion over it consumed three days, with the result that the Philadelphia branch was called upon either to comply with the $2.00 initiation fee and $1.00 monthly dues or, failing to do so, it would automatically expel itself from the organization. Like action was taken with an I. W. W. Local of Bakers in New York City, which had persisted in charging a $15.00 initiation fee.

The next step of importance was the action taken to continue the $2.00 initiation fee and the $1.00 dues. A certain amount of agitation had been going on within the ranks of the organization, for a flexible initiation fee, up to at least $15.00. In the thrashing out of this question it became evident that the consensus of opinion among the delegates favored the low initiation fee. As supporting arguments, the delegates pointed out the great amount of unemployment, industrial depression, the open shop drive, and other aspects of the present economic situation which makes well nigh impossible the maintenance of job control or of the closed shop. Under these circumstances, it is imperative that access into an organization such as the I. W. W. be made as easy and as cheap as possible.

Since the I. W. W. is an organization

whose ultimate aim is the doing away with the capitalist system of exploitation, it is willing to co-operate with and encourage any and all other movements which work for similar ends. Since capitalism is world-wide, the I. W. W. acknowledges that a system of working class supremacy can only be attained by waging war on the powers that be, on a world-wide scale. It was for this reason that, recognizing the valiant struggle that the Irish fighters for freedom are putting up against British oppression and militarism, the I. W. W. extended greetings of goodwill and encouragement to the battling working men and women in Ireland. The lengthy resolution embodying the above sentiments, passed by the I. W. W., should go a long way towards establishing a bond of sympathy between the battling proletarian minority in this country and in Ireland.

An incident took place on the second day of the Convention which, perhaps better than anything else, illustrates the present spirit of the I. W. W. One of the delegates suggested that a telegram of goodwill be sent to the fellow workers incarcerated in Leavenworth and other penitentiaries. Thereupon, another delegate jumped up and exclaimed: "What's the use of burning up good money on capitalist wires? They can't eat it and we can't organize with it." A suggestion was made, that instead of sending the telegram, a collection be taken up, which was done and which netted $53.00. The above incident shows how much sentiment is out of place in the I. W. W.

One of the big features of the Convention was George Hardy's report, covering thirty typewritten pages. George Hardy was the I. W. W. delegate to the Berlin Syndicalist Conference held in December, 1920. After the Conference he proceeded to Moscow, for the purpose of clarifying the position of the I. W. W. on the international field. This trip also served to counteract the evil effects and misconceptions concerning the organization, which had become broadspread in Europe as the result of Sandgren's policy in the One Big Union Monthly, of attacking the Communists, and, to a lesser extent, the Russian Soviet Government. We are glad to say that the position of the I. W. W. in reference to the other movements has again been set right and that the organization commands, at present, as much respect in the European countries as it ever did.

While in Soviet Russia, Hardy found that the I. W. W. is looked upon as the revolutionary labor movement on the American continent. A number of highly important resolutions were passed which will tend to direct the future policy of the I. W. W. into the right channels. We might mention, among others, the following two:

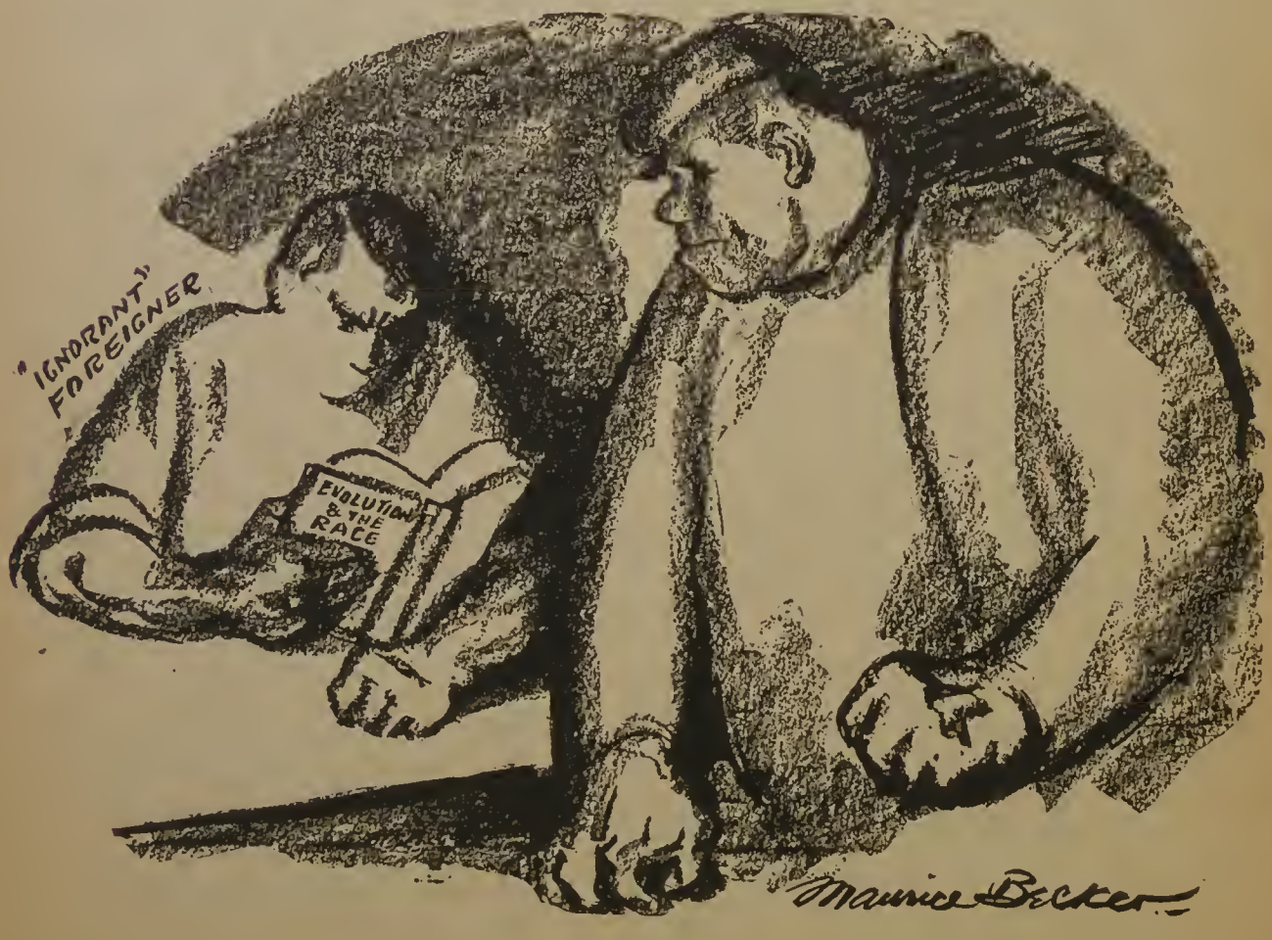
"Resolved, that we preach the general strike as the only means of the liberation of class war prisoners," and

"Resolved, that all I. W. W. agitation must be towards the control of industries, more so during periods of unemployment, as at present."

The stand that the I. W. W. has taken, is that of urging upon the workers, especially the unemployed, that the only solution for their deplorable conditions of existence is to be found in the workers taking the industries away from the capitalists and running them for their own benefit. It is becoming more apparent day by day that, as unemployment grows and as wages are being cut everywhere, no remedial half-measures are going to help the working class. Recent labor history has demonstrated, beyond doubt, that the present American craft unions are bankrupt and not capable of putting up a united front against capitalist aggression. Even the blind can see that these unions are everywhere accepting wage cuts and the imposition of almost unbearable working conditions, and that they are otherwise complying with the ever-increasing encroachments of capitalist piracy upon the rights of labor. In the face of all this, with 5,000,000 men and women in America walking the streets, looking for a job, what solution of its troubles can be offered to the working class? Clearly, nothing but a complete industrial overturn will do. Nothing but the workers' control

of industry will terminate economic chaos, hunger and misery.

The conditions in America are getting rotten-ripe for a revolutionary labor union. Parliamentarism on the political field will no longer do as a weapon for the working class with which to fight its battles; craft unionism, with its antiquated tactics and its incubus of reactionary officialdom, has become equally impotent on the industrial field. The sooner the American workers learn this truth, the better off they will be. They must ever bear in mind the truth which has been advocated by the I. W. W. for the last 16 years, by word and by deed: That the working class and the employing class have nothing in common. Time and again, during the last few years, have the workers been sold out by their bourgeois-minded leaders. Is it not high time that they at last wake up and take a firm, uncompromising stand as class-conscious members of the proletariat who will, under no conditions, engage in any half-way, sentimental bickerings with the master class but, fully realizing the present mission of the working class as the savior of humanity, will get together and build up an organization which all the combined powers of capital will not be able to destroy.



PREJUDICES OF RACE AND NATIONALITY BENEFIT ONLY THE MASTER CLASS.

# Run - Away Slaves

**By Mary E. Marcy**

FOURTEEN hundred years ago there lived in the hills and woods and caverns of what is now known as France, the Gallic slaves who had escaped from their Germanic conquerors, and who were determined to remain free at no matter what cost.

They had to move from place to place with the utmost caution, for when the soldiers (or leudes) of their own masters discovered them upon the road, they were dragged back to torture, heavy labor, and often death. And should the soldiers of a strange lord find them on the highways, they were seized and enslaved by new masters.

The counts and bishops called these run-away slaves **vagrants** or **"Vagres,"** and the Vagres were proud of the name. By stealth they gathered together and formed bands for the purpose of attacking the strongholds of the **seigneurs,** taking back the wealth the counts had stolen from them, killing the lords and freeing the slaves.

Before the earlier invasion of the Romans, the Gauls had been a thriving, happy, and very prosperous people. They tilled the land in common, wove beautiful cloth, and made the finest hand tools in the world. All over France (then called Gaul) the people enjoyed freedom, equality and happy industry; for there was neither exploiter nor exploited to cause dissension or civil war.

After years of warfare, however, during which the Gauls suffered great losses, the Roman invaders were able to thrust the Gauls into a condition of the most miserable slavery. The Gauls were not whipped, but held down by every means of force known to the Romans. Notwithstanding the odds against them, day after day, in cellars, fields and shops, the Gauls labored to organize the revolutionary "Order of the Mistletoe." Their watchwords were "Liberty" and "Death to the Roman Oppressors."

Soon all over Gaul there sprang up sharp revolts on the part of the slaves, during which the Roman masters were often slain and their castles destroyed. The guerilla warfare of the slaves increased until, after a few years, the Romans discovered it cost them more to hold the Gauls in slavery than they were able to collect out of them, and the slaves once more recovered their lands and nearly the whole of their former freedom.

The Gauls again became a peace-loving, industrious, happy people. The people to the east of them, in Germania, were, however, marauding, fighting, looting, barbarians, who scorned to labor and who despised the Gauls.

Accordingly it became the sport and the profit of these Franks (from Germania) to dash down upon the happy villages of the Gauls on horseback, seize their wealth, destroy their crops and houses, and carry off as many Gauls as possible, to be sold later at the slave market in Germania.

And by and by the Frankish counts from Germania began to hold the lands they had formerly destroyed, and to remain upon them. After long and weary struggles the Gauls were again subjugated and enslaved by the new conquerors.

But always there were fearless and independent slaves who risked torture and death in the hope of escape, and often there were loyal Vagres who remained within the castle walls to inform their Vagre comrades of the opportune time for the rebel bands to attack.

Then the Vagres dashed upon the castles, killed the lords and bishops, seized the wealth that had been stolen from them, and within twenty-four hours distributed it to the last ham among the freed slaves and the poor.

Here is one of the old songs sung fourteen hundred years ago by a Vagre band before a successful attack upon the castle of one of the most brutal of the Frankish counts:

"Death unto oppressors! Freedom to the slave!
Let us take from the seigneurs! Let us give unto the poor!
What! A hundred kegs of wine in the master's cellar, and only the water of the stream for the worn-out slave?
What! A hundred cloaks in the wardrobe, and only rags for the toiling slave?
Who was it planted the vine? Who harvested the grape and pressed it into wine? The slave! Who should drink the wine? The slave!
Who was it that tended and sheared the sheep and wove the cloth and made the cloak? The slave!
Who should wear the cloak? The slave!
Up, ye poor and oppressed! Up! Revolt! Here are your good friends the Vagres! They approach! Death to the seigneurs and the bishops!
**Six men united are stronger than a hundred divided: Let us unite! Each for all and all for each! Long live the Vagrery and Old Gaul!"**

The old song always thrills me. It is so much like some of the Wobbly songs of today, this ancient song of the Gauls, who would not remain slaves.

It was this spirit that finally broke the grip of the oppressors from the throats of the Gallic people, and abolished slavery, and later, feudalism, in what is now France.

It is this same spirit in every land, passed down from one generation to another, that will soon make this a real world of the workers, when the motto of all men will be:

**EACH FOR ALL AND ALL FOR EACH**

# The International Relations of the I. W. W.

IT IS an axiom in sociology that the ideas and social movements of the human race are only a reflex of the existing conditions. It is therefore no mere coincidence that with the launching of the I. W. W. in 1905 we witness the first planned effort at world-unionism and that such a project should have had its origin in the American workers' movement. This event is merely the inevitable consequence of the economic fact that capitalism in the United States has reached further towards operations on a world-wide scale than elsewhere. The spectacle of the U. S. Steel Corporation and the Standard Oil Company with their plants and agencies spread over the four quarters of the globe only lead to the development of a similar plan of organization amongst the advanced thinking minority of the American working class. The I. W. W., therefore, was purposely and consciously christened the Industrial Workers of the World. The original purpose was evidently to spread the organization into all countries of the world and develop in the face of all opposition a new union on a centralized world scale. In fact, before the war broke out, some semblance of organization on a world-scale did exist. Administrations of the I. W. W. were functioning in Australia, Mexico, Chile, South Africa, England, Sweden and elsewhere. The vastness of this plan has had such an influence on the imagination of the I. W. W. members that there is a tendency towards extreme exclusivism, and to disregard existing movements of similar character to the I. W. W. in Europe and elsewhere. The attempt to form an International of Red Trade and Industrial Unions, which will be made at the Moscow Congress set for July 15, 1921, and the recent conference held in Berlin, give this subject practical and immediate importance.

The original plan of the I. W. W. for a world-union may be realized in Moscow in a more natural way than it was originally conceived. Plans in the abstract may have a great deal of perfection and even have their indirect influence on the development of the thinking workers' notions of class-organization, but the evolution of the working-class movement towards world-unity has followed a natural course based on the needs of existing labor units rather than on the improvised plans of theorists. While the I. W. W. was being launched, and even years before, there was growing up in Europe, with a steady and impressive growth, an analogous movement, similar to the I. W. W. in all the essential features and differing only in those points in which a different economic and political environment rendered other tactics more efficient. This movement is generally known as Syndicalism. There is no hope for any co-operation in the proper spirit with efforts towards world-unity which are being made in Europe, unless the I. W. W. recognizes its relationship to this movement in Europe, and gets a picture of its world-position through a more inclusive perspective. All impartial observers, such as Brissenden, Tridon, etc., have recognized in the I. W. W. all the essential features of the syndicalist program (economic direct action, no political alliances, militant tactics, self-reliance of the workers as a class) plus a special emphasis on the structural advantages of centralized industrial unionism. This emphasis is natural when we consider the fact that the I. W. W. is mainly a reaction in tactics to the A. F. of L., with its antiquated baggage of absurd craft-divisions, time-limit contracts, narrow trade spirit and absolute disregard of class-action. In Europe, syndicalism is mainly a reaction to the socialist party domination of the trade unions and their conversion into emasculated electioneering agencies. Capitalism there is not so centralized in its structure as in America; the spirit of class-solidarity and the general idea of revolt is much more diffuse than in this country; the whole emphasis of syndicalist propaganda is consequently directed at undermining the influence of the socialist parties in order to develop a movement on the economic field which shall be self-sufficient to overthrow capitalism and install the new society of the producers. Industrial unionism has been adopted in many of the syndicalist unions of Europe; in 1906 the Confédération Générale du Travail of France decided to admit into its ranks only federations along industrial lines; the Italian Syndicalist Union adopted the National Industrial Syndicat structure in 1909, but nowhere have these changes been regarded as anything but a natural move in the right direction. To the syndicalist, the important point is the conservation of the revolutionary outlook and the militant tactics on the economic field.

The first effort to gather into one world-organization the already considerable forces of world-syndicalism was made through the London Congress held in September, 1913. Delegates were present from Germany, Holland, France, Belgium, Spain, Italy, Argentina, Brazil, Cuba, Norway and Sweden. The I. W. W. was not represented. The results of this conference were nullified by the outbreak of the World War, which threw the entire social structure into a fiery melting-pot, from which new and unforeseen problems are coming forth.

The Berlin Conference of December, 1920, represents the resumption of the international relations between the syndicalist bodies of workers which the World War had interrupted. Several significant points need to be brought out in connection with this important Conference. For the first time, we see the I. W. W. appear at a world-congress of revolutionary labor, where it is duly recognized as the representative of advanced labor in the United States. This fact is a symptom of a more logical

and realistic attitude on the part of the I. W. W. than the original plan to organize the workers of the entire world within its ranks. On this occasion the I. W. W. appears definitely as the representative of the American workers and is face to face with the organized strength of European syndicalism. All differences are easily smoothed over and the I. W. W. becomes aware of the fact that the dream of a world-army of revolutionary labor, which it started out to realize in 1905, has gone further towards becoming a concrete fact in the several nations of Europe than it has in the United States. An examination of the figures on organized syndicalist strength the world over is highly significant and instructive to the American worker. The statistics on this matter are as follows:

| | Population in Millions. | Syndicalist Membership. |
|---|---|---|
| Spain | 20 | 1,000,000 |
| Italy | 40 | 700,000 |
| France | 40 | 300,000 |
| England | 40 | 200,000 |
| Argentina | 7 | 200,000 |
| Holland | 7 | 40,000 |
| Sweden | 6 | 32.000 |
| Germany | 60 | 150,000 |
| United States | 105 | 100,000 |

Considerable syndicalist organizations exist in the smaller nations of Europe and South America not listed here, and the fact must be borne in mind that the syndicalist committees of France and England are organizations of the advanced elements exclusively, and not syndicalist dual unions like the I. W. W. and the Italian Syndicalist Union. From these figures it is evident that, in relation to the population, the I. W. W. is the smallest of the syndicalist organizations, and any policy towards the European syndicalist unions must keep this fact always in view. There is evidently only one road open to the I. W. W. consistent with its revolutionary past, and that is to work in complete harmony with the European syndicalist forces in the efforts being made to weld the advanced elements of labor into one mighty world unit. While the decrepit American Federation of Labor is withdrawing from the yellow Amsterdam International because it is too revolutionary (???) for Gompers and brethren, it is up to the I. W. W. to break the isolation of American labor from the renovating forces at work in the Old World by establishing ever closer relations with our working class allies across the oceans.

One aspect of the coming International Congress of Red Trade and Industrial Unions in Moscow needs to be emphasized. While the Third International on the political field has been able to marshal its forces even at the cost of splitting the old socialist parties into warring fragments, the effort to form an Industrial International has brought the Communists face to face with the hard fact that most of the "Red" unions are syndicalist unions, that they have a definite program of their own which does not coincide in all points with the Communist doctrine, and that these unions are powerful enough in themselves to exact from the political international complete autonomy and non-interference. There will be co-operation where such is desirable, but the syndicalist forces will insist on, and carry, the point that there shall be no dictation by the Communist parties over the workers' organized in the Syndicalist Unions. This matter is of the utmost importance; the syndicalist organizations, representing as they do **directly** the interests of the workers, and animated by their traditional and well-founded distrust of all political bodies, will act as a controlling force determining directly or indirectly through the exercise of economic power the vital policies during the revolutionary period.

The utmost unity, material and moral, between the syndicalist forces of the world is necessary to accomplish this important function; the I. W. W. must unhesitatingly take its place in the ranks and play its role as the representative of the American revolutionary workers in the advancing Red International of Labor.

G. C.

# To a Factory Whistle

**O grim-voiced Demon, soulless Monster, why**
**Must I your summons heed, nor fail to come,**
**When you would call me back to toil, while some**
**Loiter along the way? Is your hoarse cry**
**For me alone? May these stand idle by,**
**Yet take the loaf and leave to me the crumb?**
**Surely! Justice is dead, or else turned dumb:**
**Why does my brother loiter and not I?**
**Or why, with bended back and pain-wracked frame,**
**Must I, for these long, weary hours each day,**
**Stifle both sense and soul? Is it that he**
**May live and labor not? Justice? A name!**
**I toil that both may live and he may play.**
**Why are things so? Grim Monster, answer me!**

S. P.

# Conference of the Unemployed in Great Britain

**By H. Van Dorn**

GREAT Britain is, at present, perhaps as hard hit by unemployment as any country on the European continent. Two months ago, the official figures of the unemployed were set at 2,000,000, which does not include those who worked part time only. At present, what with the coal miners' and the cotton workers' strike, and the stagnation in other industries caused thereby, it is safe to say that at least 4,000,000 find themselves without work, and thereby without the necessities of life.

How is the British working class handling this unprecedented amount of unemployed? What effect has it had on the mental outlook of the average British workman? What lessons can the American worker learn by studying the way the unemployment crisis is handled over there?

We can answer these questions in no better way than by considering what took place at the National Conference of Unemployed Organizations held in London in the month of April, at which were present 81 delegates representing 50 Unemployed Committees. That such Committees exist, in the first place, is in itself significant. In America, which also harbors some 5,000,000 unemployed, no committees or organizations of any importance have as yet been created to look after the demands and requirements of this vast out-of-work army.

In looking over the minutes of that Conference, the first thing that attracts our attention is the **"Aims and Objects:"**

"The aims and objects shall be to organize the whole of the unemployed for the removal of the cause of unemployment, i. e., the capitalist system, and the substitution of a system of workers' ownership and control of industry."

That sounds pretty good, does it not? The unemployed in Great Britain are not organizing for the purpose of patching up capitalism here and there, in order to be able to drag out a miserable existence on "coffee and—", but for the purpose of doing away with the whole despicable system of capitalist exploitation. The workers in Great Britain are coming to realize, and not as slowly as some of us may be inclined to believe, that there is no way for them out of the morass of their misery and degradation except by erection of a proletarian commonwealth. Is it not high time that the unemployed in this country were coming around to adopting the same healthy point of view?

Now let us see what are the immediate demands that these out-of-work Britishers are making upon their responsible and respectable government. The following **"National Demands"** are put forth:

"(1) Work or full maintenance for the unemployed and the partially employed workers at the trade-union rate of wages.

"(2) As the means of finding employment for the unemployed in the trades with which they are associated, the immediate putting into operation of trade agreement with Russia and the recognition of the Soviet Government."

These demands do not sound at all like as if the British unemployed were asking for mission handouts, do they? These unemployed workers have advanced far beyond the mentality of the habitually unemployed in this country who are willing to get "saved" and to inherit the golden key to Heaven three times a day in order to obtain a bowl of soup and a place to flop when night comes. They have fully recognized that they are out of work on account of no fault of their own, but owing to the breakdown of the capitalist system of production and the incompetence of the captains of industry, and that they are entitled to as much consideration and to as big wages as the men and women who are lucky enough to continue to work steadily at their trades.

Next the question arises: How are these demands going to be put into effect? To that end the following **"Methods"** are suggested:

"(1) All unemployed organizations shall, where financial resources allow, carry on an intensive propaganda by meetings, distribution of literature, etc.

"(2) All unemployed committees shall make the fullest demands of the local authorities and Government Boards, such as will insure full maintenance of all unemployed and their dependents.

"(3) That wherever possible, unemployed committees shall work in conjunction with the local workers' committees."

These methods certainly sound sensible to us. Nothing hazy or indefinite about them at all. The British out-of-works know what they want and they are going after it by the use of meetings, propaganda, demands upon the authorities, and co-operation with the men still on the job. They know that unless they themselves take action to extricate themselves from the terrible conditions that confront them, nobody else will; that the day of waiting for a Messiah to lead the blundering and suffering children of men into the promised land of happiness for all is gone. The gospel of a savior from above has robbed the working class of initiative for ages past, and has kept it down in a condition of abject slavery. At last the workers are liberating themselves from the shackles of this deadening tradition; may

the day soon arrive when it will be thrown into the scrap pile with a hundred other superstitions which have turned the earth into hell!

After discussion of the various strikes in progress at that time throughout the British Isles, the following resolution was passed:

"That this national conference of unemployed organizations calls upon the unemployed of Britain to abstain from accepting any work from any source during the present industrial crisis, and further urges them to do all in their power to assist the workers involved, by refusing to blackleg them in their fight for a decent standard of living."

The resolution was carried unanimously and sent to the Executive Committee of the Triple Alliance.

The above action indicates that the best way to keep the unemployed from scabbing on their fellow workers is to organize them.

In the report of the organizer for the city of London it was brought out that the London District Council consists of thirty Committees. If the intelligence of the American working class is what it is cracked up to be, the time should not be far off when cities like New York and Chicago would also have unemployed councils consisting of scores of committees.

Another resolution of great importance was passed which reads as follows:

"In view of the criminal inaction of labor leaders and the imperfections of trade union organizations, this National Conference instructs all Unemployed Committees throughout the country to visit all the factories, workshops, trade union branches, etc., in their respective areas, hold joint meetings with those at work and explain to them the gravity of the situation and the necessity for action; pointing out that the only solution is for the workers, in every factory, etc., to organize themselves into Workers' Committees and elect a central committee to include the unorganized unemployed for the purpose of establishing workers' ownership and control of industry at the first opportunity.

The above resolution contains a much needed lesson for the American workers. During industrial crises it is imperative that some way be found for the men at work to co-operate with the men out of a job. This can only be done through committees in which both are represented. The principle of Workers' Committees is at present emphasized in Great Britain more and more. When we understand that a Workers' Committee is a Soviet in embryo, we will realize that history is being made in Great Britain.

That the spirit of the unemployed is more revolutionary than the spirit that motivates the official labor bodies was brought out by the following resolution about Ireland:

"Resolved, that this Conference, knowing that war on Ireland is the cause of that country's economic ruin and is responsible for much unemployment in England, calls upon the government to withdraw the military forces from Ireland forthwith."

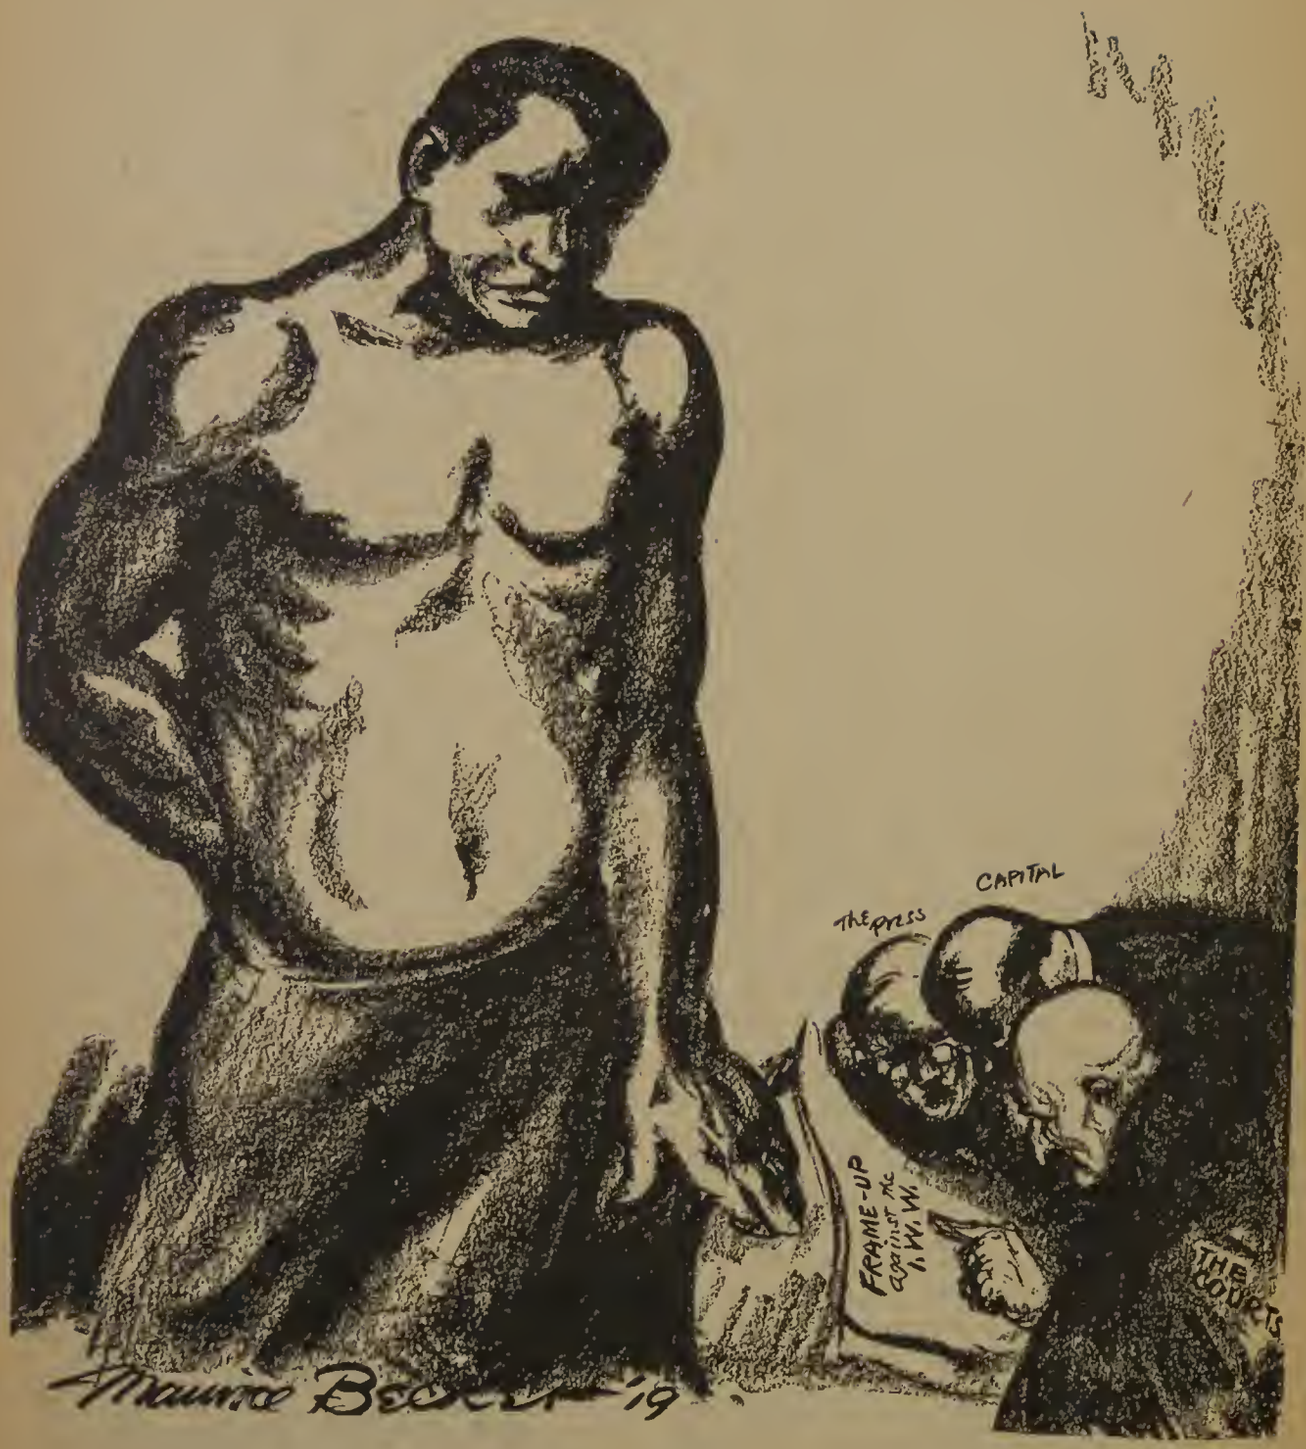
In our opinion, there is nothing that could indicate how much more advanced are the British workers than the American than the following resolution:

"Moved by Hannington, seconded by Cogan: That the objective of the organization shall be the overthrow of capitalism and the setting up of a workers' dictatorship, under the protection of which a system of workers' control and management of industries shall be developed." Carried with two dissentions.

What better indication than the above resolution could we have that the powers-that-be in Great Britain are sitting at the present time on the top of a smouldering volcano? How utterly have those people, who talk about establishing amity between the two opposing camps of labor and capital through the medium of parliament, agreements, partnerships, and such other paraphernelia of a bygone age, failed to grasp the present spirit of the European workers.

The Conference wcund up with the singing of the "Internationale" and "The Red Flag." The last paragraph of the report reads as follows:

"The delegates to the Conference are in a position to congratulate themselves on the fact that they participated in the first National Conference of the Unemployed that has ever been held, and it is indeed a sign of the times that the workers are realizing their true position in society and will remain no longer content with conditions which allow those who produce all to be thrown on the scrap heap at the dictates of the master class."



"THEIR SCHEMING HEADS SHALL AVAIL THEM NAUGHT, FOR LABOR IS INVINCIBLE."

# "The Hoosierfied Can"

**By Ralph Winstead**

I.

DISCOVERY BAY has an awful rep. As a sanatorium for those with weak minds and strong backs it is supposed to stand ace high. Havin' heard loose talk about the piece workers' paradise, I was anxious to have a look, so I didn't hesitate when the yard engineer got chalked on the boards. I bought the job and shipped up to camp.

Now, I've hit worse camps. I got to say that much. But there was a lot of room for improvement. For instance, they hadn't heard yet that man had come down out of the trees to roost, so they was still usin' the double-decked bunks. A sound sleeper that don't roll and has got lots of spring in his legs is O. K. stuck up in one of them toppers, provided that he gets near a window so as to sort of get a sprinkling of oxygen occasionally.

There was twelve men to the bunk house and the company had so far remembered the identity of interest between the workers and the boss as to stick up a wash-house and bath-house. This outfit sure has a good memory on that identity subject. They don't never forget that you should be interested in the company's welfare.

The thing that causes real humans to make a big circle around this section is the low intellectual level insisted on by the main driver. Real literature is carefully extracted from the mails and the sight of such liberal sheets as the "Nation" has been known to throw the entire office force into acute hysteria. As a training place for future postmaster generals and corporals this said office is one hundred per cent efficient.

Naturally the sight of an "Industrial Worker" or a "Liberator" just automatically rings the alarm and calls out the reserves. After that there is nothing seen but dust. So the only literature that can percolate into camp comes in by personal delivery. I was prepared good and plenty and planted the whole stock in a stump out of camp.

Now all this literary dictatorship wasn't enforced on account of pure artistic standards. The Main Stem and all his winders had to keep the slates clean of real reading in order to encourage the boys to become millionaires by the bushel route. The buckers and fallers were working by the million, the hooktender and the engineers was getting a bonus and the cook-house was run on the budget plan. Naturally anything that resembled reasoning was liable to upset, overthrow and trample under such a brainless program, even though the Frenchman says, "Man is not a reasoning animal." But sometimes he believes in reason if he reads about it.

So here was me billed as chief fog-buster for a bonus-hungry hooktender, and with a stock of literature to make Carnegie get out the blue prints. The horizon didn't look very peaceful no matter which way I looked. Peace ain't no long point in this world at that, so far as I can see. These guys that is always so afraid of their precious selves ain't got no need to worry much—their lives ain't worth livin' anyway.

II.

After nosin' round a few of the wire worms on the night that I hit camp I found that my esteemed predecessor had made his stake and had gone to town and failed to return. Said failure being caused by extreme paralysis due to poor judgment as to how much moonshine can be consumed at one sitting.

Out on the job next morning I din't have to do much investigating to surmise that this bird might have been wise to stay in town away from such a wreck as he had made the old Washington Yarder into.

I opened up the throttle and was rewarded with the knowledge that the brasses were all loose on the throttle side. Yeah! That speed artist that had been high-balling the logs out to get a lousy bonus and make a few extra dollars for the boss had sure ruined one good piece of machinery. Aside from the fact that the main drum bearings needed new babit and the friction blocks was wore to a frazzle and—well, to tell the truth, the whole crock was just naturally rim-racked till what it needed was a good doctor and a month in the hospital.

As I said, me and the hooker was the only ones in on the bonus. The rest of the riggin' crew just had the glory of scein' us get a few nickels extra while they did the work. This hooker was one of the loud-mouthed high-ball variety. The quiet, efficient specimens of this animal I often respect because usually they just can't help doing things the easy, quick way, but I got no use for the belly-aching kind.

This hooker wasn't slow on lettin' me know that he expected me to keep an eye peeled on him and hit the grit. He was full of figures about how many thousand we ought to pull, etc.

We worked along for a while and was gettin' used to the engine's various knocks, squeaks and rattles, when we choked a big one. After reefin' on her a couple of times I heard symptoms of a new complaint over on the off-side. While the crew was giving the big one a roll to start it, I wandered around and tried to see what the new complaint was all about. Steam was low, anyway.

While I was away from the throttle the whistle says go ahead. I continued investigatin' the new malady. The whistle blew again, real ambitious this

time, so I wandered around to the throttle side and lent an ear to the wild ravings of the Hopeful Hooker out in the brush. I could catch such samples as "Damned Monkey Wrench Mechanic" and "Haywire Twister" mixed up with a lot of lurid language that never came out of any ladies' sewin' circle.

I opened up until we stuck again and by that time the hooker was within sight, battin' it through the brush and bawling like a lost calf. He came up still spittin' sulphur and the landin' crew was all strainin' their listeners to get the upshot. When the blatherer got within a few feet I says to him, "Too bad, old timer! We must a lôst all of a nickle bonus by not jerkin' that log in on the thick of the whistle. I'll just owe you a nickle."

"Damn it!" he says, sort of calmin' down some. "We want to get out logs here. When that signal says go, why, go and don't go monkey wrenchin' around. If I had my way I'd take every darn wrench and throw 'em in the bay. Show a little pep now and let's get some action on this big one."

This last was in a sort of whinin' tone that I suppose he thought was good-natured. Then he turned around and raced back to the chokermen again.

I watched him out of sight and then went over to the landing crew. I told 'em to keep clear of the riggin' as something was liable to loosen up as we had a big one on. Then I went back and gave the safety valve about fifty pounds more poop.

That crazy loon got his roll all set and started her off with a high ball. I gave her the limit, too, believe me, and the lines came tight with a whip. Now as a sensible engineer I knew better, but as a dub takin' the orders of a speed maniac I wasn't supposed to have any brains anyway. So I just kept the throttle wide open and that old spar tree came swishing over with a whistling of the guy-lines and a cracking of the grain that don't sound pleasant when one is underneath.

I kept the throttle open till a loose line gave the spark catcher a wallop and sent it flying out into the brush, then I shut things off. I released the extra pressure on the safety valve and sat down to wait for the storm. The landin' crew came out and looked at the wreckage. No one was hurt.

The hooker came over and he was so mad he was white in the face. All he could say was, "You're fired," and then he choked. I looked at him and smiled. He was sure a sorrowful lookin' sight to smile at. I bet he lost a year of his life through worry over the loss of that spar-tree.

"Son," says I, "you don't look like the man that hired me. I'll just wait till the good-looking guy fires me."

Well, I didn't have long to wait. The hooker beat it off down the track so as to give the Super an earful and the head loader started to straighten up the lines. I pulled the throttle for him till the train came up with a squeeze. The Super had it all made out. He gave me a slip and never even stopped to figure up the bonus at all.

He says, "You can leave camp as soon as **you** get ready," and accented the you so as to make it sound real hard.

I went down to camp and washed up. I got my literature out of the stump and spread some leaflets so as the boys would find them. Then I lay down to read. The train went down in the morning and I figured on riding out just as I had ridden in.

The crew came in for dinner and went out again. Supper rolled around and the timekeeper followed me out of the cook-shack with one of the leaflets crumpled up in his hands. He was so mad he was poisonous.

"You damned wobbly," he almost cried, "if you don't get out of camp right away quick you are liable to get carried out."

"Son," I told him, "never try to carry a live man any place. He's awful squirmy."

After the boys got settled down I went the rounds with the literature pile. I got rid of most of it, too. Every sucker in camp bought some and then ran to tell the boss and show the evidence. They was going to keep on the right side of both parties, those birds.

After having eased my mind on the educational question I stamped up a few of the members that could be found in such a lay-out. Most of them were track men, though some of the riggin' crew were lined up, and a pumpman. Then I rolled in.

III.

My snooze was just getting interesting when I got a jab in the ribs. A flashlight that had been playin' on my face was turned onto a big, shiny star. "Hell," says I, "pinched again!" and rolled over to go to sleep.

"Johnson!" spoke up a not unpleasant voice. "I guess you will have to dress and come along. I have a warrant for you."

This sure caused me to sit up and take notice. "Warrant?" says I, "I never been pinched with a warrant yet, let's see what it says." And do you know the owner of that good-natured voice pulled out a roll of paper all covered with signatures and seals and things and read it all off from beginning to end. Everything was done so legal and all the bows was so correctly tied in the red tape that I could almost believe in the institutions of justice myself. The complainant and the said complainant and the aforesaid complainant was the gentle Super of the outfit, and me—I was the bad bird that was guilty of criminal syndicalism blacker than shadows. Now, as I said, none of my other complainants had ever taken the trouble to comply with the necessity of getting out all this warrant stuff. They just naturally had surrounded me and hoisted me aboard a "lizzie" and away we had went. Nothing balled up nor legal about it. I was just grabbed because the boss wanted it done and that was all there was to it. This "fol de rol" business was confusing. So

blamed hoosierfied and old fashioned! It was like havin' your wife run to the door to kiss you after you had been married for five years. I couldn't get over it.

While I was getting dressed John Law gathered up some of the evidence from my suitcase and took all my supplies, credentials, etc., into his own pocket. The literature he stuffed back into the suitcase and we pulled out. We rode down the track on the speeder and the timekeeper chauffered the thing. Then we transferred to auto and away we went—another bird doing the driving stunt.

The Law and me sat in the back seat and he started the soft soap stuff, at least I put it down as that. He says: "Why didn't you get out of camp right away and then this wouldn't have happened?"

Once when I was young and foolish I listened to this sort of talk and poured out my innocent insides into the sympathetic listening ears of the tender-hearted fink. After havin' had him get on the witness stand—at three dollars per testimony—and twist every phrase and sentence into some dark, dangerous threat and admission on my part, I had just naturally set down any confidences to the dicks as among the things done only by the mentally deficient.

"Why, John," said I, "I have heard so much about the good grub that you have in your hooze gow that I didn't want to miss any opportunity to pay you a visit. I heard, for instance, that you used real condensed milk with only three times its weight in water for the mush. Other things in proportion."

Conversation didn't get very chummy on such beginnings, so we both started to thinkin' our own thoughts. Somehow a feller never gets used to this pinchin' stuff. Early education, perhaps, but no matter how often it comes there seems to be a kick in it that sets the heart to wallopin' and occasionally skippin' a beat. Its like pay-day: we know that nothing much will come out of it, yet somehow or other we get exited at it just the same.

At last we pulled up to the side-door of a squat little building near the centre of a regulation "county seat" town and disembarked. Lights were turned on and keys jingled and grated and I was introduced into the office.

It was different from any jail office I had ever seen. It was clean. The spittoon had been cleaned out within a week. The old steel locker that stood in the corner to relieve the bird of his valuables did not have the usual dust. Even the electric light globe was without a fly speck. I commenced to suspect that something different was going to happen to me.

"Nice little can you have here," says I. "It must cost something to keep such a cozy little place running."

"Yes," says the Law. "It takes money. Money and time."

"Fair enough," I agreed. "The taxpayers put up the money and I put up the time. Everybody happy?"

After my list of distinguished features had been entered in the book and my cash and listed valuables deposited in the steel locker with the dustless top I was led to my cell. I had a whole four cell tank all to myself. There was a table and chair in the tank corridor. A wall bunk was already made up for me. The electric light switch could be reached from inside the tank. The tank toilet was always accessible. Never in my life had I suspected anything like this. It made me wonder if perhaps I had recently murdered someone. I couldn't remember having done so.

I pulled down the blankets and was further mystified by the fact that they were clean. Then I got the shock of my life. I found a hairpin! It was one of these kind made of the same stuff that they make pipe stems out of. Right there it lay, not six inches from the roll that served as a pillow. That was too much for one time. I turned in and finished my sleep.

At seven-thirty in the morning the sheriff rapped on the bars of the cell. "Breakfast at eight, Johnson," he said in answer to the inquisitive look in my sleepy eyes.

Washed and combed, I examined the different cells and peered out of the windows at the wooden wall of the building across the alley. Then I heard voices in the office and heard a woman laugh. The keys jingled and the office door creaked open. Then the sheriff came in with the breakfast—**on a tray!** There was mush that had been really boiled and milk made up from my prescription of the previous night. Fried potatoes and bread, sugar and coffee. I ate and was consumed with curiosity to know the how and the why of such freakish jail procedure. There was a screw loose somewhere. Jail was never like this.

During the day I got a look at the papers and read the squib that told how I had made a complete wreck of the Discovery Bay Logging Company before getting found out, and that I was now awaiting trial for my misdeeds.

IV.

So I settled down for a long wait. These things is easy after you get used to 'em. Three meals a day I had and grub that wasn't ever seen in the can before, by me.

I sent down to Seattle to one of my stationary friends and he sent me up a whole bale of books. Good stuff, a lot of it, and some of it rather clever bunk that needed lookin' into to see the place where the muddle happened. My idea is that a stiff ought to read all the best stuff put out by the opposition in order to be able to see some of the flaws in his own ranks, and to be able to put up a real argument when one of these bright college students comes along. Don't never get the idea that some of these said students don't know nothing. 'Cause a few of them do. Not all the university plugs is football nuts and longshore scabs. Once in a while

one thinks. Anyway, knowin' a few extra things don't cost nothin' to carry around.

I was deep in the bale when along come a letter from the defense committee stating that legal brains had been hired and would try and be on the job when the social carbuncle comes to a head. I ain't never been lost in admiration for these lawyer plugs, but since here was one already hired by the boys I couldn't very well do otherwise than write and thank them. Tryin' to buy your way out of the can don't seem plausible unless you got lots of money, and even Harry Thaw went broke at it. Money is just what we workin' stiffs ain't got, so I figure that this law business has got to be beat some other way.

However, I made up my mind that I would have to stand for all the "fakealoo" that goes on in a court, and then I dismissed the matter from my mind. I was a lot more interested in figuring out the why and the wherefore of the jail conditions that I was enjoyin'.

One day along about dinner time I was doin' the lion swing up and down the tank, and tryin' to digest and translate into English some junk about the state of the industrial arts, vicarious and conspicuous waste, white collars, nifty figures, etc., by a plug called Veblen. It must have been an awful job tying the meaning up in all that language, but it was worth untying, at that. Like some of this high-priced candy.

Anyway, I was mopin' back and forth doin' the jail house grind when I heard the keys rattle and the door open for dinner. Now, I have never been able to get chummy with a jailer. I got a habit of treatin' them sort of cool. Habits is not a thing to be broke easy, which can be proved by the plug who hooked on as a mule skinner in a dirt movin' camp down on the Columbia. This guy used to conduct one of Ole Hanson's prime street cars about Seattle. He nearly caused a riot on the job by yelling at the mules: "Step forward, please!"

When a pleasant little lady came up and opened the tank and put in my tray I decided that there was such a thing as carryin' a grouch too far. I busted the silence of years in this respect with some bright remark about the weather. It was explained to me that the weather was nice all right (as if it mattered to me) and that Mr. Sheriff had been called away so she had brought my dinner in. Mrs. Sheriff it was.

I got into a real lively discussion with her on the relative hospitality of jails, and soon found out that she didn't know much about such things. In the few minutes that I was eatin' my grub I solved the mystery of all this unusual bunk that had started out with 'gettin' pinched with a warrant. These people actually believed in the law! Can you feature that? A real sheriff who thought that the law was what it said it was? I never heard of anything like it!

This plug was one of these backwood settlers that had pulled some kids out of a river and had got noticed for it. Of course, he had only been in office a short time and perhaps couldn't be blamed for not knowin' better.

After this start the Missus used to bring in my meals every once in a while. She even sometimes brought along her little girl, perhaps to make me ashamed of my wasted life, maybe to scare the kid. The class struggle with her was just plain ornerliness and I had got what was coming to me.

However, I had better sense than to come straight out with such things to her. She sometimes let drop a few remarks that give full explanation of just how she thought on all questions. Her mind was molded on the Woman's Home Companion and Ladies' Home Journal plan. Style and fashion was what people should be ruled by, and my ideas were sure in discard.

It's funny how unimportant little things that have no bearing on the main events will distract us. Here was I, slated for big time in the big house and more of my idle thoughts was devoted to figurin' out the mental habits of this sheriff's wife than to worryin' about my probable retirement. She was sure just the type to lend emphasis to Veblen's point of view. I sure got a lot out of that summer's study.

Days multiplied like rabbits and I kept on collectin' my college education. Three months in the callaboose is like a term in a prep school. Six months equal a college course and a year sizes up to a university degree. If it wasn't for jails and hospitals and the like a lot of us stiffs would be as ignorant as our masters.

So far as real action was concerned I was slightly hemmed in. Yet there was a lot of excitement in livin', just as on the outside. But all the excitement was just sort of mental excitement. You know what I mean. A feller will get all pepped up on the outside over successfully pullin' something off. Don't matter whether he is a bookkeeper that has just chased down a missing cent in the ledger or a whistle punk that has just learned to splice a line a new way. Life seems to be worth while because we just naturally do things and so kind of put ourselves into them. In the can it don't look like there is much that a guy can put himself into except the bunk and the bath tub.

Me—I put myself into studyin' and honest, I got just as many thrills out of tracin' down and grabbin' onto ideas and facts as I would if I had been out correctin' scizzorbills. Every time I got hold of a new point that I had been chasin' I felt just like Mr. Block does when he puts his tobacco money in the bank; only more so. You bet! I was as busy and excited as a hop-headed dip at a country fair.

V.

About the only break in my scholarly pursuits was caused by some of this here "due process of law" that had started with the warrant that pinched me. I got solemnly interviewed by the prosecutor, who didn't seem to have the same respect for the tailor-made rules and the letter of the law, as the sheriff.

However, a short answer turns them birds away, and all their dignified and formal spluttering didn't cause no flurry in my quiet life.

Everything travels along in this here world in spite of such fellers as Judge Gary and Sam Gompers. My little period of hermetical calm came to an end likewise. I got tried.

Nothing is quite so disgusting in this world as to see a bunch of grown men carry through a lot of incantations and ritualized hocus pocus as if they really believed in it. A guy can have a lot of queer cracks in his nut and still act almost sensible, but when one of these freaks puts on a woman's mother hubbard and has everybody around standing up and sitting down, and can't even come into a room without havin' the news broke beforehand by some hanger-on hollerin' "Hereyee, Hereyee, Hereyee" and a lot of other balderdash, then I say that some work by the fool-killer has been badly saboed.

Courts wouldn't be so bad to look at and suffer through if things was run sensible like. When everything is made as buggy as possible like the thirteenth degree of the Royal Order of Sacred White Elephants then I claims that insult as well as the big stick gets handed out to the workin' plug.

The courts was for the purpose of sayin' to me: "Johnson, you're too damn fresh! We ain't goin' to have our good loyal block-headed slaves monkeyed with by you at all. Because you have been tryin' to make some of 'em think it's yours for the cooler till you learn who's who."

Instead of sayin' this to me, why, they go and pull off this fair and impartial stuff. If they had even then given the proceedin's a sort of wink and not pretended to believe what I knew and they knew was the silliest bunko stuff ever pulled off, why, I would have sort of enjoyed it. But as it was, they played the whole fake through with the greatest pains not to let anyone know what everyone knew and thought, except, of course, those poor scizzors that make up about ninety per cent of the population and don't count anyway.

Playin' the game like that allows a stiff to slip through once in a while sort of by accident. It's like playin' against the Chinaman. He lets you win to keep you encouraged, but he has it fixed so that he don't drag down his Jew percentage too raw. When the simp makes his winnin' he never guesses that the Chinaman had figured out long before that a few games would have to be lost in such a way as to appear like the sucker had won on his merits. In fact, the courts don't figure on grabbin' every labor case that comes up. They are so built that one gets by once in a while, and the workin' stiffs point with pride to this evidence of justice and don't seem to know that the game is run that way on purpose to keep him playin'.

However, it is gettin' so even this early, that puttin' out this sort of bait don't appeal to the plutes as much as it used to. They are framin' it so that in the future they will walk away with every agitator that they take a notion to. I believe it's a good idea from our point of view and if we should just fix it so that a few more of the real peppy boys would slip through their legal fingers they would shut down on the legal stuff altogether and we wouldn't have to monkey with it anymore.

I went through the first part of the proceedings with my mind on a lot of no account things that I mostly forgot about afterwards. I was real interested in the way that my defender would rub his legal brow with the thick part of the palm of his hand. The clerk had an awful nervous way of drawin' out the names from the jury box. He jerked his hand out as if he had been used to running a spud planter and was afraid of gettin' his fingers pinched.

Things rolled on. The prospective juror was asked a lot of questions by the defense, who tried by comparin' the answers one with the other to try and discover about how much lyin' the prospects was doing. The other side had made a real good survey of all the names on the jury list and knew everything that could be found out about each candidate's leanings and mental bias. The defense would have done the same thing if they had had the money.

As it was, the lawyer just had to test the amount of consistent lyin' that a feller will do to help one of these alleged wobs get his. As far as my guess went I had it that I was out of luck till number nine came up. Then I woke up and took a real interest. This party had a real twinkle in his eye. He behaved towards the solemn oath and the rest of the initiation with that amount of interested surprise that would naturally show on a man who had not checked his brains at his grandpa's.

He was a druggist. Occasionally employed some help. He guessed that he could give me a fair trial, etc., etc. Not a hair's difference between his answers and the one ahead, but somehow they hit you different. I was for him. Somehow he got in the box.

In cases like this the law don't matter none. It don't cut any ice anywheres, as far as that goes. But the law don't convict a guy and send him over.

This stunt is done by the peerless jury. This is the little arrangement which old "money bags" figures will let through a black sheep once in a while and so keep the rest of the herd comin' on to the slaughter. One man on the jury sometimes gums up the works, the way the game is played. Number nine was the guy that was goin' to ball things up, was what I claimed in my mind. At any rate I figured that he would be just the right sort of a plug to go fishin' or hikin' with, and so I centered my hopes on him.

The twelve good men and true was all selected to come to the aid of "justice," and the trial opened. As far as I could make out whenever one of the opposin' lawyers asked a question that might have

some bearing on the case, the other one would hop up and object. Then the judge would get real solemn and decide whether the jury was strong enough to stand the shock of hearin' the terrible answer. If "my" lawyer objected, why, mostly he thought they was a pretty husky jury, but if my old college visitor objected, why, they was sure sufferin' a relapse.

The two stories sort of conflicted with each other. According to the "Law and Order" bunch I was a bad egg and the organization was just like me, only more so. It preached destruction of property and I practiced it. After listenin' to the many disasters that had befallen the Discovery Bay Logging Co. through my short stay I was amazed at my destructive capacity. I figured that I could have won the World War for either side in less than ninety days.

On the other hand, proof was submitted that the I. W. W. was a strictly legal affair that didn't mean no harm to nobody. Of course, we advocated a few slight reforms such as the expropriation of industry, etc. But then this was nothing much. The Democratic party had expropriated certain worthy saloon keepers, the Republicans had expropriated the owners of the blacks, and all along they had been taking away the property of delinquent taxpayers. Expropriation was quite legal and proper. So on down the line. I almost commenced to think that maybe we were respectable, as I listened to our ardent virtues.

However, neither side mentioned that expropriation had always been a class affair, carried on in the interest of the class in power and that we only were after the power to put our program into effect. You see, the legal mind don't take no notice of classes. With it, it's like what the poet says about the Ginko tree and the Wallaby bird:

> There's no such thing as the Ginko Tree.
> There never was, though there ought to be.
> And it's also true, though most absurd,
> There's no such thing as a Wallaby Bird.

But the peerless ones didn't need to be told that expropriation is a matter of class power and not a question of legality. They just seemed to know that by instinct and they didn't have no respect for the other class that intended to expropriate them. Not much!

Witnesses was a scarce article but there was a few and they all seemed to suffer more than I did. I was sorry for all of 'em. Especially the iron-headed Super. I was so sorry for him that I just hoped that he would get mosquito bit or something, on his way to camp.

At last the bull-biting came to an end and Hizzoner stood up to watch the jury file into the jury room. After listening to his instructions I figured that it would take several hours to get them straight provided they paid any attention to 'em.

Me? I was chased back into my dubious domicile and left to my fate.

I read some and slept and ate when necessary. It was next afternoon when I was jerked up to the court room again. The jury had disagreed. My ace in the whole had stuck out for acquittal. Some day I'm going to look that druggist up and go out ramblin' with him. I bet it would be fun.

## VI

However, my presence had nothing to do with the jury. They had been canned by the judge. But the prosecutor had a proposition. He had been offering the lawyer to turn me loose on my own hook if I would promise to get out of town and stay out.

The judge, it seems, was in on the deal, too, as a sort of adviser or butinsky major. He started to give me instructions that I should do this and not do that, something like the ten commandments. He got about five off his chest when I interrupted the seance.

I told 'em that as for getting out of town I had never had any aspiration towards settling in this burg anyway. They need not worry about that. But that all talk about turnin' me loose was popped-off steam unless they gave me back all the supplies, etc., that I had on me when I was pinched. As to promises to be good I would make as many as they wanted. In fact, I told them that I could make promises faster than a sixteen-year old chicken at a kissing game party.

Unless they came through with all my supplies, report sheets, due stamps, and the whole shebang, why, all mention of throwing me out was off. I liked other places better than this, but then this wasn't so worse.

Learned counsel quit in disgust. He thought I was too hard altogether. Prosecutor says: "Take him back to the lock up." And back I went.

Next mornin' early the sheriff came in and unlocked my cell. Out in the office he forked over all my supplies down to the last empty report blank. Then he told me that a boat pulled out for Seattle in one hour and I had better be movin'. So I moved. I spotted the one drug store in town that I was lookin' for while on my way.

In Seattle I took my report up to the District Office and turned it in. The secretary never opened his bazoo about the thing bein' several months late, either. I checked in my supplies and applied for a clearance. And then, as I was mopin' out towards Hamburger Flats, who should I meet but my old side kicker up in the Chin-Whiskered Country! It was Pearly McCann, happy as ever!

After we got done pawin' each other over we got into a quiet coffee joint and I give him my yarn.

Pearly, you know, made all that peninsula country on his famous pearl divin' tour in 1918. When I give him my high opinion about the brains of sand-dune druggists he give me a little history that explains the whole mystery of why juror number nine had sure stuck to the rails. Pearly, it seems, had sanded those metaphorical rails in the regular day's work of just livin' with everybody he come across.

While up in this burg with the hospitable jail he had felt in need of a stick of shavin' soap. Blowin' into a drug store he had got interested in some nifty advertising posters that this druggist was displayin' and so had started to chewin' the rag on the dominant factors in art. Now Pearly ain't no mealy-mouthed high-brow, but still he can give some straight sensible talks on a lot of stuff that don't seem like there was any sense in it. His ideas about art is that they reflect the dominant states of mind of the people of any country and this state of mind is molded by the industries. At any rate, the subject is just full of the class struggle, although you would never think it to hear some of the long-haired boys talk about it.

This druggist lends Pearly the attentive ear and before long he is readin' some real literature, such as the "Advancing Proletariat" and a couple of other pamphlets that Pearly was specializin' in at the time.

So here was me a free man because Pearly needed a shave. Don't never tell me that whiskers is a good-for-nothing nuisance. Whiskers has always been shunned by me, but this was one time where they was all that saved me.

My ideas ain't changed much on the subject of this here legal stuff. As far as I can detect my lawyer friend had about as much influence on that jury as a talkin' machine. The ideas of the jury is made out in the open where they live. That is, so far as they have any ideas. Most of them ain't got any, and are ready to swing whichever way seems the easiest at the time.

I ain't asayin' that maybe one or two jurors haven't been educated in the jury box, but I am bettin' that even these couple or so had been worked on a whole lot that wasn't noticed before they ever stuck foot in a court. Legal defense—as long as there is such an institution kept up—can be useful mostly by educatin' the jurors before there is any immediate call for "civic duty." Payin' money to lawyers is like feedin' the sharks that follow a ship so that they will all be fat when somebody drops overboard.

Maybe I got excited and one-sided after the way old number nine pulled me through, but I sure have got an awful likin' for distributin' ideas and literature these days. Especially since I can't distribute any labor power even by givin' it away.

No need to worry, however. When times get too bad I am goin' to blow into one of these little towns with a nice hoosierfied can and commit a nuisance right on the court-house steps. Me for the Jay hooze gows every time!

# Everett, November Fifth

**By Charles Ashleigh**

(". . . and then the Fellow Worker died, singing 'Hold the Fort'..."—From the report of a witness.)

**Song on his lips, he came;**
**Song on his lips, he went;—**
**This be the token we bear of him,—**
**Soldier of Discontent!**

**Out of the dark they came; out of the night**
**Of poverty and injury and woe—**
**With flaming hope, their vision thrilled to light,—**
**Song on their lips, and every heart aglow;**

**They came, that none should trample Labor's right**
**To speak, and voice her centuries of pain.**
**Bare hands against the masters' armored might!—**
**A dream to match the tolls of sordid gain!**

**And then the decks went red; and the grey sea**
**Was written crimsonly with ebbing life.**
**The barricade spewed shots and mockery**
**And curses, and the drunken lust of strife.**

**Yet, the mad chorus from that devil's host,—**
**Yea, all the tumult of that butcher throng,—**
**Compound of bullets, booze and coward boast,—**
**Could not out-shriek one dying worker's song!**

**Song on his lips, he came;**
**Song on his lips, he went;—**
**This be the token we bear of him,—**
**Soldier of Discontent!**

# "High Spots" of the Thirteenth I. W. W. Convention

**Compiled by Roy Brown**

(Concluded from Last Month)

THE MORNING SESSION of the 10th day was taken up in debate over the changing of the universal initiation fee and dues. By a vote of 534 to 298, the present universal initiation fee of $2.00 and $1.00 a month dues still stands.

The afternoon session was taken up by the report of the Auditing Committee, who brought in a statement that they had found all accounts correct and in good shape.

### Defense Resolutions

During the morning session of the 11th day the following resolutions were adopted:

"Resolved, that all Branch Defense Committees shall become a part of the General Defense Committee and shall render monthly financial reports to the main office with expense vouchers attached." Committee concurs.

"Resolved, that all stamps, bail and bond receipt books, donation lists, or any other method of raising money shall be issued by the General Defense through the branches and districts." Committee concurs.

"Resolved, that all credentials used for the purpose of raising funds shall bear the seal of the General Defense Committee and the signature of the secretary." Committee concurs.

"Resolved, that all lawyers shall be paid through the General Defense Office only." Committee concurs.

"Resolved, that all defense and relief stamps, donation lists, and bail and bond receipt books now in circulation be declared void and called in." Committee concurs.

"Resolved, that a Rehabilitation Fund be started to insure to those who have served sentences enough money to enable them to recuperate. These funds to be derived from donations and the residue of uncalled for money in the present bail and bond fund." Committee concurs.

"Resolved, that all those who go property bonds on any member of the I. W. W. be notified that the I. W. W. will not be responsible unless agreement is reached between those placing the property bond and the General Defense Committee." Committee concurs.

"Resolved, that the rules regulating the relationship of the branches of the General Defense Committee with the head office be left to the G. E. B. and the General Defense Committee acting as a joint body." Committee concurs.

On the afternoon of the 11th day, the following was concurred in:

"Resolved, that we go on record of leaving the matter of dues and initiations in foreign countries where the I. W. W. are organizing, to their own familiar conditions." Committee concurs.

A resolution was passed that the G. E. B. be instructed to change the design and color of due stamps, general defense stamps and organization stamps once a year. Design of each stamp to contain the year in which stamp is to be used.

### A Pan-American Industrial Conference

"Resolved, that we go on record as being in favor of the General Secretary-Treasurer and the G. E. B. of the I. W. W. calling a conference as soon as conditions will allow, of all revolutionary industrial organizations on the American continent, and especially those which are inclined to break away from the old craft form of organization. The fact that an economic conference is being held somewhere in Europe is no reason why we on the American continent should not hold an economic conference to try and outline a program of organization in which all the workers shall come together with one aim, one principle and one object for the abolition of wage slavery." The committee concurs.

"Resolved, that the G. E. B. must relieve at once editors of our papers and magazines who do not uphold the revolutionary principles of the I. W. W." Committee concurs.

During the morning of the 12th it was decided to hold one of the G. E. B. members over for a period of 30 days to function with the new G. E. B. The following resolutions were also adopted:

### Next Convention

"Resolved, that the next general convention be held on the second Monday of November, 1922, a special convention to be called if necessary."

"Resolved, that the G. E. B. be requested to get out the minutes of the 1919 and 1920 general conventions in book form at once, also be requested to have minutes of 1921 convention put in book form and circulated among the membership. Committee recommends that 1919 and 1920 general convention minutes be printed just as soon as finances will permit."

"On calling in and destroying the Finnish translation of the pamphlet 'The I. W. W., Its Principles, Objects and Methods,' by John Sandgren. Committee recommends that this resolution be turned over to the G. E. B. for immediate action, and that they make the necessary corrections, etc., to cover same."

The afternoon session was taken up after the following resolution was adopted:

"Resolved, that we insert in Art. 2, Sec. 4, under the duties of the Secretary-Treasurer: 'Except in case he shall resign or be removed, if he does vacate office longer than a period of two weeks, except in case of sickness or being in jail, his place shall be filled by the chairman of the G. E. B." Committee does not concur.

In the discussion of the proposition of accepting records of paid-up union cards and outside unions in lieu of initiation fee of the I. W. W., it was finally decided that the records are not to be taken unless authorized by the G. E. B., or Industrial Union G. O. C.'s.

### Convention Favors the Six-Hour Day

During the morning session of the 13th day there was a lengthy discussion about getting out literature advocating the 6-hour day as a means to fight unemployment. The Convention passed a resolution as being in favor of it.

It was also resolved that continuation cards be issued only by the headquarters of the industrial unions.

The following resolution was rejected:

"Resolved, that in the future a description of the delegate be placed on the credentials, thus enabling a member to see at a glance that the person carrying credentials is a duly authorized delegate. This description should include some distinguishing mark."

### A General Propaganda Bureau

During the afternoon session the following resolutions were adopted:

"Resolved, that our delegates to the Convention will impress the urgent need of organization among the construction workers in the East; that we must get organizers as soon as possible."

"Resolved, that the G. E. B. shall establish a General Propaganda Bureau, which shall consist of the editors of the organization publications, who shall be appointed by and be responsible to the G. E. B. The General Propaganda Bureau shall convene at least semi-monthly to discuss and act upon the maintenance and promotion of the various publications, pamphlets, and literature in general. At these meetings different issues of a conflicting nature shall be decided upon, and not in the columns of our press. The General Propaganda Bureau shall be assisted in its work by a propaganda committee of each paper, but said committee shall not interfere with the regular functions of the industrial unions, such as handling of initiations, dues, assessments, delegate reports, routing of organizers, etc. The General Propaganda Bureau shall be responsible for the management of the organization publishing plant. The G. E. B. shall appoint a general propaganda secretary, who shall have supervision over the affairs that come under the jurisdiction of the General Propaganda Bureau."

"Resolved, that the Convention of Lumber Workers' Industrial Union No. 120 submit to the annual Convention of the I. W. W. for them to consider the indorsing of the Work People's College as an institution of learning, and to determine more specifically to what extent the I. W. W. as an organization can finance, control and make public the Work People's College, which is now maintained by a small group of I. W. W.'s." Committee concurs, and recommends that we give publicity through our I. W. W. publications for the Work People's College of Duluth, Minnesota.

"Resolved, that as all literature got out by the I. W. W. is for the purpose of education and not for profit, it be sold at as near cost as possible."

### Preamble to Be Translated Into Japanese

The morning session of the 14th day was taken up in devising ways and means to produce new literature and to discontinue some of the old. It was recommended that the Preamble and Constitution, and an explanation of them, be translated into the Japanese language, and that new literature dealing with the general construction, railroad, and coal mining industries be put out.

Some of the old literature on hand was ordered to be given away free.

### Industrial Departments Voted Down

The afternoon session was taken up in discussing the changing of the constitution in regard to the departments.

The following resolution caused much discussion, but was rejected:

"Resolved, that an Industrial Department shall consist of Industrial Unions of closely kindred industries appropriate for representation in the Departmental Administration. As soon as two or more Industrial Unions in closely related industries see fit, they shall proceed to call a convention of those Industrial Unions and organize themselves as an Industrial Department of the Industrial Workers of the World, as hereinafter outlined. A Departmental Administration may be formed in any part of the I. W. W., providing it is ordered done by the membership of such Department, as hereinafter provided.

"Any two or more Industrial Unions may form a Departmental Administration regardless of size of membership; when such action is desired by a group of members in one existing Industrial Union, they shall meet and draw up resolutions and send out call for seconds to the membership of their respective Industrial Unions in their Department. Upon receiving sufficient seconds the General Office of the I. W. W. shall submit a referendum to the members of the Department calling for such, the referendum to be voted on only by the members of said Department.

"If the members of the Department decide by referendum upon a Departmental Administration, the Chairman of the G. E. B. of the I. W. W. shall immediately call a convention of said Department.

"The delegates to such convention shall, after agreeing upon all fundamental points, proceed to draw up such by-laws and rules as may be deemed necessary and practical in their particular Department, they shall nominate the officials of the Departmental Administration, which same shall consist of one Secretary-Treasurer, one Chairman, and Department Organization Committee. The size of the Committee, its duties and salary, as well as basis of representation of the Industrial Unions on Committee, shall be determined by the Department Convention, all subject to a referendum vote of the entire membership of the Department.

"Said Departmental Convention and Administration shall pass no legislation contrary to the General Constitution of the I. W. W., and shall at all times be subordinate to the G. E. B. and the General Convention of the I. W. W.

"Sections 3 and 5 in Article 1 to be stricken out concurringly."

The following resolutions were adopted:

"Resolved, that the committee recommends that all delegates representing the I. W. W. in foreign countries shall be credentialed by the G. E. B. and the credentials must bear the signature of the General Secretary-Treasurer and the Chairman of the G. E. B."

**Philadelphia Branch Given 90 Days' Grace**

"Resolved, that we instruct the G. E. B. to give the Philadelphia Branch of M. T. W. I. U. No. 510, Local 8, ninety days to comply with terms laid down by the Convention, and thereafter start a branch of I. U. 510 in Philadelphia, and transfer all members of the old branch who agree to abide by the constitution."

On the morning of the 15th day the following motions were carried:

"Resolved, that all seamen taken in by Philadelphia Branch No. 510, Local 8, under the universal initiation fee of $2.00 and monthly dues of $1.00, before the expiration of the 90 days allowed Philadelphia Branch No. 510, Local 8, to conform to constitution, be eligible to transfer into the I. W. W."

"Resolved, that no more supplies be furnished Philadephia Branch No. 510, Local 8, while they stand suspended. Any Secretary, G. O. C. member, or other member of the I. W. W. furnishing them any supplies to be expelled." Carried.

**"The Industrial Pioneer" Put on a Returnable Basis**

"Resolved, that the price of the magazine (Industrial Pioneer) remain at 25c., and the magazine to be furnished the news dealers on returnable basis."

"Resolved, that we substitue for Art. 6, Sec. 4, in the general constitution: 'Industrial Union Secretaries shall give a statement on their monthly financial report of their indebtedness to all industrial unions, general headquarters, general defense committee and all subordinate parts of the I. W. W., and remit all indebtedness at the end of each month. Any unit of the I. W. W. who fails to do so at the end of ninety days (three months) is hereby declared delinquent and the G. E. B. must regulate the financial affairs of the delinquent unit until their accounts are paid.'

Moved by Bare, seconded by White, that we concur with the resolution.

Moved by Craig, seconded by Murray, that we amend the last sentence to read, 'Any unit of the I. W. W. who fails to do so at the end of ninety days (three months) is hereby declared on an unsound basis and the G. E. B. must regulate the financial affairs of the unit until the accounts are paid." Amendment carried.

Next, the following resolutions were passed:

"Resolved, that the G. E. B. be instructed to install a budget system in General Headquarters."

"Resolved, that this body go on record in favor of the sustaining fund for the Industrial Research Bureau."

Moved by Sigal, seconded by Archibald, that we concur with the resolution.

Moved by Craig, seconded by Monoek, that the resolution be amended to read that all money expended on a Bureau of Research must come from voluntary contributions and not from the funds of the organization." Amendment carried.

**Bond Forfeitures**

After the above resolutions were adopted the Convention adjourned early to allow the Trial Committee to investigate the bonds of those bond holders who had forfeited them on account of some I. W. W. class war prisoners not returning back to the penitentiary.

During the morning session of the 16th day the Trial Committee brought in the following report with recommendations, that were concurred in by the Convention:

"On bonds forfeited by Haywood and Rothfisher: The Committee wishes to report that we went to lawyer Otto Christensen's office at 8:30 P. M. and interviewed him in regards to the property that was put up as bail on Leavenworth prisoners. We found that certain individuals had signed a writ of indemnity (dated April 23rd, 1919), to guarantee any loss which might be sustained by William Bross Lloyd in furnishing bail for Haywood and 37 other prisoners, including Rothfisher.

"The names of those who signed the writ were as follows:

| | |
|---|---|
| George F. Vanderveer | $10,000.00 |
| Otto Christensen | 5,000.00 |
| C. E. Payne | 1,000.00 |
| John Burke | 5,000.00 |
| John Korpi | 500.00 |
| Tom Doyle | 1,200.00 |
| James Scott | 1,000.00 |
| Arthur Proctor | 1,000.00 |
| Roscoe Tobias | 1,000.00 |
| T. V. Cooper | 1,000.00 |

"We found that William Bross Lloyd together with Mary E. Marcy furnished property bonds to

secure $4,500.00 on Haywood, also that Lloyd furnished property bonds to the amount of $5,000.00 on Chas. Rothfisher.

"On further inquiring we found that Otto Christensen and friends had deposited $3,500.00 in Liberty Bonds on Haywood, and that Chas. Kerr and Co. furnished property bonds to cover $2,000.00, making a grand total loss of $15,000.00 on Haywood and Rothfisher.

"We find that Howe, who is Secretary to Lloyd, is of the opinion that those who signed this writ of indemnity were representing the organization in doing so, also that Christensen holds this opinion.

"The Committee recommends, inasmuch as these bondsmen consider the organization as being responsible for any loss to them, that Bross Lloyd, Mary E. Marcy and Otto Christensen and friends be compensated as soon as finances permit.

"Signed:

| | |
|---|---|
| **Walter Smith,** | **Tom Connors,** |
| **E. W. Latchem,** | **Joe Monoek,** |
| **Charles Craig,** | **Charles J. Miller."** |

In the afternoon session the following resolution was adopted:

"Whereas, the convention of the M. M. W. I. U. No. 440 has gone on record for the Department Administration, followed by a like action in the conventions of F. W. I. U. No. 460 and P. & P. W. I. U. No. 450, be it hereby resolved, that the G. E. B. be instructed to issue a referendum to the Department of Manufacturing and General Production No. 400 on the question of a departmental administration for department No. 400. The department administration to function as outlined in Solidarity No. 116, issue of January 22nd, 1921."

### Greetings from the Workers' Committee Movement of Great Britain

A letter from the Workers' Committee Movement of Great Britain was read and accepted by a unanimous vote. The letter follows:

"To the I. W. W. Convention from the Workers' Committees of Great Britain. May the 6th, 1921.

"To the revolutionary proletarian fighters of the I. W. W. in Congress we convey our revolutionary greetings:

"Fellow Workers, you are met in Congress in an age of remarkable revolutionary activities, when the working masses of the world are being forced to a world-wide struggle and when our class enemies are becoming increasingly savage in their attacks upon the workers. This intensification of savagery is no longer confined to particular countries. It is now extensive and general. A few years ago the I. W. W. was almost an isolated body, suffering terrific onslaughts from the class-conscious employers, who did not hesitate to attack you with every conceivable weapon.

"With the advent of the Russian Revolution and the triumph of the Russian Proletariat, your isolation is forever gone. We have entered the epoch of the World Revolution. With the crash of a capitalist peace the workers of every country west of Russia are thrust into the economic mess from which the capitalists can find no way out. In this situation we revolutionary workers have special functions to perform and a special role to fulfill. We are the advance guard of the industrial organization and must accordingly accept the full responsibility of such a position.

"We believe that the Workers' Committee Movement of Britain has accepted its full responsibilities, both nationally and internationally. In the present industrial struggles in this country we are working with might and main to extend the strike of the miners, believing by these means we intensify the growth of class solidarity and bring our fellow workers to face, through experience, the class challenge to the capitalist state. In this struggle we do not hesitate to co-operate with the Communist Party or other revolutionary bodies which are waging revolutionary struggle. Internationally we have declared ourselves with the Russian Proletariat, and have unhesitatingly allied to the Russian Trade Unions in the Red Industrial International. We have responded to their call for an International Congress of revolutionary industrial organizations and are sending delegates to the Congress.

"Fellow Workers, we believe we have much in common with the I. W. W. We believe that every industrial organization responding to the call of the Red International has much in common with you and us. We are confident that to fail in response to the call of the Red International would be to fail in our loyalty to the Russian workers. We, therefore, in sending our delegate to your Congress, appeal to you to rally with us to the Congress of July 1st, 1921, and help to fashion an industrial international weapon capable of carrying the workers' international struggle to victory.

**"Yours, on behalf of the National Workers' Committee Movement,**

**J. R. Campbell."**

Fraternal delegate Jack Tanner made a report, the import of which appeared in the previous issue of this magazine.

A discussion took place on establishing a clearing house for the organization, which resulted in the following action being taken:

"Resolved, that the General Headquarters be the clearing house for all supplies, and that sub-stations be set up where necessary, and numbered as branches, and to issue supplies to all industrial unions in that given locality and the same to be under the jurisdiction of Joint Organization Committees, and as supplies are issued to branches of the different industrial unions, said supplies as issued will be charged to same. And that expense of same be paid on the pro-rata basis of actual receipts for organization."

"Resolved, that when an industrial union notifies Clearing House to cut off supplies from any sub-

ordinate part of the industrial union, and such supplies are not cut off, the industrial union shall not have to pay for them."

### Letter to Workers' Committee Movement

The following communication was drawn up and sent to the Workers' Committee:

**"To the National Workers' Committee**
**Movement of Great Britain:**
**Fellow Workers:**

**Greetings:**

"Your communication conveying revolutionary greetings to the 13th Convention of the Industrial Workers of the World was received by a unanimous vote.

"We are agreed with you that our common enemy is 'World Capitalism.' We therefore extend the hand of International Solidarity for the purpose of eliminating the parasite class and establishing an Industrial International of the World's Workers for the benefit of the working class.

"Yours for Industrial Freedom,

Signed: **Industrial Workers of the World.**
**Walter Smith, Chairman of Convention.**
**Tom Wallace, Recording Secretary."**

The rest of the forenoon was taken up in going through resolutions and suggestions that had been previously acted upon.

During the afternoon session a motion was made and carried that monthly educational features covering different industrial unions be run in the official bulletin, parallel with the structure of the I. W. W., technical routine work, etc.

### Educational Workers' Industrial Union No. 630

The following resolutions were also concurred in:

"Whereas, it has been the policy of the members of the different industrial unions to line up their mothers and wives into the industrial union in which the members themselves are organized, regardless of whether their mothers and wives work in that industry or not, and

"Whereas, by doing this we are misdirecting a lot of useful energy, due to the fact that these mothers and wives of wage workers have no function to perform in the industry in which they do not work and consequently cannot understand how to best function in the affairs pertaining to that industry, and

"Whereas, primarily the mothers and wives are now functioning through the schools' bi-monthly mother meetings, which are being conducted as regular business meetings, and

"Whereas, the mothers and wives of members have a function to perform in the I. W. W., and can perform that function more effectively when they are placed in proper industrial unions, and

"Whereas, the function of the Educational Workers' Industrial Union No. 630 is the physical and mental development of children,

"Therefore be it resolved, that the I. W. W. place this important energy of the mothers and wives of I. W. W. members into the Educational Workers' Industrial Union No. 630, so they can function under their natural environment, the same as other industrial workers."

### Other Important Resolutions

"Resolved, that we recommend to the G. E. B. that a committee be formed of I. U. Secretary-Treasurers and G. O. C. Chairmen to work as an advisory committee to the G. E. B."

"Resolved, that we instruct the G. E. B. to take steps to find ways and means of establishing an I. W. W. school for the promotion of the educational training of job delegates, organizers and speakers for the General Organization."

### Nomination of Officers

The next order of business was the nomination of officers. Roy Brown was nominated and elected to function for a period of 30 days after the expiration of his term with the newly elected members of the General Executive Board.

John Grady, Tom Doyle and George Bradley were nominated as candidates to go on the ballot for General Secretary-Treasurer. After this the Convention adjourned, singing "Hold the Fort."

# Book Review

## RUSSIA AND THE ART OF REPORTING.

**The Crisis in Russia:** By Arthur Ransome: New York: B. W. Huebsch: 1921: $1.60.

OF THE making of books about Russia there would seem to be, veritably, no end.

Many of the reports that come to us from the land of the soviets are horribly garbled. One does not need ever to have been there to sense that. True reporting is a fine art and requires, like any other art, in addition to a certain natural aptitude, an intensive apprenticeship. Persons who would never think of attempting to paint a picture, play the piano, or carve a statue, feel that they are quite qualified to practice the reportorial art. "Why," they reason, "it's so simple—just putting down what one sees." What they do not realize is that observation is itself an art and requires a specialized training, while the proper recording of one's observations is still another matter.

And so, every one who has ever set foot in Russian territory seems to feel that he is forever fitted thereafter to pose as an authority, not merely on Russia, but on the whole theory and practice of communism. Some "authorities," indeed, do not even take the trouble to go to Russia. Take, for example, Mr. Frank Comerford, whose latest means of breaking into print is the "discovery" that the I. W. W. is mobilizing a red army. Mr. Comerford got at least as far as talking to Kerensky in a London drawing room, and so, of course, he knows all about Lenin and Trotzky and their little job.

It is to be doubted, however, if most of those who bring us back these conflicting reports are, consciously, dishonest. Freud and other psychologists of the modern schools have much to teach us with regard to the essential nature of honesty. We are all, more or less, creatures of the subconscious. Deep down below the surface of our consciousness is a bias, in accordance with which we—most of us unconsciously—act, and for which no better ultimate justification has been found, perhaps, than Prof. James' "will to believe."

"An open mind, like an open mouth, is a sign of weakness."

Chesterton, exponent of the facile and futile trick of paradox, has said many foolish things in his time; the above is one of the few wise ones. The truth is, the fabled "open mind" is, among properly cerebrating individuals, a practically non-existent phenomenon. And it is just as well. Otherwise, this woozey old world of ours would scarcely wobble along as well as it does. For, again the modern pragmatist teaches us, the important thing is to believe in something that will get us somewhere, to know where we are going and to be convinced that we are moving in the right direction. What is needed to make the world go round is intellectual certitude of some sort. This philosophy, it is true, may be used to justify anything from Catholocism to Communism. Cardinal Newman required one sort of certitude; Lenin requires another sort; but **some** sort of certitude was and is indispensable to each.

The point is, every one who goes to Russia goes there, consciously or unconsciously, with a bias. Before he has crossed the frontier, he is already pro or con the system which he knows he will find in Russia. The convinced communist goes there, expecting, if he is honest with himself, to find confirmations for his communism. The convinced bourgeois expects to find proofs that communism is and must be a failure. Sincerity, it seems to us, is oftener to be found in the radical than in the adherent to the established order, but it may be found in both. The dangerous reporter is the one who is not honest enough with himself and his readers to frankly recognize and admit his inevitable bias. Such a one was H. G. Wells, whose recent reportorial fiasco is still fresh in mind. Mr. Wells went to Russia, expecting to demolish communism because it did not jibe with his own little yellow-socialist-pseudo-scientific world; and yet, without taking the trouble to ascertain the facts, which any conscientious reporter would have taken, he poses as an impartial observer and recorder.

All this leads us to one of the latest books on Russia, Mr. Arthur Ransome's second on the subject: "The Crisis in Russia." Mr. Ransome's previous volume, "Russia in 1919," will be recalled.

As correspondent for the Manchester Guardian, one of the best and most honest organs of bourgeois journalism, the writer's opportunities for accurate observation were excellent. He seems to have had the **entree** to communist circles, which is so essential, and which Mr. Wells either did not have, or of which he was too timid or too indolent to avail himself. Our present author has the journalistic **flair**, the much abused "nose for news." Witness his chapters on Saturdayings, propaganda trains, industrial conscription, non-partyism, the trade unions, etc., all topics of timely interest to those of us outside Russia, in addition to sections on his more general thesis, the shortage of men and things, the communist dictatorship, etc., and a final chapter, of interest to would-be prophets, on "Possibilities." Such chapters as "A Conference at Jaroslavl" and "Rykov on Economic Plans and on the Transformation of the Communistic Party" are interesting journalistic features.

Mr. Ransome is a trained reporter and a good one. And he is far more honest than many. In the Introduction, he takes us into his confidence by telling us his reason for writing the book. He was

not eager to write it at this time, he hints; there were other things he would have preferred to do; but he felt it was imperative. The crisis which Mr. Ransome sees in Russia today is nothing less than the peak of the struggle between what he calls "civilization" on the one hand and chaos, the complete collapse of civilization, on the other. He sees this merely as part of a general European crisis and one wich other countries must face sooner or later. He tells us quite frankly, in the concluding lines of his book, that he believes the only thing which can save civilization in Russia is, if not communism, at least the communist dictatorship. And he tells us, furthermore, that he believes this dictatorship cannot be overthrown. So far, he is sincere.

In the Introduction, he says:

"It has been said that when two armies face each other across a battle front and engage in mutual slaughter, they may be regarded as a single army engaged in suicide. Now it seems to me that when countries, each one severally doing its best to arrest its private economic ruin, do the utmost to accelerate economic ruin of each other, we are witnessing something very like the suicide of civilization itself. There are people in both camps who believe that armed and economic conflict between revolutionary and non-revolutionary Europe, or if you like between Capitalism and Communism, is inevitable. These people, in both camps, are doing their best to make it inevitable. Sturdy pessimists, in Moscow, no less than in London and Paris, they go so far as to say "the sooner the better," and by all means in their power try to precipitate a conflict. Now the main effort in Russia today, the struggle which absorbs the chief attention of all but the few Communist Churchills and Communist Millerands who, blind to all else, demand an immediate pitched battle over the prostrate body of civilization, is directed to finding a way for Russia herself out of the crisis, the severity of which can hardly be realized by people who have not visited the country again and again, and to bringing her as quickly as possible into a state in which she can export her raw materials and import the manufactured goods of which she stands in need. I believe that this struggle is ours as well as Russia's, though we to whom the threat is less imminent, are less desperately engaged. Victory or defeat in this struggle in Russia, or anywhere else on the world's surface, is victory or defeat for every one. The purpose of my book is to make that clear. For, bearing that in mind, I cannot but think that every honest man, of whatever party, who cares more for humanity than for politics, must do his utmost to postpone the conflict wihch a few extremists on either side of the barricades so fanatically desire. If that conflict is indeed inevitable, its consequences will be less devastating to a Europe cured of her wounds than to a Europe scarcely, even to the most hopeful, to be described as convalescent. But the conflict may not be inevitable, after all. No man not purblind but sees that Communist Europe is changing no less than Capitalist Europe. If we succeed in postponing the struggle long enough, we may well succeed in postponing it until the warlike on both sides look in vain for the reasons for their bellicosity."

Here, it seems to us, the author's essential honesty—with no accord of his own, perhaps—fails him somewhat. His failure is to be quite honest with himself.

What is this thing which he calls "civilization," the saving of which is of so tremendous importance, and for the saving of which Communists and Capitalists must postpone their conflict and join hands? What is this "civilization" but the product of capitalism, or the capitalistic order itself? And yet, we, who do not believe in that order or the desirability of its preservation, are asked to join with its supporters in saving it; we are asked to wait until we have saved it before we set about the work of destroying it. Is this honest logic, even for one who sincerely believes in capitalistic "civilization"?

The real revolutionist knows that, before he can begin to build up aright, he must first tear down; construction must inevitably be preceded by a certain amount of destruction. He knows that, in the transitorial period, at least, there must be a certain amount of confusion and "economic ruin," bordering even on "chaos," perhaps. His evolutionary philosophy of revolution, the philosophy of the materialist conception of history, has taught him to expect this in connection with the breakdown of the capitalistic system.

Personally, we are of those "sturdy pessimists" who believe that present-day civilization is a disease which must be cured by radical remedies. We do not believe it is worth saving. What, after all, is this "economic ruin" of which so much is heard? Is it not merely the "ruin" of the exploiting and parasitic classes? We hardly believe that the condition of the worker could be much worse in any state of society than it is under this same "civilization," which the working class is asked to save. And if it is merely the welfare and comfort of the master class, why should we be interested in saving it?

As to postponing the conflict, we can see no advantage, save to the other side. "Wait," says the Capitalist, "until we are stronger, wait until we have recovered from the near-suicidal results of our own imperialistic folly, wait until Capitalism is safe again, and then we will fight it out, if you still feel like fighting." This is nothing more nor less than an insult to working class intelligence.

If there is one thing that could possibly justify the world war with its terrible toll in human life and happiness, it is that, as an aftermath of the war, may come the collapse of the system which makes war possible. If that result is attained, the war, even with its fearful cost, was not altogether

in vain. If, on the other hand, we go back to the old pre-war system, which can only mean war and more war, then it was a loss, indeed.

The author's belief that "If we succeed in postponing the struggle long enough, we may well succeed in postponing it until the warlike on both sides look in vain for the reasons for their bellicosity" seems to us to be a flagrant example of dishonesty. Why cry peace, when there is no peace?

The author, in the last words of his book, makes an interesting point. In speaking of the likelihood of an economic upheaval in England, he says:

"There is a strange irony in the fact that the Communists desire that upheaval, and, at the same time, desire a re-birth of the Russian market which would tend to make that upheaval unlikely, while those who most fear upheaval are precisely those who urge us, by making recovery in Russia impossible, to improve the chances of collapse at home. The peasants of Russia are not alone in wanting incompatible things."

In conclusion, we may predict that you will find "The Crisis in Russia" interesting reading. The author, if not a John Reed or a Louise Bryant, is at least not a Russell or a Wells.

## TAKING TEA WITH TROTZKY, OR LIGHT READING FOR RADICALS.

**From Mayfair to Moscow: By Clare Sheridan: New York: Boni & Liveright: 1921.**

IF YOU are a Tired Revolutionist, in need of a late-spring tonic in the form of a good laugh, or if you find yourself with a bad case of blues on a rainy day, let us be your doctor and prescribe the volume listed above. If your sense of humor is keen enough, you will find it excruciatingly funny.

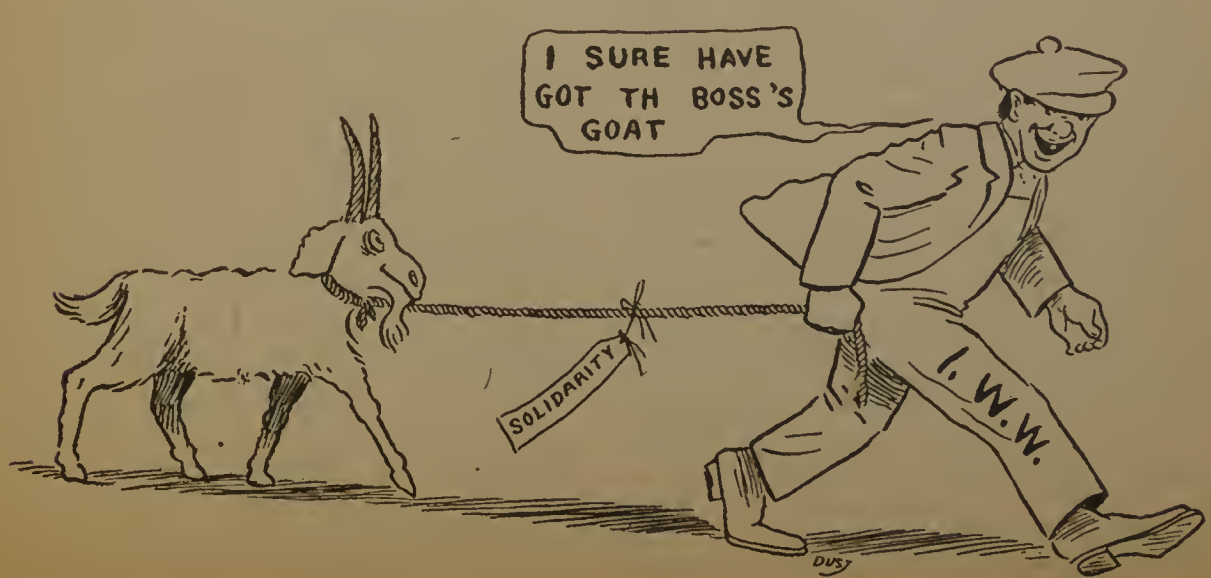
Here is a feminine sprig of British aristocracy, a niece of Winston Churchill, who, becoming suddenly bored, takes it into her head to run over and "do" Lenin, Trotsky, et al. Through the political and social wires she is enabled to pull, she succeeds in her enterprise. She makes her way to Russia via Stockholm and a Soviet representative who appears to have fallen under her spell.

Her purpose is going to Russia, she tells us, was to "sculpt", i. e., make busts of the bearded **enfants terribles** of the revolution. Her success is somewhat surprising. True, when she manifests a desire to go to the front for the purpose of "doing" the leaders of the Red army, she almost gets herself pinched as a spy, but, on the whole, she gets along very well. And she has **such** interesting experiences! My dear! You should see the table manners of those Bolsheviks! And they have **no** sense of class distinction—absolutely none! Why, on one state occasion, when the supply of waiters runs short, a prime minister or something of the sort actually pins an apron on and helps out. **Can** you imagine!

But, of course—and here the perfectly delicious humor of the book comes in—one mustn't say anything against one's hosts. Having accepted their hospitality, it wouldn't be good form. One scarcely can help wondering just what the writer would have said, if she hadn't been quite so well bred.

There are some really interesting passages in the book, as, for example, when the society sculptress describes her efforts to make an appointment with Tchitcherin for a sitting. The latter, it seems, like many Russians, has the habit of turning day into night. Time means nothing to him. He tells our lady that he will telephone her when he finds time to sit for her. She is finally awakened at 3 o'clock one morning by the ringing of the telephone. It is Tchitcherin, ready to pose.

S. P.



# Is Personal Gain a True Incentive?

By Jane A. Lee

ON ALL HANDS the rebel worker is met with the seemingly puzzling query: who will labor, invent, do creative work of any kind if the incentive to endeavor, namely, personal gain, is eliminated?

The assumption is prevalent that human effort is brought into play through fear of physical discomfort, as is seen in the case of a vast number of manual workers, or that the artist's, or scientist's, energies are set in motion because of financial aggrandizements, prestige, social distinction.

The superficial observer, unaccustomed to see beneath the surface, may be led to entertain such a view by virtue of the fact that it holds good of a large majority of toilers in factories, mills, and mines.

A brief analysis, however, will prove to the most sceptical that this is due not to the nature of the workers in those industries, but rather to the nature of the work performed by them.

### Decline of Interest in Labor

Modern large scale production has done away with the interest, the pride the artisan of old took in his handicraft. To call out interest in and love for any given pursuit, co-ordination in such manner that the worker understands the connection between the constituent parts and the whole, is absolutely essential.

The worker today is denied this potent motive power. Capitalist production carried on on the basis of profit instead of use has introduced such minute division of labor that the operative in a modern plant has not the slightest conception of the relation of his part of the work to that of the fellow worker next to him. He is confined to the performance of a most monotonous task under the most unwholesome, disagreeable surroundings. Last but not least there is the consideration of compensation, the so-called incentive translated in terms of an equivalent for labor power, i. e., wages.

It is common knowledge that the producer today receives in wages one-eighth of the value of the product of his labor. The difference in value between his wages and product is appropriated by the owners of the plant in the form of interest and profit.

Under these circumstances is it surprising that the manual worker today works out of fear of actual starvation merely? What other interest is held out to him over and above the pittance he receives and which barely suffices to maintain his existence and reproduce his kind (the latter a sort of deferred asset of the employing class).

With regard to the artist, scientist, etc., the hypothesis of external motive power, i. e., remuneration of one kind or another, is even more fallacious.

No less an opponent of Communism than Herbert Spencer contends that exercise of one's faculty yields the greatest amount of pleasure, and that human conduct responds to but two fundamental instincts, namely, seeking of pleasure and avoiding of pain (the former, in our opinion, being the more potent).

### The Higher Motivation to Labor

We see, then, that human effort has its own intrinsic value, i. e., the pleasure and gratification accruing to one in the exercise of one's faculties.

That this is true is demonstrated daily by examples of the most painstaking labor in laboratories, clinics, etc., carried on not for consideration of financial gain, but in the interest of science and human welfare. The biographies of great minds of all ages furnish many instances of hardship, beginning with physical privation, contemporary hostility and ending in persecution, jail, etc., but these things, instead of checking ardor, zeal, tend to augment the flow of spirit.

And why? Because of the value of the work itself contained in (1) the exercise of one's faculty, and (2) in the service rendered to one's fellow beings.

The individualist, Herbert Spencer, could not appreciate the tremendous role this specific factor plays in the work of those who try to further the interests of humanity instead of serving those of their own.

These are facts which no impartial student of history will undertake to contradict. Whence then this widespread idea of incentive as extrinsic, as something outside of the worker, which must be urged on, as it were, by external influence? To answer this question one must go back to its origin.

### The Ideology of Capitalism

With each social system there is developed a corresponding ideology, concepts, standards of right and wrong, etc.

A social order based on the greatest good to the smallest number and the greatest harm to the largest number must be accompanied by ideas and ideals justifying that arrangement.

Capitalism is fundamentally individualistic, it is based on the principle and practice of "each for himself and the devil take the hindmost." This cutthroat system could not endure were it not reinforced by a philosophy which lends a semblance of justice to it. The justice, we are told by its apologists, lies in the fact that nature itself has not been equally lavish with all of us; has endowed some with a large amount of brain power, others with but a small quantity of that precious gray matter, and still others nature has seen fit to forego altogether.

This so-called natural differentiation is turned to the account of the minority ruling class. Men of the first group become captains of industry; men of the third their industrial serfs or wage slaves; men of the second a sort of intermediary between the first and third, or the modern middle class.

This ingenious division of men into classes is meant to explain and justify a social order which foredooms millions of workers to the part of mere cogs in the social structure, making their work a veritable curse to be shunned were it not for the lash of hunger constantly falling upon their bent backs. In order to continue this brutal social inequality some must be deluded, some blindfolded, and, above all, the wage slaves themselves must be made to believe that nature, rather than man, made them into slaves.

There is another great advantage in this individualistic outlook; it puts the blame on the individual instead of the social aggregate. It points its finger to personal limitations as the cause of failure. And by the same token, it hypnotizes men into the mythical belief that success is the result of individual effort. It creates the paradoxical psychology of the proletarian-bourgeois standards and aims. In fine, the individualistic theory serves the capitalist end admirably in that it explains, sanctions, and holds out the mirage of success for some few isolated persons out of the large mass of workers who must remain in the mire all their lives.

To rise to the "top," to a financial pedestal, is the ideal stressed by capitalism as the most worthy of human aspirations. The decay of capitalism as evidenced in Europe, the industrial conditions of the U. S., the land of fabulous riches in the hands of a few industrial pirates, and unemployment, crime, suicide, the lot of millions who create all the wealth, all these are but eloquent proofs of the lie contained in the conception of human effort for individual gain instead of service for the common good which is simultaneously also an individual pleasure of the highest character.

The essence of this ideal is expressed in the I. W. W. conception of right human associations: "An injury to one is an injury to all."

# The Roar

**From "Factory Echoes." By R. M. Fox.**

**"This is the Machine Age. We are the Machines."**

AS YOU enter the factories you can hear us roar—a hungry, menacing, threatening, exultant roar. We demand food. We must be fed. We live on the bodies, blood, bones, and senews of men, women, and children. They come into the factories in eager shoals. They pass through and go out crushed and broken. Ever they come, flowing in like the waves of the sea, to dash themselves to pieces upon the rocks and breakwaters. We like the young men best. They are so strong. They think that they can dominate us. They hurl themselves upon us. They pull our levers, push, twist, and turn our cogs, clutches, and gears. They are brimful of energy, running over with vitality, and they empty themselves.

We laugh! We know who are the masters.

They never stop to think who worked the machines before they came, or who will work us when they are gone. Some of those who are gone before are in their graves; others are the starving and shivering flotsam and jetsam of the great cities. Others, again, are in the workhouse. They do not know. They are filled with the pride of youth. Sometimes, when they get too proud, we turn and rend them. We blind them and tear their limbs, mangle and break them. But we prefer to work slowly, to suck their blood daily, to keep them bound to us and crush them gradually.

We are iron and steel. We are heartless, brainless, nerveless, compassionless. We bite into metal. We bite into humanity. None can withstand us. We love the delicate human organisms who offer themselves for sacrifice. They have no chance against us, these things of blood and bone and nerve and tissue. We love the frail, bloodless girls who faint by our side; we can see the life oozing out of them as they tend us.

We chuckle with harsh, recurring iron chuckles.

We love the boys from school who walk innocently into our maw. They come in bright-eyed, rosy-cheeked, and full of ambition. Within a year they are dull-eyed, grey-complexioned, and low-spirited. Their feet sag and their shoulders droop. And they stop with us. They cannot escape. We have every ounce of strength till we use them up. Then we cast them off. You can hear us exult in a high crescendo, which rises above our dull, monotonous roar. Men are our slaves, our fodder. They are chained to us; we use them up. And they think they are our masters! What a jest for the gods!

They come and they go. They live and they die; but we go on, we endure.

We roar on exultingly. This is the Machine Age. We are the Machines.

# WOBBLES

WE DON'T want "pie in the sky"—we want the earth and everything that's in and on it. They say we've got a lot of crust—well, maybe we have, and maybe we got that way from eating pie that was made for profit. Sometimes this is called "affection pie," because the upper and lower crusts are in constant embrace and there is no animosity between them.

* * *

The fellow who wrote the following street car ad. knows that the best place for "sentiment" is in the dictionary:

"Men and women, don't fool yourselves! If you won't die tomorrow, you will next year, or the year after. Drop in and let us have a heart to heart talk about your future prospects. We have buried hundreds of our customers to their entire satisfaction, why not you?

—The Golden Gate Undertaker."

* * *

A priest buttons his collar in the back because it is symbolic of his mode of reasoning.

* * *

Oscar Willyum Dugul McQune, who thinks he is a poet, has informed us that he has written a very remarkable poem on the old red barn. We take pleasure in giving this sensational information to our readers. Next time you happen to be in the vicinity of the old red barn, why,—take a look at it!

* * *

The reason budding artists paint in the nude is because they haven't money enough to buy clothes with.

* * *

It is said that exponents of the Einstein theory are capable of explaining what would happen if an irresistible force were to meet an immovable body. Will they please tell us what effect the approaching revolution will have on the man who still thinks that this country is governed according to the wishes of the people?

Fanny, the little daughter of a clergyman, pranced into her father's study one evening while the reverend gentleman was preparing a lengthy sermon for the following Sunday. She looked curiously at the manuscript for a moment, and then turned to her father. "Papa," she began seriously, "does God tell you what to write?"

"Certainly, dearie," replied the clergyman.

"Then why do you scratch so much of it out?" asked Fanny.

* * *

Helen Keller, the woman who has won fame in spite of her physical defects, was asked which mortal affliction is the worst---blindness, deafness or dumbness. She replied: "Neither; it's bone-headedness."

* * *

Since love failed to redeem the world, why not try hate for a change?

* * *

Is there anything more inconsistent than the working man who says that in a collectivist society such as the I. W. W. would establish there would be no incentive to work? Yet, if you observe this bird closely, you will note that rarely a day goes by but what he will comment somewhat in this manner: "Gee, this is a long day—wish it was quitting time." This is equivalent to wishing one's life away, and yet this hick has got the brass to speak of incentives!

* * *

A young woman teacher was talking to the children about God's omnipresence.

The teacher: Now, after the hour is up and you children are running about down on the playground and I cannot see you, who is with you then?

Chorus: The Lord!

The teacher: Yes, and when I, in the meantime, am up here in the class room, who is with me then?

Chorus: Teacher Jensen.

"Solidaritet," Copenhagen.

power can be attained. Day by day our future becomes blacker; and, adding insult to injury, our union officials humbly request from our masters but a few crumbs from the enormous hoard that we have created ad placed at their feet.

It is the duty of industrial unionists to explain to the marine transport workers how they can obtain power. The national and sectional unions are almost useless, for even within their zones they act independently, fighting among themselves like Kilkenny cats. The dockers of Buenos Aires, on the other hand, are making an effort to solve their own difficulties. **They are holding themselves responsible for their own unemployed.** They are attempting to counter the boss's labor-saving appliances with shorter hours and no night work. And yet, unlike the "superior" Anglo-Saxon, fifty per cent of these dockers cannot read.

Under the present forms of sectional organization, we can hope to do very little; the only road to power is the creation of one organization for all the workers on the ships and wharves. We have to be so organized that all the men handling, loading, transporting and unloading cargo goods, regardless of their nationality, must be in one union. One union on all ships and in all ports. This will put an end to long distance scabbery, and create an organization which, as it grows, will throw the gauntlet to the shipping octopus and drive it from the seas. This organization will be the link connecting the industries of different countries; it will be the cornerstone of the International Labor Movement.

**Fellow workers of the docks, you are the home-guards of the Marine Industry. The men on ships are your fellow workers. Together you are a mighty force, an unbreakable power. Separated you are so many straws in the wind. Get the class idea, fight for it, live for it and, if need be, die for it. ....**

**There is no slavery except ignorance. The other class is powerful because we are ignorant. Let us spread the gospel of class interest, develop our spirit of self-reliance, and remember that we shall be enslaved only until we gain the power to break our chains.**

**There is only one working class. Let there be only One Big Union!**

## CHAPTER 9
## THE INTERNATIONAL FISHERMEN

Scattered in out-of-the-way corners of Mother Earth are to be found the deep-see fishermen. Up in the vicinity of Alaska and the Behring Straits you will find them engaged in the whaling and sealing industries. Down in the Southern Ocean, on the edge of the Antarctic Seas, two thousand miles from the amenities of civilization, they carry on a mighty war against the denizens of the deep. The men of the Northern Seas, in and around the port of Seattle, are semi-organized, while many of the men who work on the inhospitable, treeless shores of South Georgia and Shetland are members of the M. T. W. of Argentina.

These fishermen are mostly Scandinavians and Russians. They are vilely paid, when you take into consideration the loneliness and excessive cold of the desolate isles on which they live. Their employers, who never visit these isles, make enormous profits from oil and guano. The men generally sign, under stress of starvation, very one-sided agreements; on occasion the companies violate these contracts—they have been known to rob their men of every cent that they had earned over periods running sometimes into years.

### South Georgia

During January, 1920, there was a strike on the Grytwiken Station in the Island of South Georgia. The strike was against vile conditions, rotten food and low wages. It was won, but shortly afterwards the British cruiser "Dartmouth" came into port. The new agreement was promptly nullified by the manager when he found he had force to back him up. The men struck again to enforce the new agreement. They were then brought, between a file of armed navy-men, before the manager and the Resident Magistrate, and told that if they would not work under the old conditions, they would be deported. Two whaling steamers were packed with men and they were thrown ashore in Buenos Aires. Several of the men were penalized to the extent of their full wages, running into several thousands of Norwegian krowns—because "they had instigated a strike." The remainder of the men were grossly insulted in the company office.

These conditions will prevail until the fishermen will become organized into the Marine Transport Workers. Once the companies get their men away into these isolated islands they treat them like dogs. For instance, the men who were "deported from South Georgia"—for this was inscribed across their passports by the Resident Magistrate in order to prevent the men getting work again—were working for a company registered in Argentine, on an agreement printed in Norwegian on a British island. This excellent contrivance on the part of the companies deprived the men of getting legal redress in any of the capitalist courts.

### Colonial Office Geography

When the matter was brought before the British House of Commons by Neil MacLean, M.P., the Colonial Office informed him that it was unaware that there was such a place in the British Empire as South Georgia. The office holders do not seem to be as interested in whale oil as in the oil that flows from the wells in Persia and Baku. The smart young men in the Colonial Office may easily mislay some part of the Empire if they do not wake up. A few years in the foc's'le of a ship would teach them more about the Empire than they are likely to learn from the school books for Standard 6, whence they evidently derive their vast knowledge.

# Wastes in the Coal Industry

By the I. W. W. Bureau of Industrial Research.

### Introduction by the Editor

INDUSTRY in America has developed to a stage where it should be considered in the light of a national concern, and not as the concern of individuals or groups of individuals. One of the gravest charges against capitalism is the tremendous waste of natural resources incident upon private ownership, as well as its wasteful methods of manufacturing commodities. Where the primary object of industry is profit, nothing else could be expected. The forests of this country are being rapidly depleted, the oil wells are getting exhausted, the soil is loosing its fertility, and no thought is being taken by the masters of America of the years to come. What do they care whether the children of the people living today will have gasoline for their automobiles and bread for their cupboards, so long as they can make millions of dollars by wasteful methods of extracting and manufacturing our natural resources.

In the following article is shown the tremendous waste caused by the present-day unscientific and inefficient methods of mining and marketing coal. Special emphasis is laid on the almost inconceivable volume of energy-giving by-products of coal which are at present wasted. We hear and read a great deal about industrial technique and efficiency, but as a matter of fact very little of it is seen in actual life. The technique of industry is only in its infancy, and it will remain in its infancy until such time as industry is taken out of the hands of individuals and turned over to the nation as a whole to be run in the most efficient and sensible manner possible for the benefit of the whole population. For industry to be administered in such a manner requires a centralized form of administration which can co-ordinate activities in each industry all over the country with the end in view of eliminating waste and inefficiency. In privately owned enterprises this, of course, is not possible.

In the coal mining industry, the first step in the right direction would be the taking over of all of the coal mines by the workers themselves. This, however, does not mean the nationalization of the mines as it is being advocated at the present time in some of the capitalist countries. Such nationalization would only mean that from the ownership of the coal trust the mines would be transferred into the ownership of much more extensive combinations of capital. This would not do away with capitalist control of the coal industry. Only when the coal miners themselves will take this industry over, put out the present owners of the mines and claim the full direction and control of this industry will the problem be solved. From the consumers' point of view this, of course, would be a great blessing, as coal could then be sold at cost price after deducting the costs of production, which would mean that the selling price of coal would be cut in half, or even less.

Engineers concerned with the technique of industry on a large scale should especially be interested in having the private ownership of industry done away with and workers' control substituted in its place. At present many highly beneficial engineering projects are not being carried out for the simple reason that by doing so the profits of influential and powerful financial interests would be greatly reduced. There is no better illustration of this than the failure of our captains of industry to take advantage of the power-generating facilities presented by water-falls and rivers. It is possible to generate power fram waterfalls and other streams of water much cheaper than by the utilization of coal, oil and other products which are at present used. This would, of course, put many of our present power companies out of busi-

# Wastes in the Coal Industry

By the I. W. W. Bureau of Industrial Research.

### Introduction by the Editor

INDUSTRY in America has developed to a stage where it should be considered in the light of a national concern, and not as the concern of individuals or groups of individuals. One of the gravest charges against capitalism is the tremendous waste of natural resources incident upon private ownership, as well as its wasteful methods of manufacturing commodities. Where the primary object of industry is profit, nothing else could be expected. The forests of this country are being rapidly depleted, the oil wells are getting exhausted, the soil is loosing its fertility, and no thought is being taken by the masters of America of the years to come. What do they care whether the children of the people living today will have gasoline for their automobiles and bread for their cupboards, so long as they can make millions of dollars by wasteful methods of extracting and manufacturing our natural resources.

In the following article is shown the tremendous waste caused by the present-day unscientific and inefficient methods of mining and marketing coal. Special emphasis is laid on the almost inconceivable volume of energy-giving by-products of coal which are at present wasted. We hear and read a great deal about industrial technique and efficiency, but as a matter of fact very little of it is seen in actual life. The technique of industry is only in its infancy, and it will remain in its infancy until such time as industry is taken out of the hands of individuals and turned over to the nation as a whole to be run in the most efficient and sensible manner possible for the benefit of the whole population. For industry to be administered in such a manner requires a centralized form of administration which can co-ordinate activities in each industry all over the country with the end in view of eliminating waste and inefficiency. In privately owned enterprises this, of course, is not possible.

In the coal mining industry, the first step in the right direction would be the taking over of all of the coal mines by the workers themselves. This, however, does not mean the nationalization of the mines as it is being advocated at the present time in some of the capitalist countries. Such nationalization would only mean that from the ownership of the coal trust the mines would be transferred into the ownership of much more extensive combinations of capital. This would not do away with capitalist control of the coal industry. Only when the coal miners themselves will take this industry over, put out the present owners of the mines and claim the full direction and control of this industry will the problem be solved. From the consumers' point of view this, of course, would be a great blessing, as coal could then be sold at cost price after deducting the costs of production, which would mean that the selling price of coal would be cut in half, or even less.

Engineers concerned with the technique of industry on a large scale should especially be interested in having the private ownership of industry done away with and workers' control substituted in its place. At present many highly beneficial engineering projects are not being carried out for the simple reason that by doing so the profits of influential and powerful financial interests would be greatly reduced. There is no better illustration of this than the failure of our captains of industry to take advantage of the power-generating facilities presented by water-falls and rivers. It is possible to generate power fram waterfalls and other streams of water much cheaper than by the utilization of coal, oil and other products which are at present used. This would, of course, put many of our present power companies out of busi-

run low in certain sections, meaning that some day we must rely on the west for our chief sources of supply.

The original quantity of coal in the ground in the United States has been estimated by the Geological Survey as follows:

| | |
|---|---|
| Bituminous | 1,442,917,000,000 tons |
| Semi-bituminous | 49,863,000,000 |
| Sub-bituminous | 987,514,000,000 |
| Total bituminous | 2,480,294,000,000 tons |
| Anthracite | 22,053,000,000 tons |
| Lignite | 1,051,290,000,000 |
| Grand total | 3,553,637,000,000 tons |

Three and one-half trillion tons! A vast amount. But it is not the gross quantity which is as important as the location, the accessability and the quality of that which can be mined to advantage. Up to 1921 there had been mined in the United States about 13 billion tons, of which roughly 3 billions was anthracite, and 10 billions bituminous. In a hundred years or so at present rates of mining, anthracite will be exhausted, but there is no national shortage ahead so far as bituminous in total is concerned. The future danger lies rather in the rapid exhaustion of the best grades of coal. The Geological Survey estimates that "within 50 years much of the high-rank coal will be exhausted". There is sound reason then for a policy of conservation in respect to coal, in spite of what appear to be limitless deposits. And it must be remembered that when coal is gone, it is gone forever. It cannot be grown again or nursed back to life like forests of fisheries or herds or other natural resources. It takes several million years to lay down a new bed of coal.

According to the latest estimates, the coal reserves of the world are as follows:

| | |
|---|---|
| Americas (North & South) | 5,628,000,000,000 tons |
| Asia | 1,410,000,000,000 |
| Europe | 864,000,000,000 |
| Oceania | 188,000,000,000 |
| Africa | 64,000,000,000 |
| Total | 8,154,000,000,000 tons |

## PRODUCTION AND REQUIREMENTS OF COAL

It is impossible to calculate how much coal the population of the United States needs, without first specifying on what basis coal is to be utilized. If it is to be burned wastefully under boilers after long railroad haulage as at present, wastefully coked in beehive ovens as at present, converted into illuminating gas as at present, it is probable that the population needs much more coal than is now being mined. Not everybody has had coal enough for light, heat, and power by a large margin in the past decade.

If, on the other hand, new engineering methods were introduced into the coal and power industry, by which some of the great wastes in coal utilization could be eliminated, we would probably need to mine only a fraction of the present output in order to provide all the light, heat and power which the population needs. If water power were extensively substituted for coal, there would need to be mined a still smaller fraction.

The actual production of coal for the past ten years in the United States is shown in the following table:

| Year | Bituminous | Anthracite | Total |
|---|---|---|---|
| 1911 | 372,421,000 | 90,464,000 | 462,885,000 tons |
| 1912 | 362,417,000 | 84,362,000 | 446,779,000 |
| 1913 | 401,879,000 | 91,525,000 | 493,404,000 |
| 1914 | 427,174,000 | 90,822,000 | 517,996,000 |
| 1915 | 377,414,000 | 88,995,000 | 466,409,000 |
| 1916 | 395,200,000 | 87,578,000 | 482,778,000 |
| 1917 | 448,678,000 | 78,195,000 | 526,873,000 |
| 1918 | 492,670,000 | 88,939,000 | 581,609,000 |
| 1919 | 517,309,000 | 88,238,000 | 605,547,000 |

The present use to which this coal is put, is roughly as follows:

| | | |
|---|---|---|
| For railroad locomotives | 170,000,000 tons | 28% |
| " coke ovens | 85,000,000 | 14 |
| " house heating | 100,000,000 | 17 |
| " exports | 22,000,000 | 4 |
| " all other uses (manufacturing plants, etc.) | 223,000,000 | 37 |
| Total—1919 | 600,000,000 | 100% |

Thus the railroads use 28% of all coal produced, but as about 33% of all railroad freight consists in the moving of coal cars, it is seen that 57,000,000 tons of coal are burned in moving coal to be burned. 57,000,000 tons is nearly 10% of the total coal output.

Practically all the anthracite is used in house heating, tho a few roads like the Lackawanna, burn anthracite in their engines.

## WASTE OF COAL: MINING OPERATIONS

We have now reached the point in our general survey of the coal industry where a specific review of the present wasteful methods of mining and utilizing coal is in order. First, let us consider mining operations.

There are too many coal mines in the country. As coal is not produced on the basis of public service and human requirements, but solely on the basis of maximum profit to be gained, it has been found that more quick profit can be got by 1) buying coal lands cheap from the Government or an unsuspecting private owner; and 2) working the cream off mine after mine, without making decent provision for getting all the available coal out of the ground in any one mine. As a result, the discarded mine from which the cream has been skimmed, is practically useless for further operations without going to a new and costly development expense. It is all of a piece with a boy taking only one bite out of the rosy side of an apple and throwing the rest of the apple away, because he has lots of other apples in his bag.

Again market conditions with a high price of coal brought about by financial manipulation as like as not, will cause the opening of a lot of new

run low in certain sections, meaning that some day we must rely on the west for our chief sources of supply.

The original quantity of coal in the ground in the United States has been estimated by the Geological Survey as follows:

| | |
|---|---|
| Bituminous | 1,442,917,000,000 tons |
| Semi-bituminous | 49,863,000,000 |
| Sub-bituminous | 987,514,000,000 |
| Total bituminous | 2,480,294,000,000 tons |
| Anthracite | 22,053,000,000 tons |
| Lignite | 1,051,290,000,000 |
| Grand total | 3,553,637,000,000 tons |

Three and one-half trillion tons! A vast amount. But it is not the gross quantity which is as important as the location, the accessability and the quality of that which can be mined to advantage. Up to 1921 there had been mined in the United States about 13 billion tons, of which roughly 3 billions was anthracite, and 10 billions bituminous. In a hundred years or so at present rates of mining, anthracite will be exhausted, but there is no national shortage ahead so far as bituminous in total is concerned. The future danger lies rather in the rapid exhaustion of the best grades of coal. The Geological Survey estimates that "within 50 years much of the high-rank coal will be exhausted". There is sound reason then for a policy of conservation in respect to coal, in spite of what appear to be limitless deposits. And it must be remembered that when coal is gone, it is gone forever. It cannot be grown again or nursed back to life like forests of fisheries or herds or other natural resources. It takes several million years to lay down a new bed of coal.

According to the latest estimates, the coal reserves of the world are as follows:

| | |
|---|---|
| Americas (North & South) | 5,628,000,000,000 tons |
| Asia | 1,410,000,000,000 |
| Europe | 864,000,000,000 |
| Oceania | 188,000,000,000 |
| Africa | 64,000,000,000 |
| Total | 8,154,000,000,000 tons |

## PRODUCTION AND REQUIREMENTS OF COAL

It is impossible to calculate how much coal the population of the United States needs, without first specifying on what basis coal is to be utilized. If it is to be burned wastefully under boilers after long railroad haulage as at present, wastefully coked in beehive ovens as at present, converted into illuminating gas as at present, it is probable that the population needs much more coal than is now being mined. Not everybody has had coal enough for light, heat, and power by a large margin in the past decade.

If, on the other hand, new engineering methods were introduced into the coal and power industry, by which some of the great wastes in coal utilization could be eliminated, we would probably need to mine only a fraction of the present output in order to provide all the light, heat and power which the population needs. If water power were extensively substituted for coal, there would need to be mined a still smaller fraction.

The actual production of coal for the past ten years in the United States is shown in the following table:

| Year | Bituminous | Anthracite | Total |
|---|---|---|---|
| 1911 | 372,421,000 | 90,464,000 | 462,885,000 tons |
| 1912 | 362,417,000 | 84,362,000 | 446,779,000 |
| 1913 | 401,879,000 | 91,525,000 | 493,404,000 |
| 1914 | 427,174,000 | 90,822,000 | 517,996,000 |
| 1915 | 377,414,000 | 88,995,000 | 466,409,000 |
| 1916 | 395,200,000 | 87,578,000 | 482,778,000 |
| 1917 | 448,678,000 | 78,195,000 | 526,873,000 |
| 1918 | 492,670,000 | 88,939,000 | 581,609,000 |
| 1919 | 517,309,000 | 88,238,000 | 605,547,000 |

The present use to which this coal is put, is roughly as follows:

| | | |
|---|---|---|
| For railroad locomotives | 170,000,000 tons | 28% |
| " coke ovens | 85,000,000 | 14 |
| " house heating | 100,000,000 | 17 |
| " exports | 22,000,000 | 4 |
| " all other uses (manufacturing plants, etc.) | 223,000,000 | 37 |
| Total—1919 | 600,000,000 | 100% |

Thus the railroads use 28% of all coal produced, but as about 33% of all railroad freight consists in the moving of coal cars, it is seen that 57,000,000 tons of coal are burned in moving coal to be burned. 57,000,000 tons is nearly 10% of the total coal output.

Practically all the anthracite is used in house heating, tho a few roads like the Lackawanna, burn anthracite in their engines.

## WASTE OF COAL: MINING OPERATIONS

We have now reached the point in our general survey of the coal industry where a specific review of the present wasteful methods of mining and utilizing coal is in order. First, let us consider mining operations.

There are too many coal mines in the country. As coal is not produced on the basis of public service and human requirements, but solely on the basis of maximum profit to be gained, it has been found that more quick profit can be got by 1) buying coal lands cheap from the Government or an unsuspecting private owner; and 2) working the cream off mine after mine, without making decent provision for getting all the available coal out of the ground in any one mine. As a result, the discarded mine from which the cream has been skimmed, is practically useless for further operations without going to a new and costly development expense. It is all of a piece with a boy taking only one bite out of the rosy side of an apple and throwing the rest of the apple away, because he has lots of other apples in his bag.

Again market conditions with a high price of coal brought about by financial manipulation as like as not, will cause the opening of a lot of new

"snow bird" mines, simply that the operator may get in on the price. When the market drops, these "snow birds" collapse, after wrecking an orderly plan for coal development.

It is an established fact that nearly 50% of coal mined is wasted under present methods of extraction. That is, for every two tons lifted above the ground, one ton is rendered useless by reason of operating mismanagement. Thus in working a mine, it is customary to take the coal from the wide seams only, leaving the thin seams untouched. Again, when the market in smokeless bituminous is high, or is being mined under contract, it is often customary not to mine other kinds of coal—such as high volatile—at all. The operator will dig out only what the market calls for at that particular time. As a result, great quantities of coal are passed over in the operation, coal which is largely lost forever, for the cost of reclamation has now become prohibitive in many cases.

Another item of waste is found in the practice of denuding the forest around coal mines for furnishing mine props.

From the standpoint of administration, the physical operation of the average coal mine is exceedingly inefficient. There are no means of communication provided within the mines, no transportation schedules, no co-ordinated control. The mine manager has nothing to do with the productivity per man. He pays the miner so much per ton brought to the surface, and each miner works blindly for himself with no regard for the development of the whole operation. Such a method would bankrupt a machine shop in a week.

### IDLE TIME.

One of the most disastrous wastes is found in the low percentage of time given to the actual winning of the coal.

The Department of the Interior has estimated the number of days worked in the mines as follows:

| | |
|---|---|
| 1913 | 232 |
| 1914 | 195 |
| 1915 | 203 |
| 1916 | 230 |
| 1917 | 243 |

In other words, out of a possible 304 working days per year, productive work was carried on at a loss varying from 61 days in 1917 to 109 days in 1914, or a waste or from 20 to 36 percent.

The reasons for this idleness were analyzed with the following results. Almost one-fifth of the productive time was lost on account of lack of work—the miners were not permitted to work by the management because cars to move coal or storage to hold it were not available. More time was lost because of the necessity of making repairs. In some cases it was found that men were not available. Another 6% was accounted for by inefficient managerial causes.

If the mines had been in operation 304 days in the year, another 200,000,000 tons of coal could have been produced on the average. But no serious objections are made to this condition for the obvious reason that the country was not using any more coal than was actually mined. It satisfied the demands of the market. The miners' demand of five working days per week represents—with the omission of two weeks for holidays and vacations—250 working days during the year. Government statistics show there never was a call for so large a number of working days in the history of American mining. The highest number recorded is in the war year of 1918 when 242 days were worked in the central competitive district. The average for six preceding years in that district was 206 days, and for the whole country 221 days. There are about 760,000 miners in the country in both the bituminous and anthracite fields, and if as the above figures tend to show, a third of their time is wasted due to reasons over which they have no control, an efficient administration could produce the same amount of coal in 8 months which is now produced in a year. Or to put it in another way, 500,000 miners could produce the same amount in a year if they were permitted to work full time. Present operating methods therefore waste the annual labor of a quarter of a million men.

Another factor chargeable to administration is that on those days when the miners are permitted to work, the actual time, spent on the coal face often averages no more than two hours because of the shortage of cars, the infiltration of water and other administrative causes. Even when electric cars are installed underground, it has been found that often they are not operated as efficiently as the old mule hauled trains.

Finally, it should be pointed out that present mining methods give rise to a great number of preventable accidents. The lives of men are needlessly wasted, because it is not men but profit which is the first consideration of the operators. The figures of fatalities for 1915—1918 are as follows:

**Fatalities in and about Coal Mines**

| | 1915 | 1916 | 1917 | 1918 |
|---|---|---|---|---|
| Killed underground | 2,069 | 2,027 | 2,379 | 2,280 |
| " in shaft | 40 | 49 | 52 | 52 |
| " on surface | 160 | 150 | 265 | 247 |
| Total killed | 2,269 | 2,226 | 2,696 | 2,579 |

### TRANSPORTATION WASTES

Coal cars are loaded at the mine, move to their destination, dump their load, and return, in most cases, empty to the mine. Consider what this means in waste of hauling empty cars. Could power be generated near the mine and delivered over transmision wires, this hauling of empties and hauling of loaded cars as well, would be eliminated. Of

the total freight traffic in the United States, coal is responsible for at least a third. In 1917, the figures show:

| | | |
|---|---|---|
| Tons of coal carried | 526,873,000 | 34% |
| Tons of all other freight carried | 1,495,072,000 | 66% |
| Total tons of freight carried | 2,270,035,000 | 100% |
| Coal cars | 916,219 | 40% |
| All other freight cars | 1,385,728 | 60% |
| Total freight cars | 2,301,947 | 100% |

This means that a third of all freight locomotives, freight crews, freight line upkeep, freight equipment is devoted to carrying coal. If this burden could be removed, the capacity of the railroads to handle other freight would be increased 50 percent.

Finally, it appears that much coal is hauled by railroads which could more expeditiously be hauled by water. It is notorious that the railroads deliberately ruined the anthracite canals in order to increase their profits by securing extra tonnage over their lines. In the same way much bituminous coal along the Ohio, Tennessee and Kanawa rivers, is diverted from its natural traffic by water, to boost the freight receipts of the railroads.

## WASTES IN THE UTILIZATION OF COAL

The foregoing wastes in mining and transportation sink into insignificance before the failure of the present industrial system to utilize coal scientifically Coal is not only a fuel and a basis for making steel thru the medium of coke; it is also a source of a vast variety of valuable by-products. Under prevailing methods most coal is used simply as a fuel to burn under steam boilers which utilize only 3% of its thermal energy in locomotives, and only 10% in steam turbines. Some coal is used to make coke, the balance of its properties going up into the air in beehive coking ovens. A little coal is scientifically distilled and all the valuable properties are saved. If distillation were applied to all bituminous coal mined, the social saving is staggering in its immensity.

Today, of 500,000,000 tons of bituminous coal mined in the United States in a year, (anthracite is not suitable for distillation), about 80,000,000 tons is converted into coke, the balance, 420,000,000 tons being used as fuel. Of the 80,000,000 tons converted into coke, only 40,000,000 tons are subjected to a by-product process. The other 40,000,000 tons are burned in bechive ovens which waste everything except the coke. Thus of 500,000,000 tons mined, only 40,000,000 tons or 8% is subjected to by-product treatment at the present time.

A ton of coal put thru a beehive oven results in 1200 pounds of coke and nothing else.

A ton of coal put thru a by-product coking plant yields as follows:

| | |
|---|---|
| Coke | 1400.— pounds |
| Ammonium sulphate | 25.— " |
| Tar | 9.— gallons |
| Pure benzol | 2.3 " |
| Pure toluol | .57 " |
| Crude light solvent (oil) | .22 " |
| Crude heavy solvent (oil) | .11 " |
| Crude napholene | .10 pounds |
| Surplus gas | 6000 cubic feet (at 550 B.T.U. per cu. ft.) |

A ton of coal put thru a Mond gassification process, where coke is not an objective, yields:

| | |
|---|---|
| Ammonium sulphate | 100.— pounds |
| Gas | 140,000 cu. ft. (at 150 B.T.U. per cu. ft.) |

This process is applicable to furnishing power thru the utilization of the gas distilled, plus a large quantity of ammonium sulphate suitable particularly for the manufacture of fertilizers and explosives.

If now, the 40,000,000 tons of coal burned in beehive ovens, were subjected to the by-product, there would be recovered:

| | |
|---|---|
| Ammonium sulphate | 500,000 tons |
| Tar | 360,000,000 gallons |
| Benzol | 92,000,000 " |
| Toluol | 22,800,000 " |
| Light solvent (oil) | 8,800,000 " |
| Heavy solvent (oil) | 4,400,000 " |
| Napholene | 4,000,000 " |
| Gas 240,000,000,000 cu. ft. (at 550 B. T. U.) | |

All above, under present methods is utterly wasted and lost.

The next step in our computation is to estimate how all bituminous coal mined might be subjected to a by-product process and the gas thrown off converted into electrical energy, thru the utilization of gas engines. The energy so gained could be sent by transmission lines into the cities and into manufacturing centers, and used in the electrification of the railroads, thus largely displacing at great social saving, the wasteful utilization of coal as a fuel in steam engines, house furnaces and stoves, etc. It would mean the electrification of industry—an era of cheap and plentiful electric power.

How much coal would be required for this transformation? It would still be necessary to mine 80,000,000 tons for coke, tho it would be subjected to distillation and not half wasted as at present.

The present power requirements of the country are approximately 40 million horse power per year. To generate 40 million horse power would require 28,000,000,000,000 cubic feet of gas obtained from coal by the Mond process. This in turn would demand an annual production of 187,000,000 of bituminous coal.

In other words, to develop all the power now used, to produce all the coke now used and in ad-

dition, to recover great quantities of valuable by-products now thrown away, would require the mining of only 267,000,000 tons of coal, a saving of 233,000,000 tons over the amount now mined—500,000,000 tons.

For each additional 100,000,000 tons of coal mined, 21,000,000 horse power, and 5,000,000 tons of ammonium sulphate would be made available. If all the coal now mined for non-coking purposes were subjected to the Mond process, there would result 88,000,000 horse power from the gas, and 21,000,000 tons of ammonium sulphate—enough to drive every wheel in the country, heat every house, with a large surplus of power remaining, to say nothing of the immense value as fertilizer gained from the ammonium sulphate. It has been estimated that 5,000,000 tons of ammonium sulphate will release enough nitrogen to increase wheat production by 453,000,000 bushels, based on 115 pounds of nitrogen to fertilize one acre.

To sum up:

1) Under the present method of making coke, one half the by-products are wasted.

2) Under the present method of using coal as a fuel under boilers and in furnaces, by-products are wasted, and only a small fraction of the thermal energy of the coal is utilized.

3) If coal were turned into electrical power near the mines by the use of gas engines, less than half the present amount of coal now mined, would supply all the present horse power requirements of the country, and produce immense quantities of valuable fertilizer at the same time.

4) Such a transformation would take a third of the present traffic off the railroads and save a third of the freight operating expenses.

In dealing with estimates of this character, great caution is necessary. The potentiality of transformation is as stated. But actually to make the transformation would require the scrapping of vast quantities of present plant and equipment, and the erection of new generating plants, transmission lines, etc. All this would take time and the withdrawing of much labor from production and distribution to new construction. This must be taken into consideration when dealing with such estimates as are outlined above.

Finally the coming development of water power as a source of electrical energy, will undoubtedly prove more economical in many cases, than the gassification of coal, and thus tend to displace coal as a source of power to a large extent. That is, however, another story. We know that 600,000,000 tons of coal are now mined every year, that most of the thermal energy contained therein is wasted, and vast quantities of valuable by-products thrown away. We know that 300,000,000 tons of coal properly used would do all the work that the 600,000,000 tons is now doing, do it cleaner, better, more efficiently and provide us with materials for fertilizers, dyes, oils, paints and other products at the same time.

# Debs the Dreamer

### By Ellis B. Harris

**A dreamer? Yes, a dreamer, but**
**His dreams are all for you;**
**He dreams the dreams that nations dream,**
**And nations' dreams come true;**
**He dreams the dreams that sowers dream**
**When sun and rain assure**
**A field of silken-tasseled corn**
**From seed that must mature.**
**His ship sails on a sunlit sea—**
**A tide that never ebbs—**
**For country, home and liberty,**
**Come voyage on with Debs.**

# One College Professor Who Knew

BEFORE his death, Carlton D. Parker, the celebrated American economist, wrote that members of the I. W. W. know more about history, economics, biology and popular science than any group of college students he had ever met. We quite agree with our old friend who did so much to acquaint the world with the aims of the I. W. W.

# Our Summer Book Offers

Many of our fellow workers will be gathered together in the harvest fields and other places during the coming months. They will have a great opportunity to start their companions to using their brains. We are doing our part in this educational campaign by making an offer whereby they can get a number of valuable books **free** by hustling around and sending in a few new yearly subs (at $2.50 each) for **The Industrial Pioneer.** To those sending **$5.00 for two new subs** we will send **free** any one of the following $1.25 cloth-bound books:

**Economic Determinism.** By Lida Parce. Explaining the economic interpretation of History.

**Savage Survivals in Higher Peoples.** By J. Howard Moore. An illustrated story tracing the instincts of man from the lower animals, a great book to read or to hand to a worker who does not know man has sprung from lower forms of animal life.

**Stories of the Great Railroads.** By Russell. A tale of modern financial piracy, good for the boys who have a message for the railroad workers. Illustrates how hard some of our millionaires worked (other folks) for their wealth.

**Universal Kinship.** By J. Howard Moore. The story of man's rise from fish, birds and reptiles to his present estate; the story of man's evolution.

For ONE NEW SUB. to The Pioneer we will send **free** any one of the following cloth-bound 75c books:

**Socialism, Its Growth and Outcome.** By Morris and Bax. An outline history of the human race, through savagery, feudalism and capitalism—and up to a few years before the birth of the I. W. W. A history of class struggless.

**The Collapse of Capitalism.** By Cahn. Explanation of what is causing the strangulation of capitalism today, with the unemployment, high prices, failure of business enterprises

**Germs of Minds in Plants.** By R. H. France. Do plants feel and have consciousness? This book shows how difficult it is to distinguish between animal and vegetable forms.

**The Militant Proletariat.** By Austin Lewis. A history of American class struggles, showing the necessity for the I. W. W. program.

**Social and Philosophical Studies.** By Paul Lafargue. Shows the origin of the idea of God and why the industrial worker is the most scientific thinker.

**Origin of the Family, Private Property and the State.** By Engels. A vital book of every intelligent Wobbly. What is the state? How did private property arise? Are these everlasting? Has the family changed? This book answers the above questions.

**Value, Price and Profit.** By Karl Marx. The Marxian (or I. W. W.) explanations of where the worker is robbed, and how. Shows why the place to fight is on the job.

**The World's Revolutions.** By Untermann. A history of former revolutions.

If you want to renew your own subscription to The Industrial Pioneer, add 50 cents and we will send you any of the $1.25 books, or if you want one of the 75c books, add 25c to your remittance and we will send it on to you.

For **eight new yearly subs** we will send **free of charge** all of the eight books mentioned in the last list (75c books).

Come along now and help us pile up our circulation during the next three months. And let us know what you think of the books and we may be able to start a Discussion Page on historical and scientific subjects.

# Hunting a Job in the Clouds

By W.J. McSweeney

THE LAST DAY that Con Sullivan worked in the mill, which was owned by the Harvester Trust, was the saddest day of his life. In the first place, when he got out of bed at six o'clock on that memorable morning, his wife Kate, with tears in her eyes, told him that they were both in danger of being arrested and that the disgrace of being locked up would surely break her heart. Con clapped his hands and threw his tired body into an old chair and said: "Kate, you must be losing your senses or troubled with a bad case of what they call nightmare when you talk of either me or yourself being arrested, for an honester couple than ourselves could not be found in a day's walk. I worked with the Harvester Plant for the last thirteen years and during that time I never lost an hour or a day. I worked Sundays and holidays and made my thirteen cents an hour and was allowed to work fourteen hours a day. Now you tell me I am going to be arrested like a common thief or vagabond. As for you, Kate," said Con, "there's no decenter or more respectable woman in town than yourself. You tend strictly to your home and your family. You go to your duties regular and I never heard you say a hard word about a neighbor either to their face or behind their back. Now, for the love of God, woman, tell me what we are going to be arrested for."

"Well," said Kate, "a policeman who called yesterday said he was sent by the Board of Education to find out why Johnnie didn't go to school. Of course, I told him we were very anxious to send the boy to school, but at the present time he had no shoes and his clothes were not fit to be seen on the street, and that we would take a little from the table during the coming month so as to get him a pair of shoes when you get your next pay. I told him that we found it so hard to buy food and pay rent with your wages; that we had little or nothing left for shoes and clothes. He asked me where you worked and I told him you had a position in the plant. He asked me what pay you got. I told him your salary was thirteen cents an hour. He said we had to send the boy to school as there was no charitable socicy which would give him shoes and clothes while he had an able-bodied father who had steady work. He said that if the boy's father was dead or ran away, that the Ladies' Aid Society would give him a pair of second-hand shoes so that he could go to school, but he said that if Johnnie was not sent to school right away we would both be arrested. Now, there is but one thing to do," said Kate, "and that is, cut out milk and butter entirely during this month and increase our income so that we can buy Johnnie a pair of shoes next pay day."

Con said, looking at Kate admiringly: "You're a natural born business woman and 'tis too bad I can't put you behind the counter in a candy store. But another idea just struck me," said Con, "and if you approve of it you can send Jimmie to school before pay day, as well as drink a pint of milk once in a while, and that is for myself to kiss you and the kid good-bye this very night and run away, then you and the boy will get milk and a pair of second-hand shoes from the Ladies' Aid Society. I can hide somewhere during the day and drop in after midnight once in a while when the Ladies' Society is in bed and see how you are getting along with your business."

"Nonsense, Con," said Kate, "if you run away, you will bring shame and disgrace on your family and lose your position in the plant which would cripple us entirely. Be a man—go to your work—and the next time you draw your salary we will buy Johnnie a pair of shoes and send him to school."

With a tired body, aching limbs and a sore heart, Con started for the plant, getting there at six-thirty in the morning. The day wore on as usual, but in the afternoon he noticed great excitement among the workers; they ran around and got together in groups all over the plant. Con noticed that all got furious after reading a notice which was tacked on the wall. He walked up and read it and to his horror it stated that after that date the plant would not only shut down indefinitely, but would be moved to Germany. This was the hardest and saddest story which Con had ever read in his life. He thought of what Kate would say that evening when he told her. How could Johnnie get shoes and how could he avoid being arrested? But when he got home that evening he braced himself up as well as possible and broke the horrible news to Kate when she met him at the door. He said he had bad news for her and she asked if some friend had been killed in the plant today.

"Well," said Con, "two men got killed today, but my news is worse than that; it is that the plant is going to be shut down for good and moved to Germany."

"Con," said Kate, "you have almost broken my poor heart! What in the world are we going to do now? Are they going to take any hands with them?"

Con said "no," that the foreman told him that afternoon that only superintendents would be taken but that they would need some men for several days to tear the buildings down and pack the plant, ready for shipping, and that he had already selected men for that work.

Kate said: "Con, you are tired, worn out and sick at heart, and if you will lie down and rest we

will be in better shape to talk over our troubles tomorrow."

"All right," said Con, "I'll wash and eat a bite after I get up but don't wake me, Kate, as I need a rest,—for the first time in thirteen years."

In a few minutes Con was fast asleep and during the twenty-three hours which he slept, Kate walked on her tip-toes for fear she would wake him. At different times she saw him roll round and swing his arms, shouting, raving and muttering different things which she could not understand. She heard him mention a job. "I worked in the plant"; Johnnie's shoes"; "being arrested"; "purgatory"; "Pierpont Mortan"; "angels and saints" and other things which she could not find head nor tail to, came from him. But when he awoke from his troubled sleep, he told Kate of his wanderings near and far in search of a job, which he said he was determined to find before he returned. He searched under ground; he sailed the seas and he penetrated the clouds. During his first night in the clouds, a furious storm overtook him and he traveled, he knew not where. Finally, he saw a light in the distance and he made for it and the nearer he got to it the more dazzling it became to his eyes, when he reached a great golden gate, the like of which he had never seen before, and read a sign in large letters, which said, "The Throne of God."

Con rapped on a big massive door which was opened by a man in the garb of a saint, who asked him what he wanted. "I want a job," said Con. "Well," said the Saint, whom he found out afterwards was the much-talked-of and memorable Peter, "you are the first man who has ever asked for a job here while in the flesh. You can step inside and take a seat, as no doubt you need a rest."

"Thank you, sir," said Con.

Peter showed him a chair and sat in front of him and said: "What is your name?" and Con said: "Con Sullivan, your Honor."

"Now, Con," said Peter, "which of the planets did you come from?"

"I came from the Harvester Plant, sir," said Con, "and I lost my job when the owner shut it down and took it off to Germany."

"I never heard of the Harvester Planet," said Peter, looking over a chart, "and there must be some mistake, as those planets are revolving on their axes at the rate of several thousand miles a minute and no man could move one an inch out of its course."

"That's right, your Honor," said Con, "the plant I came from did revolve and spin around very lively, —so much so that when we got close to it it would tear our arms from their sockets and kill three or four of us every once in a while."

"Now, Con," said Peter, "did you ever hear of the River Jordan?"

"Yes sir," said Con, "I read all about it in the prayer book."

"I know the planet you came from now," said Peter, "in fact, I was on it myself a short time ago. I worked as a fisherman down there and caught many a mess of pickerel in the Jordan."

"I tried to catch fish in the Galway River, your Honor," said Con, "but I never could get them to bite."

"We have a man here from your planet, who arrived today. His name is Pierpont Mortan," said Peter.

"Why, my God, sir," said Con, "that's the very man I worked for, your Honor."

"Well," said Peter, "I am very glad you wandered up here, as we are going to give him a hearing in a day or so, and you may be a valuable witness in the case. You can remain until his hearing is over, and, of course, there will be some change coming to you in the way of witness fees, which you can send to your family. In the meantime, I will see if it is possible to find you a job."

Con thanked him, took off his coat and shoes, and went to bed. The next morning Peter called and asked him how he felt.

"I feel al right, your Honor," said Con, "but I am troubled about Kate and the child for fear they would want me for anything and get in trouble."

"Yes, there's all kinds of trouble on that old planet you came from," said Peter, "and I had a little trouble on my hands during the short time I was there. In fact, they did pinch a chum of mine, and spiked him to death with tenpenny nails, and I was accused of being a pal of his but I denied it and said I never laid eyes on him before. They let me go and in a short time I came up and I've held this present job down ever since."

"My God, sir," said Con, "you should thank your stars that yourself and wife wasn't arrested, which would bring disgrace on your family forever. You were a lucky duck, sir, to land a steady job like this, and you will be all right if they don't shut down and move the plant to Germany."

Peter, with a smile, said: "No, Con, there is no danger of this plant going to Germany. Now, Sullivan," he said, "as this Mortan case is on the call for tomorrow morning at nine o'clock, we will expect you to appear in the temple at that time."

"On my soul, sir," said Con, "I'll be there if there's life in my body."

Left alone once more Con became very much interested in the surroundings. He saw the angels and saints enjoying themselves in every conceivable way. They played harps, flutes and fiddles which filled the air with strains of the most delightful music he had ever heard. The next morning a venerable looking old saint escorted Con to a beautiful auditorium, which was splendidly decorated with palms, ferns and flowers of all kinds. The room was comfortably filled with angels and saints and a venerable looking old gentleman sat on a golden throne. Mortan sat there, his brow furrowed with sharp lines of anxiety, forlorn and dejected in appearance. Peter, who stood in front of the judge with a paper in his hand, said in a loud voice:

"Will Con Sullivan please take the stand?" Con

did, and without further ceremony Peter asked: "What is your name?" Con said, "I was born and baptized Con Sullivan, your Honor, and used that name until thirteen years ago, when I was given the name of Number Nine in the plant. All the hands were known by numbers and most of them forgot their names after awhile. Of course, I used my baptism name when I got married and got Johnny christened a short time ago."

Peter: "How old are you?"

"I'll tell you that exactly, sir," said Con, "to a day. My brother, Mike, left Ireland eighteen years ago and came to America. He worked in Pittsburgh for seven years and a half. He went from there to the wheat fields of Dakota, where he worked for eleven years. He left there and got a job in a coal mine in Pennsylvania, where he is working ever since. He was five years older than me, so that leaves me forty-three years to a day, your Honor."

Giggling and suppressed laughter was heard among the angels and saints at this answer, and even Mortan smiled, but Peter rapped for order and threatened to clear the room if it happened again. Peter asked:

"What wages did you get and how did you live during the thirteen years which you worked in the Harvester Plant?"

"My salary was thirteen cents an hour, sir," said Con, "I worked fourteen hours a day and seven days a week and I never lost an hour or a minute until I came here to look for work. Until lately we were able to make ends meet all right, but now, your Honor, prices are so high that we are compelled to regulate and control our stomachs according to our income, and, of course, while we ate no high seasoned pastry, which would give a man the gout or dyspepsia, our meals were plain and substantial and we, most of the time, had three of them every day. For breakfast I generally had skim milk and cold cabbage; for dinner I had bread and sausage, whcih I carried in a can. After I got through with my work I had a hot supper of coffee, beans and fresh dandelions, which Kate picked on the hills through the day, bnt now, that the plant is shut down and moved to Germany, your Honor, we will have to economize and live on cheaper diet until I get a job. But the hardest and saddest blow of all is now struck us, as myself and my wife Kate —as decent a woman as ever walked in shoe leather —are going to be arrested because we can't buy Johnnie a pair of shoes and send him to school. The police say that our only avenue of escape is for me to be willing to either die or run away and that while I am at home and able-bodied, that the Ladies' Aid Society could do nothing for the boy."

"That's all," said Peter, and in a loud voice called: "J. Pierpont Mortan!" When Mortan got on the stand, Peter said:

"What is your name?" and he said, "Pierpont Mortan."

"Were you ever known by number?" said Peter.

"No, sir, I never had a number," said Mortan.

"How old are you?" said Peter.

"If I lived until the third day of next March I would be sixty-three years old," said Mortan, "and I generally celebrated all my birthdays with a banquet."

"What did you work at, when alive?"

"I dealt in stocks and bonds and promoted trusts."

"What do you mean by the word 'trust'?"

"A trust is a combination of all the strongest corporations of a given industry."

"What was the purpose and object of the trust?"

"To eliminate wastes of production and distribution and thus greatly increase profits."

"What do you mean by stocks and bonds?"

"By stocks I mean that we sold in advance a right to a portion of the future earnings of the trust. Sometimes we gave the holders extra dividends, but not often; in most cases we squeezed them out; some of the more candid economists said that bonds were a mortgage on the labor of generations unborn."

Peter, with a smile: "Then your business was to make profits by discounting future production. You were connected with the Harvester Trust, were you not?"

"Yes, sir, I was chairman of the Board of Directors."

"Why did you decide to shut that plant down and move to Germany?"

"We were vitally interested in the labor question, labor being a commodity which we were buying and using every day, we had to have it or get out of business entirely. We looked over the labor situation in different countries and we found that the workers were dissatisfied and full of unrest in America; that they were joining a revolutionary union in large numbers, which declared for direct action and the general strike as their only remedy, and they even talked sabotage, which would cripple us entirely. We tried all means to get them into political parties and vote for what they wanted, but it was no use. One of our millionaire friends, whose name was Robert Hunter of New York, wrote letters every day showing the danger of direct action and the general strike, but they just would not listen to him. Instead, they told him to go back and sit down, or something like that. We looked over the labor situation generally, and in that little country we found four million and a half workers entirely controlled by socialist politicians who, at all times, told them of the danger of a general strike and direct action, and that they should go to the ballot box and ask for what they wanted. We decided that such workers were contented and easily handled and that's why we moved the plant to Germany."

Peter: "You being a man that at all times declared from the house-tops that you were a patriot who loved your flag and your country, must have known that you were going to injure America by taking such an extensive plant, which employed an army of men, away from it, and move to a foreign country?"

Mortan: "Love of country is a beautiful sentiment and we encouraged it on all occasions, but we never allowed any foolishness of that kind to interfere with our business."

"Peter: "Where did you die?"

Mortan, in an attempt to become friendly with Peter, said: "I had the honor of dying where you did, sir, in the City of Rome."

Peter: "I never saw Rome, and I neither lived or died in it. Rome became a religious headquarter long after my time. I heard of it as a clearing house for the money lords and speculators, and as I had no training along their lines, naturally I attended strictly to fishing and mending my net far away from Rome. Who was with you when you died?"

Mortan: "My lawyer and doctor."

Peter, with a smile, said: "Well, sir, if you didn't have the honor of dying where I did, you did have the satisfaction of dying between two thieves. That's all," said Peter, and Mortan left the stand in charge of a Purgatory bailiff.

"Now, your Honor," said Peter, addressing the judge, "you will probably agree with me that this man, Mortan, is the smoothest and slickest proposition we have ever had to deal with since the famous Judas came. You heard him admit being a money changer or one of the gang who slugged myself and your oldest son so shamefully that our bones are aching yet. Just think of an industrial system holding mortgages on the labor of generations unborn! It has been admitted here that the business of those great combinations was organizing heartless monsters without body or soul which robbed Con Sullivan of his name and made Number Nine of him. What would our workers in Purgatory think if they had to get along on old cabbage as Sullivan did while working for this man. Our workers complain from time to time of conditions in Purgatory, but they should thank their stars that they are not working for Mortan and his trust, as they at least have the consolation of knowing that they are working for angels and saints. Therefore I recommend, your Honor, that the Mortan case be continued for fifty years, as we want that much time to prepare the evidence in his case, and I would further recommend that he be sent to work in one of the shops in Purgatory until his case is called."

The judge decided as Peter had suggested and Mortan was taken to Purgatory by a bailiff, who was once a stockholder in Wall Street. Peter then asked Con if he felt like eating a bite, and they left the court room together and soon reached a beautiful cafe. When Peter sat down he said: "Sullivan, you were fortunate to escape from that man Mortan with a whole hide."

"Oh, my God, sir," said Con, "it was a miracle he did not rob me completely and strip me to the bone, as he is the slickest hold-up man since the days of Brannon, who robbed every mother's son he met on the Wicklow Mountains."

"Now, Con," said Peter, " as there is an eagle and a half coming to you as witness fees, you had better remit it at once to your wife, as she may need it," and he handed Con the money. "And in regard to giving you a steady job,—we looked over the whole field and discussed the matter thoroughly, and have decided to place you as superintendent of Purgatory, as the man who filled that position for the last thousand years had a final hearing last week, when he was acquitted and allowed to wear saintly robes in future, so we think you are just the man for the job. Your duty will be to take charge of the office force, and see that their accounts are all straight and balance at the end of each month before you send your official report to me. The men and women we will send there from time to time will be assigned to the different departments by you, and you must be careful that they are put at work which they are best fitted for. Your salary will be ten eagles a month and board. Your meals and room you will get here with us, and your washing will be done free in the Purgatory laundry. You will probably find it difficult to find a job for that man Mortan tomorrow morning, as he has never done much of anything in his life, but no doubt you will find some place for him; but I want you, Sullivan," said Peter, "to keep your eye on that man. He has been accustomed to the fat of the land below and is liable to make trouble up here. Of course, you will have troubles, grievances and complaints made to you from time to time by the workers over there, and you will find them a dissatisfied lot enough. They are most all organized in unions and are paid from a Calvary crown and a half to two crowns a day. You must hear most of their grievances and tell them you will take the matter under consideration. Sometimes we grant some slight demands, but most of their so-called complaints and grievances we refuse. So that you will understand the true character of the men and women you are going to take charge of, let me say to you, Sullivan, that you will be the only innocent person in Purgatory. All the rest are undergoing sentence or waiting for trial. Get along with them as best you can, as we don't want any trouble. The angels and saints and all people on the golden shore are getting their supplies from Purgatory, and we don't want any inconvenience. Describe the horrors of the lower regions to them from time to time, when they kick or make any trouble, and the everlasting happiness awaiting them here if they are faithful and tend to their work. Now, Sullivan, that is about all I can tell you in regard to your new duty, and I will have one of the saints call for you tomorrow morning and drive you to the office."

"I want to ask you, sir," said Con, "how much is an eagle in Harvester money?"

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class has interests in common with their employers.

These conditions can be changed and the interests of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

# Norway Strikes!

NORWAY, the land of Viking traditions and of marine transport fact, is when judged by population, the most important and highly developed maritime country in the world. The sons of the land of the midnight sun sail on the seven seas and her Diesel-type schooners, her coal and oil burning tramps and flapping windjammers bring home to the coffers of Norway's merchant parasites the wealth which is so conspicuously absent among the sailors.

World capitalism had failed to find markets for the products of her industries. The Norwegian ships were being tied up one by one. The owners being true business men and not having any conception of social causes saw only that they must compete with other ships for the trade. They did not realize that there was to be no trade. They did not take into consideration that without markets shipping companies would have nothing to transport. They only thought as their kind has always throught in terms of price and costs.

Their solution to the world problem of decaying capitalism was to bring down the standard of hours and wages that the sailors on their ships had been receiving. With unemployment and commercial stagnation in the ports of the world they seized on a strategic time to put their ideas into practice.

In early May they notified the seamen and longshoremen that the new scale of wages and hours would go into effect. On May 8 the Marine Transport workers went on strike. Three thousand sailors and six thousand longshoremen were the first to go out.

The shipowners refused to come to any agreement. They ignored the strikers as their ships were tied up comfortably at the docks and had little to do any way. Those ships in foreign ports were not affected by the strike order, except in isolated cases of spontaneous rebellion. There was no international machinery of unionism to make this national strike effective. The ship owners were sitting pretty.

On May 10th the Bergen council of Landsorganizationen decided to call on all organized workers in the whole country to strike if there was no agreement by May 26. They decided not to call out the State workers.

On May 26 the call went out. In Kristiania everything came to a stand still. In other towns things were well tied up. Miners, millmen, electric and powerhouse workers responded solidly to the call besides many other sections of workers in less strategic positions.

The government at once took steps to organize strike breakers. A big campaign was carried on amongst the small farmers of the whole country and they were organized, listed and mobilized for strike breaking action. The business elements and the students completed the force of scabs and under the protection of the military and police they started up the electric stations and had the gas ovens going.

Bloody battles were fought by the workers to protect their position and many were killed and injured. Class lines were clearly drawn and spirits ran high.

The weak spot in the workers line of battle was on the railroads. Six months

before a big strike had been waged on the railroads and was lost. The class conscious elements among the railroad workers were discharged and were not reinstated| A system of espionage and black list prevented reorganization of the fighting elements. The conservatives and reaktionaries were running the rail transport system of the country and aided in every section the strike breaking plans of the government.

They shipped guns and ammunition to shoot down the workers with. They readily transported the scabs and military and were all the way through the servile tools of the master class.

After two weeks continuance of the big sympathetic strike it was called off and the men were ordered back to work. The trade unions had not won their point. The ship owners stood pat when they met the sailors in conference.

With the return of the sympathetic strikers who were estimated to be about a hundred thousand in number, the sailors were in much the same position as before. They continued their strike together with the longshoremen until their executive bodies called the strike off. What the reasons were for calling the men back to work after their heroic struggle of many weeks is not clear. Later news may bring this out.

The workers in the marine transport and other industries are bitterly disillusioned with the executive machinery of their unions. With no centralized head or directive policy the different unions were handicapped when it came to putting up a united fight.

The marine workers now more than ever see the need of international organization. Could they have reached their men in foreign ports and had the backing of the longshoremen there, no doubt the end would have been different but with a purely national strike on their hands even the heroic efforts of the entire rank and file were thrown away. The Marine workers of Norway like the Marine workers of Denmark a few months ago lost their strike and went back on the bosses terms.

Now is the time to put an end to nationalistic unionism and launch the true one big union of sea and port workers. The Mariners of Denmark, Norway and the United States have all felt the futility of craft and nationalistic unionism. There is but one way out. Let us travel that way.—

W. S. & R. W.

# Soft Hands

**By A. Miner**

His face bears the scars of life's battles,
They were made by privation and care,
Yet shines through his eyes the brave spirit
That fears not to do and to dare.

Would you trace the deep tide of his courage?
I can show you the source undefiled
In the soiled grimy hand of the toiler
Lies a little soft hand of a child.

He thinks as more fondly and closely
The delicate fingers are pressed
Of little soft hands that lie folded
And still on the little cold breast.

When he heard the stones fall on her coffin,
He knew—ah the sting of that thought!
That his baby had died for lack of the wealth
That his own calloused hands had wrought.

There are millions of thin little fingers
In this fruitful, this beautiful land,
That are robbed of their plumpness and dimples,
The birthright of each little hand.

# International Class Unionism

By George Hardy

THE progressive deterioration of capitalism is bringing the working class of America to realize that they cannot safeguard their common interests unless they organize on a world class basis. This naturally draws our attention to the International Congress of Trade and Industrial Unions now convened at Moscow, for here we have the formation of an International Class Union.

The Industrial Workers of the World—the I. W. W.—commenced its class mission sixteen years ago. It had a mission to perform—the organizing of the workers on the economic field and making them class-conscious.

Gradually and forcefully we have fulfilled our duty; always changing our tactics and program to meet the various changes in the labor world and of capitalism itself. Because of the nature of our program we decided to send our delegate to the Moscow Congress.

We want to ally ourselves with what we believe to be the most **virile** International ever launched on the industrial battlefiield. It is the culmination of our aim.

### The Independent Unions.

The I. W. W. is not blind to the necessity for a closer alliance of the various independent unions of the North American continent. We are not satisfied with the progress made during the last decade, therefore it is our desire to see complete unity accomplished. There is no hope whatsoever of the A. F. of L. ever doing anything officially for the workers. They will only continue to ride on their backs; however, there is hope in the rank and file.

Our chief concern is, that the revolting elements who have severed their connection with the old crafts should get together. There are seven or eight different independent unions which, if united, would make a driving force amongst the great mass of unorganized workers. A large percentage of these can never be induced to join the A. F. of L.

With a united revolutionary union—with its objective abolition of capitalism always foremost—created out of the many independent unions—we will be able to meet any crisis that will happen. It would be tragic to have any of the independents become supporters of worm-eaten craft-union policies.

This does not mean we are against revolutionary nuclei working within the craft-unions in fact we believe the message of discontent and abolition of the wage system should be carried into every labor body.

We even believe organized methods should dominate the groups carrying on such propaganda. Especially do we realize this to be necessary as a general world's policy, because of the large masses inside the trade-unions in England, Germany and France, etc. etc. The workers destiny must be taken out of the hands of Gompers; Thomas-Williams & Co. of England; the Legiens of Germany; the Longuets of France, and Daragonas and Serratis of Italy.

Gompers and his supporters say: "We in America have nothing to do with European Labor"; "We can get along fine without their assistance"; "We want no connection with those European Bolsheviki"; and so on and so forth. The I. W. W. does not believe this! We know that if European labor suffers it will have a detrimental influence upon the condition of the workers in America. Therefore, we pledge our solidarity with all the workers of the world.

### Organization and World Conditions.

We see an economic reason for the U. S. Army participating in the world's war. The capitalist class had to save the invested millions which were loaned to the Entente. The social character of society drew the U. S. financiers and industrial barons into

the struggle which has locked them up economically—the economic and biological laws could not be evaded—the principle of the survival of the fittest always triumphs.

The very same laws are operating in working class organizations. They demand that, to have economic security and to survive, we must become the dominant class. We can only do this by building our movement on an international basis. The I. W. W. knows the war has left central Europe prostrate; we know two thirds of the world-workers are gradually starving to death under the **Iron Dictatorship of Capitalism;** we feel it and see it in the 5 million unemployed in this country; we know no relief is possible under the present system, for the same conditions prevail in every capitalist country in the world, in varying degrees.

Some day the European workers will take action, and the American workers' condition will grow gradually worse if they continue apathetic; factories will close, as the capitalist class will refuse to operate their industries to give goods to a revolutionary Europe. They even now refuse to trade with Russia who is carrying on the actual revolutionary struggle alone.

The I. W. W. takes the same position towards Craft Unionism in America as the International of Trade and Industrial Unions takes towards the yellow Amsterdam "International". We continue outside of the A. F. of L., trying to unite the independent unions to form a rallying ground as soon as disintegration commences. The so-called International of Trade Unions headed by J. H. Thomas—the betrayer of British Labor in the recent miner's strike—went to pieces in August 1914. Legien of Germany tried to use it as an instrument in favor of the Central Powers. The Entente labor fakirs and social traitors protested and lined up with the blood and trade thirsty masters of **their countries.** Thus we find an international betrayal of labor—a betrayal by those whom the workers had trusted with leadership.

### Reactionary Movements.

Since the world's war ended the ruling class have not been slow to seize upon every opportunity to hold these social chauvinists on their side. These hyphenated "labor leaders" continue their social tragedies, professing to represent the workers. They take seats at the oily benches of the International Labor Bureau of the League of Nations; urge the workers to work harder and longer, for less wages; using the same blunt statements as the capitalist class—to use J. H. Thomas' phrase—"it is not over-production we are suffering from, it's under-consumption" (?)

True, we are suffering from "under-consumption" because of the system of private ownership of the wealth production. Goods are not produced for consumption, but to sell at a profit. Because of the condition that has been brought on by the collapse of capitalist exchange—due to the war—there is over-production. All the mouthing of phrases favorable to the existing system could not convince the crudest observer otherwise, especially those now walking the streets out of a job, while the factory, shop or warehouse windows that he or she worked in, show stacks of surplus goods.

These same characters, such as Albert Thomas of France and Barnes of England, together with the yellow Amsterdam officials, betrayed the workers of Germany in November 1918, also in every move the workers have made to attempt emancipation since the end of the war. They recently betrayed the coal miners of Britain, and now the "Brotherhood" chiefs of U. S. A. are preparing to betray the railroad workers just as the United Mine Workers officials treacherously threw down the coal miners in 1919.

### The New International.

These facts make imperative the new International of Trade and Industrial Unions —an **International based on the class struggle**—standing always at attention, ready to assist any unit who may be attacked, or find themselves distressed. It will weld the divided revolutionary unions into one united

whole. Upwards of 14 **millions** are now represented by approximately **400 delegates** at the first world's congress of a real International Union.

**Centralism** must be its policy. There can be no heavy attacks made upon capitalism unless we can manoeuvre unitedly. **Discipline throughout the new International must be maintained.** The "International" Federation of Trade Unions failed the workers hopelessly, because it had no policy mapped out to meet a crisis, and an uncourageous leadership.

Wherever we can gain job control in factories, committees should be set up; these committees should refuse all alliances with the employers schemes—such as the Whitley scheme now being put into operation in many factories. It is true that power must be seized out of the hands of the ruling class—but they use **force** as instance the Facisti of Italy, the Orgesch of Germany and White Guard organizations everywhere too numerous to mention.

In order to minimize that force it is necessary to have as much working class organization and understanding of how to control the social processes as possible, before the crash comes.

The new movement must prepare for the workers' dictatorship, for as the I. W. W. always has said: "those who control economically control politically". This is a truism no one can deny who thinks scientifically.

The working class then must have before their eyes a picture of a centralized working-class government; passing decrees regulating the actions of the people; creating laws that say: "He that doth not work, neither shall he eat"; regulating the bourgeoise in keeping with the workers' desires —this is the dictatorship of the proletarian state. This, possibly, will be the policy of the New International.

The I. W. W. have in existence their city central councils which under capitalism, distribute literature and carry on propaganda with local centers. It is the social organ where centralized work is carried on, distinct and separate from the Industrial Union branches. However, city central councils draw their delegates from these industrially organized units.

Extend the idea further and we find we would arrive at the political side of the labor movement—the communal side, as apart from direct production within the industries.

### State Power and Unionism.

The congress of Trade and Industrial Unions cannot shut its eyes, and blindly ignore the existence of a state power as some individuals in the American labor movement would have us do. It must prepare for every emergency. The attitude of the capitalist class in Great Britain during the recent coal strike is a fine example of what they intend to do; mobilization of armies was their first thought, proclamations calling the army and naval reserves to the colors; battleships speedily dispatched to all important ports to wreak the vengeance of a tottering ruling-class upon those who may challenge their right to control.

This young class-conscious International will have a policy to combat this—war on any part of the working class must be met by strikes. If war is declared between two or more capitalist nations the answer must be: **General Strike!** Transport workers should prepare to refuse to handle munitions destined to be used against their fellow-workers, at home or abroad.

Thru the Central Bureau we may know of the activities of all other countries, and gain knowledge that will bind us solidly together. Heretofore we have been groping in the dark, while thousands of our comrades have been shot and thrown into the cold dark dungeons of capitalism at home and in countries far away.

The International of Trade and Industrial Unions is the highest council of the working class on the economic arena. Like the I. W. W. it does not recognize any national boundaries, no color or race divisions; not even a dividing line between the occident and the orient exists; class unionism, with emphasis, is its slogan, emancipation its goal, and the ownership of the world's

creative processes and the earth for the toilers. Centralize the activities of the world's unionists and we will put an end to this inhuman system.

Do as our Russian fellow-workers have done—stop exploitation by the bourgeoise! Feeling free we will work with enthusiasm beyond description. Prostitution of all kinds will be banished from the earth; more determined men will exist, who cannot be bought for a "mess of pottage"; children will be better educated; happier homes and brighter surroundings will be the workers' reward for their adherence to the cause of Solidarity, by being a part of the International Council of Trade and Industrial Unions.

# Sacco-Vanzetti: Victims

**By Art Shields**

AMERICAN workers are getting hardened to the prostitution of capitalist courts,—so the conviction of Nicola Sacco and Bartolomeo Vanzetti in the court house at Dedham, Mass., does not bring the shock that such action would have brought ten years ago, but none the less the case is the most glaring perversion of that abstraction known as "justice" that has been seen in years.

The multitude of evidence proving the innocence of these two working men of the charge of killing a paymaster and a shoe company guard at South Braintree, Mass., in May, 1920 has been put before working class readers time and again, so there is no need to go over it here. Nor is it necessary to recount again the methods which the Department of Justice and the labor-hating state police of Massachusetts used, to put over their nefarious act. It has been told before in this case and others, the putting of stoolpigeons into adjacent cells with stories of their I. W. W. connections and their desire for dynamite to blow up the prison, for the purpose of entrapping the defendant into conversation in order to pervert his remarks later. The use of witnesses, who were far away from the scene, the burglarizing of defense offices; these and a dozen other dirty finkstunts are nothing new to any intelligent worker.

The point is that these workingmen, whose crime was their advocacy of economic direct action in the shoe and cordage mills of New England, and their determined resistance to the murder tactics of the secret police in the case of their fellow worker, Andrea Salsedo, who pitched to his death from the fourteenth story window of the Department of Justice in New York, the point is that these men have lost a legal batte with the owners of the law.

The lives of Sacco and Vanzetti will not be saved without direct action. This does not mean to state that further legal efforts will not also be necessary. But what is meant it that the added power, the kind of power that obtained the release of Ettor, Giovanitti and Caruso from the death cage at Salem, after the Lawrence strike of nine years ago, comes from the force of organized labor in motion.

STIRRING HIS FEATHERS

# Crafty Gossip

### The A. F. of L. Convention

THE forty-first convention of the American Federation of Labor was pulled off with the usual pepless precision that has marked all the forty preceding ones. The three functions of the convention, aside from the ceremony of re-electing Sam Gompers, took up most of the time and discussion. In the order of their importance —vacation jaunting, jurisdictional disputes and legislative programs, to keep the score or more of lobbyists "busy" for the coming year, were given the devoted attention of the "representatives of the American labor movement."

It was estimated that about seventy-five per cent of the entire business of the body was of a legislative nature. Consider the fact that the labor lobby has after its years of experience and earnest sweat, been unable to gain one concession from the legislative bodies of benificent capitalism and you get a slight conception of the usefulness of this mighty gathering.

More significant were the jurisdictional matters fought out here. Of grave import were these. Up through the serried ranks of labor officialdom had come those questions debated by business agents, executive boards, vice presidents, international vice presidents, boards of international officers, only to balk at settlement and be referred to this astute body for final disposal.

Does a man working in a metal fabricating plant that drills a hole in a piece of iron a half inch thick, one inch wide and two feet long, places the drilled piece in a roll and puts a neat crook in its once straight and rigid beauty, then only to farther mar and mutilate it, places it in an oven and when one end is hot stamps it into a peculiar and ugly shape—does this man, I repeat, "belong" to the International Association of Machinists, the International Brotherhood of Boilermakers and Iron shipbuilders or the International Brotherhood of Blacksmiths, Drop Forgers and Helpers?

These were the questions of moment that furrowed the unadorned brows of delegates. To their credit be it said that they always laid the emphasis when stating such questions on the point where it should have been placed. Does he **"belong"** to us?

With one eye ever on the per capita pulse, craft officialdom forgot to lay plans for amalgamation and centralization for the purpose of fighting the boss. Far be such thoughts from them. As president Kline of the Blacksmiths (etc.) once said in Seattle—"I would be a damn fool to propose or work for One Big Union, me holding the position that I do." And so would they all.

Freedom for Ireland was popular, very popular, that is as long as it didn't cost anything. A motion to give freedom a crutch in the shape of a boycott on British goods was downed with enthusiasm. Freedom should stand on its own legs.

The final and crowning constructive effort was the report of the executive committee on Soviet Russia. Summing up the entire matter they opined that the first workers government in the world was a "brutal defenseless tyranny."

The matter of international affiliation was debated at length, but as there seemed little hope of A. F. of L. persons getting pie cards in the international bureau of the yellow Amsterdam body it was decided that parting with the necessary per capita to pay for such membership would be wasted opportunity. Amsterdam was rigidly repulsed.

The convention closed in plenty of good spirits.

* * *

### The Amalgamation Strike

On June 2, 1921 the Amalgamated Clothing Workers of America signed up a working agreement which means victory over the open shop element of the New York clothing plutocrats. A six months strike has finally been ended so that the workers can now go back victorious in the very hottest part of the year.

The bosses, happy amongst the profits of the last few years laid down an ultimatum to the Amalgamated something like this.—

1. Individuals have a sacred right to sell themselves to us as they please.
2. If they want to work piece work we can set the prices.
3. Any time we don't like them we can fire them. If they don't like us, they can quit.
4. Any time that wages seem too good for the moral welfare of the slave we will lower them.
5. Day workers will hit the ball or hit the road.

After six months of happy life amongst the idle machines the bosses accepted the following terms by which the slaves agree to be governed:

1. Slaves will maintain closed union shop.
2. Joint arbitration and adjustment machinery by which the bosses and the workers come together reinstalled.
3. Shop standards set by joint committees.
4. Wage reductions not to exceed fifteen per cent.
5. Forty-four hours a week.

It is to be stated that the most notable reason for the Amalgamated winning the strike is because they do **not** belong to the A. F. of L.

* * *

### Railroads and Open Shops

The open shop drive on the craft unions is still gaining momentum in the railroad crafts. The Pennsylvania system has even informed that efficient labor retarding machinery known as the United States Railroad Labor Board that it does not need their help in quelling the workers in the shops and on the road.

They are at present quite sure that they can keep the workers in line with a company union

TO HELL WITH SOVIET RUSSIA! EVERYBODY HAS TO WORK THERE OUR MOTTO SHOULD BE: DRAW YOUR SALARIES AND DON'T GET EXCITED
RIGHT'O
HERE HERE !!!!
LABOR SKATE
DUST

THE CONVENTION CONDEMNS

which operates on the same basis as the well known Four L. in the lumber industry. The Four L. is of about as much use to the boss or the workers now in the lumber industry as a speaking trumpet is to a spring frog. But the railroad workers on the Pennsylvania lines seem to fall, in places, for this stuff.

The brainy policy of the heads of the workers organizations in this industry is responsible for the trend of events. If the workers can be held in submissiveness by a gang of reactionary labor officials, the railroads think that all that is necessary is to get the men into a company union and then they can just as easily hold them down in it and won't have to bother with the ever greedy fakir.

The workers, perhaps seeing no gain to be had from the damnable policy of their respective craft unions have lost interest in trying to maintain unionism, and fall ready victims for the company union plan. The fact that no union, either company, craft or industrial can be of any value to the workers unless it has economic power and is prepared to use this power to enforce demands is quite often overlooked.

So far as actual results is concerned it matters nothing at all to the railroad men whether the craft officials hold them down or whether the holding is done by company officials through the company union. The solution to the problem lies not in taking sides with either of these factions but in forming an industrial union of the railroad workers capable of concerted and united action to enforce demands by the use of economic power.

Many of the workers in the rail transport industry see this very clearly and hundreds of their fellows are coming to understand it every day. Craft officialdom sits serenely on the lid and joyfully steam rolls every attempt of the membership to develope fighting organs.

### The Metal Trades Officials Speak

The metal trades department of the A. F. of L. once again proved its craft purity in resisting the seductive program of the International Association of Machinists.

The machinists in view of present day conditions have at last seen the need of industrial unionism. Not being strong of eye, however, they looked at this need through the smoked glasses of amalgamation and so managed to retain some semblance of their highly valued near sightedness.

They proposed to the metal trades officials in convention assembled to call a conference of the "heads" of the international unions which composed the metal trades body, for the purpose of working out plans for closer affiliation and possible amalgamation.

The popularity of this outrageous attack on official sinecures, at least among the officials, can be judged by the vote. One hundred and seventy-one ballots were cast in favor of the measure while vest pocket ballots made and provided for the occasion by wary labor politicians yielded the sum of three thousand two hundred and ten loud and angry nays. Thus is the virgin purity of craft isolation vindicated and maintained.

* * *

### The United Mine Workers

The United Mine Workers of America represents an anomaly in American unionism. Industrial in form it presents a sort of local activity that is inspiring to those members of the I. W. W. that see the spirit of these members when in action. Each local unit in the mine is solidly organized with the possible exception of the office help, and in many cases they are as good union men as the others.

Local strikes represent co-ordinated action and solidarity that is hard to beat. It is in the method of carrying on the industrial battles as a whole in the coal mining industry that the I. W. W. finds fault with this organization. Divided into districts with separate contracts expiring at different times it is hard to put up a united front to the boss though it is possible to do so providing there is solidarity displayed between the different districts.

Petty politics and personal quarrels often prevent such a display of solidarity. Cowardliness on the part of officials is also responsible and the traitorous actions of some of the bourgeois minded representatives of the miners inclines one to hate organization that centralizes power in the hands of executives.

Yet such centralized power, if used for the good of the workers in the industry instead of the welfare of the individuals who are in office would make the mine workers the foremost battling organization in the world.

The British miners strike has just come to a compromised close. The American miners organization never had a better chance in its existence to promote international solidarity and enforce the demand that no American coal be used for scab purposes.

With a giant treasury at its hand no attempt was made to follow the lead of the German and Russian miners, who, needy as they were, yet gave liberally to the cause of the workers of Great Britain. The policy and attitude of the officials of the United Mine Workers is utterly reactionary and hopeless. Their official magazine with a circulation of over four hundred thousand weekly copies is worse than the reactionary press. In the issue at hand—July the first, it prints an article entitled "American Legion's Heart Beats for Labor." Such twaddle, such reactionary nonsense from the strongest and really the best organized industrial organization in America.

Yet to show what can be done in the way of the class struggles one has but to go into the battle history of any of the local fights of the membership. The trouble with the United Mine Workers is that it is controlled by a machine through the use of caucuses and strict attention to business transacted in the organization.

When a local organization is liable to vote contrary to the machine policy they marshall all their big guns on that local and do their utmost to swing it into line. The rank and file of the miners are not reactionary. What they need to do is to machine up on the machine.

Caucuses and close touch with other groups of the rank and file will soon put the reactionaries out of the running. It is up to the militant members to lay out and carry through such a program and in a short time the miners of America will step out on the stage of world events invincible as a power for working class control of industries.

Alexander Howatt and August Dorchy, president and vice-president of the Kansas miners' district organization, were found guilty of violating the industrial court law of Kansas. The Kansas miners are not working until Howatt is released from jail. The rest of the organization is still on the job and the officialdom is not only not supporting Howatt but are secretly glad that he and his men are having the battle that may break them.

This lack of solidarity is criminal. That the membership of the United Mine Workers can long stand for it reflects a lack of organization ability that must be overcome. Lewis and his whole gang must be put out of office where they will be unable to betray the cause of working class solidarity.

The United Mine Workers must act together in their own common battles and what is the most important of all they must get in line to act for working class emancipation and working class control of industries the world over.

* * *

### The Seamen's Strike

In the greatest marine strike in American history the sea workers of the different crafts of the A. F. of L. stuck out for eight weeks while their union

officials hobnobbed with legislators and quarreled with their fellow representatives.

In glorious A. F. of L. stylc the strike was swimmingly lost. The engincers, being far "superior" in social position to mere firemen and A. B.'s and the rest of the crafts too numerous to mention, compromised with the boss by accepting a fifteen per cent cut.

The rest of the workers were not only not considercd but their craft officials were shown the gate. Most of the shipping on is now signed via the American plan.

With a picket front five thousand milcs long to look after and thousands of members that needed relief and supplies stretched along this mileage there was need for the moment to forget the craft tactics and pay attention to the battle of fighting the boss. In a mcasure somc things were done along this line but nearly all of the activities were initiated by militant members of the rank and file.

The west coast seamen are continuing the battle alone after the rest of the country has been give up by the officials.

The labor generals, without plans of battle, with no contact with the membership except through appiontees of the main offices and the usual dues collecting machinery, were frightened and helpless and resorted to the only tactics that they knew, political lobbying with the bosses.

It is heartrending to see such splendid rank and file spirit thrown to the winds in such vapid and self-doomed organization tactics. Think of the waste of it all, those watchful picket squads that guarded the welfare of the workers in far off ports of Alaska, in the great docks and moorings of Seattle, in the little lumber ports of Washington and Oregon, in Portland, Frisco, Los Angeles, San Diego, in the cotton ports of Texas and thc wharves and docks of Louisiana and the eastern Gulf, from north to south on the Atlantic coast wherc the great trade centers are. The victory so certain and so sure with that display of courage and of solidarity on thc part of the members was thrown away because they wcre organized in crafts with craft officials and craft ideas.

Yet in onc sense no fight is thrown away. The seamen have learned a lesson, not the lesson of servility, but the lesson of the necd for greater solidarity, the need of industrail unionism and industrial tactics.

The seaman today faces the open shop, thc miserable conditions of all the olden days. He need not face them long. Organization on the correct lines, doing away with cringing co-operation with the boss for the sake of a contract will be a start. Real ship committees and active class struggle through job organization is the step that will bring the seamen from their defeat to greater victory than would have been won had the bosses given in to ducs collecting A. F. of L. officialdom.

### The Latest Popular Song

# Slopperene - It Contains Hog Fat

**Words by Jim Seymour**
**Music by the Singer**

**Mary Jane Carter got work, as a starter**
**At 6.87 a week;**
**She weighed out potatoes and wrapped canned tomatoes**
**And acted the humble and meek.**
**The boss was a robber and threatened to mob her**
**If ever she made a mistake—**
**He needed the jinglings for wifey's high minglings,**
**So Mary Jane's health he must break.**
**And wifey would say**
**At the close of the day:**

**Oh John, you're such good old scout,**
**As useful as can be;**
**You gouge the help that never yelp**
**And bring the dough to me.**
**And thanks to all your piles of tin**
**I've grown a secondary chin;**
**I know you're hard as nails, but hully gee,**
**I love to see them worked to death for me.**

**Mary Jane Carter was only a starter,**
**She didn't last very damned long;**
**Her skin it was yellow, her lungs they were mellow,**
**So Mary was not very strong.**
**The work it had knocked her and one day the doctor**
**Called on her and ordered a hearse,**
**So Mary was buried in manner quite hurried**
**And John's wife repeated this verse**
**(Oh, hark to her say**
**At the close of the day):**
**(Repeat refrain very bullissimo).**

# The Ring Around German Capitalism

THE Majority Socialists and Independents boast of having saved the German working class by consenting to the conditions of the Entente ultimatum. Owing to their cowardice and indecision, they are so firmly convinced of the unconquerable and inescapable nature of capitalism, that to them the saving of capitalism appears as the most important thing of the hour, even though it is equivalent to the destruction of the proletariat.

The carrying out of the ultimatum depends on the raising of the export trade, which will require from the working class impossible sacrifices and greatly increased production. But even so, if it should be possible, through the cowardice and treason of the menshevist leaders, to enslave labor beneath this yoke, under which it would eventually be destroyed, still would all the sacrifices brought to the altar of capitalist profit be made in vain.

The carrying out of the terms of the ultimatum, through the abnormal increase of the export trade, will not only be impossible because the physical and spiritual strength of the proletariat will not be equal to these enormous requirements, but also because of the inherent conflicting interests of the capitalist classes of opposing countries; and further because the economic crisis in all capitalist countries will compel them to adopt means of defense against the competition of German commerce.

Besides, the capitalists of other countries are attempting to become the masters of German imports and exports. They do this, on the one hand, by doing everything in their power to strengthen and increase their own industry and commerce through state credits, state export policy, etc., and, on the other hand, by making practically impossible the heightening of the German export trade, by imposing high import and export tariff rates.

In America, as yet, the different capitalist groups have not agreed among themselves upon the details of this plan. Besides the raising of the import taxes, based on the prevailing American prices, several groups of industrial capitalists, especially those who have come into prominence during the war, are working for the passage of laws which would prohibit import trade from Germany. The following is what Dr. Charles Herty of New York, the chairman of the American Chemical Society, has to say on this subject:

"Although the American manufacturers of dye stuffs have sunk $100,000,000 in the building of factories, they cannot withstand, without the help of defensive laws, the onslaught of German competition in the field."

Henry Howard, the chairman of the Board of Directors of the Manufacturing Chemists' Association, writes:

"We shall not consent to lose the benefits which we have gained through the war. German money has now only one-eighteenth of its pre-war value. Were German labor paid eighteen times as much now as before the war, German competition would not be especially harmful to us, but German labor actually receives, at present, only seven or eight times as much as it did then. If, therefore, after peace is signed, Germany is again allowed unhindered to export its products, it is self-evident that American industry must go under, unless a compensating and prohibitive tariff is set up."

Otto Meinicke, the chairman of the Board of Directors of the Ornamental Glass Manufacturers of the United States, writes:

"Importers of German ornamental glass are able to sell the German products for $5.60 per square foot, while American manufacturers, in order to exist, must charge $12.72 per square foot. Only by charging an import tax of $8.00 per foot, and on top of that, 45% of the value of the product, can the American industry be built up."

According to the latest reports, the following far-reaching clause has been added to the Tariff Law: "Every foreign exporter who refuses to submit his accounts to the American inspector will be excluded from the American market."

The import of dye-stuffs has been put for six months in the hands of the Federal Trade Board. Hoover declared in one of his speeches that it is absolutely essential that steps be taken against foreign trade competition: "The bill for the raising of the import tax on foreign commodities has already been passed by the Senate."

Ever since the conclusion of peace, it has been England's aim, above everything else, to destroy German competition by all and any means. Besides the 50% import tax which now, as a result of the last ultimatum, has been lowered to 26%, certain commodities are not allowed to be imported at all. For instance: The import of dye stuffs has been forbidden for 10 years. As a further measure can be considered the protective tariff and the Anti-dumping Law passed recently at its first reading. It will help to protect the so-called "key industry" of England and Ireland for the duration of 5 years with an import tax of 33 and one-third per cent.

The groups of commodities which come under the jurisdiction of the above law comprise some of the most important and most valuable products of German industry. They are, among others, all of the optical instruments, glass and porcelain ware, measuring instruments and other products of fine mechanism, manufactured articles of precious metal, carbon for incandescent lamps, and other chemicals.

The Anti-dumping Law is intended to prevent underbidding in Britain's lands. On specified articles, the importation of which into certain countries has been partly forbidden, beside the regular tax a special tax of 33 and one-third per cent has been imposed. The importation of dye stuffs has also been forbidden into Australia, and in Canada the

taxes on aleohol, aleoholie essenees and wines have been greatly raised. Furthermore, the tariff law has taken on the appearanee of an anti-dumping prohibition.

The Freneh government also plans the raising of the import tariff "whieh has beeome necessary on aecount of the depreeiation of the Mark, in order to eompete favorably with the German import trade into Franee." Recently, a conferenee took plaee in Lyons, at which representatives for the French hat and machine industries put forth pleas for the raising of the import taxes. The importation into the French eolonies of German ehemieals and pharmaeeutieal produets and dye stuffs has been forbidden.

The importation into Italy of fur and fashion produets and artifieial and deeorative fiowers has been eompletely forbidden. The "Frankfurter Zeitung" has this to say on the working out of the above prohibitive measures:

"The prohibition of the exportation of products of the German decorative industry has narrowed the field of this industry to such an extent that the further prohibition of the Italian market is bound to have a disastrous effeet on it. After this market has been elosed, there will be praetieally no outlet for the products of the German artifieial-flower industry as well as other allied industries."

Last month a eonferenee took plaee in Mailand, with representatives of the Italian industries of heavy products, in which measures were taken against the inereasing eompetition of German industry. Propositions were made partly to prohibit the importation of eertain industrial produets as well as to notieeably raise the import tax.

There exists in Japan, since July of last year, an anti-dumping law. While up till now it had not been felt as being necessary, at present workable measures must be adopted for the proteetion of the Japanese market against overflooding by eheaper produets of foreign eountries. At the end of March the Japanese Parliament passed a bill dealing with the import and the raising of the tariff on ehemieals, zink, iron and steel products.

In order to proteet the badly-hit industries of Switzerland—the number of the unemployed has risen in that country from the beginning of this year to the end of February, from 21,300 to 51,000, to whieh must be added 100,000 who work only part-time—whieh have suffered espeeially on aecount of the eountry being flooded by products of other lands, the Swiss government has been eompelled to put into effeet a prohibitive tariff. The German-Swiss Chamber of Commerce, whieh was opposed to the above measure, was eompelled to disband on the 6th of June.

In discussing unemployment in the Duteh Chamber of Commerce, the representatives of many industrial groups complained about the extent of German competition. Through the policy of the minister of eommeree, the Netherlands' industry has been put on its feet, only owing to the passage of a number of orders prohibiting import.

Orders have been passed in Czeeho-Slovakia forbidding the import of ehemieals.

To what extent the German export trade has been hit by the deeisions of the eountries mentioned above will be seen from the following table:

In million marks

| Exported To | Jan. to Aug. 1920 | % of exports |
|---|---|---|
| Holland | 8600 | 21 |
| Switzerland | 3700 | 9 |
| The Balkan States .... | 452 | 1 |
| Italy | 1100 | 3 |
| Belgium | 1200 | 3 |
| Franee | 1200 | 3 |
| England | 2600 | 6 |
| United States | 2900 | 7 |
| Other eountries (Japan, India Canada) | 4000 | 10 |
| | | Total 63% |

So we see that 63% of the German export trade, or almost two-thirds of it, is threatened. Besides this, we find ourselves only at the beginning of this movement. Other eountries as well—Sweden, Norway and Spain—are eontemplating the passage of similar protective measures. The eutting off of German foreign eommeree means more unemployment, greater misery and hunger for the German proletariat. There is no way out for the German bourgeoisie. Its hands are eompletely tied by the Western capitalist eountries. It is the duty of the proletariat to open, against the desire of the bourgeoisie, the door to the East, whieh offers the only way out of the blind alley of industrial depression and misery.

Translated from **Die Rote Fahne.**

## THE EDUCATED AMERICANS

In the United States the pereentage of illiteraey is about seven and seven tenths per eent of the total population over ten years of age. This means that one out of every fourteen persons over ten years of age is illiterate. One at onee thinks of the ignorant foreigner and says what a pity they don't know anything.

But the statisties from whieh the above figures were gathered state that over three per eent of the native born white population of that age belongs to the illiterate elass. In other words the Negroes, who are eompelled ot be ignorant by every foree and eustom within the power of the master whites, and the foreigners both together only make up four and seven tenths of the illiterates in the United States.

In Holland, Denmark, Germany, Sweden and Switzerland the native white population show a smaller per eent of illiterates than do the whites of America. Some other foreign eountries are supposed to also show better results than the United States but no official and exaet eencus has been taken.

## INDUSTRIAL SCIENCE AND ORGANIZATION

THE abyss into which the world is slipping industrially can only be avoided by reorganizing industry.

Laws, politics, finance, armament, tariffs, and suffrage are matters that are outside and beyond the point. The crux of the question is in the production and distribution of the needs and luxuries of life.

The present arrangement of the process of securing food, clothing, shelter and amusement has been developed by the workers for the benefit of the owning class in society. The owners will not give up their position of control no matter if the whole world perish.

The reorganization of industry is the task of those who are not owners but producers. Their lives and the lives of all the world, parasites included ,depend on their success.

The first step in industrial re-organization is to secure control of the industries. They belong to the workers who built them. The working class must take them over, or go on down the abyss.

The first step in gaining control of the industries is in getting organized into industrial unions. We of the I. W. W. have a nucleus for those unions already organized in a unified and coordinated way according to the plan set out in our chart.

The problem of the I. W. W. and the problem of life continuance is how to organize the working class of the world into those unions and how to exercise the power of organization so as to displace the capitalits owners and develop efficient industrial organs of production and distribution.

Today is no question of waiting for capitalism to break down. It has broken down and is today dragging five million unemployed in the United States into death and degradation. Half a million workers are now on the roads and in the jungles of hobodom. Men and women and children are found on the highways with no work, no food and no shelter except that furnished by the begging, stealing ways of vagabondage.

Our need is to organize hundreds, thousands, millions of workers so that we can act together efficiently in a big all inclusive plan of action which must be worked out now.

We of the I. W. W. have decided once for all that there must be centralized executive organs, to evolve and put across such a plan with the aid of the membership. Now is no question of theory. The question is one of action.

In order to draw up detailed plans for organization campaigns in the different industries we must study and chart out those industries on maps and diagrams just as we charted out our organization's relation to society.

We must get accurate industrial data for our industrial charts and draw up plans for concerted action in the industry we intend to centralize on first. Then the executive bodies of the I. W. W. will be able with accuracy and immediate results, to direct organization and educational drives that will put us in the position of industrial power.

Once that power is achieved we can then take over and operate the industries for the benefit of the working class.

# One Union for All of Us

**By Tom Barker**

THE worker who follows the deep water is the most isolated of the sons of men. His home is a stinking hole, the food he eats is small in quantity and poor in quality.. The shore world conspires against him, from the shanghaier and the harlot down to the policeman. His officers maltreat and cheat him, and the shipowners —arrogant, bloated and stingy—buy up the union leaders and their scurvy, roughhouse myrmidions.

The consuls are against their unfortunate countrymen who go to sea, following in the footsteps of their politicians who have never yet done a thing for marine workers that was worth the paper it was written on.

To the seaman, life is just hell. Yet it is **their** industry that is, in the future, going to make even the life of the wheelsman and the coal-passer worth while. When all the labor front is in motion, the momentum is felt on every ocean route. Every black smur of smoke rising on the horizon marks, in the wilderness of waters, some shrine where crude and slow thinking men are desperately fighting down their own ignorance and seeking to coin into terms of speech their hopes and fears for the future.

To these men the union is everything. It is their only friend, weak and unreliable as it has been in the past. Political platitudes and phrases mean less than nothing to a million and a half of workers of every nationality under the sun, who do the same work, live **the same lives and die the same deaths.**

**The union, and that union ONE UNION, is the only gathering-ground for sweating underdogs who have gambled life, limb and love itself for a mouldy crust,** so that a world of land-dwellers could have their every desire fulfilled. From the port jail to the ocean floor—how often has that been the last journey of the human flotsam and jetsam who toil on tramps, squareriggers, liners and barques? The writing is on the wall. Pliable things change, rigid ones die.

There are gorgeous sunsets and sunrises at sea. The London, Paris and New York proletarians caged in their brick cemeteries do not know what the sun looks like, nor could they appreciate the millions of tints that adorn the sky when the King of Day rises, Neptune-like, from the black waters of the east. No one who is not of the sea can understand the man who lives on the sea. Now and then a Conrad, a London or a Bullen analyses his complexities, breathes in the printed word the tang of salt, the smell of tar and the aroma of cockroach-haunted foc's'les.

**There is a mighty fellowship growing up on the sea. In spite of color, and in blissful indifference to the influence of so-called religion, solidarity is growing and gripping the hand and heart of the pariah and the dispossessed of the deep waters.** In many ports and in many seas it manifests itself, and when it does so the whole world knows.

The crude and hardened men grope towards the light, slowly articulating their simple code. "One union for all of us" are the words they are using. You hear it on every hand. Go to the Liverpool waterfront and see the serious faces and note the enormous respect that is afforded to the man who proposes the One Union and can say half a hundred words in a strong, Mercey accent pointing out the reason why it should be so.

"One union for all of us"—for US, the bottom-diggers, the unwanteds, the stiffs, the overalled and oily, the guys who have spanned the trackless waterways with traffic, which you can trace on the ocean floor by the victims of storm, mine and submarine. "One union for all of us!!!" Wherever we are, night watch or day, port or two thousand miles from land; whether the pitch is oozing out on deck or you are

catching frostbite up in the rigging in a howling, 40-mile blizzard, let us have "One union for all of us!"

"One union" for sailors, firemen, bosuns, carpenters, stewards, cooks, sailmakers, messboys, engineers, oilers, skippers, donkeymen and mates.

"One union" for limejuicers, Swedes, Japs, Chilenos, Downeasters, Danes, Deutchers, Americanos, Spaniards, Greeks, Arabs, Negroes, Dutchmen, Australian, Chinese, Malays and Lascars.

"One union" at Panama, Suez and Kiel, Genoa, Antwerp and Newport News, Liverpool, San Francisco, and Canton; Hamburg, Marseilles and Saigon, Santos, Glasgow and Montreal; Sydney, Odessa and Valparaiso; New Orleans, Rotterdam and Auckland.

And in Petrograd, on the 7th of August, 1921, there will be seen the founding of the Marine Transport Workers' Union. "One union for the whole lot of us!" Goodbye, boss!!

# *The Rubiyat of El Vagabondia*

At dawn when dews bedeck the tulips face
Ere Morning's sun may all the night erase,
  I love to see the slaves in sweaty duds
Toil on—at record breaking pace.

Slaves are they; bowed beneath autocracy
They have no time for wob philosophy,
  Just work and eat and sleep, and work some more
They never heard of solidarity.

The Scissor never asks the Reason why
He does his work without a single sigh,
  But turn an agitator lose on him
Methinks he will recover by and by.

And those who harvested the golden grain,
Alike in Summer's Sun and Autumn's Rain,
  Where are they when the North Wind brings the snow,
Is there for all this Labor then no gain?

Now I remember, stopping by the way
To watch a potter thumping his wet clay,
  And cursing while he worked I think he spoke
Some words about long hours and little pay.

T'was workers who with shovel, bar and maul,
Across the prairies wide and mountains tall,
  Laid all these endless miles of railroad track,
And now they will not let them ride at all.

You built the roads with others of your kind,
Now o'er its path your weary footsteps wind,
  While those who never worked may ride in ease
You walk, and walk, and walk, a weary grind.

For as you lay upon the box car floor,
You hear the shack come banging at the door,
  You know that once again you'll have to hike
To the next town; it's fifty miles or more.

Wake! for the time has come when Labor's might
Shall banish from the Earth eternal Night,
  And in the coming day we shall enjoy
Full product of our toil, so now unite!

Come make the most of what we yet may spend
Before we too into the dust descend,
  Why slave our lives away for other men,
Why not to all this robbery make an end.

Hark! list ye to the call from out the night,
**Wage Workers, Men and Women, all Unite,**
  Cast Slavery's weary chains from off your back,
And **Stand Erect, United** in **Your Might.**

AND NEVER FORGET

Here's to the Red Card Boys, Staunch and True
Who did not flinch their Little (?) Bit to do—
  A Prison Cell for men who Dare to Speak,
Shall it be ever thus?

IT'S UP TO YOU.

# WASTE

By Walter N. Polakov

IF AMERICAN industry, personified by its captains, financiers and managers had been indicted by a grand jury for murder, arson and disorderly conduct in conspriacy to overthrow the existing government and to restrain trade, it would have caused a great sensation. On June 3, 1921 at St. Louis, Missouri, seventeen industrial experts, engineers appointed by Mr. Herbert Hoover, representing about 200,000 engineers of this country, organized in the Federation of American Engineering Societies, adopted and made public, at least in abstract, a report of the Committee on Elimination of Waste in Industry.

This committee was not a casual list of incompetent jurors—it was a representative body of industrial councellors, whose demonstrated ability to reduce waste is widely known. Neither could these men possibly be suspected of un-americanism or extremism.

By nature, conviction and income, they are and they desire to be conservative. Least of all, do they seek sensation. **Yet their findings, if stated in legal terms, might exhaust the vocabulary of our Criminal Code.**

In their own words, this report "discloses losses and waste **due to the restraint and dissipation of the creative power** of those who work in industry" and, they think, "it lays the foundation for knowledge of the destructive influences" controlling our industrialism . . .

What are then the findings of these engineers?

"Waste," they found, "results from an interruption of production, low production, restriction of production and lost production."

Let us see what it means.

### Interrupting Production

Interruption of production is only too well known to us today when over 5,000,000 men with 20,000,000 dependents are locked out, jobless, nearing hourly destitution if not desperation. We have had periodic crises: 1893, 1907-8, 1914, 1920, when production was restrained in order to maintain high prices which the limited earnings of the population were unable to meet.

We also know that seasonal interruption of production in the majority of industries is artificially created. We know too that production is interrupted when men are sick and that our state of industrial hygiene is such that 42,000,000 persons are loosing about 350,000,000 working days' production per year due to accidents and sickness of which 42 per cent are preventable. **Authorities agree that 75 per cent of deaths and serious accidents in American industry can be prevented by using methods already perfected.**

Intermittent employment is likewise preventable for it is due to lack of coordination between related industries, the failure of management to link up sales policies with production policies, lack of planning, lack of research, speculative purchases, shut downs for inventory-taking instead of using permanent inventories, etc.

### Low Production

Low production is likewise a time-honored ill of our industries. The report does not evaluate loss of productivity by comparing what is being done with what **can be done** but merely with what actually is accomplished in the best **existing** establishments. This method makes their findings ultra conservative, placing waste between thirty per cent and forty per cent while **actually we produce much less than one half of what we could if we cared to** (with present management).

Obviously the losses of this class are also preventable, for this form of waste represents nothing but failure to apply fully our resources of knowledge, means of production, and materials. Modern technology and management engineering possess today a vast amount of knowledge which is not used.

Plants are usually over-equipped in an-

ticipation of future growth and **nearly half of the machinery constantly remains unproductive.** Stocks of raw materials purchased in speculation and stocks of finished and semi-finished goods are much in excess, usually from four to ten times larger than is reasonably necessary.

Restriction of production, on which the report apparently lays considerable stress, is, similarly, purely an artificial ill. It is due, we are told, to many causes, such as fear of dropping prices if an adequate amount of goods is produced, and to the fact that only owners of patents, trade marks and other protective legalities can produce certain useful goods and can restrain others from doing so, etc.

### Slow Work Means More Employment

It is also found that the employes restrict output, but while they are doing so by "limiting the rate of speed of output of individual workmen," says the report, **the employers "usually limit the total output of an industry."** Limited individual output, of course, could be **more than offset by employment of a larger number of men** but limitation of the output of an entire industry creates both **shortage of goods** for the whole country (and high prices) and **shortage of employment.**

From even this brief review of some outstanding phases of this report, it is quite clear that its conclusion, featured in the daily press, showing that 50 per cent of waste at least is due to management while loss due to labor is but 25 per cent, is not an exaggeration, but a decided soft-pedaling.

For what are, after all, the factors in waste caused by labor? Incompetence, slow working and conflicts are the chief ones. Yet it is the **duty** of the management to train workers and to make them competent and skilful. **Slow rate of work, likewise, is partly a reaction** against the **unreasonable** attitude of many managers in cutting the piece rates, and partly an attempt to relieve the suffering of those unemployed—1,000,000 persons "normally" and over 5,000,000 today,—by offering them room in industry.

Lastly, the waste caused by conflicts and strikes is dismissed by the report as "much less than popularly supposed" and as occurring chiefly in seasonal industries.

### Time Only Can Be Wasted

Let us stop here for a while and ask ourselves a question: What is waste and what is its significance? Let us keep away from metaphysics and supernatural speculations. In positive science, we deal with only three measures: space, matter and time; everything else is derived from these. Waste, therefore, to be real and not fictitious, must be reckoned in these units. If the cause does not produce the possible maximum result—we call it a waste, waste of material, waste of time or any function of these—like waste of energy, waste of life, waste of knowledge.

Now, let us go a step farther. Nature does not know losses. Matter cannot be annihilated nor can energy be dissipated. It does not make any difference for the universe whether it takes 10,000 years or 100,000 for the fern to become anthracite for there is nothing lost in this process of making coal out of plants.

Yet, if mortal man will not reckon with the **time** that his work takes, he will rapidly be reduced to a savage state and the population of the world will shrink to a number which Nature unaided could feed, clothe and house. It is thus plain that **time is the only necessary and sufficient measure of human progress and of human waste.**

### Waste in Labor Hours

With this measure we can size up the significance of our losses. Waste of one ton of coal unproductively burned under a boiler does not mean the loss of 2000 pounds of carbon and other elements, for they are still present in the air, and ashes may even be usefully employed in road building. Loss of five dollars is not loss either—it is simply money passed from hand to hand.

This ton of coal wasted is one of the thousand which a miner has dug out during a year of his life. He worked two hundred days a year and this one ton represents one hour and thirty-six minutes of his life.

If we waste, because of reckless methods of firing, twenty-five per cent of our coal, it does not mean that we waste $750,000,000 but that **we waste the lives of 150,000 men each year, not only utterly uselessly for the country, but we keep them in a needless treadmill, in solitary confinement underground!**

Similarly, if we have built a machine and use it only half the time, what we waste is half of the productive life-time for those who invented, designed and built that machine. Likewise, if we keep materials and ideas idle, we dissipate the life-time of those who worked them out and we imperil, and sometimes actually destroy, the lives of those from whose use these goods and ideas were withheld.

### Time Factor Unconsidered

In the absence of this clear, definitely human measurement and sizing up of industrial wastes we see a tragic shortcoming in this report. Of all the people, the engineers shold have been the last ones to confuse the dimensions! The engineers would scoff at one who added yards to cubic inches or attempted to measure the strength of a bridge in gallons.

Yet, living in an age of double standards, they blundered themselves, confusing classes, all their college training in mathematically correct thinking notwithstanding. The report pathetically attempts to express the harm of idle equipment in billions of dollars, preventable disease and death as equal to $3,000,000,000, as if each human corpse has a value of so much a pound!

Material wealth and its possession is in space. It can be acquired, exhanged and moved from one place to another, whereas human creative capacity can be measured only in time, not only because our life-time has a supreme value and cannot be indefinitely extended, but because men are the only living creatures that can bind time and achievements of the past generations with the present, and pass on their knowledge and render service to the future. Moreover, because time is the only thing that stands between the cause and the effect, we cannot think correctly unless we are careful in analyzing what is the cause and what is the effect.

The engineering report falls into the tenets of this long honored fallacy. It attempts to measure the human worth of life in yards, tons and dollars—all space measures, instead of measuring it in the units of a life-time, say in the hours of mans life which were either wasted in producing something which is unnecessary or harmful, or in producing something which, though necessary, is unduly slow or which is not lasting.

### Confusion of Cause and Effect

Stil another deplorable limitation of this report is that it mysteriously confuses causes and effects. Waste is described as a result of idleness, restriction and interruption of production, etc. Yet idleness, etc., is the waste or act of wasting time, that is, life, and of life sustaining production. But let us assume that waste is understood by the writers of the report in the lower dimension,—as mere loss of monetary profit. Even so there is no evidence that the restraint of production or sales policy is the cause; it is in itself caused by an economic regime where waste is a system. The report thus fails to live up to its proclaimed purpose to "lay the foundation for knowledge."

Because of this timidity of the authors of the report to get to the fundamental cause of industrial wastes, their recommendations are also not fundamental but pallaitive, based on the **uncritical assumption that the powers that be of our economic society are willing to eliminate waste.** Yet an element of doubt may be suspected in that the proposed program calls for "governmental assistance" as a co-ordinating and **coercive** agency, forcing the carnage of **"taking"** into orderly **"rending of service."**

To conclude this brief review of the momentous engineering report on waste, one should remember the noble hope of its authors, that "from this knowledge will grow the certain vision that mental and moral forces must be added to the physical resources now employed, if industry is to serve all" . . . **Indeed, an industry as described, devoid of mental force and lacking in morality, is but a monstrous Frankenstein—the author of its own undoing and a scourage to all mankind.**

(The New Republic)

# The Lunch Hour Gang Discusses Nationalism

YOU couldn't stop them from "chewing the rag" with a fire-hose. They were at it, as soon as they met one another on the way to work and in the shop, whenever opportunity offered while at work. But it was the noon-day lunch "hour" that gave them all the best chance at argument, some of it rough and ready, and all of it interesting.

This noon they got around to the "damned foreigners," after they had "passed up," that is, discussed, every subject, apparently, under the sun.

"Aw," said "Shorty" Phelps, "They oughta stop them cheap guys comin' in here from across the pond! I say 'America for Americans,' them's my sentiments."

"It's good," observed "Tim" Connors dryly, "it's good the Indians couldn't cnforce that slogan, or none of us would be here!"

All hands gave "Shorty" the laugh.

Then "Doc" Thompson spoke up. Now "Doc" had acquired his sobriquet because of his ability to make a good chemical analysis of the various kinds of liquors, and to prescribe them accordingly. In addition, he was well read and almost scholarly in his literary tastes and talk. "Doc" coughed slightly, and then spoke up. Said he:

"It appears to me that this idea of 'America for Americans' ought to be more closely observed by our financeers—I call them 'ours' because they are the ones who stick to us so closely while plucking us, that they can hardly be distinguished from us; otherwise we have nothing in common."

The close attention with which he was followed, and the laugh that greeted this sally, encouraged the "Doc" to continue, thusly:

"These men, who are economically the greatest factors in this country's development, and who derive the most wealth from it, and, therefore, should be our foremost patriots,—these men seem most intent, not on financing 'America first,' but on th extension of their financial control abroad. They are allied with French, English, German, and Japanese bankers in the development of China; they are financing Germany, and are in a so-called world-trust with English and German financiers for the commercial exploitation of Russia. They are making immense loans to Canada, France and England, both governmental and industrial. They are represented in all the international financial conferences and meetings of the international chambers of commerce. In fact, they seem to be more active abroad than at home. They also seem to be, in my opinion, more international than national."

"They have got to be," chimed in Sam Redding, who was known as the 'forum hound,' from his habit of attending all the open forums in town.

"How's that?" asked all the rest of the "gang" simultaneously.

"Well, if you read H. G. Wells, you'd know!" said Sam tersely.

"Aw, can that high brow book stuff!" exclaimed "Shorty," in disgust.

"I'd like to can a little of it in your cranium," retorted Sam, and all "the gang" laughed—they were familiar with "Shorty's" and Sam's temperamental and intellectual differences.

"Aw, cut out that smart stuff, Sam, and give us the rest of your dope," urged "Limpy" Long, so named because of his lame, limping leg.

"Well," resumed Sam, "Wells says that all the countries of Europe must expand economically, even if they have to overlap national barriers—the machinery of production, its international sources, character and outlets require it, and make it necessary. Now, Wells might have said the same thing of the U. S., where production is on an even greater scale than in Europe and where the need for economic expansion is correspondingly greater."

"Hey, Sam; for Christ's sake, where in hell do you get all that lingo, and what in hell does it all mean?" broke in "Shorty."

"Aw, dry up!!" "Go way back and sit down!" "Cut out the racing stuff and you'll get a chance to know something."

"Give the ponies a rest, and your brains more exercise! Go ahead, Sam; don't mind him; he's full of prunes, anyway!" shouted "the gang" in unison.

"Oh, "Shorty" is only bluffing; he is not the damn fool he pretends to be," said Sam, consiliatorily.

"Now wait a minute, Sam; let me but in," broke in "Jonesy," the machinist's helper. "Where do the workingmen get off in all this stuff?"

"Now you're asking something, "Jonesy," boy!" shouted "the gang" approvingly.

"That's the question, Jonesy, that's the question," repeated Sam. "It seems to me that in order to fit into this change at all the workingmen will be forced to expand, too. That is, they'll have to become internationalists, too. Just think, Jonesy, when you grow up and some American corporation sends you abroad to help open up some of its foreign works, just think who'll be the 'damned foreigners' then, just think of how this 'damned' foreignerism will disappear in the intermixing of the nationalities that this economic expansion will compel. Why, even now the labor organizations of Europe and America are getting together in accordance with this expansion of national capitalisms. It's a great development, from which the workingmen here can't escape even if they want to!"

Just then the powerhouse whistle called all "hands" back to work with a rush, excepting "Jonesy," who lingered behind in order to ask more questions and to get the thing straight in his own mind.

J. E.

# Organization in the Lumber Industry

THE only labor organization in the lumber industry at the present time, that has the slightest respect of the workers in the industry, is the Lumber Workers' Industrial Union of the I. W. W. Its battles in this industry have been many; some have been won and some lost. Yet, regardless of any of its defeats, it stands far out and above any other group, both in courage and in honesty of purpose.

The most rapid growth of the I. W. W. in the lumber industry occurred during 1917. It was a result largely of spontaneous rebellion on the part of the workers in that industry. It was not brought about by carefully laid plans and executed maneuvers of a centralized labor executive body.

The successes of the I. W. W. can be attributed to the fact that their tactics are the only ones acceptable to the lumber workers. The A. F. of L. and similar unions refused to take into account the class antagonisms that were rife through the industry; they failed to convince the workers.

The terrible conditions in the lumber camps created a situation which was easily controlled, without much effort, by the I. W. W. The workers in that industry, however, even while they were striking, were properly impressed neither with the value of disciplined organization, nor with that of revolutionary education. The tactics used in the great strikes were largely improvised by the separate groups on the spur of the moment.

Yet, because of the rapid movements of the small minority of the old-time members who really directed the strike, the battle took on much of a uniform character. After the fight for the eight-hour day was won, the organization seemed to fail to hold the new members that had been gathered in. The voluntary centralization that had grown up during time of action had insufficient expression in the big machinery which had rapidly, and often carelessly, developed.

It is readily admitted that in many sections the organization was entirely too top heavy with new members, to permit a successful democratic functioning until such a time as the new members could have been educated. However, no organs of centralized control and of executive power had been installed, so it is not to be wondered at that many of the new members dropped out, in view of the persecution and villification that was heaped on the membership.

In point of theory, the I. W. W. is highly centralized. Due, however, to the sudden success of the spontaneous strike policy during 1917, centralized organs have not evolved, as they should have after the victory for the centralizationists in 1913. Great need for centralized organs existed then and exists now, and this need, wide-felt, is causing such organs to be created more in an evolutionary manner than according to a blue-printed theory.

### New Tendencies

The last convention took some steps to further change the organization as a whole, from a propaganda organization to one of industrial power. This will affect the lumber workers as well as others. To properly administrate a centralized lumber workers' organization, the central executives must have access to properly organized data of the lumber industry. This data they cannot procure from capitalist research sources. It must be dug out by the lumber workers themselves.

The capitalist organization of the lumber industry has been rather haphazard, and with no general plan for efficient exploitation of the timber supply. The individual capitalists have purchased sections of timber, and with no idea of co-ordinating the cutting of their holdings with general industrial methods, they have gone ahead and erected mills, camps, roads and power sites with no concern than their own small immediate plan.

These units have been scattered haphazard across the country. No unified plan, no data of productivity, no knowledge of proper technical methods were employed by the early capitalists. We see now in the lumber industry a jumble of competitive plants with no correct engineering plan of production. They co-operate on the marketing of products and solidly unite to fight organized labor.

### Getting the Facts

To properly battle these organized lumber barons, we must get the industrial facts which they have neglected. We must study the lumber industry, not from the point of view of finance but from the point of view of actual production. We must know the location and strategic value of every plant in the lumber industry. We must have easily accessible charts so that this knowledge can be drawn on at all times.

Using this industrial knowledge as a basis, we must draw up plans, regular campaigns for organization and education. In the past we have been attacking the lumber barons in much the same manner as they have been tackling the lumber production problem. We have not gone into the game with a unified plan of action. We have only tackled them as the special case seemed to call for.

With a unified, executive plan, concurred in by the membership and based on the actual facts of industry, we could hit such a wallop as to jar the old plute into a knowledge that we were really alive. With such a plan laid down we could organize flying squadrons of militant members working directly under orders from the central executive office. We would tackle the enemy section by section, one locality at a time with overwhelming numbers. We would be able to throw our greatest strength into sections where it was needed, with precision and an assurance of victory.

### New Tactics

Three factors must enter into the new tactics, that will assure the lumber workers the power in that industry. First, centralized executive efficiency in all organization matters. Second, industrial knowledge such as the Industrial Research Bureau should be made to furnish. Third, the application of such knowledge by a self-disciplined rank and file, working in co-ordinated action.

These factors are not ideas put out by some individual to be followed by the rest. They are tendencies that are manifesting themselves in widely divergent parts of the organization. At the last Convention the centralization tendency was expressed in many resolutions submitted to the body. Among them were the clearing-house idea, the departmental system and the recommendations submitted by the General Executive Board.

Not only has the I. W. W. accepted in theory the idea of centralization, but they are working out plans for unity. They are giving careful study to methods by which centralization may be applied.

The Research Bureau has been established. While no really remarkable results have yet been achieved by this organ, of gathering industrial knowledge, yet the foundation is being laid for great results along these lines. Financial stringencies are to be blamed for the slowness of action in this department.

In widely scattered articles in the I. W. W. press we hear calls for discipline. These items are a reflex of the general attitude of mind of the membership. Of course there is opposition to some of these ideas and developing tendencies but that they are maturing seems evident to the unprejudiced observer. The I. W. W. is evolving instruments of class emancipation from the material at hand. Industrial power will be achieved at the point of production whether times become better or not. The lumber workers are actively supporting centralization plans. The job branches have long been hailed as a means to solidify and make permánent reorganization work. The comparative success of this system of carrying on routine organization work has been demonstrated beyond doubt. The data of the mills and camps should make possible well laid plans which, if carried out, will mould a powerful as well as a constructive organization upon the job branch base. The catch-as-catch-can method of attack is well enough in a simple prapaganda organization. When the aim is industrial power we must use bigger and more comprehensive methods.

# Ownership Developments in American Basic Industry

**By Perkons**

THE great number of the American people still believe that the problem of social discontent can be solved by inducing the masses of laboring people who do not find a permanent employment in the industries to "go back to the farm." They are ignorant of the fact that farming has been entirely revolutionized within the last half-century, and that the possibilities for a city proletarian to become an independent farmer are about as great as those for a peanut vendor to become a captain of industry.

The invention of modern labor-saving machines has brought about the same changes in agriculture as it has done in industry. There has been going on, in agriculture, the same concentration of ownership as in industry. Just as a centralization of capital in industry has produced a class of industrial proletariat and city slums, so a concentratiion of the land, into the hands of a few, has produced a rural proletariat and rural slums. **We are fast becoming a nation of landlords and tenants.** In this process of social transformation we are repeating the history of Europe with its landed nobility and its peasantry who live in abject poverty.

In 1890 J. G. Collins, engaged in U. S. census work, computed that about 10 per cent of the total population of the United States owned about 90 per cent of the total land of the nation, urban as well as rural.

It is known that land monopoly has made the most alarming strides in this country within the last three-quarters of the century, and it is still growing by leaps and bounds.

Statistics show that during the short period of twenty years, from 1850 to 1870, the American Congress bestowed upon railroad corporations nearly 200,000,000 acres of the peoples patrimony, or an amount equal to one twelfth of the total area of the United States.

Fifty-six alien individuals and corporations own 26,816,390 acres of American soil; this is 1,678,000 more than is comprised in the states of New Hampshire, Vermont, Massachuscts, Connecticut, Rhode Island, New Jersey and Delaware with their population of about nine million.

Sixty-three American corporations and individuals own 174,485,966 acres—or one-thirteenth of the total area of the United States.

Thirty-five persons and corporations own more than 5,000,000 acres in California.

And thus we have a few railroad corporations, fifty-six alien corporations and individuals and ninety-eight American citizens and corporations owning 419,034,899 acres of land, an amount equal to one-sixth of the total area of the United States.

As in industry great and powerful corporations have sprung up, so in agriculture the great landlord is becoming the dominant factor in determining the conditions of agricultural labor..

Half of the farm lands of Texas are included in 2.7% of the farms, according to Bulletin No. 39, 1915, University of Texas.

The Texas Land Syndicate No. 3 owns 3,000,000 acres in Texas. Another syndicate, the British Land Co. owns 300,000 acres in Kansas besides tracts in other states. The Duke of Sutherland owns hundreds of thousands, and Sir Edward Reid controls 1,000,000 acres—both in Florida.

A syndicate of Lady Gordon and the Marquis of Dalhousie controls 2,000,000 acres in Mississippi.

The Industrial Relations Committee reports that the farms of 1000 acres and over, at a valuation of $2,333,000,000, comprise 19% of all the farm land of the country and are held by one per cent of farm owners. Not only is there an alarming concentration of farm lands in the hands of a few, but the same thing is true of timber lands. The Bureau of Corporations of the United States Government has found that 1802 holders of timber land had a total of 18,252,000 acres.

The Northern Pacific, the Southern Pacific (omitting the Union Pacific) and the Santa Fe hold 33,500,000 acres, or an area equivalent to that of the whole of England.

733 lumber holders have acreage equal to the territory of Ohio, W. Virginia, Indiana, Kentucky and one-third of Tennessee.

1694 holders own the equivalent of four-fifths of the area of France, or more than the entire state of California.

In Florida 18,949,000 acres, or 54% of the total area of the state, are held by 290 owners, these tracts ranging from 10,000 acres to 1,730,000 acres apiece. Twenty-four holders of over 130,000 acres each have 27.7% of the total area of the state.

In the mining industry there is a similar concentration of land ownership. In 1909 there were in the United States a total of 35,208 proprietors and firms engaged in the mining business.

In anthracite-coal mining 18 operators employed five-sixths of all the wage earners. In iron mining 9 operators employed one-half of the wage earners. In bituminous coal mining 77 operators employed nearly one-half of the wage earners. The 8,703,000 acres of land furnishing raw materials in the mining industry is in the hands of the 116 operators listed above. According to the 1910 census, there are less than 6,000,000 farms in the United States employing more than 10,000,000. Out of this number there are about 2,500,000 transient laborers engaged in agriculture.

**The average laborer's income at that time, for each person engaged in agriculture, slightly exceeded $288 in the United States as a whole. They worked long hours and, in the majority of cases, their sleeping quarters were assigned in some of the stables or hay barns.**

In the United States is being created a new privileged class of absolute landlords and a class of serfs in the form of tenants. The number of tenant farms has increased 130% in the last 30 years, while farm ownership has increased, in the same time, but 34%. It is in the great grain-growing districts of the Middle West and in the cotton and rice-growing districts of the South that tenantry has reached its greatest height and still shows the greatest tendency to increase. In the highest priced land of Illinois and Iowa the proportion of tenantry is increasing and the number of rural residents per square mile, is decreasing.

The economic position of the tenant is very far from being enviable. The competition of tenants for good land leads to a rise in rents which lessens the returns to the tenant until his total returns will not be better than the wages of the laborers in the industries.

The breaking down of the present capitalistic order of production is seen very well in the developments taking place in agriculture.

The creation of a large, ever-shifting population of farm laborers who find only a temporary employment on the farms, the reduction of the ever-increasing class of tenants to the status of unqualified laborers, the rise of a landed aristocracy in the form of absentee landlords, all tend to sharpen the class struggle in this country, which will ultimately and inevitably lead to the downfall of the present system of production. However, there are certain factors which might prolong the already senile life of capitalism in this country for an indefinite time. One of them is the lack of solidarity among the laboring population, which hinders organization and the acquiring of the spirit of co-operation and class-consciousness. **But no matter how distant our final goal, we should work so much more strenuously towards liberating mankind from the slavery of capitalism.**

# California Agriculture Demands Industrial Tactics

**By Mortimer Downing**

INDUSTRIALIZATION of food production exhibits its influence in ranches of the Pacific Slope and especially in California. In present-day culture there are traces of the buccaneer-occupation of land by the Spaniards, and already trustified food culture is in full swing. To understand this region—its needs and absolute necessities—requires that the industrial organizer should appreciate the past competitive conditions and the present urge toward centralization of effort.

In Southern California are still imperial areas under a single ownership and exploited as a unit. Around them are intensively cultivated orchards or gardens—small in acreage, rich in yield. Produce runs the gamut from wheat, potatoes and cotton, neccessities, to small vegetables and semitropical fruit, luxuries. There are no farms in California; every plantation is a ranch from the kitchen garden to the chicken yards of Petalunia. Climatic or regional conditions have developed special customs.

California may be described as 800 miles long by 250 miles wide. In this broad expanse the Commission of Immigration and Housing found 1500 labor camps employing from a score or so to thousands of hands. Carlton H. Parker in 1915 estimatcd the migratory workers in California to be 75,000 persons.

Such then is the human factor which the industrial organizer must mold before he can seize or control the vast membership of "home guard" labor which also functions in this Californian agricultural problem.

### Products of Every Clime

Let us first survey the regional industrial geography. Climate varies from the soft, subtropical, frostless belt of the coast to the arid plains, torrid in summer, freezing in winter, but snowless—and then to the mountain areas with their warm "first benches" where ranges abound, and the high areas where summer is brief and winter is long. Apples and oranges grow prolifically in areas not far apart. Cotton in one place vies with the north temperate culture within a day's journey. Roses bloom in the coast warm gardens, and snow twenty feet deep covers heights not thirty miles away.

These conditions attract to the play ground the idle spendthrift as well as the thrifty, moderately rich grubber. In a word, the luxurious desires of the present ruling class seeks California as a home. All these factors must be reckoned with.

### Development of Small Farms

These imaginative exploiters first stole the holdings of the bucolic Spanish grandees. From these vast areas they raped the land of cattle, wheat and fruits. Fertilization was neglected. The soil was looted.

Years ago, spreads of 40,000 or 50,000 acres of wheat were known as "bonanza ranches." Then intruded the insistent little scizzor-bill. Here and there this class gained a foothold, as see Riverside and Redlands in the 80's. These little landers forced a "district irrigation" law in 1888 which was fought and denounced by the great exploiters as anarchistic, because it held that water owed a "public duty."

Irrigation, the basic need of small ranches, and "bonanza" wheat dry farming having clashed, there developed the present agricultural structure of California.

### Co-ordinating the industry

Co-operation in exploitation was recognized as necessary. Hence alongsidc of the orchard is found the packing house. This unit is associated with other packing houses in a marketing concern, so that Californian fruit is not dumped into a middleman's market, but from tree to tablc feels the fostering care of organized ownership.

Oranges, pears, grapes, peaches, apples only blossom and get thcir skins under individual supervision. Once picked; their way to the market is through the chutes of a socialized machine. Around every packing house a resident labor population grows up. Time put in at the packing plants can be estimated at a given number of weeks; other incidental employment can be figured on and a semi-static population results. These and the 75,000 migratory workers harvest the hundrets of millions of California food products. It has been estimated that potatoes alone have brought morc wealth to the Golden State than all her mines.

### The Labor Force

Survey the situation: a grape ranch of 100 productive acres has been planted for five years. Roughly speaking, the rancher secures a dozen or less home workers. These are for his stock, run the disc plows, ctc., and carry on the routine work. He needs extra labor in the pruning and the picking seasons.

Newspapers advertise the rancher's labor needs. Ranchers stand at their front gates in harvest time and pick their "hands." Some engage man-catchers called "employment agents" in the cities. These agents merely put a sign out in the labor market and the migratory worker does all the rest, from auctioning to transporting himself to the job. For the mere address of a rancher the "working stiff"

mortgages away his first day's pay. Then he herds himself to the job and begins to heap up wealth for his smiling boss.

When the grapes are picked they go, largely, either to the winery or to the raisin boxes. The winery is closed, but the dry yards of the raisin industry are spreading wider. Pickers work on a tonnage basis. In the dry yards workers get various day wages, none high. Raisins have been selling at from six to ten cents a pound at the ranches. If workers would figure their value as pickers according to the product they would find that their

wages—the most important factor in production because they harvest the wealth and work frantically—rarely compare as one to ten with the relative output of the ranch. Workers should accustom themselves to estimate their pounds of products per day and the current prices as gossiped by every fat-waisted employer they meet. Until the workers think in such terms they will fail to grasp the process in which they participate, or to learn why John Rancher feels poor with but two autos and Jack Stiff is rich with ten dollars and a blanket roll.

All the products then of these ranches are smoothly gathered into value heaps under Associated Ownership. There is the Raisin Growers' Association, the Citrus Culture Association, etc., who not only produce all this wealth of the ranchside but ally themselves as shippers and merchants in distant warkets. It is this associated power of the exploiters which fortifies the California ranchers.

### Workers Organize

When the workers design an industrial organization, promptly the associated owners pass a law which declares labor unionists to be criminal syndicalists; and fourteen years in the penitentiary reward the spokesmen of toil. Jack Stiff must remember that in the 80's these same ranchers were denounced as anarchists because they demanded the right to organize and, as small organized producers, own the water of a district and the right to expropriate the princely proprietors who counted acreage in the hundred thousands rather than in the dozens.

**In the lessons of the past California directs the wage workers to the Lincoln Highway of Freedom. "Organize!" shouts history. "Organize! Ye are many, they are few."**

When the owners arrange the process of industry so that potatoes go from the field to the dessicating kiln; grapes to the dry yards and trays,

and thenee to the communal-owned paeking house; prunes from the tree to housewife; and all nature's bounty is ordered for the interest and glory of the few; then let the many grasp the prineiple of eo-operative force.

Unions must be so formed that the home-guard and the hobo recognize a eommon interest, enlist themselves for a eommon end, and use their powers for a united gain. These ranehers got their start by organization. Jaek Stiff, why may not you?

### Factory System Used

Food production on the ranehes of California resembles ordinary faetory methods. The food goes from the soil direet to the preserving and paeking proeesses close by, with all the effieiency of material going through a mill.

It varies in that all preparation for eonsumption occurs at the point of origin. In these eireumstanees the struggle between workers and employers is no longer the bargaining of the neighborhood poor with the loeal landlord but a battle pitched between organized employers and disorganized bands of wanderers, pitiful as beggars in their need, and with no higher form of organization than sheep. These forees meet at bargaining and the hobos lose.

As the manufaeturing proeess forces diseipline and organization upon the faetory slaves, so the disordered bands of mendicant migratory workers are eompelled to organize. Therefore the brief history of the Ford and Suhr case will illustrate the perseeution and tempering now thrust upon Jack Stiff and his kind. This battle took place in the hop fields.

### Hop Yard Methods

By advertisement and other deviees owners of the hop yards sought annually to attraet thousands of workers to their fields. Stories of the delightful California elimate were eireulated in the east, with suggestions that a real picnic with profit and health was in store for anyone who would join the hop-piekers. Throughout the state, also, the unwary were annually lined up—at least 50,000 men, women and ehildren were drafted.

**In hop harvesting, the factory character of this agriculture is immediately seen.** Hordes of unskilled labor are driven into the vines. The flowers are stripped and plaeed into bags. All workers are paid by the weight. They are assured that the ordinary worker can earn $6 to $8 a day. Averages about $1.50 are as good as the piekers find. Pieking is done on a bonus system, and in 1913 the offer was 90 cents per 100 lbs, with $1.00 if the pieker remained three weeks—the average season. In other words, the owners bet nothing against 10 eents that they eould make the workers quit. They won 99 per eent of their bets. Why?

According to the investigations of the Housing Commission, temperature in the fields often ran above 120 degrees. Filth and desease ramped through the sleeping quarters. Hygiene was utterly negleeted. Men and women, boys and girls, stood in line to use toilets so foul and obseene that stomaehs siekened. These were some of the loaded diee the boss rolled when he bet nothing against ten eents, that the toiler would quit before the job was ended.

When the hops were pieked and bagged they were sent to the dryer under a number. Then the inspeetors threw another pair of loaded diee. Vast quantities of hops were eondemned as "dirty," and at the seeond verdict the worker was fined, that is, besides the eonfiseation of the condemned "pick," an amount of his already-passed produet was grabbed though afterwards sold.

All this while the sun sweltered at 120 degrees. Some workers rose at 2 A. M., and were at work an hour later. They toiled and sweated until five or six in the evening. Their piek averaged under 150 pounds. Some few experts exeeeded 500 pounds. One of the incidents of this picnie was hop poisoning, by whieh the pieker's skin was infeeted by an eruption worse than poison ivy. Heroes indeed were these "pienieers"!

About seven pounds of ripe hops go to make one pound of dried hops. Then the produet is baled and ready for shipment to New York or London. It will be noted that at no stage of this agrieultural proeess is it other than a faetory proeess. From the pieking to the baling and shipping it is a modern industrial brutality. Concern for human life or comfort is expressed mueh like that of the eannibals at their feast.

In August, 1913, there were assembled on the Durst Ranches near Wheatland, California, 3000 workers of both sexes and all ages. They eomprised twenty-seven nationalities. There were about a dozen toilets for this labor horde, and the whole mass was crowded into a field of seant acreage. In this filthy eompound Durst Brothers eharged rentals which netted them in exeess of $2000.00. The thrist was intolerable, whereupon a eousin of the family exercised the lemonade privilege and charged five eents a glass for eitrie acid and water. These are only surface ineidentals to the evils which launehed the battle of August 3rd, when two of Durst's hirelings and two workers were killed and seores wounded. What really eaused the struggle was typhus raging in the camp, deaths daily and starvation among these thousands who were delayed in their entry to the fields by the owners.

### I. W. W. Protest

These workers, protesting against overwhelming misery, eried aloud to the I. W. W. Ralph Durst eame to the diseontented and suggested some form of organization. They picked Dick Ford, a former member of the I. W. W., as their spokesman.

This is what Ralph Durst told Diek Ford at their first interview:

"You will never succeed. I have seen these strikes before. You are beaten by the many lan-

guages. Money alone talks around here so as to be understood." He then struck Ford in the face and ordered him off the ranch.

Next day, Sunday morning, this crowd of twenty-seven nationalities, marching four abreast, orderly took the way from their festering quarters to Durst's office. There was a great hop wagon in the office yard. Upon this mounted a company of quiet men. They ranged themselves right and left of Dick Ford. In front of each man on that wagon was a solid block of people and each block spoke the language of the man they fronted. There were Japanese, Chinese, Hindus, Turks, Armenians, Syrians, Arabs from Asia Minor, Georgian Cossacks, Kurds from the Caucasus and Transcaspia; the neighborhood. He also appealed to the county sheriff, saying he was being expelled from his own land.

After the refusal, the strikers conferred and, at their request, Herman D. Suhr of Stockton, the only I. W. W. member known officially to be present, sent out an appeal by telegraph to the I. W. W. unions for organizers and for money to feed these starving workers. When the telegram was sent, the committee returned to report. At this meeting someone shouted, "Let us slash down the hop vines!" Dick Ford stooped and raised before the crowd a little baby with its face marked by the hop poison. Holding this infant forward, he made this historic appeal:

all Europe lent groups. Porto Rico sent a man who now sleeps calmly in his bloody grave. Two of his oppressors preceded him to death.

This meeting also was invited by Ralph Durst. It assembled peacefully. When its orderly organization was completed, Dick Ford went to Durst and was again taunted about the 'unruly mob.' He presented the demands: More toilets; drinking water in the fields; high-pole men to bring down the higher vines; the right to deal with town merchants for food (Durst had a company store); one dollar per hundred pounds and no bonus.

Sneeringly Durst refused. Ford returned to the meeting, told Durst's reply and asked the will of the meeting. As Ford talked, twenty-six others translated, each to his group. Then the question was put: "Shall we continue this strike?"

"Yes!" unanimously roared the crowd.

Durst was astounded and asked for time. It was granted. Durst then left the meeting and the workers filed back to their quarters. Then Durst, by telephone and messenger, sent for every gun in

**Don't slash down the hop vines. They will sprout again next year. Let us organize so that never again shall men and women suffer as we do. Let us organize so that no more babies will look like this."**

His audience responded with order and good cheer. They were filthy personally, weak individually, but in organization formidable and hopeful with faith in the industrial gospel of the I. W. W.

### The Slaughter

While Ford was counseling peace and order, Durst was mustering guns, and thugs to use these guns. He gathered every weapon in Wheatland. On the outskirts of the meeting he disposed his butchers—as the consequences will testify to. He had also demanded the sheriff's posse. Then—

As day died in gorgeous twilight, and these three thousand workers were listening to the peace advices, there came a fleet of automobiles surging through the lane! Guns stuck over the sides of machines. These cars charged upon the meeting, crashed to a stop, the ferocious posse advanced. The meeting opened its ranks quietly. "There was no resistance," testified the sheriff.

As this armed posse advanced, a Durst thug, Harry Dakin, now boasts that he fired two shots on the crowd. Lee Anderson, near the front of the posse, also fired a pistol. Now in this meeting were scores—maybe hundreds—of children. Their mothers flew to the rescue. In their rush the burly deputies were powerless as straws in a whirlpool. In thirty seconds, so terrible were these mothers in their agony, that no deputy stood erect. Dead, dying and wounded were strewn about the ground. Harry Dakin testified: "I got home, went inside. I heard the lock click. I covered up in bed." . . .

Nobly calm was this meeting, but terrible were the mothers who sought to save their children from these murderous deputies.

And this, in part, was Wheatland, the Bunker Hill of organization by the California ranch workers.

Then began the usual White Terror. Raids, third degrees and free prison beds were the order of the day. False witnesses, press hysteria and class lying were the preamble to the joke repeatedly foisted on the working class in this country. The "fair and impartial trial" ended with the conviction of Ford and Suhr. So terrific were the exposures of life in labor camps that the Commission on Immigration and Housing got busy and compelled some sort of decency in the camps of 1914 and 1915. In 1916 the conditions began to lapse. It was said that the camps were never as bad then as of old. Ford and Suhr from Folsom prison gaze upon a better world. There has never been the utter degradation they fought.

### Battle Still Goes on

Since Ford and Suhr there have been other battles in California by the workers. They have passed their Brandywine and Monmouth. They now may be described as in their Valley Forge. Organized ownership has passed its criminal syndicalism statute. Anita Whitney, a philantropist whose connections are high in station, has been sentenced to fourteen years in prison because she actively protested against such wrongs.

This woman whose only children are the poor and outcast has been convicted of criminal syndicalism and of conspiring to overthrow such benign rule by force and violence. They have convicted J. P. Malley, James McHugo, R. C. Lewis, C. F. Bentley, and are trying others; but just as surely as the horrors of Valley Forge led to the triumph of Yorktown, so will the workers move on to the freedom of Ford and Suhr, Mooney and Billings, and all the individuals whom Californian associated greed holds as hostages.

"We are coming home, John Farmer,
We are coming to stay!"

### Industrial Organization and Action

That necessary lesson of organization is sinking into the consciousness of California ranch hands. Workers with red cards in their hearts will organize the workers with red blood in their veins. There are more discontented workers in California than there is room for them in the penitentiaries. Those owners who have won their ease in the beautiful gardens of California are still so foolish as to deny living wages to non-unionized labor. General Organizer Greed is abroad. Hunger A. Plenty is his assistant. Criminal-Syndicalize that hunger pain, John Rancher!

The lesson which you have demonstrated in your own organization is creeping into the consciousness of the patient masses. Long has labor come onto jobs "loaded like a long-eared Jack." Labor knows how "forty year's gatherings" sits on its shoulders. Jack Stiff has learned he can "sleep anywhere on your acres so long as he don't disturb the hogs." Labor has seen you Little Landers establish a social control in California. Don't fool yourself, John Rancher, with Criminal Syndicalism. Labor will organize and own the earth.

You may dam up the River of Progress—at your peril and cost. Food cultivation in California is now industrialized. Ford and Suhr are still on the job to unionize it. Their prison is the light-house. Terror either in 1913 or 1921 avail employers naught. Labor has seen beyond the veil. It signals for organization.

# The Spirit of Centralia Victims

MODERN labor history has produced little that has created so profound an impression as did the events of armistice day in Centralia on Nov. 11, 1919.

Attacked in their own hall, members of the Industrial Workers of the World defended their lives and the property of the organization in regular battle with a mob composed largely of members of the American Legion. Three Legionaries were killed in the attack and one ex-soldier, a member of the I. W. W., was murdered by a mob after his capture.

Reflecting the fact of the class struggle in the lumber industry in the state of Washington, the prosecution was directed not against the instigators of the mob who made the attack, but against the members of the I. W. W., who were on the defensive. The lumber trust largely financed the prosecution and were loyally supported by every branch of organized business in the state and country.

Ten men were placed in the dock for their lives. After a sensational trial lasting several wecks a verdict was brought in on March 13th, 1920. Seven men were declared to be guilty of second degree murder by the jury. Two were found not guilty and one judged insane. On the same day the labor jury that had been sent down from represcntative labor bodies, in no way connected with the I. W. W., returned a verdict of not guilty.

Sentence was later passed by Judge Wilson on the seven convicted men. They were given from twenty-five to forty years in Walla Walla penitentiary.

Their case was appealed to the Supreme Court of Washington and in a decision handed down on April 14, 1921 the appeal was dcnied and thc verdict and sentence upheld. On June 22, 1921 the seven victims of the Lumber Trust were spirited away to Walla Walla to begin scrving their long weary years of confinement.

These are the few outstanding facts of the case that acquaint the reader with the actual events. Yet somehow they convey no idea of the tremendous signifiicance and the personal development of individuals concerned with this defeat.

The Industrial Workers of the World as a whole and largely as individual members have come to see that battle with capitalism means a series of defeats so far as the ultimate goal is concerned, until the final fight when victory will mcan the taking over of industrial and social power by the working class. Nothing short of such a victory can be construcd as anything but defeat by the revolutionary workers.

As the organization and its membcrs have gone from one partial victory or outright defeat to another they know and feel that it is the series of battles that are fought and the constant effort to achieve that will mean success.

It is in this light that the Centralia case must be viewed. The fact that seven convicted men by their brave spoken and written words and the every day acts of their narrow and restricted lives adopt and express this attitude intensifies the knowledge that defeat is no disaster. It is part of the proletarian battle and the great fight must be carried on.

Nevcr perhaps in any similar case involving as large a number of men has the courage and valor and unflinching attitude of the victims been sò unanimous. The seven imprisoned workers have by their every act and deed practised and expressed their solidarity with those who were on the outside, or in other prisons.

It is not so hard perhaps for pcrsons spurred on by great emotions and stimulated by being the center of great attention, to put forth a brave face in the moment of trial. From November 11, 1919 to June 22, 1921 thc Centralia boys have lain in confinement. They have passed through terrible nerve racking situations. They have existed in that close promiscuity that wears on friendship and solidarity more harshly than any possible situation that could be imagined.

Yet tHeir time has been spent in creative personal and organization work. Never from the first to the last of this trying period has any evidence of the great strain put upon them made itself manifest in their attitude. Quarrels, bickerings, petty misunderstandings, unavoidable it would seem under the circumstances have failed to materialize.

Education as a class and as individuals has beer always a star in the I. W. W. firmament. Self-education has been the main activity of its jailed members. In the case of the Centralia boys the advance that they have made in self-education can b: judged by an examination of the literary work that they have turned out for the I. W. W. press. Cartoons and pictures, of vision and of artistic value, have from time to time been produced by these prisoners and have been reproduced in the press. In their letters wide spread in point of time and written under all sorts of circumstances in regard to personal health and feeling a great contribution to thc fighting spirit of the I. W. W. has been made.

Bravc, earnest, yet with that touch of human understanding and humorous point of view that sifts out the dogmatist from the person of true breath of mind, the hcroes of the Centralia battle have endeared themsclves in the hearts of their fellow workers as much by their calm self-control as by their active bravery.

It is thesc sevcn mcn who have been taken to

Walla Walla to face the spirit crushing machine of penitentiary discipline. That they will come out unbroken and unafraid is the firm conviction of every one who has followed their case from beginning to end.

That labor will release them from their servitude is the purpose that is deep in the I. W. W. Earnest is the determination that the battle for our class supremacy will be carried on in the lumber industry and in Centralia.

The organization of the territory around Centralia is now going on full blast. The I. W. W. is well represented on the social map of this once terrorized community.

In the January 1921 active organization work was resumed in Centralia at the request of members of the organization in that place. The statement was made that should the White Terror in all the rest of the country burn and destroy the halls and scatter the members of the I. W. W., yet Centralia would maintain an organization and keep alight the spirit of revolt.

Since January a regular organization campaign has been carried on. The police officials on the instructions of the lumber interests started at once to apply pressure to stop the movement. Newsboys, branch secretaries, organizers and members were arrested. Some were released and others held on charges of criminal syndicalism.

In answer to this move the organization laid out a concerted plan of action. All the spare forces in the district were centered on Centralia. Instead of running for cover in fear of the iniquitous syndicalism law the membership rallied to the fight and dozens of men were soon in town selling literature, making house to house canvases, carrying on an educational campaign that will make forever impossible the recurrence of the armistice day tragedy of 1919.

Halls have been rented and openly advertised speakers have spoken on behalf of the I. W. W. program. Consistent press matter has been gotten out so that the whole district is behind the action of the vanguard on the job.

In organizing this educational campaign it was necessary to look out for the welfare of the educators. Housing accommodations were secured. Committees for looking after the house work, the food and the clothing were appointed and fill their duties thus securing the necessities of life for those engaged in propaganda work. Farmers are cooperating in the activities. Autos collect foodstuffs and the workers engaged in this fight are well supplied.

Four of the first members arrested in this drive were tried in Chehalis, the county seat located a few miles from Centralia. Two were declared guilty of criminal syndicalism and two were turned loose, on June 17th, 1921. Eighteen men have been in jail at one time. On June 25, 1921 nine men were unconditionally released.

They headed a parade up the streets to the place used as headquarters by the self-appointed educators. More workers are coming to town. The campaign is gaining attention, and a hearing from the formerly disinterested residents. Centralia will yet be known for acts of civic intelligence. Some day the picture of a noose bound form mangled and bleeding will not be symbolic of the reception given members of the I. W. W. by Centralia's residents.

The spirit of unselfishness and the habits of patient constructive workmanship have been held up to us by the victims of armistice day in Centralia. This spirit and these habits are bedded deep in the make up of the working class. Trough their militant expression the jail doors will yet swing open on Centralia's victims and the working class will always claim them as its own.

# *Facts are Universal*

No words have created such mischief in the world of today as these four—East and West, Europe and Asia. Division of mankind in such sharp catagories in a terrible thing. The reason is that both sides of the division are masses of old habits, and these old habits are mostly a bundle of ignorance, and superstitions. The West has its accumulated ignorance. The East has its inherited and clustered and garnered rubbish heaps. Ignorance cannot tolerate ignorance of a different sort.

But truth is the same everywhere, and for every one. The truth of science is universal. Fire burns in Tokio, in Calcutta and in London, according to the same laws. What is correct of the truths of physical science is also correct of the truths of human science.

On the basis of a scientific law, all mankind can meet. The division between East and West is a legacy of the past. The sooner we forget it the better.

In the case of India, however, this division has proved an utmost lie.

For to call India Asiatic, in the sense of China or Japan being Asiatic, is the biggest bunk possible.

The plain fact is that India is at bottom, and at top, a land of the same sort of people as inhabit the Eastern and Southern regions of Europe. India is a land of European national inclinations. She differs from Western Europe, merely in being in a state of arrested development.

Modern India was born and has been since brought up in a prison where darkness prevails. That is an English prison. For India to think of herself, to talk of herself, to aspire even for her liberty—is sedition.

# Industrial Unionism and the Strike in Steel

By Robert Grayson

THE book written on the 1919 steel strike by William Z. Foster has contributed a great deal of light where darkness previously prevailed concerning the general walk-out of over 300,000 workers of the great steel industry. It is not this illumination that the writer wishes to discuss, but rather the twisting of fact that is to be found in his concluding chapter.

After pointing out the strike's hopeful aspects in clear-cut words, Foster becomes confused, apparently by trying the impossible role of serving two masters. He is very clear as follows:

"... When one considers that they (the organizers) substituted a **group** of twenty-four unions for individual action in other campaigns; established a standard initiation fee instead of the **multitude** that existed before; adopted **modern** methods of organizing in place of the **antiquated** system previously prevailing; organized a **joint** commissariat, carried on a successful organizing campaign and waged a great strike together, one must admit that a **tremendous stride forward** has been made."

Commenting on this it is interesting to notice that every improvement over old methods are such changes as have been advocated and practiced by the I. W. W., in direct opposition to the general policy of the A. F. of L. Thus Mr. Foster admits that the strike tactics of the Industrial Workers of the World were so good as to be adopted as the means best fitted to wage the largest strike in American history.

Foster informs us that we have been telling the world that the A. F. of L. is not revolutionary; and that it has neither the intelligence nor courage to fight toward industrial freedom. He also says that we have given but slight investigation to test the soundness of these charges.

Now, who is responsible for radicals regarding the trade union movement of this country as reactionary? Is it not the trade union movement itself by its practices since it first came into prominence here? Despite what Foster declares, trade unionists do take very seriously the motto that is a disgrace to any worker believing it: "A fair day's pay for a fair day's work."

I was a trade unionist for eleven years. I, for one, do know that the trade unionists not only own that motto with the greatest respect, but it is the pinnacle of their circumscribed industrial vision. That no one can decide or even approximate just what is a fair day's work or a fair day's pay makes no difference, for the mob is always moved by phrases, catchwords and slogans; the mass never reasons.

The trade unionists do believe as a body that their interests are the same as those of their masters, after this fashion: That when the boss has orders he gives them work and when he has no orders they are left in idleness. Hence they believe that they have the same interests—orders. As a body they have not realized that there is a class struggle, that it is existing because what is good for the slave is bad for the master and vice versa.

Foster assures us that these slogans are for the consumption of the bosses; that even if the workers uttering them do believe what they are saying it matters not a bit, for, "Most movements are blind to their own goals anyway." Rather bad juggling, Mr. Foster, most movements may be blind to their future, as you say, but we are in a movement that is builded not on blindness. Ours is a movement that is not hap-hazard. We are in a class conscious movement! Conscious, get that, not blind.

As an ex-member of the A. F. of L. I may speak with some freedom as well as certitude about the vision of that organization. The A. F. of L. is blind to its future, as well as to most else that requires social vision. Its membership on the whole believe its slogans. And because they were strikers for more pay, etc., how can Mr. Foster say the Federation is revolutionary since such tactics are not revolutionary in themselves, and the order has forever been opposed to the downfall of the capitalist scheme?

A union that concerns itself entirely with the question of wages, hours and conditions is, at best, a reform outfit, and that in name chiefly, for as wages increase so do the prices of life's necessities. That this immediate effort is absolutely necessary against unbearable encroachments is not denied, but more than immediate militancy must be evidenced to stamp an organized body of workers as revolutionary.

That the trade unions are extremely conservative in spite of Foster's rather amusing revolutionary characterization of them is seen even in the handling of what they deal mostly in—funds. Twenty-four of these unions assessed themselves one hundred dollars each to fight United States Steel! These unions have millions in their treasuries.

These unions, or some of the more important ones, ordered their members back to work to scab on the other strikers. This attitude, though treacherous, was true to the inmost tenets of the Federation formed on craft autonomy, sectional interests.

Mr. Foster invites us to come into the fold of the white sheep and try to shape the destiny of American labor by infusing our revolutionary unionism within the A. F. of L.

Foster knows as well as I that the officialdom of the Federation itself and of the various **trade**

unions affiliated with it compose an impregnable obstacle to such kind of agitation on any justifiable scale; he knows that most of the trade unionists are by very nature of their craft skill conservative, opposed to any program that embraces the happiness of all the working class. More than any agitators modern machinery displacing mechanics from the safety of their skilled bulwarks is working to leaven the ranks of the trade unions with industrial union ideas.

Mr. Foster attempts to draw a comparison between the tactics operating in Great Britain and this country in the labor movements. He points out that over there the radicals work within trade unions, do not set up new organizations distinct from the craft ones previously in existence. This attempt to compare us with Britain fails for the simple reason that the conditions are very dissimilar in these two countries.

We know that working class organization over there has been a fact for about a hundred years. We know that it is the rule in England to belong to a union. In America it is the exception. There are over 75% of the workers of this country without labor organization of any kind. They are chiefly unskilled workers, not sought after by the American Federation of Labor.

It may best be said that revolutionary labor in America decided once and for all time in 1905 that the A. F. of L. scheme, which should be called not a movement but a stagnation, was definitely opposed to the performance of labor'c historic mission. The I. W. W. came into being. The A. F. of L. is a dam, flung by crafty craftsmen and official parasites before the onrushing river of progres. The Industrial Workers of the World may not be that entire stream, but surely in American labor it is the most direct current, and the clearest of the waters of this river of progress.

The I. W. W. has a vision and a plan. The vision is happy humanity, humankind toiling together and sharing together, and playing together, no masters and no slaves. The plan is the organization of the workers into strong industrial unions for the purpose of fighting the battle against master class encroachment day after day until the organization is powerful enough to decree that the master class as such is a thing of the dark ages of the past.

Mr. Foster tells us we are idealistic. Well, after being carricatured for so long as bomb-throwers that is very nice of him, but it states only a half-truth. Our social goal visioned for human happiness is idealistic. Our plan of organization is quite realistic and practical. Its practicability is vouched for by all the might and terror of the rulers of this land, by the courts that have damned and jailed our members; by the firing squad that blew out the magic flame of Joe Hill's singing heart; by the finks and thugs that gave us a red memory of Everett; by the cowards that hanged Frank Little to a trestle, and by the conspirators of Centralia.

Mr. Foster complained that the steel strikers could not exercise free speech. He seems to have forgotten that I. W. W. organizers and speakers and common working-stiff rebels fought free speech fights from one end of America to the other.

Mr. Foster criticizes our idealization of the Preamble. The clear-cut utterances of the I. W. W. Preamble have given us clear concepts, have stated briefly but fully just what we are in business for. Acting on the principles of the Preamble the I. W. W. has inspired the syndicalists of all the world, and the I. W. W. has come to be regarded by the revolutionary unionists of the world as the hope of the American proletariat.

No, Mr. Foster, we will not betray our trust to ourselves and to our fellow workers. We will go on and on, no matter what the cost to ourselves or to the aspirations of those who live by preying on the workers either as employers of labor or as officials of yellow trade unions. We have these considerations for us: That the introduction of modern machinery ever acts to displace skill in production, thus forever militating against labor orders that unite only workers who are skilled; and, again, that, in America, there are around 75% simon-pure scissorbills who need organization.

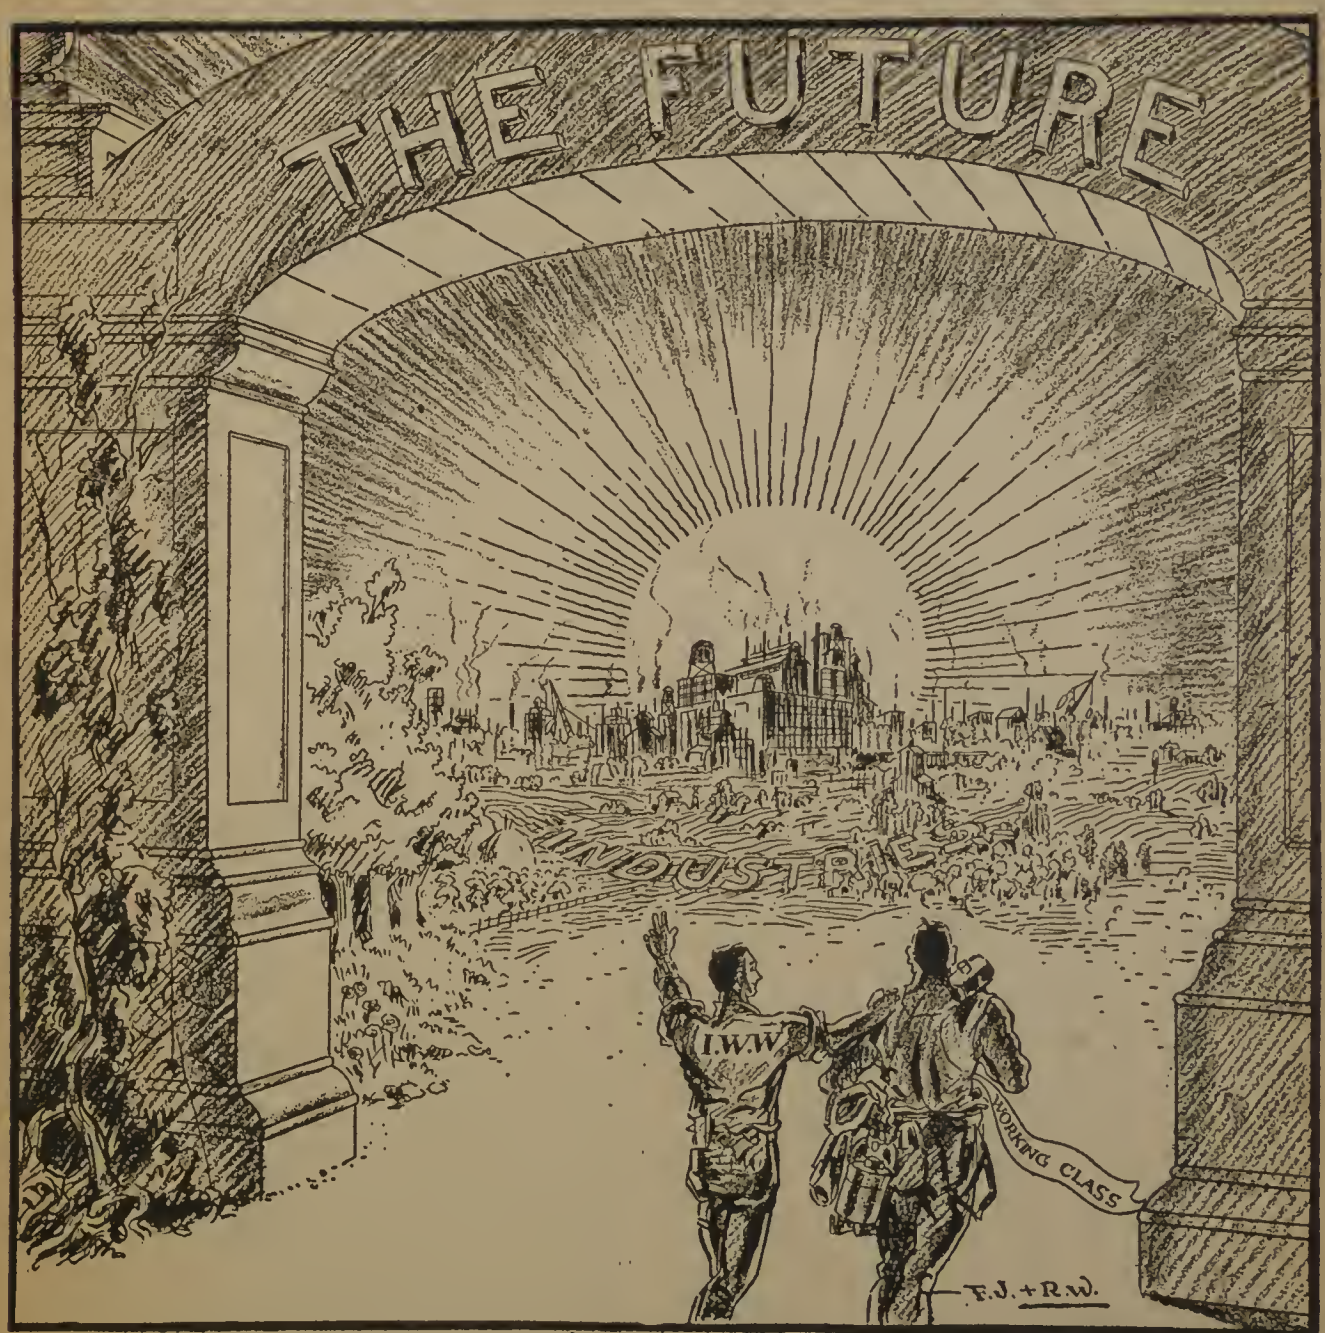
The I. W. W. will strive without halt to organize these workers and all workers possible to reach. No one can say just how many will be within the red ranks when the final contest between the two opposing classes is fought here.

Suffice to say that in every revolution of the world the great mass of people have aligned themselves with the side best equipped to win. Dynamic minorities have moved the world from savagery to the thing men now call civilization. Again in the future, near or distant, the dynamic minority of class conscious workers will remove the thing men call civilization, and put in its place what we have come to term the Industrial Communism.

* * *

It is generally conceded by members of the Industrial Workers of the World that boring within tactics are a waste of time in either the strong purely craft unions of the A. F. of L. or in the weakling so-called industrial unions which are in existence. However, there is at least one organization that does not come under either of these heads and is yet an integral part of the A. F. of L.

That organization is the United Mine Workers of America. As it is not a craft union it does not come under the critical analyses of tactics given above.—(Editor).



FELLOW WORKER! THEY BELONG TO US!

# The Story of the Sea

**By Tom Barker**

## CHAPTER X.

### Some Things That a World Organization Could Do

SINCE the war has ended there has been constant changes in the value of currency in the various countries. The central powers have felt these variations most keenly, while some of the allies have also suffered considerably. The currency of the United States has maintained the strongest position, while the neutral countries like Holland, Sweden and Argentina have been affected in a minor degree.

These alterations in the currency value in the different countries are due to several causes, including the borrowing of money on a large scale and the swamping of markets and bourses with large amounts of paper money which have an insufficient gold backing.

This is observed if you go to change gold and paper notes in overseas ports. On the thirteenth of November 1920, an English sovereign would purchase American money to the value of $4.87 while a one pound treasury note is only worth the sum of $3.37. It is much the same in other ports outside of the British Empire.

### An International Wage Scale

When a seaman signs on in a British ship he signs for so many pounds "sterling." People are under the impression that the word sterling means gold. It is not correct, for when the man pays off in a foreign port he will be paid at the paper rate.

This matter has not interested the national unions, in fact it is doubtful whether they even know that it is going on. The least that they can do is to insist that their men should be signed on in "gold" currency. **At present by the slick juggling of the exchange the shipping companies rob the marine workers of hundreds of thousands of pounds each year.**

The highest wages in the marine world are paid out of the ports of North and South America. American officers get forty per cent more wages than those sailing out of European ports. The wages for seamen out of American ports are $85.00 per month which is equivalent to about twenty-five pounds English. The British seamen work twelve hours a day and the Americans work eight. The following table shows the wages out of various countries and the amount that should be paid if the men received an international wage upon the same basis as is paid out of the United States—$85.00 a month.

| Port | Wages today | Internat. scale |
|---|---|---|
| London | 5.00 pounds | 25.00 pounds |
| Rotterdam | 140.00 gulden | 283.00 gulden |
| Athens | 560.00 drachma | 937.50 drachma |
| Hamburg | 720.00 marks | 7300.00 marks |
| Antwerp | 15. pounds | 25.00 pounds |
| Copenhagen | | |
| Kristiania | 316.00 kronen | 643.75 kronen |
| Stockholm | 320.00 kronen | 450.00 kroncn |
| Helsingfors | 450.00 finmarks | 3800.00 finmarks |
| Barcelona | 240.00 pesetas | 709.00 pesetas |
| Genoa | 800.00 lire | 2425.00 lire |
| Montreal | 85.00 dollars | 95.00 dollars |
| Monte Vidco | 81.50 pesos | 81.50 pesos |
| Bucnos Aaires | | |
| (overseas) | 202.00 pesos | 202.00 pesos |
| (local) | 90.00 pesos | 90 pesos |
| Valparaiso | 160.00 pesos | 525.00 pesos |
| Melbourne | 14.00 pounds | 25.00 pounds |

This table speaks for itself.

### Counteracting the Effect of Cheap Asiatic Labor

The creation of an International Wages Scale would compel the ship-owners to pay full wages to Chinese, Lascars and other Asiatics who work under rates. We cannot ignore these men. They have to be unionized. Wailing against their presence on ships has never done anything and never can. We can settle that vexing question by organizing them and getting them to fight for the same wages and conditions.

It will be interesting to see whether the Inchcapes and the Pirries employed these men because they love them or because they work cheaper than the whites. By forcing the power of the Marine International we are on our way to settling for all time the matter of colored labor on ships.

Hence you will see, fellow workers, the necessity for an international wage scale based on the highest wages paid out of any port. There is no reason why seamen and allied workers should be penalized on account of the changes in the currency. Any national "funeral" society that does not stand for this is better swamped. If the forthcoming conference at Brussels does not take this up then it will be their funeral. This question is merely a reform but it is a thing that will be welcomed, and it will go far towards proving to men the utility of an international.

### Reduce and Standardise Hours of Labor

Some time ago the League of Nations convened a meeting of ship owners and union officials in Genoa. They were supposed to be very much con-

cerned about the marine workers but when the question of hours came up for the seamen it was contrived that the proposal for the forty-eight hour week be defeated by one eighth of a vote. The British ship-owners wailed that it would mean bankruptcy for them and a compromise was fixed at sixty-six hours a week,—which is more real work than most of these delegates have performed in a life time.

In Australian and American ships the eight hour day has already been established and for a time likewise in Denmark and Sweden but Denmark lost out after the March, 1920, strike. The League of Nations Labor Office is merely a capitalistic tool to sidetrack the workers into hoping for something. The workers of the sea are to them what the frog is to the snake. Beware of Monsieur Albert Thomas with his nice black whiskers, fellow workers.

An International Marine Organization could enforce the 44-hour week in port, and the 36-hour week in port in tropical countries, and a 48-hour week at sea, with no overtime except under extraordinary circumstances. As I have pointed out, we are not doing our duty to our fellows as long as we are working 12 hours a day while they are starving on the docks. We have to be responsible for our own unemployed. A strong organization would reduce the hours in the stoke-hole from 8 to 6, with four watches for firemen. If there are not enough firemen to work the extra shift then let the ship-owners work the additional watch.

Instead of waiting for the bell-wethers to do things for us, we have to do things for ourselves. We have to counteract the new laborsaving processes, the new rates, by strong and determined world unionism. We have to wage ruthless war against the decadent and vicious class who have coined enormous fortunes out of our overwork, our hunger and our misery. We have to develop the feeling that we are out to **win** and that the forces of **hell** cannot prevail against us.

Again we have to force the right for our members to pay off in any port and to get their wages in full, that the system of logging be abolished, and that the business of signing period articles shall be abolished. All men shall be engaged solely through the union office and by rotation. Any delegate grafting or selling jobs should be expelled from the organization and blacklisted. No union dues shall be collected under the nose of the shipping agents as is the case in many countries today.

### In Regard to Accommodations

Ships that are minus decent living accommodations could be held up until they are refitted. The Marine International should approach all the workers engaged in the ship-building industry and ask them to refuse to build ships unless there are separate cabins for the men as well as properly fitted mess-rooms and hot and cold water baths. Deck-houses should be built for the steersman, so that he is protected from the weather during his watch. Lifeboats should be in excellent condition, and electrically launched. Ship's Committees to insist that only third class passengers clear a ship before the crew when she is in a dangerous position. Let the parasites save their own hides. The Committees to have the power to stop the officers from racing in foggy or iceberg frequented seas, and to reduce the speed to one that is considered safe. Put an end to enormities such as the 'Titanic' disaster, where the parasitical herds are saved and the firemen and seamen go down to their last grave leaving their desolate wives and hungry children to mourn the loss of their breadwinners. Our class, first, last and always.

A Marine International will give us a true appreciation of ourselves and a contempt for the idlers with their white hands and the best saloons and the best good food. We do not want seamen's missions, nor pipes at Christmas, nor tracts at Easter. We want power, for that is the basis of everything in the future.

### As to Food

The food schedules have to be drawn up again. Food must be inspected before the ship sails, and must be of the best. No margarine should be carried. There should be a refrigerator aboard every foreign-going ship. Ice or oatmeal water must always be available for the firemen. Ample fresh fruit and vegetables shall be procured at each port, and the ship should not be moved until those conditions have been carried out. As for the minimum food scale provided by politicians, we will fit a few ships especially for those type of people and send them to sea on their own schedule in order to educate them.

### As to the Future

When you read this, fellow worker, don't gasp, but get into the fight to bring it about. The things that I have mentioned, after all, are merely minor reforms, and will not make any serious hole into the banking accounts of our masters. But they are a basis of common agreement, things that we all desire, and things that we can bind the workers of the sea together on. They will help us understand each other and encourage us towards the glorious day, when the workers of the sea will be the dominant force on the ocean routes. In a few months you will see the ships of the Russian Workers' Republics on the sea. They will be built for **men** to live in, not for wild animals, who are housed like dogs and worked like bullocks, such as we are today. All things are possible with an intelligent organized working class.

Let us be in such a position that we will be able to go into any port in the world carrying the same card as the docker. Let us stick together in fine or dirty weather, for a fight is the fight of everyone of us, whatever our flag, our ship, or our job.

## CHAPTER XI.

### A Few Words on Fighting.

It must be plain as daylight to intelligent marine workers that the Shipping Octopus cannot be defeated by organizations as they exist today. The legislative acts of a country have no operation outside of its own boundaries. The men on deep water ships only work a small portion of their time within their home ports. No political party can claim to protect the sea workers outside their own radius of action. In addition to this, not one in five sea workers possesses a vote. Under the control of capitalism, the relative and actual position of the working class becomes steadily worse from year to year. The other class becomes richer and more powerful. These tendencies continue under Labor Governments (as in Australia) just the same as under the bourgeois political parties.

Under these conditions the marine workers have to find other means of expression than merely voting for politicians, or relying upon the limited power of their local organizations. Political power does not come from nose-counting; it comes from industry. A slave class industrially is a slave class politically. Men who cannot conquer freedom where they work can never conquer any other kind of freedom. That has been demonstrated in nearly every country, since the termination of the war.

The scientific fighting organization upon which the future depends has to rise from the workers, and not to fall from the professional secretaries and officials. The idea of CLASS has to subordinate all other things to its own predominance. To that end, we have to regard all capitalists, reactionary college professors, politicians and other undesirables as **enemies** and **foreigners**, and all workers as our class brothers. That is to say, the Liverpool dockers and the Antwerp crane-drivers have more in common with the Chinese firemen and the Lascar seamen than they have with the Liverpool shipowners or the Belgian importers.

Capitalism is tottering. Hoary with a million crimes it staggers towards its death. Social systems like human beings have their birth, adolescence, zenith, decay and death. From the womb of the old system, comes the new. Chattel slavery grew out of tribal communism, feudalism out of chattel slavery, and capitalism out of feudalism. One class after another has climbed to the possession and control of the earth, to be overthrown in its turn by another better fitted to manage, direct and possess. The last of the classes, and the most numerous, is now preparing itself to overthrow capitalism. "It is the historic mission of the working class to do away with capitalism." "By organizing industrially we are forming the structure of the new society within the shell of the old." On the side of the working class are all the vital social forces. Treachery, faulty organization, political opportunism, and side issues may delay the coming of the triumph of the workers, but cannot prevent it.

The working class is destined to master the world. It is the destiny that can only come from clear and decisive knowledge. It must find its origin in the growth of the ideas of **control** and **possession** of the ships and wharves on which men work. The disintegrating forces of capitalism must give way to the aggressive, masterful masses of the workers.

### As to Classes.

On certain days at Buckingham Palace or the White House you will see the representatives of the ruling classes of the different countries meet despite their varying religions, colors and languages, on terms of equality and comradeship. They do not war, nor wrangle, nor squabble about their respective differences. They leave that to the working class; furthermore, they foster it as much as possible, for in sectionalism and nationalism lies their own safety.

And yet, in February, 1921, I sailed out of the port of Buenos Aires on the Norwegian steamer "Vela," which had eleven nationalities aboard. All the crew, with the exception of the officers and engineers, were members of the M. T. W. in Buenos Aires. We stuck together and agreed among ourselves. Our united efforts gave us strength, for we were as unbreakable in our solidarity as our class enemies who meet in courts and castles. The Chinese in the galley, the Chilians, Spaniards, Italians, Swedes and Finns in the stokehole and the Norwegians, English, Germans, Esthonians and Russians on deck, agreed like brothers. When we had a strike in Buenos Aires—against the captain for attempting to take a crew from a notorious shanghaier—it was the Argentine dockers and carters who aided us, and together we **compelled** the captain to submit to the law of the **organized workers enacted in the Union Hall.**

Such is the method upon which the units of the Marine International must depend for their triumph. It will establish a fraternity and a brotherhood in every ship and every port, and create an impregnable buttress against exploitation. In its extension and practice it will give the marine workers the **power** to determine their own lives, the course of the ships on which they sail **and the cargo that they shall carry.**

This will leave the hell-found instruments of war rust in the railway sidings, or to be forged into implements of peace; the grey monsters that blight the bosom of the ocean will cease their vile work, and the Workers of the World, united through the far-reaching arms of the Marine Workers International, shall extend the rule of the proletariat to the uttermost places in the world.

### The Barbed Wire in the Path.

It is a lamentable fact that the people who know least about the requirements of the workers are the officials of their organizations. We hear the Yellow

Amsterdam International, composed of the bell-wether leaders of pre-war days, talking the same old platitudes, since they are now even more than ever embedded in their nationalism. The world has gone past them, but they persist in believing that the world of labor is following them. The world of labor is not only sick of their incapacity, but of the machine that sends them, year after year, and generation after generation, to talk the same generalities in so-called International Congresses.

And yet the men in the different industries are more than ready for something better. There are no men more capable of responding to the call for a fighting International than the men who risk their lives in every latitude. It is in their bones, it is the unspoken thought in their minds, that merely needs expressing for them to realize its vast importance.

In the past these men have sailed the seas. The National Unions have collected their initiation fees and dues and given little in return. I have seen men with five or six union cards in their possession. Ignorance and incapacity of the officials has withheld any systematic co-operation between the different unions. No effort has ever been made to educate the workers, and with the single exception of the **"Australian Seamen's Journal"**, the maritime union papers are the most woeful productions that were ever consigned to a butcher's shop for wrapping up meat.

In the former chapter I mentioned the dinner given to the ship-owners by the British Union. Compare this with the following advertisement which appeared in the columns of the London "Observer" on the 28th day of October, 1920:

**They Look for You For Help.**

The spectre of hunger, cold and misery is staring in the face of the widows and children of the British Merchant Seamen, there are 320 incapacitated merchant seamen, 887 widows, 1100 dependents and children on our books who lack the means of existence. Can you help them?

Please send a donation today to Thomas Scott, Secretary, British Merchant Seamen and their Dependents' Fund. Tower Building, Liverpool.

The advertisement is not only a condemnation of the swinish inhumanity and greediness of the ship-owners; it is as well a striking proof of the failure of the existing form of organization. If there are any eight course meals to come from

WAIT! LET US HAVE AN ARBITRATION CONFERENCE BEFORE WE PROCEED!

union funds, it would surely be more just that some of the workers and their dependents above mentioned should have the honor and pleasure instead of the rich plutocrats of ocean transport. But, I forgot that it is the work of the union in question to **bury** its members when they are dead.

**Forward! The Advance Guard!**

Let us unite, fellow workers! Let us establish the New School of Unionism—Industrial Unionism, World Unionism. Let us remember that we have to rely upon ourselves, and to build for ourselves. We have not merely to conquer the ships in which we work but we have to **run** them as social floating machines engaged in supplying the economic wants of society.

Instead of waiting for **coup d'etats**, or for the bottom to fall out of capitalism, it is our duty to work for the day, and to realize what the Red Navy at Kiel realized, that there can be no success, unless there is a powerful, well-equipped organization in the field of industry. We learn by experience, and there is no field so fruitful in results, so encouraging to the enthusiast as the creation of the foundations of an Industrial Commonwealth. Therefore it is our duty and our joy to encourage action, to dissipate ignorance, and by working within the field of our experience, and with the things and the men with whom we have contact, to make steady progress towards our objective. The compilation of knowledge dealing with our particular industry is imperative, for the time is coming when our future will depend upon what we **know**—upon the organization that we possess, its virility and its mobility.

On our side are vital social forces, and the advantage of numbers. We need but the Will to Power. The time is nearing when the merchant navies will pass into the control of the workers aboard them. A common flag will fly at the masthead; it will be the insignia of the Universal and International Organization, on a red banner. For whatever may be the tint of our skins, in our veins surges the red blood of our class, and we do not envy the titled and blue-blooded plutocrats their special variety.

**....Hail the sunrise of the Industrial Communards on the ocean routes, ye men of the sea! Hail the dawn of our class solidarity! It will strike the shackless from our limbs, and make us free as the laughing wind which whitens the wave-tips on the Pacific.**

## CHAPTER XII.

## TOWARDS INDUSTRIAL COMMUNISM.

**Towards Industrial Communism.**

Some time ago I was an interested spectator at a socialist conference in London. One of the speakers, in putting up the case in favor of participation in parliamentary action, suggested that when the workingman came to understand the capitalist tiger, through his activity in parliament and on local councils, all he would have to do would be to push his hand down the tiger's throat, grab him by the tail, and then turn him inside out. Thus we would have socialism, which the speaker stated, was but an inversion of capitalism. It was so wonderfully simple that I wondered why it had not occurred to anyone before.

The labor movement, unfortunately, has got into the habit of taking its formulas from other parts of the world; for example, from Russia, where the workers have obtained power, and are maintaining it. No allowance is made for the different degrees of industrial development in countries like the Great Britain, Belgium or the United States. In a copy of the "One Big Union Monthly" I read an article by a very capable writer, who uses the nom de plume of "Industrial Engineer". Says he:

> "The majority of the labor organizations are not capable of operating it as well as the capitalist, but that is not sufficient. There are none that can operate and co-ordinate the present producing mechanism with the needed accompaniment of a change of technique. A reply is often made to the statement of this condition, to wit, "The workers will acquire the knowledge and the organization after they come into power." In Russia, where 92 per cent of the population are peasants, and where there is only a young industrial development, a dislocation of industry, while serious in itself, does not bring starvation to any large percentage of people. In the United States to attempt to acquire an operating knowledge of an industry and an organization after the change would be preparing for birth while the autopsy was already being carried on. The interdependence of industry with industry is such that the absence of a producing organization capable of directing and operating industry would bring about nothing short of chaos and dissolution."

But even if in the United States there is enough food grown to meet the elementary needs of the people during a revolutionary crisis, in England, Belgium and France the results will be disastrous if matters are allowed to drift in the haphazard fashon of today. Most of the advanced members of Communist parties are more concerned with the spectacular outward forms of revolution than with the actual creation of a working class power having at its command the technical knowledge necessary for the requirements of the people, as well as the organization and industrial discipline that will make it possible to keep in working order the land and the over-seas transport systems. When we contemplate the fact that Great Britain can barely feed herself for three months, and that in a crisis very likely the shipping would be tied up or would lay idle through lack of initiative, we can form some idea of the hunger and starvation that would be

bound to ensue. Russia in its worst hours would be a paradise when compared with England under such conditions. The more pastoral a country, the less necessary for successful revolution is a technical industrial organization. In highly industrialized and specialized countries like the Unted States, Great Britain, Belgium, or France, the politigal organization is of very minor importance, indeed. And yet in spite of this, a lamentable confusion of thought prevails among the workers concerning this subject, when everything ought to be as clear as daylight.

With such an organization of marine workers as I have mentioned, we would be in position to do things. Our men know what has to be done. They know that foodstuffs are vitally necessary, and they know further, where to get them. They are in touch with the men who load goods in Buenos Aires, Melbourne, or Odessa, for the long chain of organization of the transport industry runs into every corner of the earth. The technical branch of the organzation knows that coal is needed in Argentine, and iron rails in Chile. It knows the number of surplus bushels of wheat in Odessa, and how many yards of cotton are needed in Java. It knows how many ships there are, and where they are distributed and whither they are bound. In this it is the knowledge of facts that will count; upon that will depend the success of the working class, or a lapse into disorganized confusion. There is far more talent for running ships than there are ships. In fact, I know ten men who could, owing to their knowledge of ports and marine transport, assume control of the world's marine transport tomorrow; but to look at them one would not believe that they had ever worn anything else but a dungaree suit. The industry is overflowing with good men and true, and with a little initiative the whole industry could be altered as much as we altered the port of Buenos Aires in the month of May, 1919.

The philosophy of industrial unionism provides for the creation of real unions with far-flung connections. Industrial unionism takes the economics of Marx out of the class-room, popularizes them and applies the lessons learned to wages, shovels, food, clothing, horses, anvils, spanners, saws, hammers, hours of labor, machines, ships, cranes, winches and compasses. It uses the language and the "why and the wherefore" of the job; a twenty minute talk on the job in the vernacular is worth twenty meetings dealing with generalities.

### The Ship Committee.

This is the unit of the organization. On large ships there will be delegates for each section of the men employed aboard. On small ships one delegate will be sufficient. At each port a report will be issued by the delegate to the shore office, giving names, grade and standing of the crew and name, nature and condition of the ship. It will be every man's duty to fit himself to undertake the duties of a delegate, so that he may educate his fellows.

### The Shore Council.

This shall consist of the delegates of ships temporarily in port. The shore delegates shall be members of this council also. They shall meet twice a week on certain nights, in order to deal with general matters affecting their ships.

### Port District Council.

This shall consist of delegates from the dockers and the seamen. They shall engage themselves in the supervision of the port, in order to force speedy action. They should meet at least weekly, except on important business, when they should be called together at an hour's notice. Whenever possible the marine workers and the dockers will occupy the same building, and utilize the same hall for meetings.

### Transport Workers District Council.

Shall consist of delegates elected from the dockers, marine workers, railwaymen, tramwaymen, and road transport men. This shall be the connecting link between the various organizations within the district port zone. The Council shall meet regularly, and shall have the business of solidifying the ranks within the industry, and be prepared to take action, in case of necessity.

### Regional Council.

This shall be equivalent to the National Union of Marine Workers, but for the sake of economy and efficiency of organization its jurisdiction shall not be determined by national frontiers. It shall be, as far as possible, in the centre of an area, and shall conform more to language needs than national requirements. For instance, Copenhagen could be utilized as headquarters for the whole of Scandinavia and Finland; Liverpool for the United Kingdom; Buenos Aires for the River Plate; Genoa for the Levant; Melbourne for Australia, and so on.

It shall be the duty of the Regional Council to provide sound and educational literature to the marine workers within its jurisdiction. It will print the necessary dues-books made to a universal design, in the prevailing language of the district. It will, also, undertake the tabulating of the general information on shipping, cargoes, clearances, etc. One of its duties will be to have such information at its command as will enable it to take control of the shipping industry at any moment. It will keep a complete roll of membership, and shall render at stated intervals reports on finances and other information to the International Headquarters. In addition to being an Information Bureau, it will possess administrative powers to act in matters of controversy within its own jurisdiction, providing that the conflict is of a local nature. It will exercise a watchful eye over the whole scope of its responsibilities, and will use all its efforts to create and perpetuate solidarity in the industrial field. It shall

be maintained by a per capita tax from the membership, and shall act as the connecting link between its own region and the International Headquarters, and from thence to the regional organizations in other parts of the world.

**The International Headquarters.**

The International Headquarters should be established in some large cosmopolitan port, like Liverpool, New York, Rotterdam, or Antwerp. The International Council should consist of one delegate from each area, and should be permanently stationed and maintained at the Headquarters. The delegates should be selected for their militancy; if possible, they should be able to write and translate in several languages. The Headquarters, in addition to being the world administrative organization in the Marine Industry, shall have full instructions to act in international crises, and to call for general action. Standardized propaganda material shall be issued by the Headquarters for translation into different languages. Information shall be carefully tabulated and published for the benefit of the whole industry. Standardized conditions shall be insisted upon in all countries, and a general standard of remuneration enforced. Instead of being a mere cypher boasting of so many hundreds of thousands of affiliated members, it shall be a live, growing force, expressing the will and determination of the men of the ships and the docks. Where a region is backward it will be the duty of the Headquarters to realize that a chain is only as strong as its weakest link; therefore a sustained propaganda must be carried on to bring the backward or conservative area into line. The Headquarters should be maintained by a per capita tax, to be collected through the Regional Councils.

The Headquarters could also be used as a centre for distributing literature from one region to another. It should arrange means of communication through ships' delegates to the affiliated councils in different regions. It should mobilize all its forces against war, declare blockades of reactionary countries, and refuse to allow ships to be used for the carrying of weapons or munitions likely to be used against the workers of any country. It shall issue regular reports in different languages and shall deal with such questions as wrecks, new tonnage, withdrawn tonnage, general port statistics, clearances, and all things pertaining particularly to the marine workers, and generally to the working class. It shall be pledged to the World Revolution, and irrevocably opposed to the yellow International of Oudegeest, Jouhaux and Thorne.

## CHAPTER XIII.

## CONCLUSION.

The last chapter of this small book will form a summary of suggestions for building a Marine International. Conditions vary in different countries, existing organizations are of different shades of militancy and reaction, but still the principles of capitalism are much the same, although more pronounced at one point than at another. I have suggested that we have to build something better than the employers have—something stronger, something more powerful. Capitalism is a standardizing force; hence our idea of standardizing conditions is only in accordance with the general tendencies. In company with many fellow workers of different nationalities, I have thrashed the matter out. We honestly believe that the thing can be done, and further we know that there are the men to do it.

The reactionaries may, of course, doubt it, but what has been said is true, nevertheless. Fine houses, good cigars, well-clothed friends may have convinced them that human stupidity is likely to last an eternity. When I state that the men of the sea are tired of things as they are, I state facts, for I have been in possibly the best position of any man to judge of the present-day direction of the men who go to sea. For twelve months I was secretary of the deep sea men's organization in Buenos Aires, the largest port south of the equator. Our membership was the most cosmopolitan in the world; members from every conceivable marine organization passed through our office. I am told that we have had the most intelligent and the best union meetings in that port, by men of great experience. A better body of men I have never met, but I do not believe that they would be exceptional under the correct form of organization. I believe that almost any other port could produce such intelligent and militant types, if the organization were based upon the principles of Industrial Unionism, and a correct attitude taken in regard to organizing the workers for fight, and not for the benefit of the ship-owners.

Many and many's the time a fellow would come in to join and would demand to know first, "Is this an International Union?" That's what the men want. A little initiative here and there, a little of the right kind of propaganda, and the results soon become visible. The results give you a determined and energetic membership—men whom you are proud to know, and men who are proud to be in the organization. Furthermore, the men get the idea of **possessing** and **controlling**, and when a man feels like that you have got him for all the time.

The Russian workers have overthrown their brutal oppresors and established a Workers' Republic. In a short time we will see the ships of the Soviets with the Red Flag at the mastheads. The battle is coming on the sea to determine whether the workers' or the capitalists' flag is to be supreme. Oil and water cannot mix; neither can the Octopus of Inchcape, Ellerman, Schwab and Spreckels agree with the growing giant of the Marine Transport Workers. Conflict is coming, and the race is to the strong. The Marine Transport Workers calls you to organize in the only effective manner, upon the basis of Class. It calls upon you to exercise your power, to guard it jealously and to increase it daily.

We can look forward to a time when workers' control of industry will make work a pleasure; when machines will perform the heavy laborious work, when the stokehole will give way to the tiny engine room with its super-Diesel engines; when in building ships the first consideration will be given to the housing and accommodation of the men who will have to man them; when seamen will be of more importance than cargo; when the men's wives will be able to go to sea with them—and the children, also; when the avaricious grip of the wealthy magnates will be forever broken.

We look forward to the time when the marine worker, upon reaching the age of fifty, or when broken by accident, will have his wants attended to; when he will not be obliged to beg from door to door or to sleep in the dismal wards of a parish workhouse.

**....All the injuries inflicted upon our martyred comrades call us to go forward. All the hundreds of thousands of dead who lie beneath the waves of the Seven Seas cry to us to end the vile rule of the money hogs, whose riches have been coined from dead and broken bodies. Let us not forget a single coffin-ship, or a night in the cells, or a half month's logging, or a sneer from a consul's clerk. Let us rouse ourselves for conflict, and, armed with the ONE BIG UNION of the Workers of the sea, meet the enemy in open combat.**

**The sea produces today as many real men as it ever did! Men of wide purpose and speedy action! Men who know their own power, and how to use it! Men who know what they want and how to get it!**

**Build, ye men o' the sea, build the ONE BIG UNION of your class in whatever port or ship you may be, for the dawn riseth across the waters! The darkest night is going, the capitalist era is ending, and the workers in their millions are marching to greet the sunrise of the New Day.**

**Build the One Big Union, Fellows of the Seas!**

**THE END.**

# Tactics

Did you ever
Go on a job
Thinking you would
Last one day?
Made your mind up
That no matter
**What was to happen**
You were going
**To propagandise?**
Then when you
Get on the job
The bunch don't
Appeal to you at all
Because they tell these
Dirty stories
And talk about the booze
And other nonsense.
When you become disgusted
And bawl them out
For being scissorbills
Sapheads and fools—
At night time
When the boss
Tells you to go
You're not surprised a bit—
ARE YOU?

Suppose that you had
Joined the bunch
With a different spirit
Had told
As good a story
Of your humorous
Hard times
And kind of
Let them know that you
Were normal.
Gradually to get
Into their confidence
And in a clever way
Turn discussion into
Lines that you want.
Soon you talk about
**Working class conditions**
In all the world
**And right on the job.**
Even though they disagree
Don't you think
It's best to have the bunch
So any other
Wob can talk
Where you left off?
DONTCHA NOW— DONTCHA?

**Achef.**

# Economics in American Universities

**By Max Lippet Larkin**

ROUGHLY speaking, university economics can be divided into three periods—the positively scientific, the pragmatic and the modern business-college type.

In the days of Adam Smith, when the labor movement was as yet unborn, the problem of wages and of the distribution of wealth was handled very simply and yet, on the surface, quite scientifically by the seers.

Wherever one could travel and observe, one would find that labor was getting enough, but no more than necessary to sustain life. Therefore, the great scientists argued, there is a natural law that labor must inevitably get no more than is necessary for its existence. So, just as it was foolish to change, or even to try to change, the natural order of the stars and their movements, so was it vain to change the great, immutable, scientific natural law upon which the pay for labor seemed to them to be regulated.

To be sure, it sounded pessimistic—it presaged an eternally miserable fate for the working man; but "economists" must bravely face the facts—and spread them. Besides, they thought, if labor once got this great truth into its "noodle," all social restlessness would at once be prevented and labor would try to find its salvation in spiritual realms!.. Pathetic and insignificant were the scholastic discussions as to what was meant by "bare existence as the regulator of wages." Did it mean, enough for a working man to save for old age; did it mean, enough for a working man and his family; did it mean, mere physical existence?

They could not explain the difference between the amount of subsistence necessary, say, for a Chinaman, and that necessary for an Englishman of that day. Once they had gradually drifted into certain standards of living they felt the need of modifying the phrase "bare existence," but they continued to stick throughout to this "great scientific law" because it was a common condition throughout the universe, therefore, they said, it must be a natural law that labor could not get any more.

The textile industries began to organize, strikes occurred, and some support for the masters was demanded from the theoreticians of the "natural law." Several economists tried to patch it up, notably Malthus. He argued, the poverty of the masses is a natural law because it is an existing condition. He discovered the "law" of population and supply, according to which poverty becomes still more inevitable, still more natural, and still more scientific.

There are still several representatives of this school living right among us and sincerely arguing in its favor. The former head of the economics department of Chicago University, who is still its Professor Emeritus, defended it and preached it for many years in our own midst. **He was humane enough to hold out one hope for labor—the saving habit.**

When a student would indicate that it might be very difficult for a laborer to save on the present scale of wages, he would kindly and seriously, for the millionth time, relate the story of a rich man who carried his own laundry to the shop to save twenty per cent.

But back of this grotesque and inapplicable remedy one could sense the positive pronouncement that all our economic relations and industrial occurrences are due, mercilessly and inevitably, to great economic, natural laws against which revolt is foolish.

### Pragmatism—the Questioning

Now let us return to the breakdown of the "scientific" period in college economics. Only a few relics of this period are at present left in our universities.

We must remember that the great underlaying principle of that type of economics was the argument for the inevitability of poverty. So well founded and substantiated was this dogma that its greatest enemies accepted parts of it.

"Poverty is inevitable," admitted Mill, Lasalle and Karl Marx, "but only under the present system. Change or modify or destroy the present system, and poverty ceases to be inevitable."

Thinking workers heard this message. It aided them to an awakening consciousness of their strength and importance. With various changes, this optimistic viewpoint on the lot of the workers became popular.

The universities dare not accept this modern view.

It involves flux, human effort, social volition, and all these capricious, non-scientific, uncontrollable forces. They therefore chose an alternative. They rejected their own theory, refused to accept the evolutionary viewpoint, and created a new school—positive, less fatalistic, more hopeful, encouraging and boastful, but just as clever a defense of our modern class relationships. This school has generated the productive theory.

**No more does a working man receive little because it is the law of nature, but because he does not produce enough,** so say the new seers.

From the fact that an employer would rather dispense with the services of a laborer than pay him a higher wage, yet is willing to pay high wages to a foreman, a good salesman or a highly skilled working man, the new school of economists draws

the final proof for their contentions, just because the accounting department tells the employers that the laborer does not produce enough to warrant paying him a higher wage.

Smugly and proudly do hundreds of college professors preach this doctrine daily to our college students. It at once quashes the indictment of capitalist society and holds forth—supposedly—a definite remedy for our social ills.

### Produce More!

One can easily see that, in the first place, the idea of the social problem as a whole is broken up by reverting to a highly individualized scheme of reform. This at once centers the attention upon the individual struggle between the various members of society. It is evident that if the modern distribution of wealth can be proven to be based directly upon the idea of productivity, this distribution at once becomes just and inevitable, and can be changed only in so far as the individual workingman will improve his own productive capacity.

It is almost heartrending to watch young college boys and girls who, because they may be aware of the wave of social reconstruction, attack the wise and cynical professor with their numerous questions: "Does the employer get no more than he produces?"—"What share of the general increased wealth, because of new discoveries and inventions, goes to the masses?"—"Why is there such a great uniformity of poverty among working men?"—"What about unemployment?" The more daring souls ask whether trade unions, strikes or I. W. W.'s can force the employing class to give a larger share to the workers.

### Decay of Prestige

I wish I could reproduce here a snapshot of the professor answering these eager youngsters. He reads to them a quotation in which it is proven that wages can mathematically be determined by multiplying and inter-multiplying and dividing about ten fixed and variable quantities. The students, he academically warns, must not forget that they are and must remain scientific observers and must not be moved by what he calls a "popular" and "ipso facto" unsientific, economic chattel.

There are, he points out, too many reformers, too many forces interfering with these wonderful mathematical truths, too many unions upsetting violently the productivity theory, by forcing a raise in wages through their sheer numerical strength.

Add to this the many revolutionary organizations and other upsetters, and our universities are desperate and are giving up what they consider an impossible job. One could write an elegy on the death of the economic departments of the American universities.

In some other article we may try to trace the development of the sociological department to which the faculty on economics contentedly transfers the task of handling the troublesome problems of labor, social service, distribution of income, etc., which is but the grandest passing of the buck.

It would be too much to expect of them to yield their private jobs and the income that the teaching of economics afforded. They will give up their high position of economic prophets, but far be it from them, the old and wise economists, to give up the economists' incomes, meager though they be.

Now the latest and most modern type of economics department has blossomed out. It is called the college of business administration. For dignity's sake they still employ one or two old-fashioned economists, but the bulk of money and energy goes to the school of commerce. We find the smooth, clerkly type of professor of political economy, who gets invited to the convention dinners of various manufacturers' associations, who actually feels that he is no longer a detached, useless academician but the practical man of affairs in a practical world.

All shame is thrown off. No more is found the old pretentiousness of a systematic school of thought, of academic, cultural pursuits. Callousness is triumphant.

Today the average business college does its job of turning out individualists much better and much cheaper than the university. Hundreds of young men and women are yearly misled by the hope that in the department of economy they will find some reply to the many questions everyday life asks, particularly now when we are in the widst of a great economic struggle. Their questions are mocked and perverted. They find no answer there.

There is solace for us in this final tottering of "political economy." The field is left by the defeated enemy. We are the only ones to discuss the economic problems seriously and scientifically. As a former instructor, I may be pardoned if I express the wish and hope that some way could be found to transmit our lessons in economics to the hundreds of college boys and girls to whom we may some day have to appeal to side with us.

# A Letter from Russia

Moscow, Russia,
Dear M.: May 2, 1921.

ARRIVED here without mishap. Write me care of Hotel Lux, Moscow, as this is the hotel of the delegates. As you no doubt know, the Industrial Union convention has been postponed till July. The Third International meets in June and the Trade Unions of Russia on the 15th of May. So we will have many things to keep us busy.

Three more years of proletarian rule here and the world will go Communist in the next generation if not before. In our wildest days of activity we never reached such enthusiasm, such devotion to our idea as has the Russian vanguard, the Communist party.

### The Army School

One day we stumped in to a building, having heard the sound of the band during the graduation exercises of a group of Red Commanders. Just a few months before these had been gathered from their peasant and workman activities to come to the school for red officers. The school was in the Kremlin, in what used to be the barracks of the Kremlin guard. There were 1300 students from all quarters of Russia. Fine, husky workmen and peasant lads.

The graduating comrades are speeded into the ranks protecting Soviet Russia, by exercises simple yet full of revolutionary meaning. We were there unexpectedly, yet at once the international character of the occasion required that we from America, England, etc., greet these new defenders of the conquests of the Revolution. Then they must needs show us their quarters. As one passed through the rows of cots, one noticed the books, the signs of study . . .

Their club room is in the old palace of the widow of some Grand Duke. It is just under the windows of the room where Lenin works. On the walls of the clubroom, near the ceiling as a decorative border are inscriptions as follows:

"Study the old but create the new."

"The proletarian class must create its own art."

"Art will beautify your life and enlighten your mind."

"Art for the people."

"Long live the art of the workers."

The walls are decorated with painting by the student commanders. When before was an army interested in creating anything, especially literature and art? Their magazine is called "The Hammer and Sword," their emblem is the red star. The I. W. W. emblem has three such stars.

### Industrial Construction

In Russia the industrial construction is on. In Theater Square, the first of May, and throughout Moscow, were erected billboards full of posters of production. To the right a pile of coal; to the left a pile of peat; here a record of coal and iron production in the Urals and the Don region; there a graphic representation of transportation, looking as if it had just stepped out of a college textbook on industrial economics. Education and ideas in Russia are for the workers.

Here is a silhuette of a Red soldier with red flag, cheering a dark background of marching workers who carry pick and shovel. Over there is a full view of a peasant digging with his hoe. Everywhere the value of labor is pushed to the front. This all promises much for the future. To realize it Soviet Russia wants peace.

### Holidays in Moscow

For the first time in the history of Soviet Russia the first of May is a peaceful holiday. Before this Russia has been at war. This Mayday the people were in holiday spirits. They filled the parks. From the center of the city came street cars in groups of two, one a flat car decorated as a stage, carried the actors and speakers to the people. Auto and trucks reached the places off the car lines. It was a day of pleasure and propaganda. I went with a car of players dressed to represent the Mexicans and the cowboys of southwestern United States. The visiting speakers, besides myself, were representatives of the miners from Great Britain and of the Communist party from the United States. We spoke to five large crowds.

All the theatres closed a few days previous to Mayday and the actors prepared the international plays which they gave from the street car stages. The whole world was brought in costume to Moscow. As a part of each performance the international delegates addressed the crowds. Each meeting closed by everyone singing the Internationale with great enthusiasm. The children sang best. Soviet Russia celebrated her first peaceful first of May. No one was killed—no one was clubbed in Moscow's Mayday.

Yesterday, in one of Moscow's many parks, the English delegates and a few substitutes played football against a team of Russian schoolboys of 18 to 20 years old. It was an English game, but this game went to the Russians. The ball was in English territory througout the play and the score was England 0, Russian schoolboys 12. There are a few very stiff delegates this morning.

In Soviet Russia the people are still eating black bread with pleasure when it can be obtained. Every worker gets a certain amount from the soviets. To their ration most of them add occasional purchases from the peasants. Crowds in Moscow look well dressed and well fed. Yet the food situation necessitates conservation of supplies until the next harvest.

### Industry and the Army

Soviet Russia's industry is still in the stage of small handicraft production. Her social organization, excepting that of the army and of education, is somewhere between that of Mexico and the United States. Those who know among the English, French and German delegates, say that Soviet Russia's army is the best in the world for organization, skill, morale and general efficiency. Its limitations are the backwardness of Russian industry. Yet Soviet Russia has reached a daily production of 1000 machine guns and 5000 rifles. It has equipped over one million soldiers entirely with the products of its own manufacture. All this in the face of ruin, and the civil war which capitalism and Kerensky left behind them. Primitive and modern production go on side by side. Auto trucks deliver the Soviet ration. The peasant carries his food for sale on his back. Many people are worrying over the "free trade" and the speculation, but it is really only a push-cart competition compared to the developing communist soviet economy.

The educational system is experimental, but everywhere efficient. The theatres are under the Department of Education. The schools and pupils must be seen to be appreciated. Without books, paper, pencils, ink or adequate buildings, education has gone on and on to new victories. The school children go to the theatre. They see "Carmen," the ballets, the drama, the "Blue Bird" of Macterlinck. They make excursions. Now the school children of Moscow have gone out of the city. The country homes built by the czarist nobility are now the summer playgrounds of the children. So the children learn.

### Social Action

Social hygiene has done wonders in two years. It works along the lines of education and prevention. It has established museums everywhere. It organizes groups and gives lectures in these museums, on man and healthy bodies.

The Communsit party of Russia is carrying the burden of the revolution on its shoulders. They have been given that burden by history. There is no other group to bear even a part of the work of pointing out the way for the masses. The Communists work harder and live on less than any other section of the population. The program of the party is holding the masses on the road to communism. All other roads seem to lead to counter-revolution.

Literally, the Communists of Russia are "building the new society within the shell of the old." One can see the "new" sprouting everywhere. The destructive work has reached a foundation, and on that foundation the building will expand until it breaks the old shell. This partly explains the fact that the churches are unmolested and doing business as usual, on a reduced patronage.

### Celebrations

Sunday there was a ceremony celebrating the liquidation of the Kronstadt counter-revolution. "Ye have been naught, ye shall be all." Trotsky was the speaker of the day and his voice rang out over the assembled mass of the Red soldiers and workers like the crack of a whip. It rebounded from the shops at the far side of the Red Square and rolled over the crowd. Concluding the speeches, Trotsky presented on behalf of the Red Army and Soviet Russia, a banner to the regiments who fought in Kronstadt. Later there was held a military review which was the event of the day. How they marched! The youths of Labor, carrying Labor's flag, red, with gold letters, the stars and the new rising sun shining through the crowned hammer and sickle!

Soviet Russia can defend herself. She knows how to march to war, if war be necessary. Her seven years of horror have imposed their cost, but they have trained. Every soldier is a post-graduate in the art of defense, gun in hand. Her manpower seems to be untouched. Her people are trained to withstand the shock of a war—a war for a cause. What greater cause than the cause of Labor? Yet Soviet Russia wants peace. The hammer and sickle are tired of rusting away because of war.

You should have seen the red sashes and wiry horses of the artillery, the red caps of the cavalry, the long, grey coats of the infantry! Heard the songs and cheers of the bicycle corps, automachine guns and tanks, dressed in black leather coats! To their right, as they marched lay the graves of the revolutionary dead beneath the Kremlin wall... To their left stood, crowded together, a vast gathering of the workers of Moscow... Unless the Red Army is there, do not go to the Red Square to rejoice—for it is the resting place of the heroic dead. But the Red Guards give it the color and life of the new victories of Labor.

**It has been raining the last few days in Russia, which is good for the harvest and the revolution. The rain this season is drowning the mensheviks.**

Card No. 418,588.

# Nationalism and Direct Action in India

**By A Hindoo Nationalist**

THE Hindoos are a race of mystics. Their philosophical conceptions seem weird and foolish to the average realistic I. W. W. Yet as this letter shows they have put into real action under other names realistic tactics that the I. W. W. has not yet had opportunity to try on as large a scale. This article with its honest presentation of nationalism and class co-operation gives an accurate picture of India today.—(Editor).

### The New Movement in India

The wave of new ideas that swept czaristic despotism out of Russia and struck terror to the hearts of the plutocrats of the world, has not missed India. "Depots must go" is the present cry of India. She is determined to weed out despotism root and branch from her land, and truc to her traditions she has adopted "soul force" as her weapon to fight out her salvation.

Mahatma Gandhi, the devotee of soul force, the uncrowned prince of India, is the brain of this movement. He has dedicated himself to win "Swaraj" (independence for India).

Mr. C. R. Das and several attorneys of Calcutta High Court together with numerous lawyers in the provincial courts have given up their practices and are devoting their entire time to rousing the people so as to attain freedom. A host of government officials all over the country have also resigned.

A huge propaganda work to liberate the country from British imperialistic designs, is on foot. Boycott of British piece goods is also in full swing. The peasants of Bengal have given up jute cultivation for export purposes and are raising food crops to stop the tide of famine. Excise taxes (government taxes on liquor and various drinks etc.) are hard hit. Even the most sodden and ignorant of people are giving up drinking rather that support the government to the extent of paying their drink tax. They are organizing "panchayat" (village councils) of their own to decide matters for themselves.

Public sentiment is running high against the British government. His Highness the Duke of Connaught who came to India to formally declare the so-called Reform Scheme for India, was completely boycotted by the public under the leadership of Mr. Gandhi. "**Hartal**" (boycott or strike) followed his Royal Highness wherever he went. Shops and markets were closed and there was complete suspension of business. Taxicabs and all kinds of conveyances stopped running in Calcutta and the mill laborers and railroad workers ceased working. The Britishers had to walk home from the railroad station and carry their own luggage.

**Hartal** is now a matter of everyday occurrence. In past years enthusiastic welcome was the order of the day when the government officials came to visit towns. Now they are greeted by **hartal**. On one occasion when the governor of the state of Bengal went to visit Dacca (a town of some 200,000 population) the **hartal** was so complete that even the mighty Bengal police could not get a coolie or a carriage to carry the baggage of his Excellency from the station. The authorities offered as much as a hundred dollars (American money) to the laborers and four hundred dollars to the drivers but no one responded. Such is the temper of the country.

Another incident will tell you of the present mind of the people even more clearly. Recently Mr. C. R. Das went to Mymensingh to address a meeting. When he reached the town in the morning a notice was served him at the station prohibiting him to enter the city by order of the Additional District Magistrate who was a Britisher. About ten thousand people gathered outside to welcome C. R. Das. As soon as the news of the government order reached the ears of the waiting public, there was a great excitement. Mr. C. R. Das, true to the principle of the non-violent, non-co-operation movement insisted that they should leave the station coolly and wait for developments.

The news spread through the entire city and the shop keepers began to close down their shops, the lawyers left the courts, the laborers laid down their tools, and the students, who were busy at their matriculation examinations, left the examination halls.

In vain did the Additional Magistrate plead with the people to go back. Shops, courts and manufacture were closed and not only in the city. The movement spread to nearby towns. The situation became so tense that a higher authority was forced to intervene and suspend the order of the Additional Magistrate prohibiting Mr. C. R. Das to speak in the city. The government felt it necessary to apologise to the people—but the people understood.

### An Explanation

By misunderstanding the first part of a story by W. J. McSweeny, entitled "Hunting a Job in the Clouds," was run in the July issue of the Industrial Pioneer. A book review was all that should have been run as the story was copyrighted.

To those who wish to conclude the story it can be obtained from the writer at 5520 Prairie Ave., Chicago, Ill., for twenty-five cents a copy or for twelve dollars and fifty cents a hundred.

# WOBBLES

In a blind boosting article the Merchants and Manufacturers News claims that in no period in the history of the United States has greater progress been made than during the first half of 1921.

With stronger organization we could smear a little grease on the toboggan and the Merchants and Manufacturers would gain more speed yet.

* * *

World progress can easily be estimated. In ancient Greece the average freeman considered that he needed five slaves to take care of himself and family. Today one slave produces enough to take care of five families.

* * *

In 1904 the average power used by each industrial worker was two and one half horsepower. In 1920 he used three and a half horsepower. By the end of 1922 it is predicted that he will be using some headpower.

* * *

The program of the American Legion seems to now be in harmony with tendencies in other organizations. Even they are becoming industrial. According to the latest reports they have spoken against the advisability of raiding wobbly halls and are bending their efforts toward job activity. Scabbing on striking union men is conceded by them to be better tactics than mass action.

* * *

Perhaps after all the fifteen Legion members that kidnapped Kate Richards O'Hare from Twin Falls, Idaho, only were playing a little game of Hare and Hounds.

* * *

We must heed the Legion's claim of having accomplished a 500,000 organization drive. Numbers lend needed courage when it comes to kidnapping a woman.

* * *

A governor pardoned an elderly man for his activities against the war. Because of the vehement protests from the Legion, he was forced to cancel the pardon. Another war for democracy and these boys will turn cannibals.

The bonus so hard fought for by the Legion was protested against by President Harding. Maybe he thinks the way we do, that the bosses ought to pay them direct for their valuable assistance.

* * *

There was one lad who went to war against his wishes. During a battle he was the only one of the bunch who had the courage to assist an officer caught in a dangerous position. He was a member of the I. W. W.

The government awarded him one of the highest honors for his display of courage. When discharged he displayed his working class honor by taking out I. W. W. organizer's credentials and going to work in industry.

* * *

Plain prose can do no justice to the type of heroes characterized as America's Ideal by president Elliot of Harvard. Like Homer we must burst into song:

A patriotic blood and guts instructor
Is no longer on the job these peaceful eves.
For peace, the bloodless, scheming, arch disrupter
Had turned him loose—with chevrons on his sleeves.

A predigested headline labor bomb plot
He spied, above premeditated lies.
His brain—a mass of corrugated dry rot—
Was duck soup for the boss to hypnotize.

A weary disillusioned agitatress
Was marked down as a Bolshevistic spy.
She prestidigitated as a waitress
And went on strike for wages—none too high.

Our hero with his bloody inclination
Was mobilized and marched upon the scene.
He scabbed upon the girl—and saved the nation
By scalding thumbs in every soup turene!

# The British Miners' Struggle

A GRAND fight took place between the Miners' Federation of Great Britain and the British Coal Owners' Association, backed and supported by the government. The skirmishes that have preceded this gigantic struggle commenced in the early eighties. They followed along until the first national clash that was reached. This was the six weeks' strike for a national minimum wage when legislation was hurried through the House of Commons guaranteeing the miners a minimum wage of five shillings per day, whether they were employed on the piece-work system or on the day-wage system.

Previous to this, thousands of skilled hewers in the bituminous mines in the Forest of Dean and South Wales district, were unable to earn more than from three to four shillings per working day of nine and a half hours. Since that time numerous strikes have taken place in the different districts which have been long and bitter struggles, and are more and more inclined to take on the attitude of the class struggle.

### Miners' Union and the State

By the way, it is very interesting to observe the attitude of the Miners' Federation of Great Britain during the European war towards the state. Sidney Webb's "History of Trade Unions" says: "Trade unionism itself has been tacitly accepted as a part of the administrative machinery of the state."

The getting and enforcing of legislation is, it seems, historically, as much a part of a trade union's function as maintaining a strike.

Trade unionism, in 1920, won its recognition by Parliament and the government, by law and by custom, as a separate element in the community, "entitled to distinct recognition as a part of the social machinery of the state." "It is now distinctly represented on Royal Commissions and Departmental Committees. It has entered the inner Council of the Government, and is recognized as part of the machinery of state administration." (In 1917 coal control was instituted, in 1918 a coal mine control agreement was made.)

The miners were pampered by the government during the war, the unions themselves assisting in recruiting and combing out their members from the mines. Conditions in general assisted greatly in the rapid development of this big cumbersome organization.

### Destroying the Miners' Political Position

The British imperialists are now undertaking the work of destruction. The state has no future use for such an organization. Leading up towards the present clash one can carefully analyze the Coal Commission inquiry of March 19, formed by the government to deal with the demands of the miners for a six-hour day and a guaranteed wage of one pound a day.

This committee consisted of twelve persons and a chairman, Judge Sankey. Three commissioners were coal owners, three were miners representatives, three were (impartial?) representatives of allied great industries, three were economists, representatives of democratic ideas.

After several weeks' sitting, during which one hundred and twelve witnesses were examined, a report was presented to the government. Clause nine of the report says: "Even upon evidence already given, the present system of ownership and working of the coal industry stands condemned, and some other system must be substituted for it—either nationalization, or a method of unification of national purchase, or by joint control." Also, Sankey recommended the continuance of coal control for three years from the date of the report.

The point-blank refusal of the government to carry out the decisions on an enquiry selected by themselves proved an eye-opener to the miners. Their distrust of the existing government was demonstrated throughout the country by vigorous protests sent forward from mass meetings denouncing them for the manner in which they turned down the recommendations of the respective Coal Commission inquiry. The government undoubtedly was disappointed with the report of Judge Sankey, because it indirectly suggested state ownership and joint control. Many important features were disclosed at this inquiry which were generally unknown.

Nevertheless the Coal Commission and the inquiry were strategical tactics used by the exploiters to postpone any direct action that threatened the interests of the industries concerned. In July, 1919, the country of Yorkshire, with one hundred and seventy thousand miners, struck work for five or six weeks over two points difference, in the award. The owners were offering 12.2%, while the miners' contention was that they were entitled to 14.2%. This ended in defeat for the miners.

### Falling for Compromises

In October, 1920, the miners are again found taking up the cudgels and were persuaded by their reactionary leaders to accept a temporary settlement of the matter in dispute. This is known as the datum line strike, where the government was desirous of basing wages upon national output. With the fluctuations of production, wages increased or decreased.

This was strongly resented by the miners, knowing that they have no voice in the management of

the mines, or the development of the industry. The dircctorates of the large colliery combincs held the lever of producticn in their own hands.

Nevertheless, certain terms were submitted to thc men to be balloted upon for a temporary settlement, thc government pledging to create an apparatus in the form of National Wages Board. This was to bc ready by the end of Marcb. The result of the ballot was a majority of 8459 against the terms, this according to rule not being sufficient to continue the strike (the rule stating that a majority of two-thirds is neeessary before a strike can be called) work was resumed under a temporary agreement, the same extending over March, 1921.

### Making Economic Demands

The government held firmly to their decisions upon the decontrol of the mines on the 31st of March, in spite of the appeals from the Miners' Federation of Great Britain to at least extend the period for another six months. "The industry must pay its own way without any further subsidies from the treasury."

### Miners' Demands

a) National Wages Board.

b) Standard wage of present basic wages and district percentages, plus last year's 20% advance.

c) Standard profit to employers to be 10% of national aggregate wages.

d) Surplus over this 10 per cent to be divided, 90% to miners and 10% to owners.

### Owners' Demands

a) District Boards.

b) Present basic rates plus percentage paid in 1914 to be standard wage.

c) Standard employers' profit to be 17% of district aggregates.

d) Surplus to be divided, 80% to miners and 20% to owners.

### The Form of Organization

A brief explanation of the system in pre-war days will explain the reason why the owners desire to take a retrogressive step to the district boards.

The industry itself consisted of thirteen districts with a wage or conciliation board for each of these districts. The miners' organizations were also geographically divided and equal in number, each section of the Miners' Federation having autonomy to make its own agreement and settle its own disputes. This meant that each agreement expired at a prearranged date. Agreements were skilfully manouvered never to expire at any time two districts together.

Hence sectional strikes took place against the forces of the National Coal Owners' Association. The result was naturally defeat for the workers. The rapid growth of industrial unionism in the mining country during the war makes it absolutely impossible to revert to district wage agreement.

The above terms were submitted to the different districts to vote upon. Two districts were for acceptance, Yorkshire and Northumberland. For rejection there were eleven, S. Wales, the whole of Scotland, Durham, Lancashire and Cheshire, Nottingham, Derbyshire, N. Wales, Gloucester and Forest of Dean. Important meetings took place between the government, the miners and the coal owners.

### Preparing for Direct Action

Nothing, however, was accomplished by the government towards bridging fundamental differences between owners and men. The executives of the Miners' Federation discussed for two hours the situation before meeting Sir R. Horne. At the close of the meeting Frank Hodges issued the following statement: "It has been resolved that the following communication be sent to the districts, that all strike notices must take effect regardless of occupation in every mine and plant in the Miners' Federation."

This meant that the pumpsmen and others, enginemen and ventilation men were to cease work on the 31st of March simultaneusly with other mine workers. Without question, this was the most effective move by the miners to induce the owners to yield to their demands. It forced the hands of the government who was declaring its neutrality in the fight. Immediately the decision became known, the neutrality of the government passed out of pretended existence and provision for employing naval ratings to work the pumps followed.

### Stopping the Works

On April 1st, the three thousand three hundred mines were closed down and a general stoppage of the whole of the British coal fields resulted. This, in my opinion, is the dawn of the greatest industrial crisis in the world's history, and should take on an absolutely revolutionary character. With skill and directive ability it should lead up towards the goal.

The State Emergency Act of 1920 was immediately put into force. Every coercive unit was mobilized for government use.

On March 31st, the Miners' Executive Committee proceeded to Unity House where it joined with the Executive Committee of the National Railwaymen's Union and Transport Workers' Union. Conferences were called to take place on the 5th and 6th of April. These conferences decided to give full support to the miners.

At the same time skirmishes were taking place in different parts between the police and the miners. Shots were fired at blacklegs in Lanarkshire, also some supply trains stopped and looted. Colliery officials engaged in working the pumps were given fifteen minutes to clear.

On April 6th, the prime minister sent letters to Hodges and to Evan Williams, President of the Mining Association, offering to move for the reopening of negotiations between the miners and the owners, "but he assumed that the miners would

first have taken steps to ensure the mines from being flooded. The miners' Executive Committee, when informed of this condition, indicated that it would not agree to order back the pumpmen, and also with regard to pit ponies said," if there are any ponies in the mines they are there with the approval of the management."

### Negotiations Again

The prime minister withdrew the condition that was laid down by him, and summoned both parties to meet on April 11th, the Railwaymen and Transport Workers having warned the government that if negotiations were not resumed they would strike in sympathy with the miners on the 12th of April. The characteristic peacemaker that plays a conspicuous part at this juncture is the yellow-gutted J. H. Thomas.

Bob Williams, the secretary of the Transport Workers, in an interview, says with gasbag bombast: "That the full power of the Triple Alliance is and from Tuesday next will stand as binding as when the decision was passed."

The proposals submitted by the government to the Executive Committee of the miners were practically the same as the original terms of the owners. Only they had a little coloring and dressing peculiar to documents that are issued from that quarter.

In the actual words of Hodges as speaking for the Executive Committee: "We have fully considered the terms set forth in writing this morning by you. For reasons already stated to you in full conference, my executives feel compelled to reject the terms proposed as they offer no solution to the present dispute."

After fourteen days lockout of over one million miners, during which period the Triple Alliance had made two definite postponements of its threatened strike, a further threat was issued which says: "Tonight at 10 o'clock, unless the government gives way, over one million railway and transport workers are ready to strike and to enforce by direct means what reason and argument have failed to ensure."

On April 15th Frank Hodges addressed a meeting of members of Parliament at Downing Street, and suggested a temporary settlement. Condemnation of such conduct by the miners' Executive Committee caused Hodges to offer to resign.

### Playing the Traitors

At 4 o'clock in the afternoon, J. H. Thomas and Bob Williams made the following dramatic announcement: "Our communication to the three organizations, National Union of Railwaymen, Enginemen and Firemen and Transport Workers, is to announce that the strike called for tonight is canceled."

The explanation given for the same was that the miners' Executive Committee refused to accept the prime minister's invitation to a conference based upon Frank Hodges' personal remark to certain members of Parliament.

During the whole of this period the most militant section of the miners were the Scotch, who were kept at the point of bayonet from executing further destruction to machinery and the pitheads, yet huge quantities of coal and wood were carried away, the police being unable to cope with the strikers. The estimated cost of same amounted to 20,000 pounds sterling.

### Forming White Guards

At this time, the government, through the press, was endeavouring to create an impression that the miners were raising a political issue when they insisted on a National Wages Board and National Pool. The government stated that they are purely economic questions not concerned with politics.

The only suggestion of a political character was raised by the prime minister himself. An army of 300,000 men, White Guards, are at the disposal of the government for distribution over affected areas. A defense corps also, consisting mostly of middle class youths enlisted in the role of privates and also acting as spies, was an indication of the determination of the employing class to crush the workers into submission.

### Miners Show Fighting Spirit

At this juncture the feelings of the miners were again tested after the latest betrayal of the Triple Alliance. The results of the voting show emphatically the fixed determination of the miners to adhere to their original demands by a decisive majority of fourteen to one. It is safe to say, that the British miner is a real fighter and displays great courage and power of endurance over minor questions in dispute.

His characteristics are prominently displayed in strikes for the improvement of working conditions, and wage advances or against reductions. He will undoubtedly play an active part in the front line trenches when the future attack is made upon capitalism.

Mr. J. H. Thomas and Bob Williams were stormed with written protests from the rank and file after their decisions to cancel the strike of the 15th. The sheer audacity of Thomas is shown when out of 1300 branches only one voted against a strike, yet this sneaking betrayer is allowed to continue in office in spite of such conduct.

### Power of Reactionaries

One peculiar feature in the rules of the National Union, of which Jim Thomas is president, is that its executive has power to call a strike, or to cancel strike notices without consulting its members. There is no fear of the present Railwaymen's Executive Committee making use of the former part of that clause. It only affords a channel for the reactionary leaders to put the latter part in operation.

A later phase of the strike developed on April 26th, when the prime minister offered to meet the miners unconditionally. A series of conferences between government, miners and owners commenced on the 26th of April. The result of such a meeting ended in a point blank refusal by the

men to accept the proffered terms. The chancellor of the exchequer made the final offer of the government to the miners on April 28th.

### The New Offer

The offer: The sum of 10,000,000 pounds sterling shall be paid by the government to maintain wages during the next four months. This is to subsidise the wages earned on the basic rate laid down by the owners. Thus, giving a guarantee that the reduction in May should not exceed three shillings per day, in June not more than three shillings and six pence and the remainder of the sum to cover July and August.

The government offer:

1. No National Pool.
2. District settlements.
3. Arbitration on the question of new standard wages.
4. Subsidy of 10,000,000 pounds sterling for four months.
5. District cuts of three shillings per shift, for May, three shillings six pence for June, and further losses for July and August.

A delegate conference met on the evening of April twenty-eighth, to consider the proposals of the government and, on the ground that they did not concede to the fundamental principles of the National Wages Board and the National Pool, for which they have already stood firm for four weeks, rejected the offer, by 899,000 votes to 43,000.

### Owners Are Crafty

British coal owners are skilled in ring craft and scientific fighting, the developments of this strike is a confirmation of this. The labor leading pawns on the national chess board were moved by the strong hand of the master class to forsake the miners in their great struggle. This proves absolutely the putridity of both Thomas and Bob Williams, and, if no National Pool is conceded by the government the workers of England would do well to create one of their own in which these scoundrels could flounder in their last moments.

To justify their outrageous backslidings, the railwaymen have placed an embargo on all coal in pit sidings, and have instructed their members to refuse to remove it. The consequences of this decision resulted in the Great Northern Railway Co. dismissing nine or ten men. An agitation arose for the reinstatement of these men. That ended in them being reinstated unconditionally.

These are strategical points least understood by the workers themselves, nevertheless sufficiently important to divert the attention of the masses, to fight on matters of minor importance and to allow the great issue to pass unchallenged.

### The Miners Determined

The miners are determined to fight to the bitter end. Better to die of starvation in idleness, than to submit to working conditions amounting to nothing better than starvation. If the reductions decided by the owners were accepted, it would mean to the S. Wales miners eleven shillings, seven pence and four farthings per day reduction, varying in different districts from eleven shillings, seven pence and four farthings to a reduction of about three shillings per day in Yorkshire.

The owners plead that they can pay only what the industry will stand. The miners' reply to that is, that if an industry cannot yield a full livelihood to every worker there is something seriously wrong with it. But, suppose you accept the employers' plea, what then?

### Parasites Get Wealth

Let figures talk. The mine owners took out of the industry at least 350,000,000 pounds, in the last twelve years, recovering their capital nearly three times in that period.

In addition, royalty owners took well on to another 100,000,000 pounds.

Huge fees were paid to directors of all the tinpots concerned and there was all the waste of inefficient methods, overlapping and competition.

Sir Richard Redmayne, His Majesty's Inspector of Mines told the Coal Commission:

"The present system is wasteful and extravagant."

### Aspects of Wind Up

The mine owners are divided. A large section wants to abandon the fight and to accept the National Wages Board and National Pool. The other section wants to fight this at all costs. This section draws its strength from the Federation of British Industries whose policy it is to break down national agreements where they already exist. But the Federation of British Industries is wavering as it sees its members' property in peril.

The National Workers' Committee Movement have already circularized all the delegates of the Railway and Transport Workers' Unions about the betrayal by the leaders, and an unofficial strike is being organized to take place on the 15th of May. Action is called for and, in every probability, the Railway and Transport Workers, in defiance of influential leaders, will line up for drastic action on that date.

### Need for International O. B. U.

This is the psychological moment in the history of the miners of the world. Conditions in England, Germany and America are mellow and ripe. The cry of the miners for an international is heard in all lands. **French capitalists are now dispatching an army of two hundred thousand men to the Ruhr valley,** to act as slave drivers on behalf of Entente exploiters and to inflict further tortures upon those miners who have striven to defeat their German oppressors.

Having only a bogey International in Amsterdam and a skeleton mining International serving no other prpose than that of providing an annual holiday for the corpulent leaders, the miners of the world are at the mercy of International capital,

# The QUESTION BOX

**Why can't working men get justice in the courts?—M. B**

It is true, as this question scems to infer, that courts are not for the purpose of bencfiting working men. However, the use of thc term justicc muddles up the idca that is wished to convey.

Justice is that idcal state of affairs wherein everyone gets everything that hc should have. The only drawback to the installation of justicc is that the desires and wants of people arc not governed by what they should have but a lot of notions and idcas that arc aside from the simple matters of food, clothing and shelter.

When people come in contact with each other there is a certain amount of conflict, for people unlike the bees, have individualistic traits that will not down and that often come uppermost in treating of social matters. In other words human beings are strictly selfish besides being social. This seems to be a matter of inherent instinct besides being well developed through capitalistic cducation.

Justice then would have to nullify and overcome all the conflicts of selfish desire that might arise. This might be done to the satisfaction of the majority of the community but could never completely satisfy the person who judgcd that his claims were the greatest. Justice in its true sense cannot satisfy all. In its aplication it is essentially a matter of force. It may be mental, moral or physical force.

The type of justice which is now handed out to the working men through the capitalïstic courts has no connections with the equitable settling of affairs. Capitalistic courts are for one thing mainly, and that is the protection of private property. The protection of life which seems to take up some of its time is treated also in the same manner as protcction of property.

Now property intercsts clash and the purpose of the courts is to scttle any such clash not in the interest of one of the contenders but in the interest of thc owners of thc majority of the property.

Courts are capitalist class institutions for the benefit of the capitalist class. They are not for thc workers benefit. This is not bccause they do not deal out justice. Thcy do dcal out justice but it is capitalist justicc for thc benefit of the majority property owners. They are not for the workers benefit because they do not deal out the workers justice for the benefit of the worker and to the dctriment of the capitalist.

The way to achieve working class justice is not to look forward to some utopia where master and slavc will lie down in peace together and everyonc will do what is "right." The thing that is to the pcrsonal interest of the individual always seems right to him. The way to achieve this working class justicc is to achieve a tyranny over the capitalist class and deal out what they will term, injustice, to them.

Capitalist courts must tyrannize over the workers, in order to give justice to the capitalists. Workers' courts must tyrannize over the capitalists in order to give justice to the workers. The party with the strongest forcc wins. The working class cannot get anything but tyranny from capitalist courts.

**Why was the American Legion started?—C. W.**

The American Legion was started in the United States to act as an extra legal weapon of the capitalist class. Courts are so bound by rules, regulations, precedents etc., that they cannot be mobilized quickly to meet sudden needs and emergencies of the capitalists.

For instancc an I. W. W. hall is private property and the court must make a ruling that as this is sacred private property it is inviolate from the incursion of a mob. Otherwise the court would not be upholding the interests of the majority of property owners.

In order to get around these matters it is necessary to have some organization that need not be bothered with these little quibbles. In the United States the American Legion is the result.

The Legion can and does destroy the private and sacred propcrty of the I. W. W. and the capitalist courts gravely rule that such destruction is not lawful and is against the preccpts of property ownership. That is as far as it goes.

Not only in America has this weapon of the decaying capitalist class been formed. In Finland it is called the White Guard. In Italy it is the Fascisti. In Ireland the Blacks and Tans. In other countries they have different names but they are all one and the same thing.

Capitalism must have a more drastic and terror inspiring tool than the slow property honoring courts. The assassins knife, the white guards bullet and the rope of thc mob of American Legionaires are all instruments of warfare used by the master class to keep the workers in submission while the world totters and seems about to crash into economic chaos.

# Book Review

**The Labor Movement.—By Frank Tannenbaum: New York: G. N. Putnam Sons.**

A FELLOW gets a cynical attitude towards new books on the labor movement these days: there is so much damning with faint praise and attempting to reconcile the classes which have nothing in common. So when the post man brought around a plum colored volume, "The Labor Movement," published by G. N. Putnam Sons, I picked it up half sceptically, till the name of the author struck my eye—"Frank Tannenbaum."

"Frank Tannenbaum," I reflected, "Oh yes, he is the fellow worker who did a year in Blackwells Island for using one of the homes of Christ for a lodging house, without the permission of the church wardens, during the desperate unemployment days of 1914—he and some two hundred others who had not where to lay their heads. After that he figured in the Bayonne strike, and then he sort of dropped out of sight. But here he comes up again with a well bound book from the most respectable of publishing houses, and about the labor movement. "Well," I though, "We'll look it over," though I guessed that Frank had "slipped."

But the first few pages quickly undeceived me. There was still nothing in common between the two classes as far as he was concerned.

Said a paragraph in Part 1:

"There are apparently only two alternatives. Either the business community is going to destroy the labor movement or the labor movement will absorb the control and power now in the hands of the business community, and by such absorption displace competition and substitute co-operation."

This was introduced by previous chapters explaining how the workers who operated the machinery of production were forced to unite into social defensive forces—the unions—to resist the exploitation of the owners of the machines.

These unions are forced by the nature of the fight to struggle without ceasing toward the control of the machine, whether they know the direction they are traveling or not, and the owner is likewise forced to carry the fight to them. It is a fight for security, for this is the age of insecurity for everyone, business man and worker, though the insecurity presses hardest on the worker. The fight for security centers around the machine which is the center of gravity in modern civilization. Workers' control of the machine means the elimination of capitalism as truly as the development of commerce meant the elimination of the feudal system, and the struggle must go on till unionism is broken entirely or business is displaced entirely.

It all sounded very much like the opening guns of the historic class war document of 1905 and I looked for more, and found it. The opening lines of Chapter X, on "Industrial Government," read as follows:

**Building the New Society**

"In its preamble the Industrial Workers of the World proclaims that in organizing along industrial lines the labor movement is "building the structure of a new society within the shell of the old." This sounds like an extravagant statement. On analysis, however, of the actual contribution to the structural changes which the labor movement is making to society, it becomes evident that the quoted opinion is more than a wish."

Though this particular quotation is taken from the middle of the book the greater part of the volume is devoted to a development of this general theme. Tannenbaum shows how the unions are building the new society. The most important method which he cites, in my opinion, is the actual structural organization of producers' units, though the author perhaps lays largest emphasis on the unions' work in developing the social sense through group consciousness. This idea runs through the entire book and is illustrated with all its many sides. No other force in American life, says the writer, equals the union in transmuting individual consciousness into group consciousness. Whether a worker joins a union with the most conservative defensive purposes or not, he argues, the effect of his new environment is nearly always to shed off his narrow individualism and to give him more or less of the common social aim—the desire for group betterment. Many individuals are caught so thoroughly by the new atmosphere that they will make the highest sacrifices for the benefit of the group, and even those who retain selfish aims—such as the desire for the applause of the group, are by the same token thinking in group terms. Though this development of group consciousness is only one function of the labor union, in fact is a by-product, yet it is one of the most valuable contributions to the times. The more unsocial and migratory a worker has been, because of the nature of his work, the greater the social service which is performed by his unionization. Pointing out that the I. W. W. has been the chief force in the organization of such workers he says:

"This in a measure tends to give the I. W. W. an importance which is generally overlooked. It makes independent, self-reliant, thoughtful and socially-minded men out of migratory, unskilled and isolated workers."

"It might also be remarked," he says later, "that this fact probably tends to explain the loyalty which the workers who have been organized by the I. W. W. have shown to the organization in the face of almost unbearable persecution. Their need for association is so intense, their individual helplessness is so great, that no amount of pressure, apparently, can break the love, the idealism and the loyalty which has grown up around this instrument of self-defense and this means of personal dignity."

The solidarity of labor is made possible, he says, because the unions group men together in such a natural way. They are brought together in their unions as they are united by their skill or by their industry. The machine is the center of gravity. This mechanical setting holds the workers together as they cannot be held together by unassisted idealism—though idealism is a by-product of the labor movement. The steel rails of the railroads hold the railroad unions together, he says, and the mines bind the miners into one body.

(It might be said here is passing that the more nearly men are organized according to the way they work the greater is their solidarity, and vice versa, which is one explanation of the failure of a craft union to hold together after the craft has been displaced by modern industrial processes).

This socializing influence of the unions, goes on Tannenbaum, extends through the district councils to the workers of the community; through the national unions to workers in the same industry all over the country; and through international industrial consciousness, based partly on the international nature of industry, comes a measure of international industrial solidarity, even in advance of international unionism. This international solidarity has been shown in the many instances of direct action by which the war of the Allies on the Russian Labor Republic has been held back, as when American longshoremen refused to send ammunition abroad.

The Seattle strike is given to illustrate the workings of the structure of the new society which is building within the shell of the old, the author telling how the industrial representatives of the workers administered the feeding of the city and the supplying of milk for babies when power fell from the helpless hands of the politicians.

### A Producers Government

The "Labor Movement" sees the politician as an animal out of date in this age of industrial grouping. Every extension of unionism, with its growth of power for the workers and its system of industrial representation, means a lessening of the power of territorially organized political rule. When full organization of labor has been reached, and full power consequently is transferred to the workers, then the government will naturally fall into the hands of the representatives of the industries. Tannenbaum cannot see where the geographically organized political state will have a chance to function and he gives some pages to the subject of British Guild Socialism, the social theory which would compromise the proposals of state socialists and industrialists. The guild socialist theory would have a political parliament, representing the citizens according to territory, as consumers, sitting side by side with a producers' congress representing the workers according to industry, as producers. Producer and consumer are one and the same in a workers' society, explains Tannenbaum, and as such will have common interests, the interests involved in adequate production of the things most needed for human life. The determination of the quantity of production, according to the consumptive needs of the workers and the various industries which use raw products, is something for the producers themselves to determine.

Industrial representation means functional representation; that is, each representative in the producers' congress, or central council of the industrial unions, will represent not only a certain set of workers but the work itself, and he will presumably be acquainted with the facts of the industry he is elected to represent. In his duties, of course, he will be assisted by experts and statisticians, but his industrial experience will enable him to understand the data submitted on the subjects under advisement. The contrast with a political state organized on a basis of territorial representation, with the representative responsible for the interests of a mixed community containing a hundred different industries, becomes obvious.

### Industrial Education

In this connection the writer gives a valuable chapter on labor education:

"Industrial democracy requires organization," he explains. "Next to organization it must have education **about industry** by those who are to manipulate it on a democratic basis."

"This is the problem of working class education that radicals and socialists who have talked about industrial democracy have generally neglected, and yet this is **the problem** of working class education."

"The primary aim of this education should be to make each worker in the industry conscious of the more general character and relationships of the industry and the part he plays in it."

He goes on to tell of the necessity of any worker who would participate in the direction of the industry vizualizing the industry as a whole, and he emphasizes the lack of interest of the average worker today in his work. His interest is through his pay-check. The monotonous grind he hates, and outside of his own little operation he has no vision of the industry as a whole, or even the shop, as a rule. He is a cog in the wheel, and a cog cannot participate in the management of the mechanism, necessary as it is.

Tannenbaum just touches on the essential working class nature of the technicians and the part they will play in the new administration, but for a thorough and clear cut exposition of this subject it is necessary to read the new book by Professor Veblen, "The Engineers and the Price System" which will be reviewed in the September "Pioneer."

It is well to mention, before dismissing this subject of industrial education, that the author slightly exaggerates the lack of industrial vision of the workers as a whole, though he does not exaggerate the neglect of this subject by the radicals. He will find that in almost every machine shop, or electricians' department there are several young fellows working on correspondence courses

in mechanical or electrical engineering or related subjects. It sometimes happens that there are more men in the shop who take a progressive attitude towards industry than towards the labor movement, as now constituted. The newer developments of industrial unionism tend to utilize this scientific interest in the furtherance of workers' control of industry.

Tannenbaum conceives industrial knowledge to be valuable for the coming industrial administration but he does not mention its significance in the class war today. In fact this significance is strangely overlooked even by many of the Russians who have done such good service in showing the need for industrial knowledge in the future. It would seem apparent that the more knowledge the workers have the more power—today. For instance, unions properly equipped with the facts of their industry would know when to strike, in order to inflict the greatest economic damage on the enemy, and they would know where to strike, for they would have full knowledge of the key spots of industry. And they would have the data by which to lay out systematic organization drives on the unorganized parts of the industry. Examples will occur to the reader in any industry with which he is acquainted.

The "Labor Movement" is one of the few worth while contributions to the subject in the last year, but before closing the writer of this review would like to take courteous issue with the author regarding a statement that is emphasized distinctly in several parts of the book, that is, that any labor union is essentially revolutionary, the theory being based on the facts that the union brings workers together, develops group consciousness and fights the exploiter. This statement is an old acquaintance, though not usually developed as fully as in this book, but it always causes surprise to the worker who has been through an industrial union strike which was scabbed on by a craft union within the same industry. He cannot see that craft union in any other but that of a counter revolutionary role, for the very reason that it is blocking the group interests of a larger number of workers. I had such an experience in Newark, N. J. two years ago when a dozen cutlery shops were three-quarters shut down by an industrial union strike and the metal polishers' union of the A. F. of L. officially fought the strike, the business agent going out on the picket line and using all the arts of coercion and cajolery to force the workers back to scabbery, including those outside his own craft. Such experiences have been repeated in very industry where an industrial union movement, which for the time represented the majority of the workers, has been opposed by a craft union which represented only a small fraction.

Regarding the evolution of the present craft unions towards the industrial form and greater strength, the author is over optimistic. The recent action of the Metal Trades Department heads of the A. F. of L., (since the manuscript of the book was written) in turning down by an immense majority the machinists' mild proposal for a conference of international presidents to consider the question of closer affiliation, is a case in point, which is more striking than the favorable settlement of some minor jurisdictional disputes. As far as the development of A. F. of L. strength is concerned, it is well to consider that a loss in membership, estimated at 1,500,000 to 2,000,000, has taken place since the industrial depression and the accompanying open shop drive, which the craft unions were unable to resist, because of structural and spiritual weakness. But it is only fair to Tannenbaum to point out that the book was written, though not published, before these later developments.

But by and large the book is good, and even a veteran in the industrial union movement will gain from perusal of the more essential phases of the book. Especially will he be interested in the socializing effect which the labor movement, in the main, unavoidably exercises on the worker who enters it. This emphasis on what may broadly be called the spiritual side of the movement is refreshing in a period when the grimmer aspects of the struggle are being forced so emphatically on our attention. A. S.

## THE BRITISH MINERS' STRUGGLE

(Continued from page 53.)

that crushes English and German worker alike. Russia, the only exception, is free from the tendrils of the capitalist octopus and, having completely exterminated its supporters, is now engaged in the reconstruction of her industries, under great difficulties. To defeat the International capitalists, the workers of the world must construct an International Union having all the technical mechanism of modern science embodied in its structure, powerful and capable of overthrowing its enemy.

(Signed) N. Watkins,

Member of Provisional Council of International Trade and Industrial Unions, Moscow. E. C. Member of National Workers' Committee, England.

* * *

The latest news from the coal front in England show wavering and uncertainty there.

The miners executives have recommended that the miners accept the offer of the government. This offer was essentially the same as that put forward on April 18th except for some verbal dressings. The miners formerly turned it down emphatically by referendum vote.

Some of the miners have already reported for work but the majority are standing fast till the new ballot is taken.

The government threatened to withdraw its offer of ten million pounds subsidy unless immediate resumption of work occurred on the part of the miners. It is this threat, it is reported, that caused the miners' executives to recommend acceptance.—(Editor).

# The International Situation

THROUGHOUT the capitalistic world the process of slowing down and disintegration is going on in the industrial fields. The joint committees of capitalism known as political governments, are frantically applying those nostrums and remedies which custom and belief have led them to believe will effect a cure. These political measures are nationalistic in their outlook. They deal with tariffs and subsidies and seek to improve the conditions of the capitalists in single nations, having no reference to the whole world nor its problems. Industry is international, and today the social life of peoples is international, as it depends upon industry.

Selfish national measures, instead of aiding the industrial situation tend only to further disruption. Tariff walls against the commodities of foreign countries prevent the recovery of exchange and foreign finance. Industry suffers and retaliatory measures nullify any benefits that might accrue to the first nation.

Normal outlets for surplus values have in the past been supplied through foreign investments, loans and development schemes. Preparation for war armament, munitions, etc., has always been an exceptionally profitable matter for nationalistic-minded capitalists. There is a tendency today to economize on war programs. Whether or not it will have effect, in curtailing the extravagant expenditures on war material remains to be seen.

Social conditions are in the hands of men who look at things through the eyes of business enterprise. Business management, that thinks in terms of profit and loss and curtailment of overhead expense, rather than in terms of industrial production is unable to conceive of any means to bring back industry to something like a normal state.

With millions of people throughout the world facing starvation, conditions are rapidly reaching the state where a solution must be had. There is no solution other than the complete abolition of the capitalist system. All power must be assumed by the working class. Industrial problems can only be solved by dealing with the material facts of industry. To get at these facts and to put the machinery in motion to achieve betterment, the empowered working class need to convoke congresses of industrial engineers.

The organizing of these engineers and experts to work with the industrial unions is a problem which we are facing today. Upon the correct solution of this problem depends largely the welfare of the future race.

Production for use instead of for profit is the only alternative to social chaos.

### Russia and Germany

Russia and Germany today are centers of complex industrial issues. As yet, Russia has not had time to develop foreign trade to any large extent. Most of her trade has been in the line of imports. Exports have consisted of such materials as flax, lumber, timber, etc.

The development of the Russian international trade depends upon the ability of the Soviet Government to speed up production in the Russian industries this summer.

Everywhere in Russia there is swarming activity. The organization of industry for immediate production takes precedence over every other question. In order to produce goods, food is the essential thing. The crop situation of Russia is perhaps the most vital point of the whole situation. So far, the harvest appears above normal, pre-war days.

Only the upper Volga which is a semi-arid country and only occasionally gives good crops reports a failure. Organs for barter with the peasants are being prepared, in order to swing this great agricultural production into international trade channels.

Transport facilities are being vastly improved. Trains that a year ago could travel only 50 versts in 24 hours are now making 400 in the same time. Special lines have been made more efficient than in pre-war days. From Omsk which is a great grain center in western Siberia, to Petrograd the time used to be 10 days on fast freight shipments. Today the provision trains are making it in 8 days.

Through trains are running from Odessa, via Kiev and Moscow to Petrograd. Everywhere the transportation problems are being attacked and solved with vigor.

The arrival of shiploads of fuel and food in Petrograd has relieved an immense amount of railroad equipment for important industrial transportation work in the interior. This fall will see Russia billed to play an important part in the international trade activities. Their industrial production is well on the upward trend.

The German industrial position grows more hopeless day by day. For quite a period German capitalism was regaining its grip on the markets of the world. Activities were becoming intense in great German plants.

No sooner, however, did the flood of German goods commence to pour out than the capitalist governments in the other countries took steps to offset this German advance. Restrictions of all sorts then met the German capitalist in his attempts to market the products of his poorly paid workers. The situation among the working class is growing worse. There seems to be no outlet for German material except in the direction of Russia. This outlet has not been exploited except in specialties. Pressure, however, is forcing the German capital to find markets in Soviet Russia.

There is little unity at present in the ranks of the German working class. The communist uprisings at Halle seem to have been premature and

ill-advised. At present German courts are dealing out sentences to those communists whom they have been able to capture, and on whom they are fixing the responsibility for the trouble.

The breakdown of the capitalist system is becoming more acute daily. Among the working class, however, no real, efficient, detailed plan or program has been advanced. The rebel spirit by itself seems unable to solve the difficulties of a proletarian revolution.

### Scandinavia

In the Scandinavian countries the working class is active and is in a better position economically. Sweden is enjoying some measure of prosperity through her trade with Russia. This trade is increasing the percentage of her total exports.

Norway is in the grip of a marine workers' strike and a general strike has been declared to support the mariners. This general outbreak started in Bergen, in the north of Norway and spread rapidly to the industrial and sea-port towns.

### Great Britain

In Great Britain the miners' strike was settled by compromise, and the situation there was treated separately in this magazine.

### France

In France the labor movement seems to be going through a process of reorganization and centralization. They are preparing for a final struggle. Industries are in worse shape now than at the close of the war.

### Small European Countries

In Italy, Spain and Portugal the White Terror has been running rampant. In Poland there is open rebellion amongst patriots against the German victory in the Silesian plebiscite. A practical state of war exists in Silesia. Whole areas refuse to recognize the German authorities. Production is at a standstill. In the Balkans, capitalist rule is only maintained by means of well-organized White Guards.

The Great strike of Jugo-Slavia has left a bitterness and a class hatred that makes reconciliation and compromise impossible. In Bulgaria and Roumania conditions have improved slightly since winter but no solution of the production problem is in sight. Organization of the workers is carried on under greatest difficulties. Persecution and terrorism are used to keep the workers in submission.

In Egypt, the nationalist, anti-British movement has grown to tremendous proportions. Rioting has repeatedly broken out in Alexandria. All the dependencies of Great Britain seem filled with revolt.

### Japan

In Japan the revolutionary workers have made great strides in organized and co-ordinated activity. Strikes and demonstrations have shown unheard-of solidarity. Among the ship-yard workers especially, has the revolutionary spirit and organized action been seen. According to the capitalist press a new revolt has broken out amongst these workers at Kobe. It was reported that they had taken control of the yards and were defending their position against all attempts to dislodge them.

### China

In China the revolutionary spirit is more of a nationalistic movement aimed at the imperialistic policies of Great Britain and Japan. Industry being in a handicraft stage, no industrial movement of any size is in existence. In the few industrial plants that are in operation the workers there are like the Japanese fellow workers—very revolutionary.

The tremendous suffering of the Chinese through famine and disease has not produced any corresponding growth in revolutionary spirit. It seems that all Chinese rebellions have been personally organized and are not the results of spontaneous uprisings. The best laid plans have always won. Industrial depression, famine and disease are sapping the life of millions of Chinese people. Yet this has been the chronic condition for thousands of years.

### South America

In South America industrial breakdown is more acute than elsewhere. In northern Chile nitrate deposits are closed up. The shipping of Valparaiso has dropped off to very little. Hundreds of thousands are without work.

In Peru the great copper camps of the Guggenheim and English syndicates are closed to the workers. Silver mining in Bolivia is still going ahead and the biggest mining camp in the world still holds its lead now, far ahead of Butte, Montana which once ran a close second.

The rest of South America shows conditions of depression. Organization is met with the persecution and the mailed fist of the state. At that, however, progress seems better than in North America, for the workers are getting together for action.

### Australasia

Australia, New Zealand and the islands of the East Indies all reflect the same general conditions of the rest of the world. Especially miserable is the lot of the Hindu coolies working in the big industrialized plantations in the islands. That a tremendous spirit of revolt is growing amongst them can be seen by the occasional news of uprisings, revolts and reprisals that leak out.

Never was the need of a definite centralized industrial and social program so necessary. As if to fill this imperative need, the Red Industrial International met in Moscow on July 10th. Upon their adoption and prompt carrying out of a definite constructive program depends the welfare of a stricken world.

Intelligent revolutionists averywhere must place their abilities and energies in the elaborating and carrying out of the world program, else civilization itself is doomed. There is one hope: World wide working class action.

# DEFENSE NEWS

ATTEMPTS are being made in almost every state in the Union to suppress the activities of the I. W. W. Particularly so in the harvest fields where the I. W. W. is carrying on an extensive campaign of organization. In Kansas and Oklahoma hundreds of members are being arrested for having literature and cards in their possession.

In the state of Kansas where an injunction against the I. W. W. exists, members are being thrown into jail, some being charged with criminal syndicalism, and in many cases no charge whatever placed against them. In quite a few instances cases are pending with the possibilities of the men having to go to the penitentiary.

In South Dakota the newspapers have already started their campaign of inferences, insinuations, and lies. This is done for the purpose of justifying the persecution that has now commenced. Those who are thrown in jail have charges of vagrancy placed against them, a technical charge that is being overplayed by the agents of our masters.

Yet in spite of all the persecution the membership of the I. W. W. go merrily on, talking to the slaves of the necessary remedy to change existing conditions. In California where the agents are bending every effort to break up the I. W. W. they only lend impetus to the organizers and delegates.

Charges of criminal syndicalism, vagrancy and a number of other fake "crimes" continually used against workers and their organizations, have not disheartened the membership but on the contrary, has made them more determined than ever to place the industries where they properly belong.

New agencies are being organized by the employers to combat the I. W. W. and other liberal organizations. These new bodies parade under the name of the Ku Klux Klan and the Commercial Club. They are using the war time method of tar and feathering, whipping, and deportations. The capitalist press in its silence acquieses.

The county and state officials are rather encouraging these mobs and in some cases are giving a helping hand. It is known fact that the farmers in the harvest disapprove of these tactics, but they themselves are sometimes threatened if they should give more wages than is set by the Commercial Clubs.

The members of the I. W. W. realize the gravity of the situation. They realize that it is an attempt of the powers that be to suppress every bit of acivity that the American workers might show. Unless something is done, mob rule shall again prevail in America.

There is but one answer to the challenge of the masters who are bending every effort toward destroying the organization, and that is for each and every member to rally to the support of the principles they believe and the organization stands for. It is only by acting together can we win. Solidarity should be our watchword.

The General Defense is in need of funds to supply relief for the dependents of those men who are now imprisoned in the various jails and penitentiaries throughout the country and for comforts that are denied the defendants themselves.

We want every member to send in something, no matter how small the amount may be, and to get others to do likewise. By our action, let us show the boys that we haven't forgotten them. Let us make our answer to the master emphatic.

Donations should be sent to the General Defense Committee at 1001 W. Madison St.

**Harry Feinberg**, Sec'y.

# RAILROAD JUGGLING

**By Jan Rus**

UPON the balloting now going forward among the 2,000,000 railroad men of the country will depend whether the nation's transportation system will be tied up or not this fall. They are voting upon the proposition to accept or reject the ruling of the United States Railroad Labor Board abrogating the national agreements, which the unions affiliated with the American Federation of Labor hold to be indispensable if present working conditions are to be maintained, let alone improved. The board, prompted by the importunities of the railroad managements of the country, ruled that the national agreements are unworkable, cumbersome, and that they should be displaced by local arrangements that would permit of a looser form of agreement to exist between employers and employed.

Whatever merit there may be in this contention it is a fact that once local agreements are put into effect the railroad brotherhoods will find much of their power gone and once labor organizations, no matter how yellow they may be, lose even a particle of the power they have gained through years of fighting and negotiation so much the worse for the radical labor movement in the United States. Of what use is the yeast if there is no dough? No matter what happens, unions, as such, must be kept intact, and that is not to say no effort, however small, must not be made to convert them to more modern forms of industrial organizations.

And so the railroad unions, independent or affiliated with the American Federation of Labor through the railway employes' department, will find themselves either losing what they have gained or all but maintaining ground conquered only after much hard fighting. The rank and file have the

issue in their hands. Tom, Dick and Harry have it in their power to decide whether the national agreements shall continue or whether their unions shall deal individually with the roads in all parts of the country. The latter will mean, that, though their work is identical, a freight handler in Boston, compared to a freight handler in San Diego, may receive preferential treatment, not because of any inherent strength in the union to secure more favorable terms in Boston than in San Diego but because of certain other conditions obtaining that will compel the union to temporize on the question of working conditions.

It is only necessary to bear in mind the phrase "local agreements" to get the full impact of the chaos to which the labor forces of the nation must revert if local agreements go into effect. Even under national agreements, uniform and liable to but one interpretation, there is enough delay in getting wrongs righted and squables settled. But local agreements can mean only a sort of guerilla warfare that would augur badly for the nation's transportation system. The carriers would contest every difficulty with all the means, legal and extra-legal, at their disposal. And there is a suspicion that this is what they desire. They want to reduce the roads of the country to such a pass that to bring some order into the system the federal government would be only too glad to pay and pay handsomely for appropriating the lines, lock, stock and barrel. The managements already have had a taste, sweet to them, of the public treasury, and they are crying for more to the tune of $800,000,000 at least.

Rea, of the Pennsylvania railroad, recently informed a listening public that this amount of $800,000,000 would hardly cover the disparity between what labor was being paid and what labor was really only worth to the roads. For good measure he added a few other items of a few millions or so, for repairs found necessary after the government returned the roads to private ownership, all this in spite of the fact that grants of several billion have been made out of the United States treasury since the memorable March 1, 1920.

We may be sure that if Uncle Sam did take over the roads for good his right hand would not know what the left was doing, and government ownership under any plan than that of out and out confiscation would be on a par with that form of state socialism in which the future is mortgaged to pay for the dissipations of the present and the past. Through years of exploiting the lives of others a certain class in this and other countries has grown so accustomed to profits that a form of society where profits are withheld is quite incomprehensible to them.

And so any nationalization scheme that the railroads might advance as being the only solution of the mess into which they with their money-grabbing hands have brought them would have to be taken with a barrel of aslt.

It would not be a sudden change of heart on their part. In fact it is quite on the books that the nation would wake up to find itself in possession of a gold brick. The stockholders would continue to draw dividents and interest on dividents; the directors their fat fees; the managers the high prices for their valuable services. And not only would the nation be paying for these but in addition would have the cares of ownership upon its head.

There is every indication that the roads are contemplating some such move. W. W. Atterbury, of the Pennsylvania Railroad, appearing before the United States Railroad Labor Board some time ago, and speaking in behalf of the managers of other important roads, startled his hearers by declaring the carriers were facing immediate bankruptcy. This camouflaged as a reason for redecision of the board to cut pay 12 and 15 per cent, according to classification among the employes, proved to be successful. But it is highly probable that there was something else than a mere reduction in wages behind it.

Atterbury, egged on by his formal competitors, who, behind the scenes, are his best friends, sobbed out the confession as a piece of stage play destined to prepare the public for the grand finale. Too great a shock would never do.

To carry out the tragi-comedy to perfection the abrogation of national agreements is yet another of the properties necessary to the capitalist art of deceiving the public. These fellows are excellent at sleight-of-hand. Now you see it; now you don't. Hey, presto! You thought you were looking at labor getting its just reward and with a start you find your own pockets were being picked.

## A NEW PERIODICAL

**A new periodical is now added to the list of publications being put out by the Industrial Workers of the World. It is published in New York City by the M. T. W. I. U. No. 510. Full of breezy organization news and timely articles of value to seamen it should be well supported by the membership in seaport towns.**

**The Marine Worker will be published every two weeks, the 1st and 15th, and will contain articles pertaining to the marine industry the world over and especially the work of the delegates of the M. T. W. in the ports of the United States. The Marine Worker is for free distribution and the only means of financing it will be through voluntary contributions from the workers who want to see the I. W. W. gain in the Marine Transport Industry.**

**Address is:**

**THE MARINE WORKER**
**P. O. Box 69, Station D, New York City.**

# TO MARINE WORKERS OF THE WORLD

**Organize to Overcome the Capitalist Sea Wolf**

Moscow, Russia,
May First, 1921.

Fellow Workers:

CAPITALISM is suffering from one of its inevitable crises which recur. The old system is tottering to its end. It has long ago failed to satisfy the needs and desires of the human race. No intelligent workers can find an apology for its continuance. It must be destroyed by the people who suffer. It is only power that can count. And to commence in that great work is the task of the marine workers of all the seas and the oceans.

Fellow workers of the sea, let us hail this sorrowful First of May by resolving to construct a form of organization that will render us invincible. The capitalist class have nothing to offer us except rags, poverty, and hunger. We refuse to die of hunger in a world of plenty. We refuse to sleep beneath the stars of heaven while there are houses, beds, and linen occupied. We refuse to wear rags while there are clothes to be had.

Let our slogan be, "The abolition of the system of robbery which men call capitalsim." Let all our efforts be towards converting the ruling class into useful workers, and placing the great industry in which we work under the control of the workers. The marine transport industry has within it thousands of sober, intelligent, capable fellow workers, who are as competent to organize it on a modern proletarian basis as the other class are incompetent.

We refuse further to be lured by the promise of unemployment doles on the part of the various governments, and we refuse to be further misled by the yellow fakirs, who murder every strike, sabotage every effort by the marine workers to improve their standard of life. We declare war upon local and national unionism and its upholders, the pot-bellied bourgeoisie. The world is big enough for us, and the sea at least shall no longer be the property of the monarchs of ocean transport.

Our logical position today is to establish for the earth one organization for all workers on ships and wharves, regardless of nationality, creed, or colour. We will place our religious and color differences on one side, and organize as a class. The working class first, last and all the time. The foreign proletarian is more to us than the bourgeoise of our native countries. Universal organization, one union for the definite and final control of the great marine industry, is our programme. The mastery of the industry will be determined, not by fine words or well-polished phrases but by actual, tangible, concrete power. The one big union of the marine transport workers will possess, when organized, such power.

To this end the Provisional Council for the convening of the Marine International have decided to hold a congress for all marine workers in the historic city of Red Petrograd during the month of August of this year. The general principles outlined for this new organization are as follows, and all marine workers are requested to study them closely:

Name.—Marine Transport Workers Union, part of Red International of Trade Unions.

Headquarters.—To be fixed at congress.

Aims and problems.—To organize all the workers in the marine transport industry into one union. To carry on an active struggle against the national unions who oppose this organization, and who are based upon the premise that the workers and their masters have interests in common. To extend full protection to all members of the organization in all parts of the world. To exert all the efforts of the organization to take the industry into its own hands, and to render protection to workers in all regions of the earth.

Composition.—The organization will be divided into sections comprising the various elements of the marine industry viz.: wharf laborers, stevedores, coal and oil workers in ports, and the men employed on the deck, enginecrs and pursers' departments aboard ship. Also ship painters, cleaners and riggers.

Executive Board.—The Executive Board of the M. T. W. Union shall be elected by the congress, and shall continue in office until the following congress. This Board shall be composed of practical marine workers, and representatives of the various regions of the marine industry, who speak various languages and thoroughly understand the work in hand.

This executive shall standardize the work of organization and see that it is centralized in each port. As far as possible the offices of the different sections will be under one roof. Educational meetings will be regularly conducted, and newspapers and literature published in the language that is easily understood by the men engaged in ships and wharves.

Through the regional and port offices the Executive Board will acquire all data necessary to them taking the entire merchant fleets of the world and operating them. They will compile the tonnage of the different ports, the nature of ports, and the different types of ships. They will study the economical running of shipping to prevent trips in ballast and generally acquaint themselves and the members of their organization with the complete technique of the industry.

Offices.—Regional offices will be opened in the following ports, which may be varied from time to time owing to economic or political changes, viz., Goteborg, Christiania, Copenhagen, Helsingfors, Hamburg, Le Havre, Athens, Singapore, Sydney, Rio de Janeiro, Havana, Montreal, Reval, Rotterdam, Lisbon, Constantinople, Batavia, Wellington, Callao, Tampico, Petrograd, Antwerp, Barcelona, Port Said, Hong Kong, Durban, Valparaiso, New

York, Odessa, Liverpool, Genoa, Calcutta, Yokohama, Buenos Aires, San Francisco, Superior.

As far as possible each district will publish its own newspapers in the language of the region and a system of general distribution will be devised so that every region will have a continuous supply of such for every ship and nationality within its zone.

Control by members.—In all ports regular meetings shall be held of all the workers. In large ports, when neeessary, language sections may be formed. These meetings shall always be utilized to develop the ideas of industrial control among the members. Vital matters from port meetings shall be forwarded to the regional offiee and thence forwarded to the Exeeutive Board.

Dues and initiations.—The monthly dues shall be determined between the regional organizations and the Executive Board. These dues shall be as low as possible, and shall be arranged so that they coineide as near as possible with the eurrency rates and the wages paid in the different regions. For the maintenanee of regional offiees a per capita system shall be adopted that shall meet with the approval of the first congress. The system of dues shall be upon a monthly basis to simplify bookkeeping and a stamp system of payments utilized. Monthly accounts shall be kept.

Assistance.—In eases of vital necessity monetary assistance shall be granted to members during strikes and fights against the employer and the ruling elass.

Discipline.—Within the ranks of the Marine Transport Workers Union there shall be complete solidarity between all members regardless of eolor, religion, or nationality, oeeupation or profession.

Ships committees shall be elected from the various departments, and shall consist at least of two men, where the crew does not exceed 20. When the crew exceeds 50, one representative shall be eompletely released from all work for the carrying out of his duties. The duties of the ships committees shall be to supervise the work aboard ship, so that they may develop the self-reliance and the initiative essential. They shall inspect all supplies of food, and see that they are of the quantity and quality desired. They shall render reports in writing immediately on their arrival in overseas ports to the port offices.

There shall be regular meetings of delegates in the various ports. They shall concern themselves with dismissals, loggings, penalties, and see that the water line is maintained in a satisfactory manner. They shall be instrueted to inspect life boats, and see that all gear is in perfeet order. That the eargo is stowed without danger to the ship or the crew. The ships delegate shall be elected from the committee, and shall keep a journal of happenings during voyages. The committee shall be elected from the bottom up, and any member may be liable to instant reeall at the will of membership.

Things to be done.—The Marine Transport Workers Union shall engage itself upon the general standardization of remuneration, hours, and working eonditions for the whole industry. They shall keep in direct communication with all the various shipbuilding organizations, for the purpose of eollaborating in the needs of the workers in regard to the structure of living aeeommodation, etc. They shall legislate for the industry, approving terms of serviee and fixing the age limit for workers. They shall seek by every means to make the union capable of controlling the whole of the industry upon the disintegration of eapitalism.

Schools.—Marine and teehnical sehools shall be established, the serviee of which shall be free to all marine workers desiring to use them. Observatories and rescue stations would also ultimately eome under the eontrol of the union, as would all questions of cosmopolitan importanee affecting any part of the marine workers.

The general work of surveying, maintenance, and eontrol of light-houses and ships, beaeons, buoys, harbor and coastal signals will ultimately also pass into the hands of the union. The scientific and speedy handling of cargo and its supervision will come under the work of the union, as will meteorological studies, oeeanography, etc.

Fellow workers of the ports and ships, the hour has struck for the M. T. W. U. The old unions are breaking up. Their day is finished. They were as cowardly as they were useless. They failed in the great British miners' strike, and in every country the marine workers are fighting in strike and struggle against the ruling class and their own black-hearted traitors who have sold them again and again. The time is ripe for the new form of organization. With you, fellow worker, behind it, it must prevail.

In Moscow the Provisional Bureau for the preparatory work for the M. T. W. international is carrying on its work. The delegates and members of nearly 500,000 marine and river workers have studied this vital matter from every standpoint, and they are confident that the time is red hot for the holding of a great congress that will end the days of the rotten Seafarer Federation and woeful aggregation of deadwood that trades and snuffles under the name of the International Transport Workers Federation, and is guided by the hands of the most lamentable ereature, who ever climbed upon the shoulders of the trusting working elass, J. H. Thomas, who is a worthy colleague of the other unspeakable blaekwhiskered Thomas.

In Petrograd in the month of August this eongress will be held. Representatives from all the eorners of the world will be present, who are intent upon the positive and definite ereation of One Union for the whole marine transport industry. Come, then, fellow workers, and make history, and throw down the gauntlet to the magnates of ocean transport.

Long live the Marine Transport Workers Union, Universal and International ! ! !

COMMITTEE

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class has interests in common with their employers.

These conditions can be changed and the interests of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

# An Organized Harvest

By Wm. Dimmit

THE American grain harvest introduces into the tranquil life of the farm that form of labor division with machine processes that on a large scale marks the factory production of the bigger cities.

The American harvest worker is a migratory worker. The harvest including the threshing, lasts but a few months from the time that the first binder enters the fields in Oklahoma till the last bushel of wheat is separated in Alberta, Canada. The average harvest job lasts from nine to twelve days while the threshing rigs usually furnish employment for no longer than from twenty-five to thirty-five days.

From Enid, Oklahoma, to Northern Alberta is over fifteen hundred miles. Across these rolling plains in frontier days the migratory herds of buffalo used to pass twice a year. Today the migratory worker covers the entire distance working from job to job harvesting and threshing, transporting himself on freight trains with an occasional lift on the blind of a passenger, on foot and by borrowed lifts from local farmers.

These workers enter the harvest in Oklahoma or southern Kansas. They put in a week or two in one locality and having finished their work they get paid off. They either transport their wages on their persons as they climb on the freights or they send them to some distant place for safe keeping or they blow in at the nearest town. By far the majority carry the cash on them.

After riding on the freights till they have arrived at new territory where work is going on they disembark and enter into the harvest workers' hotel, the jungle. Here they cook their food, wash their clothes, sleep and rest up a little for the next job.

These jungles are situated in places handy to the railroads. They form the connecting link from job to rail or back to job again. Coming or going the worker passes through the jungles and partakes of their hospitality.

In days before the I. W. W. organized these workers, there existed and flourished a peculiar brand of outlawry in this western harvest region. A combination of high jacks (plain hold up men) and gamblers were organized and preyed on the workers throughout the harvest.

These parasites, like others of their kind that infested the big cities such as white slavers, gun men, stool pigeons and detectives of all shades, worked hand in glove with the police authorities.

They victimized the migratory worker traveling by way of freight and jungle from job to job. They were not a menace to the moneyed interests of the towns and were given a free reign by all the guardians of law and order.

Gangs of high jacks ruled the freights. Heavily armed and well organized they would pass down from car to car sticking up the travellers and exacting tribute from them. High jacks and gamblers ruled the jungles and if their gambling games were so crude as to leave the worker cold and uninfluenced they would beat him up, rob him or drive him out of the place.

Resistance to their armed rule was hopeless for an individual. Many a dark tale of cruel murder could be told of these early days. Many a beaten form was dropped down between the swaying ends of box cars to be ground to pieces beneath the wheels of the moving train. For workers to apply to the authorities was to be joked and twitted. There was no protection from these blood suckers of capitalism

except by the remedy that all parasites fear, and that is labor organization.

The conditions of work that force a man to become a hobo can be imagined. Conditions of the job were not in most instances fit for cattle. Long strenuous hours of labor under a scorching sun, poor food and no place to sleep are things that cannot be tolerated always.

The I. W. W. entered the field. It organized the workers on the jobs, on the trains and in the jungles. The organized harvest workers fought for better working conditions and declared uncompromising warfare on the high jacks and gamblers.

Following the Harvest.

The improvement of working conditions is a matter of record. Hours have been shortened and food improved wherever the organized workers on the job have understood and practiced the tactics of the I. W. W. Still they are far from being satisfactory. Still the battle goes on for better working conditions and better pay.

But the high jack has not been tolerated. That he resisted with all his treacherous brutality cannot be doubted. His rule of freights and jungles could only be overcome by organized force. Law and order cared nothing for the migratory workers. The law is not made to protect such as they.

The workers organized their train and jungle committees. Many a pitched gun battle in inky black box car or hand to hand combat on the top of swaying, rattling freight trains have marked the elimination of the high jack and his fellow the gambler. Today workers' committees rule the freights and jungles and these committees are I. W. W. committees. That they have freed themselves from the leeches of the old days is due to nothing but their organized fighting ability. It is the way to the elimination of all parasites.

The first drive by the I. W. W. was in 1915, but was not very successful except as they learned by their failures. Definite plans of action were laid and in 1916 the famous harvest drive was put across that generated such vitality in the whole organization that it was able to withstand the ferocious attacks of subsequent years.

In the time during the war there was little activity in the harvest compared with 1916. The organization was taken up with defense work. No coordinated plans were laid down. High jacks crept back into bold activity and together with the rest of the organization things seemed to be failing.

In the fall of 1920 the agricultural workers' convention in New Rockford, North Dakota, nominated their new general officers and laid plans for real work in 1921. Early in the spring of 1921 the General Organization Committee met and detailed plans for the drive that has rejuvenated the I. W. W., were laid.

Careful study was made of the physical facts of the harvest country and the industry. The militant forces of the organization were centered at the beginning of

the drive at Enid, Oklahoma. Their activity started the ball rolling. From Enid they moved with the ripening crop in a wedge shape spreading out like a huge fan up through Kansas, Nebraska, South Dakota, and at this date are entering North Dakota and Minnesota.

Each section of this immense area was studied. At every strategic point in the entire country was placed one of the members of the G. O. C. who furnished supplies and gave information and directive advice in the momentum gathering drive. Committees were on the trains. Committees had charge of the jungles. Job delegates were on the job. Everything had been provided for in this great, inspiring, well planned drive to organize and educate the harvest workers.

In the past the harvest drives have been subject to much criticism because of the lack of educational features for the new members. In this drive from July till August, in scarcely a month, 160,000 new leaflets have been distributed to the harvest workers. 40,000 pamphlets have been sent out, all this besides the thousands of copies of Solidarities, Industrial Workers, and Industrial Pioneers that are sold to and read by the harvest workers.

Never was such an educational drive carried on by the I. W. W. The workers everywhere are alive to the need for understanding and are eager to get knowledge of the system of society that has so lately and rapidly thrust them into war and then into the degradation of unemployment and misery.

Up to August first over 5000 new members have taken out cards in the I. W. W. That these workers will stick to the organization is the firm belief of all who are in constant touch with the changing phases of the thousand mile picket line. Hundreds are stamping up ahead getting ready for the times next winter when organized action will be more necessary than now and they may not have the money to pay up with. The I. W. W. spirit has come back with such a wallop that every one has been surprised, old time members most of all.

To enumerate the little job battles over this great area would be to fill volumes. Everywhere that pep was shown for betterment of conditions and wages the workers have won hands down. That they have met with some defeats is to be expected. That the law has snatched off its quota of victims is the usual thing but the drive sweeps on and gains such magnitude as to be irresistible at the present writing.

On the jobs throughout the wide wheat belt the binders were at work rolling out the yellow bundles for the shockers or

**Old Style Reaping—Binding by Hand**

stackers to handle as the case may have been. Shocking or stacking grain in the broiling sun is a terrific job. Men used to inside work can seldom stand it. But the clumsy looking binders cut swath after swath and the grain shocked or stacked is ready for the threshing.

In some places the combine threshers cut, thresh and sack the grain at one operation. These are big, unwieldy machines

**WOWIE!**

that are usable only on large, well levelled fields. If one part of the machine goes wrong the entire work is stopped. They are not the decided success that they were thought to be a few years ago. Dust clouds fill the air and the great automaton moves on with its productive task. How different from the old style mowers and hand binders!

Where the binding and threshing is done separately as is the rule the compact threshing machine or separator comes around, some weeks after the grain is cut.

On every crew of workers the I. W. W. is a living force. On the binders and amongst the shockers, pitching bundles on the stack, or sewing sacks on the combine, feeding the separator or hauling the grain there will be found men carrying red I. W. W. cards, reading I. W. W. literature and thinking and talking I. W. W. language. The harvest drive is a big success.

A delegate was arrested at Devil's Lake and the workers at once pulled a general strike in the whole county for his release. In short order he was back on the job. At Valley City in the same state of North Dakota a delegate was arrested within the last couple of days. Already from farm to farm throughout the county the work has been passed to strike unless this worker is released unconditionally.

With this force of the I.W.W. generated in one month with the use of coordinated plans by determined workers, think what could be done to the criminal syndicalism laws of the more southern states next year if we entered the harvest with the workers that we now have organized.

Down through Kansas and South Dakota the fellow workers who now are lying in jail for their working class activities would be free. There is but one way to secure the workers' rights and that is to organize and fight for them. Organized power gets the goods.

By the time of publication the drive will be entering Canada, stronger, more virile and with greater spirit and solidarity. Already plans are made to divert part of this great organized force out to the coast to take in and organize the beet, apple, and potato workers of that section.

Part of this great army are going into Colorado to take in the beet and potato work there. Then will commence the big new drive on the corn huskers. Plans have been laid out for this drive for the first time. Iowa, Nebraska, South Dakota and Minnesota will be covered again with the great thousand mile picket line this year. The I. W. W. has come into the ring again. With its new spirit, with its new planful methods of attack and new tactics, hard learned from lessons of the past, it will be invincible. On with industrial organization. All power to the Industrial Workers of the World.

**A Combine Thresher and Wobbly Crew**

# Industrial Research

OUR Department of Industrial Research should be developed to the highest degree of perfection. The importance of this department is, perhaps, not sufficiently recognized. Let us consider the reason for its existence, and how it is designed to function to perform an anticipated need of the workers.

In the end, the social revolution is not a matter of free verse poetry and cubist art, nor even an armed uprising, but is the act of a new class in society assuming the control of production and distribution of those things which men must have to live. There is no revolution until this act has been consummated. It is entirely possible that conditions will develop here in which this may be accomplished.

One need not be an oracle in order to predict great rebellions of the workers. Whether or not these rebellions will culminate in the social revolution depends entirely upon the workers' ability to organize, to seize power and then to use it upon a higher and more efficient plane than is possible to that class which at present rules.

A rebellion can at most but deprive the present masters of their power. The workers' power can come but from themselves. If this power is not immediately developed and held by the workers and applied to the direction of the economic functions of society, then indeed there has been no revolution but merely a revolt. A rebellion is merely an emotional outburst, while the social revolution is entirely a matter of intelligent action.

Even at the present time there is plenty and to spare of rebellion, but it is of a sporadic nature, it lacks co-ordination, and has in general little or no immediate revolutionary significance. We are, in truth, a nation of scissor-bills, for in us the contradiction of the existing economic system finds its reflex in our emotions, hardly, if ever, in our intellect.

This process, in turn, is reflected in the acts of individual or local group revolts, seldom in conscious effort to seek cause, effect and remedy. There are, however, potent forces at work which tend to co-ordinate these revolts and to make clear to the workers the cause and cure for their economic ills. To do this, is of course illegal and cannot be done by any organization without great loss and hardships on the part of the active members.

The spirit of revolt, however, should not be discouraged, nor should those who seek to direct it to practical ends be condemned, but it is the peculiar revolutionary duty of the I. W. W. to organize the workers for the tasks of production and distribution in the coming new society.

We must be fully prepared to place at the workers' disposal the most perfect economic organization, and to supply these with the most detailed information upon all matters of production and distribution. Against that day we must now gather facts, facts and more facts, numbers and statistics. Every available tool in the country must be listed, all processes fully understood by our own specialists, all sources of supply must be known as well as the wants of all localities.

All this, and more our industrial engineers must have available, and it is the work of the general membership to collect this data. Each branch should have a secretary of industrial data who will collect this information from the members, and classify it and forward it to the Bureau of Industrial Research. This bureau should be composed of our best revolutionary engineers and they, in turn, will digest this acquired information and prepare it for the service of the workers in the old and new society.

Then, if the workers accomplish a successful revolt, the machinery will be at hand for these to immediately take up the tasks of production and distribution with little or no confusion, and they shall be secure against the expropriated "owners" efforts to sabotage, thus escaping and eliminating a most painful period of transition, an example of which we have recently witnessed.

Our engineers should make known to the fellow workers just what information is required, and each should exert every effort to acquire it. The idea should be developed to the point of economic espionage, so that no machine or process shall remain a secret.

**Bud.**

# Economic Determinism

By Mary E. Marcy

THERE are three well known ways of explaining history. Some folks believe a God or Gods reach down from Heaven or Olympus and take a hand in the affairs of mankind. They believe in the theological interpretation of history. Others insist that if the years had not been occasionally sprinkled with Great Men, who stepped into the arena and yanked society forward, we would still be living primitive lives. They fancy that all the progress of the human race has been caused by a few hundred men of genius who found some great New Idea and led the people into new paths. In almost all colleges, schools and universities the teachings of history are based on this Great Man theory.

Then there is the economic, or materialistic conception of history, based on economic conditions, methods of production and the class struggles which arise from these between the makers of products and the takers of products.

The materialistic conception of history teaches us that the method of production determines all the institutions of a country, the governments, the laws, the press, religions, education, in fact the intellectual life of the people.

Instead of believing that the great ideas of great men pulled us forward, we know that economic need forced us to struggle forward.

The believers in the great man theory would say that we might just as well have had industrial unionism in the middle ages (when almost all production was carried on by serfs, tied to the land) as now, provided only that some man had been brilliant enough to think of it. They do not understand that it required machines and machine production to release men and women from the farms and from hand spinning, hand weaving, etc., etc. so that there would be an available supply of laborers to employ in new factory enterprises, and that it is modern machinery and modern productive methods which are taking the skill out of the workers and putting it into the machine. This reduces skilled and unskilled workers to the same level and the pressing need for industrial unionism arises.

When I studied English history at school I would have told you that the history of England was the story of the kings and queens, their quarrels, love affairs, marriages and deaths. To me history meant courts and parliaments, Senate and Congress, while these institutions, as the materialistic conception of history teaches us, are only the result, the superstructures catering to the economic needs of the exploiting classes.

During the days of kings and serfs all the laws were about the rights of the king, the duties of the nobles to the king, taxes, the rights of the lords, giving him power over his serfs, the duties of serfs toward their lords. And all the teachers and priests and preachers taught the people that these were right and everlasting. All the institutions did reflect the mode of production and the interests of the ruling classes as the materialistic conception of history teaches us they have always done.

Nobody thought about railroad legislation in those days because there were no railroads. And nobody thought of limiting the hours of the work day. These ideas came after factory production when workers were gathered in groups and could communicate with each other readily, could organize and fight for their demands.

In the early days in America it took nearly all of the people all the time to supply the actual necessities of life. Then came the steam engine (which burned wood for a long time) but which carried products from one part of the country with much less labor power than transportation had formerly required. People could send their products to a central point by railroad; and villages grew up. Farm machinery liberated some of the farmers from the land and small machine-operated factories began to spring up in the towns.

The farmers migrated to the towns to get work. And every improved method in production threw men out of work somewhere and enabled the rising capitalist class to hire them for wages in new factories.

And the towns grew into great cities with mills and shops and factories. The population of the cities became greater than the number of people engaged at work on the farms. And always there were class struggles—struggles over the product of the workers, whether the employers should have more or the workers more.

We can see how impossible it would have been for men to start great industrial institutions in the old days before the railroad, steam power, machinery. Men and women could not be separated from the land. There was no great army of unemployed to hire. And all this American history has been made by a change in the methods of production and distribution. The laws changed; the teachings of the college professors changed; the churches changed; the press changed—all to meet the needs of the rising capitalist class.

All the kings that ever lived were unable to make as much real history as the steam engine, or the spinning jenney, or the farm machines, or the cotton gin. These new tools changed the whole lives of the people, changed the whole face of the country.

And this is economic determinism, meaning that the economic conditions determine.. This is what we call the materialistic conception of history.

**Boss (arguing with striker): "ME work???? An who in hell'l be left to pay ye yer wages ye fool!"**

# Oil and Oil Workers

By Albert Barr

LONG ages before the enslavement of one man by another and longer ages before anything even remotely resembling modern civilization existed, oil was evolving, drop by drop, in old Earth's chemic depths—evolving, accumulating, awaiting the time when a certain desire of man's would drive him to seek an assistant to the functioning of the machines he had builded as a result of other desires. Yet the liquid treasure that the ages had stored was not drawn upon until, in the late 50's of the last century the treasure house was smashed open with a giant steel drill a short distance from Pittsburgh, Pennsylvania, U. S. A.

Swiftly around the industrial world went the news that crude mineral oil had been found in large but unknown quantity. Every intelligent owner of machines knew not only that a new industry had been born, but also that the way had been opened for rapid and almost unlimited advancement in his own industry; and but a few years elapsed after the finding of oil, before that oil became an industrial necessity.

With remarkable swiftness there sprang up in Pennsylvania many "boom" towns inhabited chiefly by men who had money to put into the new industry and men who had nothing but hard muscles and a desire to live. New wells were drilled; new fortunes were made certain; and a new slave group—oil-field workers, sires of those who were to be shot down at Bayonne, of those who were to be mobbed at Tulsa, and of those who were to be sent to Leavenworth from Wichita—was added to that larger slave group—the working class.

The first oil shipped out of Pennsylvania was barreled and floated on barges down the creeks and rivers. In a few years, however, came the pipe line. And the pipe line's quick coming is typical of the application of improved mechanical methods to oil production. The industry originated lately enough to have profited by all that other industries had been long years in evolving.

From Pennsylvania, the oil industry spread westward across the United States. With the growth of the industry went the growth of the oil working group of the working class; and with the growth of this oil working group went inter-group specialization of function—one man becoming definitely a driller; another a pipe-liner; another a pumper, and so on. And concomitant with this growth of specialization went what we may call functional clannishness—the hobnobbing of "tankies" with "tankies," pipe-liners with pipe-liners, etc., etc., each group isolating itself from and treating with contempt all other groups. To be sure, the owners of oil property encouraged this proneness of workers in one line of oil production to treat with contempt the workers in other lines, as it made and still makes for lack of working class solidarity.

As oil production in the United States spread westward, all oil-producing and many other states were dotted with a new kind of industrial plants—drilling rigs, earthen and steel storage tanks, refineries, gas-pumping stations, gasoline plants, etc., etc. As the total production for the United States increased, the number, size and modernity of these plants also increased; and while the total number of oil workers also increased, due to the addition of new fields to already producing fields, improved machinery was displacing men in certain lines of oil production. This displacement of man by machine continues in the oil industry as in all industries.

From the United States the oil industry leaped around the world. For 1918 the figures for oil production (figures compiled by the U. S. Geological Survey) are, in barrels of 42 gallons:

| | |
|---|---|
| United States | 355,928,000 |
| Mexico | 63,828,000 |
| Russia | 40,456,000 |
| Dutch East Indies | 13,285,000 |
| Roumania | 8,730,000 |
| India | 8,000,000 |
| Persia | 7,200,000 |
| Galicia | 5,592,000 |
| Peru | 2,536,000 |
| Japan and Formosa | 2,449,000 |
| Trinidad | 2,082,000 |
| Egypt | 2,080,000 |
| Argentina | 1,321,000 |
| Germany | 711,000 |
| Canada | 305,000 |
| Venezuela | 190,000 |
| Italy | 36,000 |

The figures for total production from 1857 to 1918 in barrels of 42 gallons are:

| | |
|---|---|
| United States | 4,608,572,000 |
| Mexico | 285,182,000 |
| Russia | 1,873,999,000 |
| Dutch East Indies | 188,389,000 |
| Roumania | 151,408,000 |
| India | 106,162,000 |
| Persia | 14,056,000 |
| Galicia | 154,051,000 |
| Peru | 24,415,000 |
| Japan and Formosa | 38,498,000 |
| Trinidad | 7,432,000 |
| Egypt | 4,849,000 |
| Argentina | 4,296,000 |
| Germany | 16,664,000 |
| Canada | 24,426,000 |
| Venezuela | 318,000 |
| Italy | 974,000 |

U. S. figures are limited to quantity marketed.) These figures show that while there has been some changing of places among other countries, the United States has always been easily the greatest producer of crude oil—producing 67.82% of the world's total in 1918, Mexico coming next with 13.58%; from 1857 to 1918 the United States produced 61.11% of the world's total; Russia coming next with 24.66%. And from the following table of production for 1919 by fields, in barrels of 42 gallons, it will be seen that the Mid-Continent field is the largest producer in the U. S.:

| | |
|---|---|
| Mid-Continent | 196,891,000 |
| California | 101,564,000 |
| Appalachian | 29,232,000 |
| Gulf | 20,568,000 |
| Rocky Mountains | 13,584,000 |
| Illinois | 12,436,000 |
| Indiana | 3,444,000 |

The growth of oil production in the United States from 500,000-42 gallon barrels in 1860 to 377,719,000 barrels in 1919 followed the demand for oil and more oil, as more industrial uses for oil were found. As exemplifying the fact of the necessity for oil in the present social and industrial scheme, consider the minor fact that the number of officially registered motor cars in the United States for 1921, is 12,000,000. These cars, excepting perhaps one half of one per cent, are driven with gasoline, one of the most important of oil by-products. As exemplifying the anarchy of the present methods of oil production—production for profit—consider the important fact that the Capitol Crude Oil Co. has a refinery—their only refinery—at Santa Paula, Calif., with a total daily capacity of only 40 barrels, while at Bayonne, N. J.—Bayonne, city of evil reputation where the lives of 18 striking oil slaves were ended by company-gunmen's bullets—The Standard Oil Co. has a refinery with a daily capacity of 88,000 barrels.

On the part of the large oil companies there has been, of course, some striving towards concentration of plants and coordination of working forces; but even so, the waste of effort in the oil industry is notorious.

In 1916-17 the Oil Workers' Industrial Union (I. W. W.) carried on a vigorous organizing campaign in the Mid-Continent oil fields. The oil workers responded to the call of the I. W. W. for organization, some thousands joining and remaining in the union. The oil companies expressed their resentment of the I. W. W.'s activity at Tulsa in 1917, by organizing a mob of very law-abiding citizens to beat, tar and feather a group of active I. W. W. oil workers; and in Kansas with the well-known Wichita indictment, on which 26 men were sent to Leavenworth prison for terms ranging from 3 to 9 years. With the last-named atrocity, organization work in the oil fields ceased, unfortunately.

After the signing of the armistice, hundreds of soldier workers went back into the oil industry; the labor market became swollen and the unusual wages paid to oil workers during the war were cut and working conditions became bad.

Now, since the supply of crude oil surely cannot be unlimited; since present methods of oil production are extremely inefficient, and wasteful of oil and energy; and since the great mass of oil workers is unorganized—two things must be done:

The oil workers must be organized industrially; and such plans must be made as will insure rapid and complete concentration of energy in oil production when the oil industry as we know it today crashes in the general—and inevitable—collapse of the capitalistic system of production. Both of these tasks are gigantic and cannot be completed without hard thinking, hard working and hard fighting. Therefore, the sooner and more seriously they are begun, the sooner will they be completed.

# The American Railway Industry and its Workers

**By W. J. Lemon**

THE railway industry of America is not only the largest industry in the nation, but with its 2,000,000 employees in times of prosperity is in all probability the largest in the world. In America as in all countries it is the key of the key industries; it is the connecting link of all industries. Industry would cease should this vast network of railways cease to operate for any length of time.

As the nerves of the human body are connected to all its parts, so are the railways related, and connected to the industrial and economic life of the nation. It is true that the railways cannot exist and operate for long without the other essential industries, but still there are none that hold the important and strategic position of the transportation system.

The majority of our other industries, with the exception of a few, can store their products, and still continue to function so long as the transportation systems remain in operation, and continue to distribute their products. Not so with transportation. It is an everyday necessity. Social life starts to go to pieces at once when it stops functioning.

There is another prominent factor that we must now reckon with in the transportation problem, and that is the auto truck, which is taking a great part these days, especially in the short hauls between urban and interurban localities, with every indication that in time as the good roads plan progresses and grows, it will be a strong competitor for long distance traffic. Who knows but that in time the auto service may outstrip the steam and electric systems of transportation?

What is necessary is to impress upon the minds of the reader, not the superiority of the railways or its workers over other industries, and their workers, but to make clear how the organized workers of the railways have failed to perform their duty to their class and themselves, and what they can do in the future if they only become conscious of themselves as a class, and organize in the proper form.

### History of the Railroads

In less than a century, to be exact just 90 years ago, the first railroad was constructed in America. From an insignificant line of a few miles in length, the system now totals approximately 265,000 miles exclusive of yards and sidings. In comparison as the mileage and volume of traffic increased, so all other features of the railways changed, such as materials used in construction, and in the method of operation.

The first lines that were built used ties or sleepers as they are sometimes called, somewhat similar to those in use today; but the rails were made of wooden four by fours, with straps of iron nailed on for the wheels to run upon. The locomotive was a very simple affair, light of weight, and slow on speed, with about as much tractive power as two good span of mules. The cars for both freight and passengers were as crude and simple as the locomotive that pulled them, and the track upon which they ran.

The movement of trains was not directed by telegraph until near the sixties, because the telegraph was not invented until about 1850, or at least is was not demonstrated to be practical and useful until about that time. Neither could you purchase a ticket over more than one line of railway, and the same rule applied to shipping or checking your baggage, for interline traffic had not yet come into vogue.

The speed and the stopping of the trains were controlled by the simple hand brake, which meant plenty of old fashioned hand power. The electric block system for safety, or the electric switches for speed and economy were things unheard of in the early days of railroading. Since those pioneer days a great and rapid change has taken place, both in the construction and operation of railways. This development was apparently much faster than the evolution in the workers unions.

Instead of the old fashioned wood and strap iron rail, we have the steel rail weighing 110 lbs to the yard, upon which the giant locomotive and the electric motor weighing hundreds of tons pull trains of a 100 cars or more. An ordinary car of today weighs more than an entire train of primitive days. Instead of the equipment being made of wood as of old, it is now constructed of steel. The coaches are marvels of beauty and comfort, and installed with every device for comfort and safety. Now we have the automatic air brake that is operated by one individual—the engineer, who controls the speed, or stops a train of 100 cars as easily and simply as he formerly stopped one. One can now buy a ticket, check your baggage or ship your freight from the Atlantic to the Pacific with no more trouble than is caused in going to the next cross road station. The merging of hundreds of small lines into a few systems has made it possible to simplify the clerical and accounting work.

We also have the automatic car coupler, the automatic electric block signal, and electric switches. We are told that all these appliances are installed for safety; in reality it is all done for economy, and dividends. Train wrecks, and damage suits are much more expensive than safety appliances. All this improvement has been brought about by the brain and the brawn of the workers. The despised immigrant from Mexico, Asia, and Slavic or Latin Europe, who have constructed the roads, and maintained the tracks, played the same essential part in this task as the so-called skilled aristocratic worker, for without their work these roads would not be here.

### Finance

According to history railroads were financed to some extent by stocks (water) and bonds, but to a greater extent by bonuses, national subsidies, and government land grants. In the early period in the eastern states many of the old canal companies developed into railroad corporations, and financed their projects with the state grants, and municipal bonuses that had been given for the building of canals. In the western and Pacific states they were financed principally by national subsidies, land grants, and loans. From the year 1850 to 1872 the national government had given outright to the railroads 155,000,000 acres of land, and $140,000,000.00 in cash, besides many substantial loans.

The following is only a partial summary of the favored few. The Union Pacific was granted $16,000 per mile from Omaha to the Rockies, and $32,000 per mile through the Rockies. Meyer's History of Great American Fortunes states that the Rockies were moved 200 miles east. $48,000 per mile was granted for track laid to its connecting link, the Central Pacific which ran from the Rockies to the coast.

The Union Pacific received a land grant of 13,000,000 acres, and later on a loan of $27,000,000. The Central Pacific received a grant of 9,000,000 acres; the Northern Pacific 47,000,000 acres; the Kansas Pacific 12,100,000 acres, and the Southern Pacific 18,000,000 acres. Only a few weeks ago the government handed over another cool half billion on top of what they had already given to the roads since their return to private ownership; and this right after congress had refused a bonus of $3,000,000,000 to the returned soldiers, for reasons which they asserted would practically ruin the credit and finances of the nation.

### The Railroad Workers and Organization

No class of workers in America have been more brutally treated and exploited than the railway workers; both as to wages, general conditions, and excessive hours of labor. They have been slaughtered, maimed, driven and blacklisted without limit; and still they are one of the most submissive and servile groups that we have in America today.

In the beginning there was no such a thing as organized labor on the railroads, unless it was among one or two of the skilled shop crafts, and that is doubtful. The pay was small, so much per hour, per trip, per day or month. No collective bargaining existed. It was all individual bargaining and the individual who got the best of everything was the boss. The day for the trackmen and shopmen was 10 or 12 hours without any bonus for overtime. For the enginemen and trainmen it was work until the trip was completed, whether it was a few hours or a week without any overtime allowance.

The first engineers were machinists, which no doubt explains why they received the highest pay. This fact once becoming an established precedent, it remained so for a number of years.

Not until about 1856 was the first railroad union organized, when the engineers launched the Brotherhood of the Footboard, now the Brotherhood of Locomotive Engineers. In 1867 the conductors organized; in 1873 the firemen; in 1883 the brakemen, baggagemen, and switchmen, later on the telegraphers, but the unskilled were left alone and unorganized until just before the war when the Maintenance of Way and Shop Laborers united, but really did not make much headway until this country went into the war. The first railroad industrial union that opened its doors to all railway workers was the A. R. U., led by Eugene V. Debs and others in the early 90's. It went down after the great Pullman strike in 1894, principally due to the treachery of the old line brotherhoods to their class.

The U. B. R. E., another industrial union followed, but it, too, died out in a few years. The last independent industrial railroad union to come into existence which is still alive and organizing, is the United Association of Railway Employees of North America. Of course the I. W. W. has always been open to all wage workers, and today has an industrial union of railroad workers.

The U. A. R. E. of N. A. is the result of the outlaw movement of April, 1920, and the Los Angeles and Winnipeg outbreaks in 1919. It was formed because the Brotherhood executives failed to function in the interests of the workers, but lashed their members back on the job thus forcing the workers to scab on each other, and assisting the masters to gain a victory.

There is no denying the fact, however, that the present unions have accomplished good in the past when conditions were much different from now, but those days are gone never to return. The only real fundamental things they have accomplished, is the raising of the wages, the shorter work day, and the arbitrary overtime. The railway corporations have likewise lengthened the trains, adopted improved mechanical, and other methods of operation that more than offset the gains of the workers. Likewise the cost of living has advanced ahead of the money rise in wages, so in reality the increased productive power of the railroad workers like all other workers, makes them cheaper slaves today than ever before.

The Limit of Service Law, not to exceed 16 hours work in any 24 hour period was secured by act of Congress, not to protect the workers from performing unlimited hours of toil, but to protect the lives of the traveling public. In all the history of the Brotherhoods and the crafts there has never been a spirit of solidarity displayed on the part of the leaders, except in 1916 when the 8 hour day (Adamson Law) was forced through Congress by the strike ballot of the four Brotherhoods.

On numerous occasions, organized crafts have scabbed on other organized crafts in order to gain

some petty concession. We should mention two things in particular that have done an incalculable amount of damage to the railroad workers in the way of breaking and crushing their morale, and militant spirit. The first is the seniority and jurisdictional agreements introduced by the unions themselves which only tends to create friction and prejudice amongst the workers, thereby preventing solidarity, and only redounding to the benefit of the masters. The other is the age limit, and physical examination, introduced after the 1894 strike to punish the rebellious slaves; but is still in operation, and is used just as effectively in punishing the rebels of today. It is nothing more or less than a blacklist; a club in the hands of the masters, and none of the "recognized" unions has made any attempt to abolish it.

Times have changed wonderfully in the last year or so. It used to be two jobs for every man; now it is two men for every job. It used to be fight or work, now it is a fight for work. What the capitalists gave to the workers during the war, they are now going to take away, and more if they can.

On July 1st they took back the first slice in the way of a 12% reduction, and the next to come is the abrogation of the national agreement, which is the time and a half, and other arbitration awards. According to reports the decreases shall continue as far as the masters have the power to push us. And why shouldn't they, so long as the workers are divided and lack the power of organization with which to halt them? The leaders of the unions are doing nothing to stop them, except using a lot of old time threats and worn out phraseology, and appealing to capitalist politicians to help save them. They well know that they are powerless to save themselves under present conditions.

Some will no doubt take exception to the statement that railroad workers are poorly paid. It has been understood by many that the railway workers were the aristocracy of labor. Even the highest paid among them—the engineers—received no more than many mechanics. During the war there were many workers in war industries that received much more. The railroad workers' pay was brought up to the highest rate when labor was scarce, when the profiteers were in competition with each other for labor power.

There was a time when most of the present unions were considered quite militant, with the exception of the Brotherhood of Locomotive Engineers, and the Order of Railroad Conductors; these two organizations were never accused of having any radical or progressive ideas. They always stayed on the job, let the other fellow do the fighting while they came in for the cream. For many years they held aloof from all other organizations, either feeling their superiority over the other workers, or else believing in that old quack idea that too many crafts in one union makes an unworkable piece of machinery. Later on, however, they found out that they could no longer get any of the increases unless they got in the harness, and helped to get it. They began to see that a lone union was of no use to get anything from organized capital, so they gradually associated themselves with other organizations of the train and engine service only.

Like many other craft organizations they have not yet learned the necessity of organizing on the One Big Union plan. They don't yet seem to realize that that is why the bosses are whipping them now. The capitalist class is organized in the only real One Big Union in the country, while the workers are divided and powerless to save themselves. The American plan, or open shop is condemning the Brotherhoods and the railroad crafts to death.

While the courts and the chambers of commerce, ably assisted by patriotic organizations, were busy persecuting I. W. W's and other radicals for working class activities, the leaders of the A. F. of L. and the Brotherhoods sat back self poised and quite contented, in fact more than pleased. They were saying to themselves—they'll never bother us, for we are "Respectable and Law Abiding Organizations." Their hopes and dreams are being shattered—the masters are going to wipe their unions out of existence, as though they were chaff before the wind.

It is too late now for the old unions to recover and gather their fragments together, to present a solid craft front to the enemy. With no foreign markets to absorb the surplus goods produced by the American workers, industrial and social conditions must get worse, before they can get better. With industries closing, and millions of workers walking the streets looking for work, it is utterly impossible for the present unions to solve the problem of unemployment.

The first step towards a real solution is the forming of industrial unions. This is opposed strenuously by all the reactionary officials of the railroad brotherhoods and the crafts.

The second step in arriving at the correct solution of the problem of society is in putting into operation workers control of production and distribution. The master class cannot operate the industries unless there is a profit to be had. The working class can and must, if they intend to exist, operate the industries for use and not for profit of anyone.

The only solution to this age long struggle of the classes is for the railroad and other workers to build the One Union of all the workers, regardless of creed, race, color or sex, upon the ruins of the old, and through organized **power** take possession of the means of life, for only by the ownership of your own jobs can you be free men and women. Organize like the capitalist class; they have shown us the way to freedom.

## UNEMPLOYMENT

Factories, mines and mills throughout the country still remain idle or work part time. Others everywhere are closing down. In the needle trades which is largely seasonal work, the season for many sorts of goods is long overdue and there is no activity.

The five million unemployed is rapidly swelling to six million. Still there is no attempt on the part of the owners of industry to even as much as understand the situation with which the world is faced. They hide from the disagreeable truth that capitalism is in its death convulsions, chatter wildly about deflation, normalcy and lack of demand, but do nothing.

The working class of the Volga region of Russia are faced with a famine because of the lack of rain. Ten million persons are liable to suffer in this catastrophe either death or great privation. The entire machinery of the centralized Russian Workers' Republic is at work vigorously trying to solve the problem of feeding these victims of combined capitalistic greed and climatic accident.

The number of persons now affected by the unemployment in the United States is greater than those liable to be affected by the Russian famine. No steps whatever have been taken by any of the powers that are in control in this country except the paltry remedy of a few bowls of soup and a few chunks of bread that usually serve to keep the hungry ones from disorder. Such paliative measures will be ridiculous in the terrible winter that is now facing the workers of America. At the present progress of disintegration there will be ten million men out of work this winter and this will mean more than twenty five million persons with no means of support.

There is but one answer to the question of what shall be done. The only persons capable of solving the problems of the working class is the working class themselves. Industrial organization, industrial study, industrial planning by the industrially organized workers can be the only answer to the problems of starvation that confront us.

To declare the greatest strike in history and go back to work, move in and occupy the factories, the workshops and warehouses that the capitalists are letting lie idle, these things are the only means that can bring relief to the working class.

We are not prepared for such a move now. We of the I. W. W. must get prepared between now and that day in the near future when there will be no other solution for the workers of America but to move in and take over the industries.

Let us lend our energies now to constructive effort at organizing the three things that we cannot do without in such a move, the workers, the industrial knowledge and the plans of action.

---

## POWER

The capitalist class today has no power that the workers can take over and use. We must generate our own power from our own class if we would ever achieve any control over the means of life.

The development of working class power is a bitterly hard process and does not come from any spontaneous freeing of the "soul" from the restraints of capitalism. It comes from the constant and recurring restraints of having to deal with and solve problems vital to the working class.

Remember this, that the working class has all the power that there is in society at all times. We need only to organize it and set it to work. Let us get on the job now! Map out the industries! Gather the data of the movement of materials! Create the organs of economic control and lay the plans for action!

## THE PRISON HOUSE OF REALITY

REALITY seems a miserable and unwarranted affair. It is a dingy commonplace arrangement from which most of us are always trying to escape, but to which we are being forcibly brought back by that incorrigible policeman—Fact.

The queer part about it is that once Fact has hustled us out of the gay and happy building of our fancy and with sundry punches, jolts and wallops has deposited us back in our original prison we cannot escape again to our former warm and trustful menage—that is, we can't unless there is a road to this dream land to be had by way of the long stemmed pipe, the three inch hypo gun, the mysterious bottle, or a Billy Sunday revival. As a rule we next escape to a new house.

It is true that some persons have the happy faculty of eluding fact altogether. Great respect is due deeply religious or dogmatic and fanatical people. When the old flat foot Fact comes knocking at their doors with a warrant in his hand they with the greatest of dispatch fall upon him and annihilate him clothes, flesh, blood, bones and all. They are the greatest resisters in the world. Yet even they occasionally give in at some unguarded moment and are placed in that cell house of things as they are for a while.

Now there are very few of us who can shamefacedly say that we never even sought to escape from our lazy guards. Most of us slip out with various pretexts and have a jolly dissipated time with our freedom until we get rounded up and herded back again.

Some of us repeatedly evade reality for things that we call virtues and which we make a big fuss about. Love, patriotism and revolutionary faith are samples of these virtues which are used by us and which we select according to our age, ignorance and former or present condition of servitude.

A lot of us who have, from various visitations of brutal fact and studious observance, become aware of certain big social forces that are operating to change somewhat the structure of society, made quite recently an escape into the realms of fictitious conjecture and revolutionary fervor over the far distant and well organized happenings in Russia.

The gradual rounding of us up by our dogged jailor is being accomplished with great pain and suffering, on our part. But every day we are landing back in our prison house wiser and more willing to use a workmanlike attitude toward things that we find there. Our prison is jammed full of reality. That is why we have always wanted to get out of it.

For instance it is something wonderful to escape on one of these great inspiring Madison Square Garden or Peoples Park revoltingly enthusiastic adventures. Unanimously we resolve to fold our Giant Arms or Build Barricades and die for the ragged remnants of a Red Flag as it flutters close to a manhole choked with gory dead. Such things as industrial facts be damned! We want nothing to do with reality while we are on this big revival. Industry! It is the vilest torture chamber of the boss. Away with the job! Give us liberty, freedom and industrial democracy!!!!

Then, when we organize our forces on these mass lines, what glory to gather together and discuss this and that line of action. It is so wonderful and inspiring that we never want to stop discussions. Action itself requires real knowledge and effort: plain everyday prison house knowledge and the drudgery of effort.

So we steer clear of action for we know that as soon as we get to dabbling in knowledge the old tyrannical jailer Fact will come along and send us back from our vacation to the colorless rooms of the prison house of reality. That is, some of us steer clear. We don't like those other persons who are always dabbling in facts and trying to set us to work. They **are** such nuisances.

* * *

The rumblings of a social cataclysm are heard and today those who have lately been confining themselves to reality are widely aware that the only escape from the impending ruin and its threat of total anni-

hilation lies in the reorganization of those distasteful and commonplace things—the industries.

There can be but one method employed by those revolutionists who are able to keep themselves in the gray walls of reality—by all those who are able to keep their feet on the ground and use their heads for other purposes than as instruments of hat measurement. That is the method of workmanship—the method of science.

Confronted with a problem, and we were never confronted with such a big and varied problem in all our race history, the workmanlike and scientific way to a solution is to get the facts in the case that can be had and having the facts, real definite facts, mind you, and not a lot of good guesses, then lay down and carry out a plan of action based on these said facts.

The social problem of most vital importance is one of industrial management compared with mismanagement. Things that we need are being produced for profit rather than for use. Social service and industry are not even on hearsay terms of acquaintanceship. The I. W. W. solution is to make them one and the same thing.

The way to do this is to study the industries, get the industrial facts and organize the workers according to the form and structure of the industry.

It is only through industrial union organization that we can achieve the power that is needed to put the industries on a footing of efficient operation for use and by this only means avert the crushing out of millions of lives during the period of starvation and chaos coming on with the dissolution of capitalism.

# "I" or "We"

He was young
Just from the army
And a member
Of the Legion strong.
Bound for the harvest
Being adventurous
He went riding
On a west bound freight.
Great were his thoughts.
He'd fix the Wobs
And show the great men
Just what
He could do.
His start was
Sioux City,
And a little
Out of the town
Some one asked him
If he had a card.
He showed his Legion button
With a lot of pride.
Somehow or other
He quickly quit his ride.

He hooked on the next one
And after a while
Found himself waiting
For another freight.
He got peeved and cried,
"By God, I'll ride
On the next, I'll bet!"
And got stung
Worse yet.
Being helpless and alone
And hungry and tired
When morning came,
He made one more attempt
On another train
And failed again.
But he rode the next
And was heard
To exclaim,
"By God—Fellow Workers,
We'll make John Farmer
Come through this year.
WON'T WE?

Achef.

# Revolutions in Industrial Countries

**By Charles W. Wood**

DOES anybody know how a revolution takes plaee in an industrial eountry?

I have happened to see only one. I wrote a pieee for the papers about it at the time; but few people even in the country where the revolution oeeurred, could believe that any sueh thing had taken plaee.

It was a funny revolution. In the first plaee, nobody mueh wanted it to happen, but nobody mueh opposed it. It was a neeessity of the moment, and it went through without a hiteh; but it was agreed on all sides that the new arrangement would be temporary; and when the erisis had passed, the people set about, almost unainmously, to restore the old order.

**Years have passed since then, but the old order has not yet been restored. The new order was smashed conmpletely—by common consent.** The whole maehine, which had worked so marvelously, was taken to pieees and buried without ceremony. But the old maehine—the one that had broken down—refused somehow to work.

Very soon the prosperity of the eountry began to wane. A year later things got worse. Two years later, the industries throughout the land shut down wholesale and millions of workers were left without a job. A crime wave swept the nation. The people beeame almost desperate, and they are getting more desperate every day. There is mueh talk among them of "revolution," but the whole thing ends in talks; for nobody knows, among the 100,000,000 inhabitants, how a revolution oeeurs in an industrial eountry.

You may never have heard of the country of whieh I speak as it hasn't figured much, for the past eentury, in the revolutionary news of the world.

It is known as the United States. It is located on the Continent of North America. The revolution I refer to occurred in the year 1918.

For a full year this eountry had been at war with Germany and it was the eonsensus of opinion that it had to win the war. Up to date, however, it hadn't even figured in the war, to say nothing of winning. In the spring of 1918, somebody found out what the trouble was. The country had plenty of resourees, equipment and man-power. But the whole thing wasn't of any fighting use, in that there was no eo-ordination. Production was earried on hit-or-miss, as individual enterprise determined. The war administration tried its best to regulate affairs, but it eouldn't even regulate itself. The army commandeered things that the navy needed, and viee versa. The railroad administration similarly eompeted with shipbuilding and the manufacture of munitions. Everything was hopelessly balled up until the industries of the country got together and ealled upon engineering experts to devise a plan of eo-ordination.

**Nobody called it revolution, but it changed the whole industrial face of the country overnight.** And it generated a power that surprised the world. Granted that it was only war power and that nobody thought of using the same methods in peaee; the faet remains that produetion for sale was supplanted by produetion for use, and that the prineiple of eo-ordination began to supplant the principle of eompetition as the governing prineiple of our industrial life.

Whieh is, of eourse, why the whole maehine was busted by unanimous eonsent about seven minutes after the signing of the armistiee.

"Back to Normalcy" has been our slogan ever since. Baek to ineffieieney and produetion for sale! Baek to the eompetitive struggle for markets and to the eonditions that produeed the war! Baek to the system that broke down!

Of eourse, there are a few "revolutionists" who propose a different eourse. But what do they propose? I have been unable to understand.

Communism? Yes, but how? A dietatorship of the proletariat? Not a bad phrase, but just what is the proletariat which so unanimously voted for "normaley" expected to dietate? And how are they to gain the upper hand in the first plaee—to wrest the power from the ruling elass of today? It all harks baek to my first question: How do revolutions oceur in an industrial eountry?

Mosts revolutionists have a pretty elear pieture as to how revolutions have oeeurred in the past—when countries were politieal rather than industrial. It wasn't a bad idea then to establish a political party. The party might not be legal, but the more illegal the more revolutionary it was apt to be.

Then there was pamphleteering, with underground propaganda among the intellectuals. Eventually the eommittee of aetion might make an open deelaration, and the people would spring to the defense of liberty.

"Ring, grandpa, ring!" Let the bugles blow! Proclaim liberty throughout the land! Gather in the publie square and defy the tyrant to do his worst!

Those were the happy days when revolutions could be won by fervor. All you had to do was to get everybody mad enough—"willing to die for an idea" is the proper way, I believe, to analyze the frenzy—then the eity hall or the eourt house or something eould be blown up, or the bastille stormed—and everybody knew that a revolution had occurred.

Ain't is tough, though, to be a revolutionist in times like these—when nobody knows how revolutions happen, and when they are just as apt to be made and unmade without anybody getting wise? As for getting the people into the right state of frenzy—the stolid, spiritless rank and file of Amer-

ica today is more afraid of frenzies than it is of anything on earth.

Frenzies haven't got them anything, in recent years, at last. They have won elections and got the politicians something, but the matter generally ended right there. They have brought on revivals and got the revivalists something, but in a few weeks things spiritual seemed to sag as badly as before. Even those frenzies which have resulted in the frenzied ones getting married haven't left all the participants permanently enthusiastic.

It may be stated as a matter of history that the people of the United States, since the civil war, have gradually become less and less amenable to frenzy. There was one exception. Frenzy became popular again in 1917, but the great majority refused stolidly to fall even for that until they were perfectly certain that the best people had all got in line. Today, if I am not in error, they are generally rather sore at themselves for falling even then.

**Revolutionary Engineering**

I think it is relevant to remark right here that the United States, since the civil war, has become an industrial rather than a political country. Less and less have things been accomplished through frenzy: more and more things have been accomplished through engineering. Even the white-hot patriotism of 1917 didn't hurt Germany very much. It required the engineering of 1918 to break the Hindenburg line.

Does this give us any clue as to what is likely to happen in the United States? The whole world is in a state of revolution. It is hardly thinkable that the world changes which are being made will leave this country unchanged. There will be some sort of revolution here. But how will it come?

Will it come through the people becoming sufficiently excited? If so, just how mad will they have to get? Will it come through great mass meetings and parades of the unemployed? Will the populace bare its breast to the machine guns of the capitalists in some great outpouring in Union Square? Or will the proletariat march up Fifth Avenue and seize the palaces of the rich?

I confess to having inherited a somewhat revolutionary temperament, and I hate to throw a damper on anybody's enthusiasm; but I think it quite possible that the revolution will not come to us just like that: for we are an industrial country, and these doings all hark back to revolutions of a different sort.

Once upon a time, seizing the palaces of the rich was a revolution in itself. For the palace was on a hill and the huts of the serfs lay all about; and when the palace cellar got empty, the serfs could just trot over to where they used to hang out; and if they hadn't forgotten to put in their crops, they could harvest them as usual and drag them up the big hill.

But they could hardly get away with that on Fifth Avenue. When the ice-boxes get empty there, they are habitually restocked in a different way. Somebody goes to the telephone and calls up Park and Tilford. Any modern proletarian, to be sure, could do this: but Mrs. Tilford might be out and she might forget to leave any of the family to answer the phone. Revolutions of this sort do upset people dreadfully, and it is even possible that some of the telephone girls would be strolling up the avenues themselves, instead of sticking to the switchboard until the new residents were all installed.

Incidentally, where do the delicatessen folk keep their hens?—in case the supply you are able to find doesn't last you more than a week or two. And where does Mrs. Borden keep her cow? The milk in the bottles might be all right, but you've got to locate the cow if you want a permanent supply.

And the meat? And the new clothes and shoes? How do people get these things anyway—in an industrial civilization? They come from human labor applied to natural resources, and there is no question that the workers are entitled to them. But how do they get them? And how would they get them in an industrial country, during and after a "revolution" which had happened in Union Square? There aren't any cows in Union Square. There aren't any mines there; no tanneries, no steel mills, no mercantile marine. Without these things in constant action, life simply cannot go on in an industrial country.

The answer is, of course, that these things would have to be kept in action, and the only way that they can be kept in action is through industrial organization on the job. Most revolutionists today admit that political revolutions in themselves could never turn the trick; but what have they to offer instead? Parades, marches, mass meetings—strike, fold your arms, overthrow the tyrant—in other words, go generally wild. Then by some mystic hocus-pocus you will come into possession of the great industrial machine which you haven't the slightest idea how to run.

The most important fact in America today, however, is the new unionism which refuses to be swayed by such so-called revolutionary notions. The new unionism is revolutionary to an extent which the old industrial union never dreamed of being. But it aims at more than getting the workers into one big body. It is aiming to **organize labor**—which means organizing the work of the world. And when labor is really organized, it will be ready for something far more significant than a strike—far more significant even than "seizing the ownership of the means of production." It will be organized to use the means of production to keep the machinery going, to carry on production and distribution as an industrial and not as a business proposition.

"No spirit," has been a common verdict of professional radicals in regard to the working class of the United States. "The people here will suffer and complain but they will not revolt." It seems

more to the point to observe that things happen in such a country as this not in answer to emotional fury but in accordance with the laws of scientific engineering.

### The New I. W. W.

The I. W. W., as an organization, is observing that fact. It is concentrating upon a technical program. Many A. F. of L. and independent unions are stepping in the same direction, notably the Amalgamated Clothing Workers. They are not "abandoning the class struggle," but they are recognizing that the class struggle is a much bigger thing than the fight of the workers against the employing class. They see in it the struggle of the workers for power and for freedom, neither of which can be wrested from the master class today.

The master class has no liberty. It is enslaved by its own inhuman aims. And it hasn't the power and cannot possibly develop the power to protect its possessions against panic, disorder and war. **If the workers are to attain real power, they must get it not from their masters but from themselves.** They must acquire the knowledge from which the power comes. They must learn how to run the machine not only as well as capitalism has succeeded in running it but much more efficiently. And they must learn how to run it not only for maximum material production but for the utmost human service. They must make the machine fit for men to work in, and not for men only but for women and children, too. They must abolish, as Charles P. Steinmetz says, all the jobs which lead nowhere, which do not release the creative powers of the individual and assist in all-around human development.

As Sidney Hillman recently pointed out, the workers can get 10 times more from industry than they can ever get from their employers: and it is because the Amalgamated recognized this sound industrial principle that they won the greatest labor victory in recent years.

"One Big Union" used to be a sufficient motto. Get all the workers of an industry into one organization, so that if trouble occurs in any particular department, all the employes of the industry can go out together. This was a thrilling idea and scientifically unassailable. But it was not revolutionary. It contained a full program for the stoppage of production, but it gave nobody an inkling of how production might be carried on.

The new idea is to organize for production: and that means that the workers shall not be organized in a hall—for production is not carried on in halls—but that they shall be organized on the job. They must be organized to go to work, not to quit. **They must be organized to carry on productoin and distribution in every necessary industry, and to produce and distribute more efficiently than the capitalist system can.**

And this is not a matter of religious frenzy. It is not a matter of oratory and debate. It is not a matter, either, of politics, law or government, nor of business nor economics. It is purely a matter of engineering and industrial technique, hence this type of revolutionist insists on placing all emphasis upon the technical program.

It is significant that the monthly organ of the I. W. W., the One Big Union Monthly, has been succeeded by the Industrial Pioneer. It is significant that I. W. W. workers throughout the country have dropped their propaganda concerning the "ownership" of the means of production, and are talking definitely about how they may be used.

And who opposes this program? The greatest opposition I have seen comes from self-styled "Socialists" and "Communists." Ultra-revolutionaries, they think they are, and I have little doubt of their sincerity. I don't believe that one-half of 1 per cent of them are spies of capitalism, for capitalism is still too blind to the situation to recognize red on sight. Capitalism is seeing red all right, but it is seeing red where red does not exist, and it is so concerned with economics and banking that when it hears working men talking about increasing production, it thinks fatuously that they have "given up their foolishness."

But the fact remains that capitalism can put down any movement, no matter how widespread it is, which fails to keep the machinery of production and distribution going. **But there is no power on earth which can overthrow a system which uninterruptedly performs these functions.**

It is true that the industrial administration of 1918 was scrapped, but not by any outside force. If the group which controlled this experiment in co-ordination had wanted to continue its control, the government itself would have been helpless. That group, in fact, was the government, and bossed the army and the navy as well as the other functions of these United States.

And if the working class of America does organize industry, instead of contending itself with organizing citizens and baptizing them in the name of one union or another, it can avail itself at once of all the power which the industrial machine can generate.

### The Situation

Perhaps it cannot be proved that an industrial country can have a revolution. Perhaps things will inevitably get worse and worse untill the race gradually starves itself into giving up industry and reverts to individual farming with crooked wooden sticks in place of plows. From industrial Austria and industrial Germany and industrial America we have not yet seen anything to give us hope. But three facts, at least, are obvious.

First: Capitalism has proven its incompetency. The financial genius of the world has plotted for three years to make capitalism function as it did function before the war and has so far miserably failed.

Second: No revolution of the kind which most revolutionists have been dreaming about can occur in an industrial country; for modern industry

is a question, not of conservative or radical thought but of collective technique.

Third: While there is nothing in the proposed technical program which prohibits radicals from developing any fine frenzies which their emotional organisms require, there is nothing which keeps them from hearty co-operation with conservative minded mechanics, farmers and engineers who happen to have a sane desire to continue being fed.

The revolution I foresee—the only sort of revolution which can succeed in an industrial country—may be lacking in blood and color and even in fiery phrase. But it will be a real revolution, and it will remove not only capitalism but all economics from the earth. It will be the organization of life to express, not to possess, to create and not to fight, to do things instead of wearing ourselves out trying to sell things and using up nine-tenths of our human energy in effecting the sales or in protecting the property we are induced to buy.

The Sunday Call.

# Honorably Discharged

We are a pair of old socks,
Worn out in the service of one
Who noticed not our loyalty,
Until in the end—
Mostly the lower—
We failed.

We were good and faithful servants,
Serving our masters well in his days of
good fortune
And at his lowest extremities;
But we were tossed aside in disdain,
And with an arrogant pugging of the nose,
To be ground into the dirt
By passing hoofs.

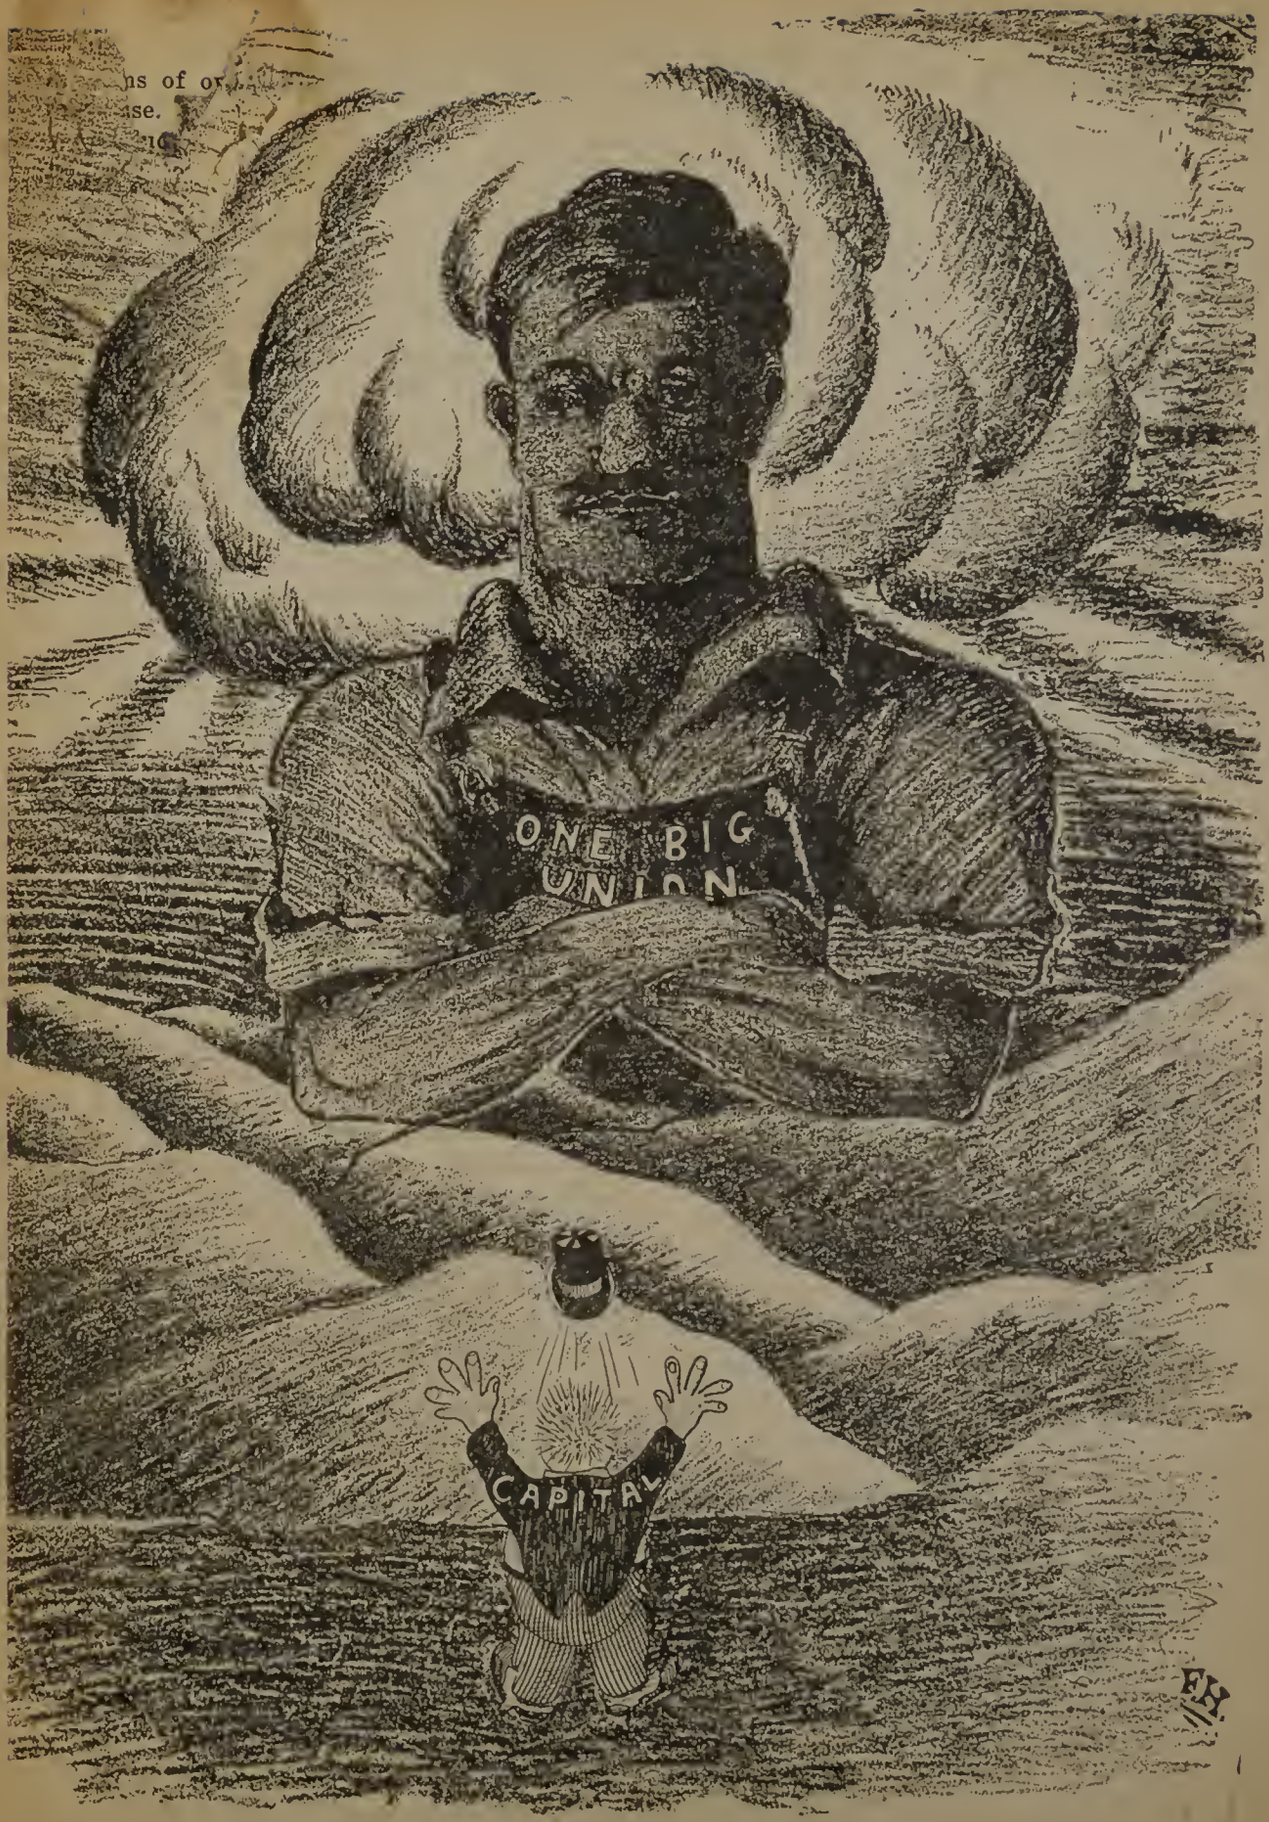
A wandering minstrel
Picked us up tenderly and gingerly
And hung us on a barbed wire fence,
Where the desert sun
Could rot our tissues and purify our holey-
ness
And the desert air
Purge us of the tenacious odor
Of our days of servility.

He trussed us on the fence
In the shape of the cross
Of the predecessor of the Wobbly agitator,
And here,
Abandoned,
Our days of usefulness ended,
Though the winds persistently invite us to
accompany them
To fields of sanctifying activity,
We steadily decline.

The dull-eyed cattle stand and look at us—
And wonder . . .

We were good and faithful servants . . .
And we are well done.

**Jim Seymour.**



CAPITAL'S ONE BIG FEAR!

# Large and Small Scale Agric

**By Wm. Dimmit**

A HOG, a peach, and a bushel of wheat all start life on the farm. In this they may not be different from lots of persons that drape themselves over city desks and work benches.

Also like the farm bred city folks these first mentioned products of the farm no longer spend their last days in the old home. They emigrate to sections which do not produce hogs, peaches, or wheat.

This emigration is the big feature not only in the life of the hog, peach, and wheat but in the life of the farmer who has brought them into the world and looked after them, and to the person who takes them off the farmer's hands and introduces them into the machine process. In fact it has become the big feature to all of us.

This transference was not always so. In many portions of the well known world it is not so yet. But here in the U. S. A. the big and distinguishing feature about agriculture is that it is a commodity producing process. The hogs, peaches, and wheat seldom stay where they start at. When ready or nearly ready to be of some use to the world they are rounded up, picked, or mowed down and put on the market. The farmer sells them for cash and often buys part of them back again for his own consumption.

### Agriculture Is Part of Industry

Agriculture in America is industrialized. There is very little of that small garden size production carried on chiefly for the personal use of the producer. American farmers produce first for commodity exchange and then occasionally for personal consumption.

The industrial nature of production is the outstanding fact which must be taken into consideration by any organization which is laying plans for a social revolution. The fact that farm production itself is industrialized makes it just that much more imperative that industry must be the determining factor in the success of any experiment in socialized or communistic methods of social organization.

Industry is a huge complex machine depending on the efficient or at least partly efficient working of all the parts. If one of the parts don't work the whole blame machine shuts down.

### Dangers of Industrial Breakdown

In America shutting down this machine means simply the starvation of every one. Not only the people of the cities but most of the rural population as well. So it is of prime importance that no attempt at a transfer of social control to themselves should be attempted by the workers of this country until such time as they have enough industrial knowledge organized so as to insure at least enough production to keep most of the people alive.

Full warehouses may give to the onlooker the idea that there is enough food stored up to serve the country for a couple of years and that during this couple of years we can easily enough reorganize the industries. This looks fine. But the distributing machinery is part and parcel of the entire industrial process and with no definite plan laid out as to how to keep the industries at least moving why the stuff would either lie in the warehouses and rot or else be wasted by being distributed in one section while another section was starving. The industries in America must be carefully studied and understood before any revolutionary attempt is made or else with the transference of power to the workers will be transferred the job of burying the majority of the population.

Agriculture is not excepted from this hard and fast rule. Indeed it should be more carefully studied and mapped out than any of the industries. From the farm comes that which keeps us going. With no food revolutionary spirit soon plays out.

### Two Sorts of Farm Methods

On the American continent there are two sorts of farm commodity production. We find first the common individual farm method in use. The farmer and his family together with an occasional hired man or two do all the work of production except during harvesting and shipping periods.

Alongside of this individual farm system there are larger scale methods. Comparatively big estates depending on hired labor and under the supervision of either the manager owner or a hired manager, have for years been a feature of domestic agriculture.

Both of these methods are carried on with greater and greater use of machinery. It is generally supposed that the big estate is putting the small farm out of business but no figures for this assertion are ever submitted. The tendency for concentration of ownership in fewer and fewer hands can easily be backed up by reams of data but paralleling this concentration of ownership there exists the creation of a farm tenantry that is increasing at an alarming rate. Large scale farm operations are not on the increase in this country.

It is doubtful if there are as many big ranches under single management now as there were ten or fifteen years ago. It is strange that there is such a scarcity of figures about the industrial methods of operation. When it comes to figures involving ownership, profits, or cash values a person can find volumes everywhere but figures dealing with industrial methods of management and industrial evolution are very scarce. People think

still in terms of ownership instead of in terms of industrial use.

As a productive factor, considering the number of hours of labor power applied, there is little dispute that the large estates are the most economical of the two systems. Accurate figures on this question have not been compiled either, as nearly all data in a capitalistic world deals with investment and profits. Production per uit of labor power has little meaning to the so-called investigators.

In the present profit system any enterprise that does not produce profits regardless of how economical the production may be is doomed to fail. Failure has marked the road over which a large proportion of the ventures in extensive farming have traveled. So much has this been in evidence that farmers are everywhere cynical of any attempt to start such enterprices. "The agriculturist," they say, "is one who makes his money in town and spends it in the country while the farmer makes his money in the country and spends it in town."

### Distribution of Products

An analysis of the position of large scale agriculture cannot be made without proceeding into the facts of distribution. It is generally recognized among students of economics that the worker is robbed at the point of production. As a class truth this is not to be refuted. Its application, however, to the owner workers of the farms does not hold and is limited to the elements known as the wage working class. Farmers come in the social class known as the middle class or bourgeoisie. In spite of the fact that they belong apparently to the ruling class they are highly exploited and robbed.

This is done indirectly through an elaborate system of control of the distribution of farm products by those business elements that constitute organized capital. In practically every instance where farm products are being marketed they pass first into the hands of some branch of that competitive buying and distributing organization that for inefficiency and lack of co-ordinated effort cannot be beat. These commission houses and produce buyers are the most wasteful feature of the American food industry. They are highly efficient and show great solidarity, in extracting a high percentage of profit from the farm produce, however.

The only exception to this marketing program lies in certain fruit and dairy combines that have eliminated the middle men by means of their position. This phase will be touched on later.

### The Farmers' Returns

It is an easily noticed fact that in every village, town and city which is a center of a farming district there are always agents for commission houses and produce firms. They operate in every way possible to get possession of the largest amount of the farm crops at the lowest possible prices. Hay buyers, potatoe buyers, grain and stock buyers, buyers of everything that the farmer sells flock through each community, working in competition with each other yet strangely co-operating in keeping down the price to the lowest level.

Here is the point where the farmer is exploited. He is not robbed as he tills the fields, milks his cows or tends his stock. All over his cost of maintenance is stolen from him by this marketing end of the food industry. Not so of course with the farm laborer. He is a wage worker whose wages are determined by the same factors that influence his city fellows. The going wages and working conditions are usually the very minimum on which life can be sustained. They can be raised only through organization and battle with the farm employer.

Produce buyers, wholesale houses, bankers and financiers form a combine which have preyed on the farmer unmercifully. The farmer in turn has kept the wages paid to his hired man at as low a figure as he could get by with. Yet low labor wages are of no benefit to the farmers as a class. If the entire class of farmers decided to install a five dollar a day minimum wage with a basic eight hour day for all hired help these farmers would themselves be better off at once.

The percentage of return to the farmer is decided on by the distributing monopoly according to the amount found necessary to keep the farmers as a class in food, clothing and shelter besides reproducing children to take their places as the foundation on which the system rests.

### Domination of Small Farming

It is these facts of the marketing end of farming that have kept the large scale production from

TRACTOR PLOWING ON LARGE FARM.

being installed throughout the industry. The surplus values from the agricultural industry are extracted from the products as they are on their way to market rather than at the point of production. The dominant financial class is the recipient of those surplus values in all cases.

A large estate is placed in the same position as a small farmer so far as the marketing end of the game is concerned unless the estate is operated by some of the big food packing and distributing concerns.

Of such a nature are the big combinations of growers that control the fruit packing and distributing industry of California as well as actually operate many of the ranches there. They exploit wage labor and secure all these profits in addition to the ones normally raked in from the wholesale distributing end of the business. It seems that it is by these methods only that real productive, large scale agriculture can extent its field under capitalism.

On the other hand, ownership of agricultural lands has become more and more centralized in fewer and fewer hands, but the method of exploiting these lands has not been that of centralized management and control.

The tenant system is being largely put into operation. The individualistic farmer whether held down by tenantry, mortgage or marketing factors is a source of greater profit to the parasite as things are at present organized, than is the large-scale farmer with his wage labor. Besides small farmers present no dangerous liability towards organization.

The technique of small scale farms provides no efficient method whereby many of the larger and more efficient machines for cultivation can be used. The tractor is largely a failure in fields smaller than several hundred acres. It is wasteful of land, being clumsy in turning the corners which seem to greet the plowman every few feet while turning the sod, in a small field.

Not only that but in order to get proper use of any of the large mechanical farm devices it is necessary to have some efficient system of mechanical overhauling and repair for them. Small farms (and many big ones also for that matter) have none of these things and cannot have them even though they have the capital to invest in the large machinery.

Small scale farming has one advantage of a productive nature, however. This advantage lies largely in the mental state which is induced by the sense of private ownership and control. The

HORSE PLOWING ON MEDIUM SIZED FARM.

farmer has a highly developed instinct of workmanship. He does things quite often just for the sake of doing them. Working as he does in personal contact with his hired laborers he extracts from them a degree of efficiency and interest that the wage laborers on a large estate seldom show.

Add to this long hours, poor food, lack of recreation and an entire immersion in the problems of farm labor—and we have resulting a cheapness of commoditiy price which is not achieved by the large estate.

The factors of custom would tend, of course, to the conservation of this small-scale farming, even though the larger methods were more profitable, but from the present indications the large farm will never succeed in replacing the small individual method until some form of social ownership and working class control is arrived at.

**Organization Needs**

The problem of organizing powerful industrial unions among the farm workers is one which calls for an extensive survey of those large-scale farms which are already in operation. It calls for an extension of that policy of controlling and organizing those strategic workers who are so necessary to the harvests.

To place such an organization on a solid basis, however, requires permanent stationary organization of those workers who actually plant and tend the growing crops. Tenant farmers are among the most exploited, as well as ignorant, of the agricultural workers. To educate and organize them is a task of tremendous magnitude, yet from the many half-baked attempts which have been made by ill-prepared tenant farmers' organizations and groups, the results are remarkable, considering the effort expended. For the I. W. W. to enter into this field with a determination to achieve real power necessitates a development of highly centralized organs for the securing of special data and the bringing out of timely programs of executive action.

There is no present indication that the small farmer will be removed as a factor in farm production until such time as he takes an active part in removing small-farm production himself. The present method of exploitation by marketing control gives no hope of large-scale agriculture displacing the small tenant or individual farmer. We will always have to deal with farmers who have the psychology of individualists until we can with the active aid of the farming population put across large scale farming ourselves.

Our present end is the solid organization of those actual wage workers employed not only on the large farm but on the small one as well. A definite program of action can be the only means to achieve this. The knowledge of the agricultural industry as a whole is indispensable for drawing up such a plan.

# Will Europe Revert to Barbarism

By H. Van Dorn

MANY years ago Karl Marx made the statement that capitalism contains within itself the seeds of its own destruction.

Had he foreseen the word war and the extent of its ravages, as well as the stupendous disasters, political and economic, which have befallen the European peoples since the conclusion of peace, he might have, with a great deal of justification, expanded that statement to include, as well, the possible destruction of everything that goes to make up our present-day civilization.

While such an eventuality may sound rather startling to some people, it is not by any means historically impossible.

Before the war "the onward sweep of the machine process" had reached a stage where, for industry to continue to operate smoothly in any country, commerce had to be carried on and production co-ordinated on an international scale; boundary lines had lost their meaning, nationalism in business had become an obstacle to trade expansion and the international outlook a necessity for further continued peace and prosperity. Yet the mentality of the people, either of the classes or the masses, had not changed—could not, in the nature of things, have changed—fast enought to keep pace with the requirements of industry. The outcome of a nationalistic mentality coupled to a fast-expanding industrial mechanism, for the successful control of which an international outlook is absolutely essential, could only have been an explosion—the inevitable word war.

Almost three years have passed since the signing of the armistice. Is nationalism now as strong as it was before the war? Has the spirit of international working class solidarity, which alone could have averted the world war, made any appreciable progress? If the inherent contradictions of capitalism led to the world war, what will the continued operation of capitalism, burdened with war's aftermath—staggering national debts, disorganized industry, shattered finance, sapped vitality, heightened national hatreds, sharper class conflicts—lead to?

### The Class Struggle and Co-ordination

The future of the human race will be determined by the outcome of the struggle for supremacy between capital and labor,—ignorance versus enlightenment, patriotism versus universal brotherhood, capitalsm versus communism—in short, bourgeois nationalism versus proletarian internationalism. It is the fight to the bitter end between the forces of destruction and construction, a race for life between economic dissolution and the growth of proletarian internationalism. And the sad part of it is that we cannot by any means be sure that even should internationalism triumph, it will be in time to save Europe from tumbling into the abyss.

What do we see on the side of internationalism and economic reconstruction? Soviet Russia, the other Soviet republics and the Syndicalist and Communist movements of the European countries.

True, as was pointed out by Henry G. Alsberg in the Nation a few weeks ago, there is no communism in Russia now. But there has not been, at any time since November, 1917, pure communism in Russia nor a pure communist government, nor could there have been either. True, Russia has granted free trade to the peasants, concessions to foreign capitalists, has compromised with the foreign bourgeoisie in order to conclude trade agreements with it. But those things do not mean the abandonment of internationalism. On the contrary, they are a recognition, in deeds, of the fact that all nations are so closely bound together by economic chains that even socialist and capitalist countries are compelled to co-operate for their mutual benefit. Failing to do so, both would be headed for the rocks of economic dissolution, as is the case with most of the European countries which have failed to understand the absolute necessity of international co-ordination of effort.

### Italy and Russian Trade

The internationalism of Soviet Russia cannot better be illustrated than by pointing out the over-generous conditions which she always concedes to the other party to a contract, whether in the signing of a peace treaty or a trade agreement. This was especially marked in her pacts with the Baltic states—Finland, Esthonia, Latvia—the Caucasus and Near Eastern states, with China nad with Poland. On May 6th the Russo-German trade agreement was signed, and now the Soviet representative Vorovsky is in Rome, negotiating with the Italians; and, according to authentic information, he has been "exceedingly well received" by the Italian government. Why he has been so well received will readily be seen from this comment in Le Journal de Geneve:

"Now the Black Sea is really for Italy the roadstead down which flows the coal of the Don basin, the wheat of Ukraine, and the oil of Baku. Because Italy is absolutely dependent on the outside for these first necessities, she has suffered much during the war and since the war. What is more, Italy sees in a direct understanding with Russia the only way to escape American or English exactions."

The results, to date, of Russian trade negotiations have been cited by Mr. Krassin as follows: Foreign purchase contracts placed by Russia amount to

5,000,000 pounds in Great Britain, 50,000,000 crowns in Sweden, 3,000,000,000 marks in Germany, $10,000,000 in the United States. He further points out that Russia's gold reserves "have a limit" and that "as our exports still are negligible, we must resort to concessions, of which only one, that of the Svenska Kugellager Fabric, has been signed, but others are pending."

### Brands of Internationalism

It must therefore be admitted that Soviet Russia is today the chief bulwark of internationalism. Of course, the bourgeois countries also have their "internationalism"—of the bird-of-prey variety. The British and French imperialists do not care whether they get their booty in France, England, Silesia, Syria, Egypt or Afganistan,—just so they get it. This is the kind of "internationalism" that is killing Europe by inches. But we will treat of it later.

What distinguishes bourgeois from proletarian internationalism is that the former presupposes the presence of a robber or exploiter class which aims to benefit from whatever activity may be undertaken or agreements entered into jointly by two nations; in the latter that class is absent, and the welfare of the workers of the two countries receives equal consideration. This was admirably illustrated by Georgia before she turned Soviet: Allied imperialists were robbing the country right and left, with utter disregard for the welfare of the native population, which was starving and without work. As soon as a Bolshevist government was set up and trade relations established with Russia, the Georgian working class was given first consideration.

Besides Russia, we can count on the side of proletarian internationalism the other Soviet republics—Ukraine, Georgia, Azerbaidjan, Armenia, Persia, Turkestan, and most of Siberia; also, those countries which, while they have not yet adopted the Soviet form of government, have come within the sphere of Russian influence, such as Turkey. It may safely be said that at present Russia exerts equally as much influence in Asia as does Great Britain, with the difference that while Russia's influence is growing that of Great Britain is on the wane.

In the rest of Europe and in America, proletarian internationalism finds its only support in the ranks of the more advanced trade unionists, Syndicalists and Communists. In the United States these elements are at present numerically quite negligible, but not so in Europe. The Syndicalists unions are especially strong in the Latin countries: Spain, about 800,000 members; Italy, 700,000; France, 300,000. Then follow Germany with some 200,000, and Holland and the Scandinavian countries with an aggregate of close to 100,000. In Great Britain the case is different, as there the revolutionary unionists have remained within the old-fashioned trade unions.

The Communists are said to have at present 500,000 members in Germany, about 75,000 in Italy and Great Britain, and quite a respectable number in some other countries, notably France and Bulgaria. But in no other country do they have, as yet, a real firm hold on the laboring masses; neither do they possess, it seems, in any country a concerted, workable plan of action.

### Results of Nationalistic Forces

What are the forces lined up on the side of bourgeois nationalism, leading inevitably to economic dissolution and—"God only knows"? The capitalists, landed proprietors, middle classes and peasants of the various countries, with their respective nationalistic movements, counter-revolutionary organizations and governments.

To fully realize the extent of the danger let us always bear in mind that in every country only one class, the industrial proletariat—and, generally, only a part of it—stands for international cooperation and solidarity, while all the other classes—which in most European countries constitute numerically a majority—stand for class and national aggrandizement at the expense of other classes and nations.

The international status of most of the European countries has been largely determined during the last couple of years by French foreign policy. And it is doubtful whether in the annals of the whole history of mankind anything could be found to equal in selfishness, bigotry, short-sightedness and imbecility the course of action pursued by French bourgeois imperialism.

By the terms of the Treaty of Versailles Germany was obliged to pay over to the Allies an enormous amount of indemnity. But, says Frank A. Vanderlip in "What Happened to Europe" "... with the Entente nations there were fundamental misconceptions in regard to the economic principles involved in the payment of indemnities. Indeed, the statesmen who drew the peace treaty seemed least of all, for a time, to understand how indemnities may be paid by one nation to others." Eighty per cent of the iron ore of Germany was located in Alsace-Lorraine, which the treaty returned to France, and of the three large German coal fields the one in the Saar valley is to remain under control of France for at least fifteen years, while Polish insurgents, backed by French gold, are trying to grab off the Silesian coal fields, which were recently retained by Germany through plebiscite. Having ruined German industry, and having built up, to boot, an embargo wall against German exports, the Allied imperialists say to Germany: Now pay us forty-two billion dollars' worth of indemnities in gold and commodities! Why does not some psychiatrist put these French bankers through the mental age tests and send them back to the kindergarten, where they belong?

### Austro-German Conditions

No wonder that there are over two million unemployed in Germany, and that the real wages of German workmen are about one-third of what they were before the war. The thing to be borne

in mind is that this suicidal policy does not benefit the French working class, since there are almost as many unemployed in France and the real wages are just as small.

The criminality of the Allied imperialists is still more clearly illustrated in their treatment of Austria. The former Austro-Hungarian empire was hacked up with such utter disregard for economic requirements that in what now is known as Austria industry is completely paralyzed. The people are actually dying from starvation by swarms, in Vienna several hudred thousand children are tuberculous and rachitic; the only way out towards economic reconstruction is union with Germany. And yet the Allied imperialists do not permit this union because it will strengthen Germany economically! Better the murder of a nation than an added measure of health and prosperity for the German peaple—there is the wisdom of the French bankers in a nutshell.

The following is taken from the July, 1921, issue of Current History: "Austria has not yet collapsed, but it is certainly tottering. In the early days of June it was left without a government, as Dr. Mayr's cabinet resigned, and the prospect of forming a more authoritative cabinet is remote. The government's fall was precipitated by the action of the annexationists, that is, the Pan-Germans and other influential groups who favor unification with Germany. The people are mainly in sympathy with this plan, at least on one score: They hope that inclusion with Germany would mean a brighter future for Austria. Racial sympathies have played a large part in the development of such sentiment. The provinces of Tyrol and Salzburg have overwhelmingly voted in favor of such alignment, and Dr. Mayr, in view of the attitude of the Allies, especially France, and of the Financial Commission of the League of Nations, could do nothing but point out the conclusions and resign."

The other actions of Allied imperialism are on a par with its treatment of Germany and Austria. What sane person will deny that the economic reconstruction of Russia will benefit the whole of Europe—in fact, the whole world? Yet for three and a half years the Allied bourgeoisie has done everything in its power to prevent Russia from recuperating economically. Supplies and ammunition to the value of many hundreds of millions of dollars have been given to the counter-revolutionary movements of Kolchak, Yudenitch, Denikin, Wrangel and Poland,—and the sad part of it is that these supplies were produced by the Western European and American proletariat.

But enough about the French imperialists! Whom the goods wish to destroy they first make mad.

### The Small Nations

However, we would be mistaken in thinking that only the ruling classes of the big Allied countries are selfish, bigoted and short-sighted. The ruling classes of the smaller countries are just as bad. Writes William Hard in the Chicago Daily News: "The principal business difficulty in central Europe is an unreasonable and excessive governmental interference with the flow of commodities across frontiers. This fact is so manifest that it has led at last to the project of the conference at Porto Rosa, where an effort will be made by representatives of various south central European states, including Italy, to abate the frenzy of export restrictions, import restrictions, vexatious examinations, intolerable delays and numerous other methods of suicidal economic warfare now prevalent along south central European boundary lines."

In discussing the situation in Hungary, says a writer in the July, 1921, number of Current History:

"Several difficulties must be overcome before friendly relations can be established with this neighbor (Roumania). What Hungary aims at is economic treaties, and the consequent lifting of the export ban. Although Hungarian money increased conspicuously in value recently, this rise is handicapped because of the obstacles put in the way of commercial traffic with neighbors. Roumania, especially, is slow to come to an understanding with Hungary in this respect."

Thus does bigoted nationalism reign supreme. Every little country has built a fence around itself. The "foreign policy"—what a degraded use of two perfectly good and innocent words!—of every bourgeois country has but one end in view: to maintain an outward show of authority and to safeguard the material interests of the class in power. What does the landed gentry of Roumania care if the town populations of Hungary, or of Roumania itself, are starving! What does the British imperialist care if the Black and Tans in Ireland leave a trail of arson and murder in their wake! The "integrity" of the empire must be maintained, the "under-dog" must be shown his place.

### Political "Constructiveness."

In Rosta-Wien, edition of June 5th, 1921, appears the following news item:

"Budapest, Hungary, May 12th.—In one of the recent sittings of the National Assembly, deputy Felix Drozdy directed attention to some of the items of the budget. For the maintenance of the Brachial-Gewalt formations (the original of the Black and Tans) there was a sum of 1,123,000,000 crowns; for the maintenance of invalids 14,000,000; for Horthy's court the cost was 34,000,000; for combatting tuberculosis 1,600,000. The wages and other costs of the Brachial commandos were 44,000,000, for the support of war orphans, 8,000,000. For the maintenance of prisons and jails there were 34,000,000, but for adult education not a penny."

Here we have a government, which calls itself Christian and civilized, spending 1,167,000,000 crowns for the murder organization Brachial-Gewalt, which is the instrument for carrying on the White Terror, and not one cent for adult education. Of course, the Brachial commandos have had

a big job on their hands. As far back as May, 1920, the British Joint Labor Delegation sent to investigate the White Terror in Hugary reported that at a conservative estimate there were at that time 12,000 persons detained or imprisoned; and, possibly, twice that many. Then there were all those thousands who had been murdered since Horthy assumed power. One executioner has confessed to having hung over a thousand single-handed. But hanging and torturing people, cutting off women's breasts, tearing off their finger-nails and gouging out their eyes is not going to start a country's industries humming. We should not therefore be surprised to learn that half of Hungary's population is unemployed and starving.

### Social Disintegration

Hungary may be a somewhat extreme example, but, broadly speaking, the same bigoted, nationalistic, cruelly selfish, class spirit motivates the governments of all the European bourgeois countries. Not a sign of an international outlook anywhere. Everywhere unemployment, starvation, degradation, ignorance, crime, disease. In many of the south eastern countries, as well as in parts of Spain, large masses of people have forgotten the meaning of soap, doctors, hospitals, books, schools, good food, clean linen. The life of a man has become cheap,—a hundred times cheaper than that of a yearling calf.

George W. Russell ("A. E.") comments in the N. Y. Evening Post as follows on the disintegrating European civilization:

"The great danger for Europe, the great danger for us in Ireland, is that we may forget what civilization means . . . The man who has drunk whiskey for years finds the purity and coldness of water tasteless and distasteful. The generation growing up in an atmosphere vibrating with sensations and alarms, with rifle and revolver never very long silent, comes to regard these as part of the normal life."

### Anti-Jewish Demonstrations

Of late there has been a great revival of anti-semitism, which can always be considered as a barometer of nationalistic feeling. During the last couple of years pogroms on an immense scale have taken place in Hungary, Roumania, Poland, Ukraine and Siberia. General Graves, former Assistant to Chief of Staff of the American Expeditionary Force in Siberia, writes in the July Current History, in an article entitled "The Truth about Kolchak": "A pogrom against the Jews was carried out (by Kolchak) in Ekaterinburg in the middle of July, 1919, and anti-Semitic reports place the minimum number of killed at 2000." Anti-Semitism has raised its head in countries where heretofore it has been practically unknown. In Great Britain a book has been published, and is being extensively sold, purporting to show that the Jews have entered into a gigantic conspiracy to gain control of the finances and governments of the whole world. Sure, is not Trotsky a Jew, and does he not want to overwhelm the whole world by a Yiddish-Bolsheviki revolution? And even our own Henry Ford has temporarily forgotten efficiency in flivver-making and welfare work for employes, and gone Jew-hunting.

The circumstance that the Jew is of a different race and holds different religious tenets has really very little to do with anti-Semitism. Ask the average Jew-baiter what are the objectionable features of the Jewish religion and the chances are that he won't be able to tell you. The significant thing about anti-Semitism is that it serves as a safety valve for feelings of discontent among the masses. Are times hard, is work scarce, is money short? "Oh, that's easily explained," says Henry, "the Jew is to blame." "You have nothing to eat?" asks the Polish landlord of the peasant, "then kill the Jewish traders and merchants and you will be alright." So the peasants slaughter five or six thousand Jews and are afterwards worse off than ever. Anti-Semitism is a form of throwing sand into the eyes of the ignorant, suffering masses, whether industrial workers or peasants. It is like saying to a man who is starving because the factory in which he worked has been shut down: "Go and kill three dozen flies and your troubles will be ended." American race riots must be put in the same category with anti-Semitism, and the owners of newspapers which incite whites against blacks are as much accomplices to ghastly murder as the Polish landlords and Cossack officers who start pogroms.

The following quotation from an article by Paul Scott Mowrer on "The Assimilation of Israel," which appeared in the July Atlantic Monthly, will further emphasize the gravity of the present wave of anti-Semitism:

"In Eastern Europe, the sentiment of anti-Semitism is not, as in Western Europe, confined chiefly to conservatives and chauvinists, but impregnates even the masses. The Magyar peasants are bitter against the town-dwelling "communist" Jews . . . All Eastern European Jews are suspected of Communism. The Ukrainian nationalist bands have apparently been guilty of serious and repeated pogroms. The Poles are unanimous (?) in their ardent and patriotic hostility to the four or five million Jews included within their frontiers."

### The Terror Organizations

But anti-Semitism is only one aspect, albeit a glaring one, of the wave of national and class hatred which is sweeping over the world. It is but one example of the use that the classes in power make of brutal instincts in order to perpetuate their period of misrule. The British Labor Delegation in Hungary reported that although most of the victims of the White Terror are Jews, a great many are native Hungarians. There is essentially no difference between Jewish pogroms and the shooting of Communists and Syndicalists by the Italian Fascisti, the outrages perpetrated upon the Irish by the Black and Tans, and the wholesale deporta-

tion and assassination of members of the Spanish Confederation of Labor.

Sinee the armistiee, and espeeially sinee the establishment of the Russian Soviet Republic, the world has witnessed a tremendous growth in the military, both legal and extra-legal, organizations for the protection of the bourgeoisie. In Italy there are the Faseisti, several hundred thousand strong, who prior and during the May eleetions murdered over a thousand workers and wounded several times that many. In Bavaria some 300,000 armed men belong to the Orgesh, (the word is eoined from "organization" and "Escherieh," the latter being the name of the leader in the movement.) There are "Noske's Guards" in Germany, the Blaek and Tans and volunteer eorps in Great Britain, the Brachial Gewalt in Hungary, the "free unions" and Samatan in Spain, the Ameriean Legion, 600,000 strong, and the Ku Klux Klan in the United States. No negro, Jew, foreigner or Roman eatholie ean beeome a member of the latter. All of these organizations are bourgeois nationalistic and patriotie, and believe in the use of foree and violenee.

To these organized and undisguised forees of violence must be added the "free" or "Christian" unions which the capitalists are so assiduously eultivating in all eountries in order to break the baekbone of the class-conscious proletariat, as well as the latent violenee of the European peasantry. The outlook for eeonomie reconstruction is espeeially dark in countries like Franee, possessing an overwhelmingly large, selfish and ignorant bourgeois-minded peasant population.

That the European governments are utterly helpless in the faee of these forees whieh are making a shambles of eivilization,—are, in faet, being used as instruments of destruetion—has been admirably pointed out by a writer in the London Nation, June 11, 1921:

"Profound as the eeonomie eonsequenees of the war have been, it may be that the psyehologieal eonsequenees eut even deeper... Five years or more of fighting have rebarbarized a great part of the European population.

"It is remarkable that a few thousand young men ean dash about the streets and roads of Italy in lorries, hurling hand-grenades and burning buildings, it is mueh more remarkable that the millions of Italians suffer them to do it. The eomplieity of the government is the newest and most startling faet of all.

"We suffer not merely from the wild violence of men of the Korfanty or D'Annunzio type; mueh worse is the ealeulating and legalized violenee of governments. They, too, go labor smashing on a titanie seale.

"In our own country, and indeed in Western Europe generally, the eonstruetive side of government has disappeared.

"Only one eonseious purpose seems to illuminate the eoalition, the defense of property, while property itself disappears with our trade."

Then the writer diseusses the possibility of another war, and eoncludes by pointing out the alternative that "there is another possibility, and that is Caesarism."

### The Coming Revolt

In the preceding pages we have briefly summarized the forees, engendered primarily by the eontradictions of capitalism, whieh are making for the destruetion of eivilization. And this brings us to the erux of the argument. What would happen if the European proletariat, driven to desperation by unemployment and starvation caused by the breakdown of industry, would revolt and try to set up proletarian states, being faced as it is by that mighty array of organized bourgeoisie? That revolt the industrial worker must, and will, of that there can hardly be a question. It is not thinkable that he will gently lie down and die from starvation.

Civil war will then break out on an unprecedented seale. Tens of thousands of the most virile, intelligent and aggressive men and women on both sides will be slaughtered. The already vitiated and devitalized European stoek will be still further vitiated. The animal instincts—brutality, bestiality, lyneh law—will reign supreme. As a foretaste of what probably would take plaee let us eonsider this extraet from General Graves' artiele about Kolchak: "In paeifying this district (Krasnoyarsk), which was generally anti-Kolehak in sympathy, General Rozanov's troops, on entering a village, would demand the name and residence of every partisan, the location of hostile bands and a guide to lead them in a surprise attaek. Failing to seeure this information ,every house was burned, and in the event that the demands were not then complied with, every fifth male was shot regardless of age."

It is generally elaimed that the Napoleonic wars redueed the stature of the Freneh people by two inches. The world war has certainly aeeomplished irreparable damage. Ten million men of the very best European stoek were killed outright on the battle field. The growing generation will be a generation of weaklings, broadly speaking. Hundreds of thousands,—nay, millions—of European ehildren are syphilitie, consumptive, richitic,—deformed in body, mind and soul. That Europe can stand a prolonged eivil war on a large seale, or another imperialist war, without her civilization "going under," is highly doubtful.

### The Next War

One only has to read Will Irwin's "The Next War" to beeome eonvinced that another world war would wipe half the Caueasian race off the face of the earth. Says General Tasker H. Bliss in "What Really Happened at Paris": "I maintain that in the eonditions of this modern world a war eannot begin between two of the great powers of Europe without threatening civilization. And if it should come within this generation I doubt if civilization could stand the added strain."

It is remarkable that men representing vastly different viewpoints are in practical agreement on this subject. Says Will Irwin, in effect: peace and reconstruction, or war and—barbarism; Frank A. Vanderlip: economic reconstruction, or—barbarism; Leon Trotsky: communism and economic reconstruction, or—barbarism.

Yet to judge by the actions—and expenditures—of the bourgeois governments of the whole world, another imperialist war is by no means outside the field of possibilities. Figures have been published showing that at the beginning of July of this year France had 800,000 men under arms; Poland, 600,000; Greece, 250,000; Jugo-Slavia, 200,000; Italy, 300,000. In 1920 ninety-three per cent of the total expenditures of the United States government went to pay for wars, past, present and future. $697,000,000 were spent on the navy, although the appropriation first made by Congress was only $440,000,000. As a contrast, in 1916 the navy bill was only $155,000,000.

The following significant dispatch appeared recently in a Chicago newspaper:

"Paris, July 11.—The flying arms of the Japanese army and navy are being developed in France today, and also in Japan under French direction, with astonishing rapidity.

"Orders for airplanes placed with French manufacturers in recent months by the Japanese military authorities total more than 300. The majority of planes being purchased are the latest types of French scout and bombing machines. Another significant fact is that the French airplane factories, probably the most advanced in the world, are now filled with Japanese army engineers, who are studying construction.

"The Japanese army has adopted the French scheme of aerial organization, French instruction methods and French types of planes."

In relation to President Harding's invitation to some of the big powers to send representatives to Washington to discuss disarmament, the following news item will be highly interesting.

"Washinton, D. C., July 11.—Approximately $1,500,000,000 has been appropriated for the extension of the naval program by the five countries which are expected to discuss disarmament, figures today disclosed. The United States leads with $500,000,000, Great Britain is second with $422,000,000, Japan is third with $250,000,000, France is fourth with $175,000,000, and Italy is fifth with $73,000,000.

"Completion of the present building program will show the five countries armed on the oceans as follows: Great Britain, 995 ships; United States, 608; Japan, 221; France, 253; Italy, 245."

It seems unlikely that these vigorous military preparations can go on without leading to war. But another imperialistic war, or a protracted European civil war, by still further disorganizing industry and international commerce and sapping the vitality of the nations, can only lead to a relapse into feudalism, or—barbarism.

In every point the capitalist classes of the world show not only their incompetence to promote and conduct industry but their every move shows them to be hindering, obstructing and actually destroying industrial co-ordination and industrial growth. "Each man kills the thing he loves" sang Wilde in his prison cell and capitalism, once having fostered with loving hands the infant industries, is now seemingly bent on their eventual destruction. With the destruction of the industries goes also that which we have come to term civilization.

The only other alternative seems to be a quick and decisive victory in all the European countries of proletarian internationalism over the forces of bourgeois nationalism.

# The Industrial Future

— — — We will develop and use the human attributes which are inherent in all of us—the attributes which are lofty and noble. Our greatest joy will be when we are doing something for our fellows. This is not Utopian—No! Even then we will get just a glimpse of what ideal perfection would do for humanity.

These are a few of the things which **Industrial Unionism** makes for. We I. W. W. men vision these things—yes, we are dreamers and so were the founders of Christianity, of the American Republic, of capitalism . . . So is it with the I. W. W. men and women who are pioneering the way for the workers' industrial commonwealth wherein all will be happy and safe. *Jas. H. Larsch.*

# The Undoing of Capitalist Industrial Management

By Rosa Knuuti

A commercial war which was the inevitable outcome of a system of production for profits has produced its natural results. "Idealistic" aims, for which the suffering people of the nations fought so zealously, are lost in the stagnation of a "reconstruction" into unemployment, misery and want for the workers.

Undoubtedly the post-war times are giving as much cause for unrest as did the war itself, for scarcely had the last gun been fired when the mad cry of the "high cost of living" and "profiteering" was echoed from shore to shore. Wild efforts to solve these problems were made.

### "More Production"

The "high cost of living" was an exceedingly lively topic for a while with the capitalist press itself, and with blundering stupidity various kinds of action were suggested as a solution of this "perplexing" problem. More production, an increase in the efficiency of the workers was advised. Crowding the markets full of commodities would force the prices to drop, and, lo and behold, the high cost of living was "solved." So the law of Wall Street was duly obeyed; the factories began to hum as they never hummed before; the warehouses already glutted with wartime production, were rapidly being crowded to over-capacity with the good things of life, all this, with the supposition of bringing order out of chaos. And in the meantime international capitalism was discussing markets. The Russian blockade was becoming a problem together with the boycott and annihilation of Germany's production, which was dictated by the Versailles treaty.

### "Under-Consumption"

But this is already of the past. At the present time, with the cry of increased production still ringing in our ears, we find ourselves face to face with another problem to be "solved." More workers than there are jobs, or unemployment with all its vicious consequences, is the situation that demands attention and solution. And again, we find the bourgeois press with the aid of "law and order" solving a social problem for us. Inasmuch as overproduction seems to be the disturbing factor at the present time, it is, no less, an error or a wrong deduction to assert that society is suffering from over-production. There is no use denying the facts: while the granaries and warehouses are full, are overflowing with the necessary things of life, the masses of the people are living under conditions that make it an utter impossibility to buy back or supply themselves with the food and clothes that they have produced. **Under-consumption** is really, what we are suffering from today, as the direct result of a capitalistic industrial administration.

### Nothing to Buy With

And capitalism, ill-at-ease, aviods the music. Vigorous campaigns are being launched to encourage buying. Empty out the markets and warehouses, we are told, and again a social problem will have been "solved." This all sounds well, when one doesn't think about it, but, since the good things of life cannot be had for a song, but through the medium of money exchange, we, the jobless and penniless, conclude that it is an excellent "solution" from the bourgeois standpoint, but it doesn't mean anything to us.

The present system of capitalistic production is essentially a business system. To produce commodities for use is out of the question, since producing commodities for profit is the very foundation, the pulse of the capitalist system. What matters then, whether the producers, the wage earners in society, are able to buy back the things necessary for human living? What matters then the fact that armies of workers from time to time must accept an indefinite "vacation"? The accumulation of profits is the vital point, and toward this end capitalism strives, however inconsistently. The capitalist class is consistent only when it considers its own safety, and its cunning and vicious efforts to keep the workers ignorant and submissive.

The impending economic ruin of an inefficient system of production is becoming more threatening each day. Consequently, "back to normalcy" recipes are many. Efforts to stabilize conditions by stimulating domestic trade, since European markets are either crowded with commodities or unavailable for trade, is the last straw that the business interests of this country are endeavoring to clutch. The "over-production" they have on their hands must be disposed of at all costs, even at a risk of less profits, to avoid further aggravating the masses by prolonged unemployment. But the master class is an exceedingly cunning class and usually strikes when the iron is hot. While it may come down with the prices on commodities, nevertheless, it does not lose the oportune moment for lowering the wages of the workers, afforded by the whip of hunger and unemployment.

### Workers See Capitalist Inefficiency

But the capitalist class has already made its blundering mistake, the mistake that will eventually fling it into oblivion. It has unmistakably

proved to a dangerously large majority of the workers that it has become an inefficient administrator of the business of society, and that the only alternative is to replace it by an administration that can produce and distribute the necessities of life so that each and every member in a society of human beings can survive and progress, work and recreate for the benefit of society as a whole.

Feverishly the whole world over capitalism is striving to recover its equilibrium at the expense of the workers. This is the question of the day, and the question which should be uppermost in our minds. Although we know that the capitalism of yesterday will never be its same old self again, we must all the more help the march of events along so that the bankruptcy of capitalism will become a reality as soon as possible. "Blood and thunder" politics, with the aid of a pop-gun brigade, will not bring this about. Spontaneous, unorganized mass-action will not deliver the goods. The undoing of an organized industrial capitalist class will be realized by a force not only as strong as the organized forces of capitalism, but infinitely stronger, more cunning and more scientific in every sense.

**How to Conquer and Replace Capitalism**

The grievance of the working class in a capitalist society is not serfdom nor chattel-slavery; it is not political disenfranchisement nor abject slavery to the "divine right" of king or czar, but it is the damnable curse of wage slavery upheld by a system of industrial despotism! The curse of living and slaving in a profit-mad world for no other reason than to produce comfort and luxury for a class of parasites! This is the grievance of the producing class in capitalistic America, the sample for the world's industrial slaves, where everything evolves on competition, profits and labor exploitation; and these are the phases that we must consider when we talk of the undoing of capitalism. When we speak of undoing capitalism, we must speak in terms of organized force, a force that is not only competent to challenge the forces of capitalism, but which will furnish to society an alternative to capitalist economic management.

A working class management of affairs is what we are aiming at and, after having learned many a valuable lesson from the working people of Russia, Italy and of other countries in throes of minor social upheavals, we are bound to use this knowledge profitably. We have learned that the social-economic factors in any society are the determining factors of a revolution. This being the case, we must strain our efforts to organize the working class power on a social-economic basis; in other words, consolidate the industrial power of the workers in a manner that will paralyze the industrial forces of capitalism and will give us the organization to carry on production and distribution.

Revolutionary industrial unionism is today the only power that gives a practical and scientific solution for economic slavery. It not only implies the overthrow of capitalism but the reconstruction of a new system of society to replace it. The social revolution is inevitable, and if we take it seriously, we must accept industrial unionism with all its consequences and apply it unreservedly to better our conditions and principally to foster revolution.

# *Capitalists Utopia*

Radicals have long been accused of looking for a utopia on earth. Today the radicals are the ones who proclaim that there can be no utopia either under this system nor the next. Life is a constant flux and change and when our social organization changes into something more fitted to present day needs, life will not cease to struggle forwards to new goals and new achievements.

Today the reactionaries are looking for a dream condition. They want to reach a situation where they won't be annoyed by the facts of the class struggle which they refuse to admit but the signs of which stare them so resolutely in the face.

All labor troubles are to be ended and profits are to be secured through the efforts of the National Civic Federation sub-committee appointed to find the maximum agreement that can be reached between capital and labor. Once that agreement is reached then there will be no more labor troubles and everything will be serene.

That such intellects as Herbert Hoover and President Harding subscribe to the undertaking but shows more clearly the bankruptcy of intelligence that exists among the ruling class. There can be no peace as long as hunger and want are found among millions of working people and the few who make up the employing class have all the good things of life.

# Industrial Democracy

## Its Origin, Growth and Prospects

**By Justus Ebert**

THE ideal of the Industrial Workers of the World is industrial democracy, in which industry, taken in its broadest sense, shall be run by, for and of the workers, industrially organized.

Industrial democracy recognizes the basic importance of industry in modern life. On the development of industry depends the development of society. Russia, for instance, cannot have anything else in fact than a peasant dictatorship, because it is dependent on and dominated by primitive agriculture. This is made plain by the recent change of policy adopted by Soviet Russia.

The reverse is true of this country. Here we witness an industrialism that dominates everything, including advanced agriculture, and the immense numbers of proletarians who support this industrialism and make it possible.

"On the operation of industry depends the creation of wealth which makes finance and war possible." So said Frank Vanderlip, the eminent banker, during the recent world blood-bath.

Peace, no less than war, depends on industry, too. The shutting down of factories causes "hard times," with all of its serious, vital consequences.

Industry controls government and society. Who composes Mr. Hoover's staff of advisers for the redemption of the country from industrial depression? Why, industrial experts and engineers, to be sure! And whom does Mr. Harding call in for a nice little after dinner talk at the White House, for the same purpose? Why, the big bankers, who control the finance of industry, and employ these experts and engineers, to be sure!

Industrialism, in its most inclusive meanings, overshadows everything else in modern diplomacy and life. Why is Russian recognition demanded or opposed? For industrial or economic reasons! Why is the oil of Mexico, Mesopotamia and the Dutch Indies wanted by the capitalists of this country? For industrial or economic reasons! Why do the capitalists and bankers of this country want "the open door" in China? For industrial, economic reasons! Why is war with Mexico, England and Japan threatening? For industrial, or economic, reasons! Why do employers associations boycott Y. W. C. A.'s and church societies with social ideals and programs? For industrial or economic reasons!

In brief, the industrial basis—the economic motive—is seen in all social, governmental and diplomatic acts of modern society. He who controls industry controls society.

It is for this reason that the I. W. W. emphasizes the importance of industry and the necessity for its democratic administration.

Industrial democracy is a growth from within industry itself. It is not an imposition by law from without. It is not state ownership and control. Industrial democracy is the conscious endeavor of the workers to operate industry for the good of themselves and all society. It has its origin in the struggles between capitalists and laborers born of modern capitalism; and is recognized as a necessity to save society from the wars and cataclysms caused by the conflict of interests engendered by the latter.

Industrial democracy embraces only the workers. As in real political democracy there can be no kings, so in real industrial democracy there can be no capitalists. And for the same reasons: kings were brutal, oppressive, grasping and incompetent rulers, a menace to the state and progress; likewise with capitalists, who rule, not for the good of mankind, but their own profit, to the ruin of the race.

Industrial democracy, being founded on industrial possession, is the basis of all democracy, for without the power and control which industrial ownership confers, political and social democracy is a delusion and a snare.

Apparently, industrial democracy is only a dream —an utter impossibility. Yet its beginnings are manifesting themselves in many ways besides the theoretical formulation of the I. W. W.—negatively, in the attempts of corporations to create company unions in order to run the tendency towards industrial democracy into the ground; positively, in the endeavors of the labor unions to give this tendency a more pronounced force and character.

The battle for industrial democracy is on. It is being waged in current literature and in the confines of conservative unionism.

Henry Frank, writing on "Industrial Democracy," in the March, 1921, Century, gives an outline of the origin of this fight and its deep though obscure significance. Says he:

"Before the introduction of machine power, which resulted in grand-scale production, the handicraft workman was master of industry. When the factory came into being the masters of the small shops were driven to the wall. Two classes developed in industry, employers and employees. Not even a sense of partnership survived the wreck of the old handicraft system. It became a matter of master and servant. Control was the big thing that was lost by the masses of the laborers. The workmen of the world have never become reconciled to that loss, and as popular education has done its work, stimulating the self-respect and dignity of the masses, the sense of disinheritance has become keener. So that many of the most acute students of contemporary life contend that

beneath all the elatter of labor disputes there is a profound movement for representative government in industry, exaetly as there has been through the years a movement for representative government in polities. It is diffieult for many employers to believe this. They eome into daily eontact with workmen, and rarely do they find a workman who seems greatly eoncerned with a voiee in business. The workmen they meet seem eoneerned solely with matters of wages and hours. Many employers therefore set down all the faets of a movement for industrial demoeracy as the dream of doetrinaires. But I suspect that a reporter going up and down England a little while before magna charta was wrested from king John would have been impressed with the faet that few of the eommon folk of England would discuss intelligently and in detail the desired politieal reform, though the underlying urge to democracy was there. Most of the profound movements of history have been uneonseious, as far as the masses were eoneerned, until the eritical moment of eonsummation arrived."

The movement for industrial demoeraey is growing in consciousness, as witness the aetivities of the railroad and maehinists' unions at the recent Denver Ameriean Federation of Labor convention. These two groups of unions foreed through a resolution favoring "government ownership and demoeratic eontrol of the transportation systems of the United States," and a half-eontrol of industry by labor. Or as the resolution puts it, to seeure to the men employed in organized industry that equality of employment of all the rights, privileges and immunities now enjoyed by those who eontribute eapital to organized industrial enterprises."

In England we see mueh the same trade union phenomena that we see here, viz., a demand for the nationalization of the mines by the workers, with the idea of advaneing the workers' status, standards and powers, both as produeers and as citizens. It is reeognized, sometimes dimly, sometimes vividly, that only through workers' management and control of some kind and degree ean the workers progress towards improvement and emancipation.

Now, this is not full-fledged industrial demoeraey. It is a eompromise with eapitalism on the part of labor unionism—an attempt to bridge the transition from the old order to the new. Nevertheless, it is a beginning, a groping towards industrial demoeracy of the full-grown kind. It is an outgrowth of experienee with capitalism, whieh, together with more experience of the same kind, will lead directly towards industrial demoeracy of a genuine eharaeter.

The railroad and maehinists' unions, having felt the need for "governmcnt ownership and demoerati: eontrol" in the peeuliar eonditions surrounding the railroads during the war, are likely to find that post-war conditions will foree them into even more advanced positions than those at present assumed—positions involving even greater ruptures with the old order of absolute private ownership and eapitalism. This evolution will be hastened by their own organization weaknesses, which will make them unable to enforee their Denver resolutions.

This tendeney to greater definiteness may be observed in Europe, espeeially among the working elass organizations of England; so that ,on the whole, industrial tendeneies may be seen working for industrial demoeraey the world over, the eapitalist reaetion to the eontrary notwithstanding. In faet, this reaction will be helpful to industrial demoeracy in the long run. History makes this obvious.

Following the Civil War in this eountry, for instance, there eame a stupendous depression, unemployment, and a great eorporation development, leading to the formation of the trusts and modern imperialist eapitalism. The labor unions were badly crippled and their growth temporarily halted. But they survived the crisis and flourished later as never before.

A somewhat similar condition on a more extended scale prevails now. As a result of the world war, an economie erisis holds the nationos of the universe in a paralyzing grip. Millions are unemployed, starving and destitute. Everywhere, in striking eontrast, capitalism is developing on a larger, intensive seale, expanding beyond national boundaries, forming international eombinations, while, at the same time, developing an imperialist nationalism. Labor unions are deeply effeeted; apparently favorably so, as far as growth in numbers go and elarity of purpose is eoneerned. Their future, when viewed in a workaday light, is apparently uneertain. But assured when viewed in the light of history. If the past is any eriterion bigger growth awaits them not many years henee.

Consider the futurc prospects that greater eapitalism offers to the workers and thereby realize what opportunities for industrial organization and industrial demoeracy are embraced therein.

Greater eapitalism is intent on the international development of Mexieo, Asia, Africa and Russia. This will give an impetus to industry, with its usual eyele of prosperity, overproduction and collapse. Or greater eapitalism, aceentuating the need and the greed of its national imperialism, will fall out and go to war, when the results, as seen during the late war, will be the same; that is, there will be a eyele of industrail impetus, prosperity, overproduetion and eollapse again.

In both, or either of these developmnts, the industrial demands for labor and the need for labor partieipation in the programs outlined will give to labor a basis on whieh to further build its organizations and to more fully and eompletely advanee in the direction of industrial demoeraey. Not only will the favorable aspeets of greater eapitalist development—international or national—eontribute to labor's advaneement, but so also will the unfavorable aspeets. War and its horrors arouse labor to organization no less than war and its pros-

perity do. Espcially is this more likely to be th case in the future than in the past. Hostility to war has grown, thanks to the revulsions engendered by the late war.

The international growth of capitalism—its Chinese consortiums, Franco-Teuton ententes, Anglo-Teuton-American "world trusts" to exploit Russia, international chambers of commerce and financial conferences—will tend to make industry international and promote international labor organization more practically rather than theoretically, as has been the case heretofore. Should imperialist nationalism assert itself it is likely to be caught in this international meshwork of capitalism. Or it is likely to tear it down, to its own destruction. The international expansion of capitalism is the greatest necessity of the latter, as events demonstrate; and all that is at odds with this necessity is likely to disappear before it. This means, ultimately the international triumph of industrial democracy.

All this will mean much to labor organization, especially to the I. W. W. and its principles and forms. It is logical to suppose that the upbuilding of a greater capitalism will compel the upbuilding of a greater unionism—a unionism, not of trades, nor of industries only, but of international units, corresponding with international corporation development. This will be the I. W. W. opportunity for growth, for the I. W. W. has anticipated this upbuilding, in a measure by promoting international organization and affiliation; and, hence, will be in a position to profit from this new necessity for a new and better unionism.

There is much, in present day phenomena, to justify the ideals, principles and forms of labor unionism advocated by the I. W. W., espcially is this noticeable in the influence of the I. W. W. on the marine transport workers of the world, who are turning away from the old unionism to it, in search of the new. This phenomenon is likely to be repeated in many other industrial spheres. So let the I. W. W., despite the "hard times," be up and doing!

"Do not weep" over these "hard times," "organize"! On to Industrial Democracy!

# The Labor Movement of Greece

**Compiled from the manuscripts of Geo. Katsiolis and Joe Marko.**

The labor movement of modern Greece is probably less known than that of any other country. It began with the introduction of capitalistic production.

Previous to this introduction the workers of Greece could be divided roughly into two groups. The first group were composed of the agricultural workers or peasants who were unorganized. The second group were the handicraftsmen who were organized into trades unions or guilds.

All tools of this period were adapted for the use of one worker. The agriculturalist used his tools unaided by big machines and implements. The handicraftsman used his tools and his shop in the production of his wares.

The biggest part of the towns people were handicraftsmen or their apprentices. So most of the townfolks were organized in their unions or guilds. Each street or section was occupied by a particular trade or craft and the individual houses and shops on that street were occupied by the individual artisans who used the shops to produce and barter in.

Even those trades that did not do their work in shops yet owned their own tools and were organized. The masons, carpenters, plasterers, sewermen and longshoremen were union men though none of them carried cards. Their unions were local affairs and they knew each other by sight.

Yet they had a treasurer and held limited funds to help the disabled and aged members and to carry on the occasional struggle against the community government. In place of Union Halls they used coffee houses to meet in. It was the habit after the days work was done to go to the coffee house and discuss the gossip of the trade.

When a person needed a carpenter he went to the carpenters coffee house and so with the other trades. These coffee houses exist throughout the Balkans, Asia Minor, Egypt and northern Africa today and some of them function exclusively as meeting places for labor groups yet.

When the social surplus products of western Europe poured into these countries the many trades unions lost their prestige. The machine production of the west pitted against the hand production of the east was the cause of the falling away of each unions membership.

Thousands lost their little shops and became wage workers and others managed to hold their shops by adopting the use of machinery. The machines made competition amongs the former members of the union and this was against the principles of communal mutual aid which they had believed in so long.

The old forms of guilds or trades unions became meaningless and out of date. The old stable condition of things was changed. Wherever

the machines were introduced the field of production became a battle ground.

The wage workers did not understand the principles of the new mode of production and were beaten in their individual fights. In the great hard times thousands after thousands emigrated to western Europe and to America. Yet the army of wage workers increased continuously. Men of every rank denounced the competitive system but denunciation was as far as they could go.

No one could understand how the Bourgeoisie could flood the market with well fashioned commodities and sell them for a trifle of the price that hand labor must receive to exist. The mistake made by these dying unions was in not watching and understanding the evolution of the mode of production. They should have merged from many small local unions into big powerful industrial unions.

They failed to create a means (as an industrial research bureau) to investigate and study the working of the ever active social forces that were causing new methods of production.

By mastering the problems caused by the introduction of machinery they could have turned this knowledge to their own service. Not having this knowledge they could not hold together. Confusion was the order of the day.

Some of the workers who wanted to understand the new system came together at last and formed the Socialist party of Greece in the early nineties. Their idea was to get the old guild men together again with a new vigor and build up new unions on the basis of new scientific knowledge.

A socialist press was started and they put out pamphlets written in language similar to the law books or the holy bible. Their literature was full of ethical and moral ideas together with abstract logic but no scientific facts.

In short the socialists of Greece were far from understanding what it was necessary to get the workers to understand. They failed to put before the workers clearly the new economic structure of society. This knowledge was needed by the workers so that they could carry on a successful battle against the bourgeoisie.

After failing in their mission the socialist party turned their press into a vote catching machine. They became grand patriots and flag wavers and openly allied themselves with the middle classes. They helped them to enlarge the sphere of capitalist exploitation.

The Balkan war came on which resulted in the destruction of hundreds of thousands of workers. The miseries of this war heaped on the shoulders of the toilers created a rebellious sentiment but there was no organized attempt to express this rebel spirit in action.

The workers realized that something was wrong and that a betterment of conditions must be secured but they were more fearful of trouble than desirous of bettering their conditions.

Still the sentiment of unrest has been very helpful in furthering class conscious education in later years. Some workers who had studied the labor movement in foreign countries had returned to Greece and with some of the more advanced elements of the newly conquered territory they built up a nucleus of an organization and carried on consistent propaganda. Since then a better understanding of the labor movement and the class struggle has invaded the minds of the workers of Greece.

Direct action on the basis of the class struggle did not show itself until three or four years ago. Organizations grew rapidly and the trades unions embrace over a hundred thousand members of which more than sixty thousand were affiliated with the Confederation of Labor. Under the organization of the trades unions many battles were bitterly fought and many victories were won.

The hours of work used to be from sunriso to sunset with five and ten miles of foot travel before and after the days work. With proper use of economic action it did not take long to reduce the working hours to eight and to raise the wages from two drachmas a day up close to twenty and even as high as forty a day. However the wage increase was of slight moment for the prices kept even pace but the betternment in conditions will remain as a constant source of working class benefit.

In 1918 a movement was started to break off from the Socialist Party the reformist bourgeois element and was successful to some extent. The party remaining declared for the third international.

Small in numbers yet this communist element were the majority in the party when the split came. Their fighting spirit soon brought down the persecution of the Venizelos machine but the well organized and compact Communist organization was able to give a hard battle. The Confederation of Labor supports the revolutionary program of the Communist Party and is the greatest single labor factor in Greece.

Communists were arrested, imprisoned and ordered exiled. General strikes were declard demanding their liberty and industry after industry was tied up.

Every method possible was tried to break the strike. Strikers were arrested by the dozens, hundreds and finally thousands and thrown into prison. Strikers were drafted into the army and when they refused to obey the military orders to go back to work they were court martialed for breach of discipline.

As a result of the incessant strikes practically all of those arrested were liberated and the exiles allowed to return, but twenty or thirty of the most active rebels are still in prison.

The railroad workers have so far refused to affiliate with the Confederation of Labor and have failed to recognize or play any part in the past class struggles. Constant agitation however is having its effect on these workers and plans are now on foot to get these workers organized into a real industrial union of the railroad workers which, if successful, will place them in a better position to fight the reactionary classes and bring them into line with the Confederation.

The government is more afraid of this move than of any of the others that have taken place. They are using all their power to keep the railroad workers separated into their crafts and away from the Confederation.

All the radical elements of Greece are united in the fight and there is no split in the ranks of the workers. The Communists have the active support of all the advanced groups of organized labor and work hand in glove with the battling Confederation. The official organ of the Communist party is also the official organ of the Confederation. Both groups are trying to get the railroad workers to accept Industrial Unionism and join the revolutionists. Success in this aim is expected in the near future as the railroaders want to join but are held back by government persecution and their craft officialdom.

Perhaps the main reason for the unity of action among the radicals is the fact of the persecution. No one has joined the organizations unless they were out for a fight so all the compromising and cold footed elements were kept out.

The Communist party of Greece is the heart and soul of the industrial movement. Also the political defeat of the Venizelos machine can be attributed partly to the skillful activity of the revolutionists.

The big failure of the Communist party and the revolutionary program in Greece has been among the peasants. Special endeavors have been made to establish posts for propaganda among them but the small number of men really capable of directing such work has held it back. It is to be hoped, however, that these posts will soon be established and the strongest hold of capitalist tyranny will be flooded with revolutionary literature and understanding. The reds are strictly on the job now and are successfully switching the currents of discontent into lines of social revolution.

The present administration has been feeling the weakness of its position and have started persecutions. The arrest of reds was resumed about two months ago and the country was immediately tied up in a general strike. As yet the outcome has not been decided.

There has been good work done in Greece. The struggle has been and will be a tough one. The workers there with the aid of international solidarity will carry the struggle out to a successful conclusion. The workers organized as a class will expropriate the bourgeoisie and establish permanent industrial communism.

★

# THE WINNER

**By John E. Nordquist**

He played the game of chance called life;
Wrought with hardships toil and strife.
From the cradle to the grave
His efforts to the game he gave.

He played the game in honest style,
Knowing fraud not worth the while;
And bade his fellow players share
His fortune when the game ran fair.

He played his hand the best he knew
Tho oft times trumps were mighty few;
And if he lost a trick, well earned,
He kept his stride and never turned.

His cards are put away, the game is o'er;
Old father Time has chalked his score.
He played the game of life quite well;
He won the game, the records tell.

What has he won? perchance you ask:
He won the joy of a well done task;
His was the hand that smoothed the way,
That other men might better play.

He helped to educate the slaves
To free themselves from greedy knaves.
He fought to free humanity—
He played the game for you and me.

# Johnson the Gypo

**By Ralph Winstead**

THIS here Gypo proposition reminds me of the old woman who had a peppy daughter. She used to moan and plead with the girl to change her state of mind and be a good girl. This old woman was faced with a condition of things, not a state of mind and the only way for to deal with conditions is by the use of tactics, not by using a line of appeals to be good.

Now there is one time honored tactic that has been used by old dames on their daughters since and before the human race had thumbs. This line of action was to turn the refractory young female over a bony knee and administer to the well being of her ideas by hand.

That ain't the only tactics to fit this particular problem by a whole lot but at least it has some advantages over appealing to 'em to be good. They got inside urges as to what they want and need and all the appeals in the world don't cut much ice in the face of a human urge. Tactics is what counts.

Now it's the same way with the Gypo proposition. These here bushel maniacs just naturaly got the same sort of nature as John D. Rockefeller and a lot of other humans includin' all of us. They wants to get rich quick and are goin' to listen to that interior urge to gather in the mazuma when the gatherin' is good in spite of any appeals to be good saintly wobs and travel the narrow path.

But mostly we have been playin' the part of the noble mother and been pleadin' with these here almost human Gypo birds to be good, and spurn the pitfalls of their evil ways. What we got to do is use a few tactics on 'em. Maybe spankin' would be justifiable but maybe it wouldn't get the goods as quick as a way that me and a bunch of other wobs tried up at Grinnon one time.

Of course, as I say, tactics is the thing to use and when tactics is decided on in a whole industry it takes a lot of organized action and workin' together that is a lot harder than just goin' around spoutin' about the humpbacked species that has ruined the organization and is now keepin' us on the bum. In order to put any real tactics across we got to have a real plan worked out and have got to put the thing over by co-ordinated action and not by sanctimonius prayers to stay away from the sinful contract and keep pure and undefiled.

One time I blowed into Seattle with a short stake and was prepared to stick around town for a week or two. There was a good bunch in town and we lit out to take a little relaxation. Snowball Smith and me was roomin' together and was takin' on the said relaxation mostly in company. About the first stunt we done was to go out to Alki point and gather an eyeful along the beach. Of course these was before the short skirts made the beaches unnecessary for purposes of sight seein' but even aside from this sight satisfaction we was both longin' for a salt water swim, and got it.

It was the next afternoon after this excursion amongst the darin' dressers that I was walkin' down the slave market when I noticed on old man Moore's board a sign that caught the eye: "Wanted eight men to take contract bucking and falling. Details inside."

There it was, straight Gypo stuff. Chance to make a co-operative fortune right in my hand. Me—well, I looked around real quick to see if there was a hump backed Swede in sight and not seein' any I high balled right up to the room and got hold of Snowball.

Now Snowball is one of these here plugs that is never restin' with his trigger on safety. They ain't no neutral gear in his make-up. Snowball is always ready to go and further more after the goin' is a long ways from the start and gets rough, why, he ain't the bird to crawfish neither. Maybe he ain't exactly what you call an executive genius that can lay out and get others to carry through a big campaign but he don't need to ponder over no proposition for three weeks to see if it'll hold water. Snowball makes up his mind quick and stays with it.

So when I suggests to him that we become the original humpies and go scabbin' on ourselves just for a little fun and tactical experience, why, Snowball don't bat an eye but hustles his lid and we streaks for Moore's. Nobody had beat us to it so we got all the details.

Eight men was wanted to sign a contract to fall and buck a full section of timber up at Grinnon which as you know is a sort of steeple jack outfit up in the Olympics off of Hoods Canal. The ground was level we was told and the timber was good The rate was 60c per thousand and we had a bunk house all to ourselves.

The company furnished the tools but we had to do the saw filing. We was to eat in the company boarding house and they would deduct the board bill at the pay off. We could draw only fifty per cent of what our log scalein' called for till the job was finished. Everything in regular Gypo style.

Snowball did most of the talkin'. He made rapid estimates with greedy eyes at how much we could clean up in the summer. I almost got in earnest on the finance end of it myself. It sure sounded good the way he mentioned the thousands of dollars.

Moore agreed to hold the job till we got six more fellows to go in with us and so we set out to round up six good wobs that was willin' to mar their perfectly good reputations in order to put the Gypo game in bad at Grinnon. We had a hard time. Some of our best known wobs sneered at the idea and told us we was just lookin' for an

excuse. But we kept travellin' in spite of little set backs and raised a crew.

The eight of us signed on and got our John Hancocks on a big contract that was goin' to make or break somebody. Then we separated and rustled our clothes and spent the night listenin' to advice not to go and tryin' to explain why we was goin' to the bunch, but they wouldn't pretend to believe us. Faint hearted wobs never went Gypoin' yet is my claim. The pressure was awful, but we stuck it out. A fellow's friends and fellow workers can always be depended on to state the right and wrong of things. Right and wrong I always claims is matters of gettin' results.

Next mornin' we grabbed the boat for the first lap of the trip and after changin' into busses and back onto boats a few times we made the landin' at Grinnon. We was met by the time keeper with a speeder and made the trip up over the steepest known loggin' track in the country and that is sayin' a heap.

We didn't see where the nice level ground mentioned in the sacred contract was comin' in but we sure enjoyed the scenery which is sure pleasant in this section.

Mountains and valleys with clear tumblin' rivers and misty clouds hangin' half way up can sure wipe out the memory of a lot of squalid misery found in more civilized sections. Somehow they make a fellow feel that life is big and not exactly centered about himself.

And this feelin' is most necessary to get real action these days. Most of us like to stick our chests out about two inches further than is necessary for deep breathin' and seem to forget that there are others in the world that might be just as wise—as the big center of things—me. There is a lot us that has got to learn to think and act according to the biggest benefit to the greatest number instead of in the way that our own ideas points.

We made the camp alright and found a bunk house fixed up for us that was pretty fair. The boss give us the icy eye as if he was only in on this Gypo proposition by compulsion but the manager was all smiles and explained to us over and over that he had only left his office work in town to come up and see that we got a good start.

Of course we was grateful. We even told him so. The grub was good too but the flunkies set it down before us with a bang and the cook looked cross-eyed at the whole bunch of us. Sure a guy must have to suffer a lot from just wantin' to make a few lousy dollars via the Gypo route in some places. I even commenced to be scared somebody that knew me would write it up for the Worker and demand that I turn in my card. Such would have sure ruined me for life but then I been ruined more than once anyhow.

Well, we went out and looked over the ground. It was level, too. A fine bunch of trees in a level valley that just seemed to happened along by accident in the steep canyons. Then we organized ourselves. Snowball was elected to do the filing and the Bull buckin' and the rest of us scattered out in the trees.

, I started in with the fallin' gang not knowin' anything about this end of the loggin' game and we dropped the first tree fine except that the blamed thing hooked up and it took us most of the day to get it down where we could look at it.

Then we done better. The manager came around and found all of us sweatin' and puffin' so he went off to town satisfied that he had solved the problem of bustin' up these here pesky wobs by makin' 'em take an interest in the work. Yeah, we done better. In the afternoon me and my pardner dropped three fine big trees, every one of 'em with high grade timber in 'em—number one flooring stock, but the blame sticks dropped on stumps and was busted all to hell. It was sure tough but I cheerfully took the blame as I didn't know much about the fallin' game anyway.

When I looked over the rest of the crew's work I commenced to think that I had picked the biggest bunch of green horns that could be found in the whole organization. Not one of 'em seemed to know as much about fallin' or buckin' as I used to.

The newly elected bull bucker came around to me and he pulled his face into a sorrowful twist and explained that we wasn't makin' more than three or four dollars a day and was a dullin' a lot of saws.

This of course was awful news as it meant that maybe we wouldn't make that young fortune we was a lookin' for here. I promised to speed up and we did manage by workin' a little overtime to drop another fir, but it was punky.

The funny part of the whole thing was that we didn't seem to improve as the days went by. Some of the gang got lazy and wouldn't drop as many trees as they should and then they would blame Snowball for bein' a bum sawfiler but I couldn't see anything wrong with his filin'.

The boss dropped around and looked over the work we had done and I saw him goin' away with his hat off and him a scratchin' his head. He appeared to be plum puzzled by our progress. In the meantime I got friendly with the blacksmith's helper and he told me that the boss once carried a card in the early days and that there was good bunch of wobs that had been sent down the road to make room for us damn scabs.

You bet I got **real friendly** with that helper. I made it a point to see that he wasn't handlin' any hot irons when I happened around. Well, we stuck to this job for a month. Things went from bad to worse. I commenced to lose faith in the co-operative movement when it comes to gettin' work done. We didn't seem to have the right spirit for work no matter which way we tried to bring it out.

Still I learned a lot about fallin' trees but the fallin' pardner didn't seem to think so. He said that I couldn't hit even the ground more than

once out of three times without him. Well, I thought if he was so wise I would try my hand at buckin'. So we made the switch.

I went on with a big Finn that agreed to show me how to buek. But I soon wished that I hadn't done it. Buckin' is even harder work to my notion than fallin', besides I was no good at it and didn't seem able to learn much. About every time that I got a real good log about half bucked out, why, somethin' was sure to happen to the wedges and the blame log would split. I must of spoiled a lot of 'em that way but I learned how to buek 'em off square at last but the bunch decided to let me buek on the split ones about this time so I didn't get any real practice at that.

In other ways, however, things went fine. For instance the eook finally seemed to get over his grouch and was real friendly. He came out and looked over our job and even got jolly about it. Then we sort of decided to take it easy anyway. About this time, why, we got a good buneh of papers and magazines up and it got so it was harder and harder to tear ourselves away from the literary field. We enjoyed discussions on a lot of highbrow topics and sometimes when the job got irksome we took a hike up on some of the hills and looked around.

Maybe I am a little off on the subject but I sure admire the seenery in the Olympics. The more I saw of it the more I admired it. Finally it got so that it appealed to me more than even the buckin' did though I admit that that was sure fascinatin'. It certainly was wonderful to get way up on the mountain side and look down on the riggin' erew a sweatin' and strainin' like little ants down in the valley while the donkeys would shoot steam like these little peanut roasters on the pop eorn stands in town.

Oh, it was a great life. I could see where there was all sorts of temptation to be a gypo. I eommenced to think that I would like to do this regularly.

The good grub and the pleasant companionship sure didn't make none of us feel bad either. Snowball said that he wore a full ineh off of some of the saws just to keep himself busy about the shack while we was out on the job but I think he was exaggeratin'.—I never did think that he always told the whole truth about some things especially about how hard he worked but I will say that he changed the looks of some of them saws alright.

All good things come to an end at last, however, and one day the scaler eome up to scale up our eut and see where we was at. He come out on the job unexpeeted but as it happened three of us was workin'.

He started to work scalin' the logs and seemed to grow real exeited. He didn't stop, however, to make any remark to us but kept on all day. Well, he stayed with the job and so did we. When he got finished he come over to tell us about it. He was so mad he was almost happy.

"Well, you birds have sure got away with somethin' this time," he tells us in our bunk house the night he finished. "You have been here thirty days and have eat up four hundred dollars' worth of grub. You have knocked down and mutilated a million feet of timber, whether from pure eussedness or beeause you are damned fools, I don't know and no one can prove. But I sure have a bright suspision because none of you look like plum idiots to me."

"The foreman wrote into town advisin' the manager to abrogate the eontraet a eouple of weeks ago but then the manager had an idea he was still opposed to the contraet system. Now I know what he was opposed to, allright."

We all asked him what was wrong. We wanted to know if he was goin' to get us fired from out good job. In fact we made him feel that we sure enjoyed the stay up there but that didn't seem to help him any. He went away madder than ever. I heard later that he had three shares of stock in the company.

The manager came up and told us that our eontraet was not worth a damn and that the quicker we got out of eamp the better he would be pleased. He said that if we wanted to eollect the money for the trees that we had put down we could bring suit and see what we' got.

We pulled out and blew into Seattle but so far none of us has taken up the matter of our legal rights to pay for our work. And on the other hand I saw the boards down at Moore's ehalked up heavy for buckers and fallers workin' by the day at Grinnon right away after we hit town.

Tactics, I claims, will get the goods where dealin' out the sneers and peddlin' the holy solidarity stuff only makes a man feel ashamed and unnatural but don't stop him from wantin' to obey that inner urge. In fact some of the looks I got up in Grinnon made me think that maybe I was a superior bein' and not in the crude and unsophistieated eircle of eommon workin' stiffs.

Providin' that I hadn't already known better I feel sure that that idea would have got stuck in me somehow or other. It's funny that way. Everybody is always ready to believe that he or she (espeeially she) is different from the rest of the people. You know the line of bunk I mean and how if you shoot it out just right, how it always gets results.

Well, Gypos don't want to get no chance to think that they are different from you and me. Just use a few organized tacties and the humps on some of the loggers' backs will look like a camels that has been through a famine worse than a term in the Spokane City jail in a free speech fight.

Suppose we just get together and put across a few tactical manoeuvers on these birds and see that they don't obstruct the progress of the organization any more. That is my idea.

# Women, War and the Class Struggle

**By Mabel Kanka**

A WOMAN delegate to the International Women's Conference delivered an anti-war speech the other day in the heart of Wall Street.

The conference to which she had been a delegate was composed of women from Austria and Germany as well as from their late enemies and neutral powers. They met to lay plans to enforce peace.

This fact alone is remarkable when we consider that women usually follow in the beaten trails and seldom blaze new ones for themselves.

But it matters not what problems the International Womans Congress seeks to solve it is fairly safe to say that it is predestined to failure. It begins by dividing the human race on the basis of sex, and has no concern with economic or social problems.

Is it any wonder then that the majority of women are still blind to the light that is flooding the earth? They have been taught to think in terms of sex when their only hope lies in the obliteration of sex barriers and the recognition of those of class.

They propose to refuse to aid in any manner whatsoever the successful prbsecution of wars by refusing to take the places of men called to the front. They propose, in other words, to take the same stand that the conscientious objector took during the late war.

And have they forgotten with what ruthless brutality the state sought to stamp out every vestige of individual conscience in these objectors? Did these women raise even a feeble protest against these outrages? If it is women who bear the major burden of wars were not these objectors fighting the cause of women as well as of their own individual conscience? And what was his reward? Of course it is true that the majority of people are always saved in spite of themselves. They never accept a new idea until they have burned at the stake a few of the early advocates of this new idea. But the women who framed this resolution must have known as well in 1916 that they bore the burden of war and that it was in their power to stop it as they did in 1920.

The success of this undertaking depends largely on the ability of women to stand together when the next war comes, when the shrieking hysteria of war again engulfs the world, blotting out every vestige of sanity and reason, she is expected to remain calm and unperturbed. Amid the blare of trumpets and waving of flags she will stand like a pillar of stone blocking the path of the marching feet on their way to the battlefields. Can a more brilliant or impossible dream be imagined?

Just at the beginning of the late war one of our prominent suffragists issued a statement in which she said "Patriotism is the supreme virtue." As long as such ideas permeate the very air we breathe we must expect mothers to lead their sons to recruiting stations and cheer them on their way to the battle fields. As long as the germ of patriotism, as represented by nationalism, is taken in with the mothers milk, just so long will there be wars, and as long as wars are fought women will sacrifice their sons whether willingly or unwillingly.

The roots of war lie not only in the mind of a perverted humanity but they extend much farther back and are rooted in the fountain of all social evils—private property. Abolish private property and you will have destroyed the eggs of war. Patriotism is a product of the state which in turn rests on private property.

Any such movement based on the assumption that the interest of one woman is necessarily the interest of all others and that women should stand together as a sex regardless of class lines is a gross deception to the woman of the working class. She has nothing in common with the parasitic woman of the aristocracy. Her interests are bound up with those of the workers, both men and women. And it is on this basis and this basis alone that war can be abolished.

It is high time that the women of the working class awoke and ceased to follow such will-o-the-wisps as equal suffrage and the like and instead of looking at things as a woman, see them as a member of the working class. Then and then only will war and all its accompanying horrors be abolished.

# Tramping the Northwest

By G. R.

ALTHOUGH many of the saw-mills, logging camps and mines of the Northwest have ceased to operate, there are few unemployed hangers-on in this part of the country. When out of work, a man generally takes to the road with the hope that somewhere he will find a kind-hearted master who will let him use a job for a while.

Automatically he becomes a tramp, a bum or a hobo—whichever term seems the most fitting to the average respectable citizen. Normalcy, wherever that may be, surely has been passed a long time ago but to judge by the large numbers of tramps and bums on freight trains and in the jungles we are still on our way.

For the enlightenement of those who always think of the tropics, waving palms, monkeys and cocoanuts when they see the word "jungle" a few words of explanation might be in order. The jungle of the migratory worker and the thousands of city workers who now also are bums and tramps is far from being as romantic as the name suggests. It is mostly always located near the stockyards or refuse dumps of the small towns, this being the only place where the citizens will tolerate the undesirable hobo.

Coming into a small town during harvesting or fruitpicking time one can always tell at a glance if there is a jungle near the town. If the citizens do not allow the bums to "jungle up" the appearance of the men who stand around the streetcorners waiting for a job to turn up is often terrible. They are unkempt and dirty, with dirty and greasy shirts and overalls. Not being able financially to stay at a hotel, they must sleep outside and often there is not even a place where they might wash themselves. Under these circumstances it is impossible to keep clothes and body clean.

Where there is a jungle, the general appearance of the men is entirely different. If one has no razor or soap, needle or thread, there is always some fellow-bum who will gladly help him out so that he can wash and shave and patch his clothes. They can pool what little money they may have and cook up a nourishing meal, and one can often see a lowly bum sharing a loaf of bread bought with his last dime with some tramp who has just dropped off a freight, broke and hungry. Real christianity and good fellowship? Go amongst the hobos in the jungle and you will find it.

The businessmen of many of the towns out here have spent time and money on tourist parks for the accommodation of the traveling members of their own class, and, incidentally, to induce them to linger for a few days and spend some of their hard earned cash, but they do not show any consideration whatever for the bum.

Of course, the bum only comes around to build railroads, and highways, cut and bale hay, harvest and thresh, pick fruit and do hundreds of other things which could not be done without him. It would be unthinkable for the business men to set aside a place for the bum with some shelter against the elements, and with pure drinking water.

Ever so often, though, the tramps and bums must be shown that they exist only by the grace of the Chamber of Commerce. The town marshall is ordered to "clean up the jungles" and with his thirtsy gun he will perforate John D's oil tins in which the tramps had washed their clothes. With both feet he will jump on to the smaller cans which had been used for coffee, stew and drinking cups. He will look at the frying pan, and if he doesn't decide to take it home with him he will do his duty and fire a shot through the bottom of it, also.

The next tramp who comes along will curse awhile and then will patiently look for another jungle outfit. He will string along the torndown piece of haywire again that had served as a clothes line, and again shirts and underwear will flap in the wind and mulligan and coffee will boil on the rearranged fire place.

I am a bum, too, and I am sitting under a railroad water tank waiting for the "manifest," the fast eastbound freight. The lights of the town have long ago died one by one, weariness overcomes me and I doze off only to arouse myself again to listen for the sound of a train.

Suddenly the grinding of brakes brings me to my feet and I hurry down the long string of cars to find a place to ride, passing car after car locked and sealed. Slowly the train begins to move and gather speed. At last I reach a coal car loaded with square timbers which has an open space on one end. A bum looks down at me over the side. "Is there room for one more?" I shout at him. "Always room for one more" he says, and I swing on.

When I try to lower my feet into the car I find that the floor is covered with human forms. Carefully I pick a place to stand amongst the bodies of sleeping men who look like a heap of corpses in the dim starlight. The fellow I spoke to asks me for a cigarette and we stand quietly among the heap of sleeping humanity at our feet while the train pounds through the night.

Daylight at last, and one by one the sleepers arise and work arms and legs to overcome their soreness and cold. There are young bums and old bums, natives and foreigners, and also two colored tramps, There is little conversation; waking up on a freight train penniless and not knowing what the day may bring is rather depressing.

The sun comes up and the spirits rise a little.

Two young fellows, one of whom wears the button of the American Legion, ask about the next stop. The question of course is: "Can a fellow eat there?" An old timer who has been there says that the baker is good for a loaf of bread and that the old Dutchman who runs the butchershop is alright too. "If we can get some bread and bologna, we'll be fixt for our breakfast," in relief exclaims the young fellow with the button of the Legion, "but if the butcher is a Dutchman I'd better take off my button before I bum him."

* * *

All day long the freight has crept through the dry, sunscorched desert. All day we have traveled without food, and we do not know when nor where our next meal will be. Slowly the train crawls onto siding, a whistle sounds in the distance and a passenger train pulls up alongside of us. We gaze through the windows of a dining car and almost within reach we see a white tablecloth, shining silver—and food. A portly gentleman and a plump, middle-aged lady are evidently enjoying their evening meal very much. ("Overfed parasites!" grumbles the fellow who stands beside me). A slim young girl daintily toys with her fork while a waiter hovers nearby, ready to be at their service.

Two blasts of the whistle and they glide out of our view again. A fellow jumps off the freight to pick up a couple of slices of bread thrown out through one of the windows of the passing train and clambers on again. Slowly we pull out onto the main line and we settle down to some more shaking and jolting.

* * *

"Hello, there, Fellow Worker," a cheery voice greets me as I drop into the jungle of an Idaho town. Glad to see someone I know, I walk over to shake hands with a Fellow Worker I had known on the Coast. He is one of those out on bond, with a penitentiary sentence hanging over his head, but to judge by his appearance he has not a care in the world. We sit down to speak of the things wobblies will discuss whenever they meet.

He had been reading when I came and I pick up the book lying in the grass. Ballad of Reading Gaol, by Oscar Wilde. Think of it! A man as good as condemned to years in the pen reading such a book and still not in the least depressed. "Here is a verse that would well apply to Fellow Worker Everest of Centralia," he says and he reads out loud:

"They hanged him as a beast is hanged:
They did not even toll
A requiem that might have brought
Rest to his startled soul,
But hurriedly they took him out
And hid him in a hole."

I speak of his own case, but he only smiles. "You know," he says, "a county jail is rather a noisy place, there is always a bunch of fellows and you don't get much opportunity to read, but I think that in the pen it will be quiet and I will have the chance to read many of the books I have always longed for. I can study undisturbed and I might come out with a better education than I have been able to acquire so far."

I sit up and ponder. Here is a workingman, bright and intelligent, with the soul of a poet, a better man morally, mentally and physically than those who wished him condemned. His only crime has been his desire to help the workers in the logging camps to better their conditions and to preach the gospel of industrial freedom. And yet there are millions of workers who would not even read the outcome of his trial, nor would they give a thought if this man is sentenced to years in prison. His name is known only among his friends for he is only one out of many.

"You can have this book if you wish," he says, interrupting my thoughts. "There is a train coming and I don't like to miss it." Cheerily he bids me goodby and swings his packrack over his shoulder. Out of such stuff wobblies are made.

* * *

Nothing to ride but the tops or the rods, every car is loaded and sealed—and so we take to the tops and sit on the running boards. A brakeman makes his way towards us from the engine. "Tickets, boys," he sings out. "Tickets—only red tickets are recognized on this train." We all have our "tickets" and one fellow gives him copies of the "Solidarity" and the "Worker." He sits down to chat a while and then resumes his walk towards the caboose.

Presently we pass a westbound freight, and a bunch of bums wave at us from the doors of open box cars. "Some go east and some go west," as the famous butcher used to say. No one seems to interfere much with the bums traveling on freight trains and blinds of passengers now-a-days. The powers that be do not seem to like bunches of hungry men to congregate anywhere and they seem glad to see the bums keep traveling. Strange, is it not? Never before were they afraid of tramps, bums and hoboes. What may be the reason?

# On the Top of the World

**By A Rebel Girl**

(An interview between a Business Magnate and an Offiee Mierobe).

B. M. (Ringing a bell on his desk). "It's a pity, I'm sorry for the kid!"

(Enter a uniformed errand boy of about sixteen years, pale and spindly but good-looking, seeming to bubble over with suppressed eagerness).

B. M. "Sit down, John."

O. M. (Looking surprised and rather seared). "Yes sir."

B. M. (Turning over a pile of letters on his desk as though only half attending to the boy). "I am afraid I must inform you that we, er—we must dispense with your services." (He looks up suddenly at the boy with a searching glanee, eatehing the expression of alarm and the paling of the young faee before him. He is evidently sorry. There is a framed pieture of his own baby boy on the desk. He looks at it thoughtfully).

O. M. "May I ask why, sir?"

B. M. "You see, John, I hear from several different sourees that you are ... Well, not exaetly lazy, but that your heart is not in your work.—You do not seem to eare to do more than you are bound to. (Squaring his shoulders pompously). We always make is a point to have young men of ambition with us.—Young men who are not afraid of a little extra work after hours—who have the interest of the firm at heart. (A kindly look takes the plaee of the self-satisfied pomposity). John, you are aware of the faet that I am not usually bothered with these small offiee details. You would under ordinary circumstanees be diseharged by the head elerk and I should hear nothing whatever about it. But I have always taken a personal interest in you. (Suddenly moved by a kindlier impulse than he has felt toward any member of his office force for years). "Tell me why you don't work harder—with more enthusiasm.—Perhaps (Seeing the boy's look of relief)—perhaps we ean keep you on even yet."

(John's cheeks are burning, he speeks slowly, a eurious mixture of relief and wounded pride in his voiee).

O. M. "Thank you, sir. I—er—don't know, sir. I thought I was doing all I was paid to do."

B. M. "That's just the trouble!—You give the minimum amount of effort possible, only enough to keep you on the payroll.—As I said before, we want young men with the interest of this business at their heart."

O. M. (Looks up slowly into his master's faee. His expression is that of a hurt child, but slowly the color deepens, the full lips tighten, the wide blue eyes narrow and grow steely, his hands eleneh at his sides. It is the dawning of manhood, the cruel dawning of manhood and womanhood that comes to many of the boys and girls who go out into business world! Suddenly he flings diseretion, fear, servility, to the winds. He is a man, speaking to another man, and with an uneonseious gesture of defianee he speaks).

"Why should I have the interest of the business at heart? I am here beeause I must eat, beeause my people must eat, not beeause I like it or chose it!

"Why should I be ambitious here?

"Why should I want to rise amidst the dust and grime and stagnation of your wealth? They are all dead here, or dying—dying for want of sun and air and life. Dying in all this ugliness—for what?

"It is hell here! My arms are strong as steel—and I carry bits of paper here and there in the grey canyons! My eyes are keen and far-seeing, and I peer over dead, dead files! My mind is burning with new hopes, new dreams, new desires, and I jump up and down eternally to the tinkle of a bell! There is a great power blazing within me, tingling like fire in my blood. I could eonquer the world, all that, I dream eould be mine—and I earn my living here, lieking stamps!"

(A long silenee follows. Slowly, almost imperceptibly, the boy's squared shoulders droop; the shining glory of triumphant youth dies out of his eyes; his hands uneleneh and lie passive on his knees. He is obviously terrified at what he has done. He is thinking of his mother's sorrow should he lose his job, his sister's feeling of disgraee and shame should they hear of his mad outburst before the great, sueeessful man who is kind enough to patronize him. He speaks at last).

O. M. "I'm very sorry, sir. Please, excuse me. I—I—hope you won't diseharge me, sir. You see, there's my mother and sisters—and—I'll try to do better."

B. M. (A look of almost sorrowful disappointment on his faee). "All right, John, I'll disregard it. You ean stay on a week or so and see how things go. Now take this, er—'bit of paper' in to Mr Larsen." (Hands him a doeument).

(John stands at a little distanee irresolute, not understanding his master's sudden termination of the eonversation or the new note of kindly eontempt in his voice).

O. M. (Wistfully). "Thank you, sir."

B. M. (Already engrossed in the eorrespondenee on the desk). "All right, John!"

(John goes out, closing the door very slowly and softly behind him).

(B. M. looks up at the elosed door, tapping his fingers thoughtfully on the glass desk top. Then he turns to the pieture of his son).

B. M. "Stiek to your guns, son—for God's sake stick like hell! That little ehap was on the top of the world just now—but he'll never get there again!"

# Book Reviews

**Sherwood Anderson's Poor White (B. W. Huebsch).**

"At the corner of Main and McKinley streets and just beyond the place where three old buildings were being torn down to make room for the building of a new hotel, appeared a man who attacked, not the piece work prices at the corn-cutting machine plant, but the whole system that built and maintained factories where the wage scale of workmen could be fixed by the whim or necessity of one man or a group of men. As the man on the box talked, the workmen in the crowd who were of American birth began to shake their heads. They went to one side and gathering in groups discussed the stranger's words. 'I'll tell you what,' said a little old workman, pulling nervously at his graying mustache, 'I'm on strike and I'm for sticking out until Steve Hunter and Tom Butterworth fire Ed Hall, but I don't like this kind of talk. I'll tell you what that man's doing. He's attacking our government, that's what he's doing.' The workmen went off to their homes grumbling. The government was to them a sacred thing, and they did not fancy having their demands for a better wage scale confused by the talk of anarchists and socialists."

This and the consequent strike in which "three men had been killed and ill-feeling engendered in hundreds of silent workers" is what took place in Bidwell, Ohio, where Hugh McVey, the principal figure of Anderson's book—if Anderson with his attention to the small-hearted and the commonplace ever has "principal figures"—came to spend his life and to give to the community his inventions: the corn-cutting and plant-setting machines and the apparatus for unloading coal cars. In its delineation of the progress of a small town and the inception therein of capitalism, this story is the story of America.

McVey, "poor white trash" of Missouri, born of a sluggard father to whom the flow of the Mississippi River suggests only the wash of liquor down his sullen throat, dozes away his childhood in a stupidity from which he is provoked only by the scholastic ministrations of a motherly woman who teaches him to read and write, and toward his twenty-fourth year comes to Bidwell, Ohio, a town of twenty-five hundred population and rich soil, and leisurely if not altogether kindly lives.

Here the prophetic figure of Judge Hanby sounds a clarion call of the industrialistic era imminent, and the need for the coming generation to develop the instincts of the fox and ant. Oil, gas and iron are discovered, railroads are "pushed out across the plains . . . At Cleveland, Ohio, a precise, definite-minded man named Rockefeller bought and sold oil . . ." Then arose the Morgans, Carnegies, etc., who were "merchants glorified and dealt in giant things, in the lives of men and in mines, forests, oil and gas fields, factories and railroads . . . From all sides the voice of the new age that was to do definite things shouted at them."

It is in this atmosphere that Hugh McVey who, to rouse his mind from what seems to him a fatal nebulousness which he dimly resents as an inheritance from his "poor white" ancestors, takes to the handling of concrete things, mathematically; investigates mechanical problems. Love, family domesticity—are parts of life in which, he thinks, he is not about to figure, and his awakened, active mind first concentrates on a device which will save people from the slavery of creeping over fields; creeping over fields and manually setting plants—creeping year in and year out until their heads sink in their shoulders and they give way to their children who are able to crawl with intelligence just sufficient to drop a potential cabbage into the soil.

This device is perfected—though afterwards it proves a failure—and McVey's mind—a product seemingly of the age rather than of hereditary traits—proceeds to nurture germs of other mechanisms. And all these inventions are promoted and marketed by the first and second generation of capitalists in that microcosm of America which is Bidwell, Ohio.

There is no "story" in this book. Indeed, as a story of even an incomplete development of an individual (Hugh McVey) "Poor White" is somewhat hazy. This is characteristic of Anderson—it is indicative of his viewpoint which is but temporarily concerned with one person and with the character and spiritual "aura" of that person, and which then goes on to the mass. If he is always in perceptible sympathy with the individual, he is essentially and closely in sympathy with the mass. One by one, impartially, he takes up a harness-maker who is crazed by the advent of machine-made harness; Ezra the cabbage-farmer who resents the invention of the plant-setting machine which will do away with his slave-driving of his family over the fields all day and night; Steve Hunter, a nervously incipient young capitalist; Jim Priest, an uncomplaining farm work-beast who drinks and laughs away his leisure; Tom Butterworth, the father of future generations of hard-headed promoters; for female figures: young Clara Butterworth, roaming about unable to digest the newly acquired intellectualism of three years at a provincial college; Kate Chanceller, an upshoot of the sporadic "independent" woman of that generation . . . All these figures are at once soft and arresting, soft because of Anderson's semi-obscure, inclusive pity.

This is only a fictional description of the development of capitalism in America—of the growth of village to town, town to city, the machine displacing the craftsman and the involution of lives lost, harmed and ruined, through the mental and the machine cog. Better artistic work Anderson has done in his "Winesburg, Ohio," and to art "Poor White" has only the relation that is in all narrative of suffering, poor-spirited humanity, and in the simple transmission of the dank aroma clinging to people who, all their life, lie close to the soil.

But here, as in his "Marching Men" Sherwood Anderson is the prophet—and not only the prophet that he is, in clear-eyed Judge Hanby, but one who believes, with a sober gladness, that "... in extending the invisible roofs of the towns and cities to cover the world, men cut and crushed their way through the bodies of men in making way for the newer, broader brotherhood into which men are some day to emerge."

*Jean Cutner*

---

**Engineers and the Price System**; Thorstein Veblen. B. W. Huebsch Co. $1.50.

The winds of post-war radicalism have blown many strange doctrines through the revolutionary camps of the world, but perhaps the weirdest is the theory that the same revolutionary methods that succeeded in a primitive, loose-knit agricultural country can turn the trick in a modern, close-knit industrial community, and that a political party can put together what a mass uprising has ground to pieces. It is the rose colored dream of the old Persian:

"Ah Love, couldn'st Thou and I with Him conspire
To grasp this sorry scheme of things entire,
Would not we shatter it to bits, and then
Remold it nearer to the heart's desire?"

"Russia did it!" has been an inspiring slogan, but the hard fact confronts us that the industrial countries have not done it; that every attempt at revolution in the industrial countries has failed, up to date, from the Hungarian coup to the Spartacide revolt. Magnificent idealism and courage have come down to defeat because revolutionary strategy was not adapted to the material facts.

How will the revolution occur in an industrial country? To be more definite what are the requirements for a successful revolution in the United States of America, the most highly industrialized country in the world?

The answer is given very convincingly in the latest book by Professor Veblen, his "Engineers and the Price System," just off the Huebsch presses in New York. In this compact little volume of 168 pages he lays down the necessary course of action for a successful revolution.

**What Is Revolution?**

We hope that no timid reader will be excited by this word "Revolution." Professor Veblen uses it—oh, so gently and dispassionately. He is just talking quietly, as a social scientist pursuing a line of impersonal inquiry, and he gives a very mild and colorless characterization of revolution which will not thrill the person who is looking for thrills. Revolutions are merely, according to Veblen, the doing away with absentee ownership of industry. Which only means the elimination of the business man and all his works from control of the means of life, and the substitution therefor of industrial administration by producers. That is all. There is nothing about the proposition which should ruffle anyone, except perhaps the "kept classes" as Professor Veblen calls them.

This happy change will be made any time the producers draw together and so decide, **providing** they carefully work out a plan for the systematic and continuous operation of the industrial system without any temporary breakdowns. And here is where the technicians and the trained workingmen are more important than all the spell binders and martyrs. For on the continuous operation of this complicated industrial system depends the life of the population and therefore the life or death of the revolution. Few persons realise by what a slender cord hangs the life of a highly industrialized country from day to day. Unlike Soviet Russia this country is so interdependent industrially that the whole system will stop like a clock if a few essential parts cease to function.

**Why the Engineers Are Necessary?**

Without a clear cut plan for the operation of the industrial system as one well balanced whole there will be no revolution, but only revolt, breakdown and return to reaction. Therefore the revolution becomes essentially an industrial affair, in fact a problem in industrial engineering. This still holds true even though the partizans of the old order offer military resistance, for in the words of Professor Veblen, "warlike operations today are also substantially a matter of technology, both in the immediate conduct of hostilities and in the still more urgent work of material support and supply." Since all this is the case it follows that the technical engineers are absolutely essential to the carrying through of the revolutionary program for they are the only men who grasp the technical problems involved. They are the general staff of the industrial system.

This was not so in the old days of handicraft and small gauge production, and therefore the revolutions of the fervid times of old were as different from those which will come in the future as an old mill wheel is from a modern turbine. In those ancient times of a hundred and fifty years ago the technical expert was in his infancy, but times have changed, and since the dawn of the last generation industry has become so specialized and interwoven, that only the trained industrial scientist can understand in detail how to keep its parts working in harmony.

The American industrial system today consists of hundreds of thousands of industrial units,—mines, mills, factories and farms, all feeding material into each other for further fabrication, and bound together by a complicated network of rail and waterways. So interdependent is industry with industry that the whole system in effect is one industry, which, like a clock, continues running only as long as all its parts are functioning. If anything serious goes wrong with several essential parts the whole thing comes to a standstill. Without the unremitting supervision of the industrial experts, the system will not run, and will, as a matter of fact, foot up to just so much junk.

### Technicians Hold Balance of Power

This startling statement will cause no surprise to any clear headed industrial unionist who is accustomed to look industry in the face, but it is in sharp contradiction to the views of a certain class of impulsive persons who call themselves revolutionists, and who say that the technicians can safely be left to the future, and later on corralled and assigned to work—after the revolution. Veblen shows that there would be no time to wait, that if the technicians are not on the job from the start the revolution will be a fizzle, for there will be no production of the means of life, which will mean death for the population and failure for the revolution.

The technicians hold the balance of power. Without them the new system cannot be put through nor the old one continued, and any time they so desire they can start the revolutionary ball a-rolling. To quote the writer:

"A general strike of the technological specialists in industry need involve no more than a minute fraction of one per cent of the population; yet it would swiftly bring a collapse of the old order and sweep the time-worn fabric of finance and absentee sabotage into the discard for good and all."

And further he adds:

"The industrial dictatorship of the captains of finance is now held on sufferance of the engineers and is liable at any time to be discontinued at their discretion, as a matter of convenience."

Of course the author does not fall into the error of leaving it all to the technicians. He says that the aggressive support of the railroad workers and the trained workmen in the great basic industries is absolutely necessary to the revolutionary program. The technician is emphasized only in proportion to the part he plays in industry.

### Point of View of Technicians Changing

'All this sounds very fine,' the reader may say, 'but is it not hopeless to expect any revolutionary action from the technicians?' Professor Veblen deals carefully with this much mooted point and says very frankly that the majority of the technicians are still quite docile in their attitude towards the Vested Interests, and that nothing may be expected on a large scale "just yet." But he shows that a change is progressively taking place in the attitude of these men; they are more and more being weaned away from their old time allegiance and many are now beginning to think of themselves as something alien to the business interests whose servants they are.

More and more the technicians and the business men are being divorced from each other. The evolution of both industry and finance are responsible for this. On the one hand the specialization of industrial science makes it impossible for an outsider, such as the commercial man, to understand it, and on the other the specialization of commerce so absorbs the business man's attention that he is unable to comprehend problems of a non-commercial nature.

Consequently while the business man is dependent on the technician for the operation of the industry from which he derives his profits he is unable to understand him or his work, as he could in old times when the problems were less complicated. And the technician sees the business man more and more as someone who contributes no useful knowledge or labor to the carrying on of the industry, and who, in fact, figures in industry only as a holder-back of production. The technician sees the industry under his direction as something capable always of producing far more than the business man allows him to produce, for reasons of market. Furthermore, the ultimate decisions in all important industrial questions are up to the business man, and not to the engineer, and the technician sees these decisions foolishly guided by the light of the business man's own ignorance.

One of the most interesting chapters in the book is the first, called "Sabotage," in which the author tells how the conduct of business today is essentially a question of skillful sabotage, of holding back production in order to bring higher prices or to cause disadvantages to competitors, regardless of the disturbances that this interference makes in the operation of the industrial system. All this the technician sees, and it is alien to his instinct of workmanship.

More and more some of them are beginning to see that "commercial expediency has nothing better to contribute to the engineer's work than so much lag, leak and friction. The four years' experience of the war has also been highly instructive on that head," he says. And they are beginning to see that the "material fortunes of the civilized people lie loose in their hands."

### Revolutionary Preparation

It will not be necessary for all the technicians to take part in the preliminary work that must be done in preparing for the big move. It will only be necessary for a few thousand technical men to draw together to work out the industrial plan. First of all there must be careful industrial surveys, tabulating industrial resources, such as all the in-

dustrial plants in the country and the available personnel. Since the scrapping of the business system will require a realignment of industry and allocation of labor it will be necessary to plan how this industrial equipment which has been surveyed will be utilized. Then will follow studies of the main lines of waste under the present system so that steps can be taken to prevent them. This will be necessary, for the new industrial regime must be superior to the old or the rank and file of the people will not put up with it, the writer logically asserts. With the information that will be obtained a skillful publicity drive can be made to win the understanding cooperation of the trained manual workers who are equally necessary to the putting through of the program.

All this was written by Veblen and published in magazine form two years ago, though it has not been issued in bound volume till this year. Since then the prospects for an aggressive movement by these twin forces of productive industry are still brighter than they were when he wrote. Radical papers are giving more and more space to articles by industrial engineers criticising business management of industry. Two of the most brilliant of these, from the pen of a well known industrial engineer, appeared in the One Big Union Monthly last fall. But what is still more significant than mere educational propaganda, a distinct movement has started for an actual joining hands of the engineers and the rest of the working class. A start was made at the Unemployment Conference of Greater New York last spring and as a later development several independent unions in that city have decided upon an industrial research program with the collaboration of a certain group of engineers. And the Industrial Workers of the World have more definitely declared themselves for a thorough-going industrial program of this character.

The long expected crisis of the capitalist system of production is at hand and the time has arrived for the bungling and sabotaging management of business to go. Professor Veblen's book is doing valuable service in focusing attention on the concrete problems involved and as such should be pushed to the limit among all intelligent producers, especially among the technical men who are now more ready than ever for persuasion to a program of action because the job tie that binds the servant so tightly to his master is being snapped in the present industrial depression.

**Art Shields.**

# CIVILIZATION

**Julia C. Coons.**

When man first rose erect, and looked upon
His kind; and sought to give command,
What grief and misery we all had missed
Had there but been a noble, guiding hand!
Not one divine; one that could keenly feel
The biting sting of human taunts and blows,
And knowing, lead that infant race
In ways of pleasantness and paths of peace.

When man first gained that noble title **Man,**
How vastly changed would be our history's page,
Had there but been one noble, guiding mind
The terrors of race travail to assuage.
A mind to teach the purity of love
And set a type of parenthood uncursed
To raise the standard of World Brotherhood.—
A kinship, barring lust and sordid greed—
That feels the wound deep in another's breast—
That, seeing joy, rejoices with the glad.

And yet it could not be. Nature's stern law
Decreed that man should cut his tangled swath
From savagery up—a weary tedious path—
To gain, in years yet in the distance dim
The jeweled crown, washed by all nations' tears,
And purchased by the blood of countless slain,
And written there, in hand-wrought tracery
Is Unity, Peace, Prosperity.

# WOBBLES

At a conservative estimate about ten thousand wobs have made the can in the last five years.

Now comes Thos. Mott Osborne, most noted of authorities on prisons and prison life and tells us: "Generally speaking prisoners are on a higher plane than the general run of the public."

Scientific! Cause and effect!

* * *

Speaking of that higher plane brings to mind the remarks of an old cell mate up for white slavery. "Jedge," he said, "you shua ah wrong givin' me six months on this reedickless chahge of whaite slavery. Why Jedge jest look at the gal! She's blacker'n the ace a' spades!"

* * *

Men headed south for the winter will be glad to know that the Dixie highway is completed. Better walking. Incidentally: how many of you spent thirty days helping build it?

* * *

A major has invented a mob-subduing gas and is going to try it out on 200 Philadelphia policemen. He claims it puts the victims to sleep and they wake up in half an hour just as always.

Why try it on policemen? There is no difference in their mental processes awake or asleep.

* * *

The Ku Klux Klan closed five swell hotels in Texarkana, Tex., because they employed negroes in the kitchens and dining rooms.

We bet the owners of these hotels are highly indignant over interference with their constitutional rights to exploit whoever they please.

* * *

American Legion heads visit France.
Strange! Not many of the boys want to go back.

Gary, Ind., is much incensed at the idea of starting a Ku Klux Klan there.

"The idea," they say, "here we are with eighty per cent of the population composed of foreigners and negroes. Ku Klux Klans are only good where American sizzorbills predominate by at least fifty-one per cent. Use same sense!"

* * *

Fellow Worker King George seems to be having a hard time of it. His annual deficit this last year was $225,000 which had to be paid up out of the old fellow's savings.

Another argument for thrift. If he hadn't saved a bit against hard times where would he be?

* * *

Soviet Russia is about to fall, says Gregory Alexinsky, member of the latest Constantinople anti-bolshevik quorum. In quantity of falls to date, Soviet Russia is far ahead of Niagara.

* * *

"Al" Gruman, boxer, says he loses his fighting pep when he does manual labor. If that's the general rule the unemployed should be quite peppy.

* * *

The Industrial Revival in Europe is in full swing. At Milan, for instance, a printing firm has just put out and exported 90,000,000 forged bank notes.

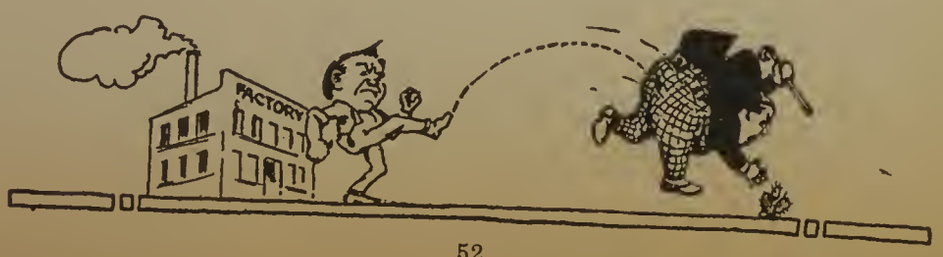
* * *

"There is no question," said Attorney Frank Comerford, "that the I. W. W. is the nucleus of the Red Army in America. I have absolute information that it has arsenals at central points throughout the state (Illinois),"

Now if we only knew where they were—

* * *

"1921 will reward fighters" is a business slogan. Ach, mein Gott, what if the workers should take to acting on that principle.



# The Workers of the Near East

**By Joe Marko**

In a circular of the Executive Committee of the Communist International, the chairman, G. Zinoviev, gives out ten distinct points. One of these points was on the Eastern question, and he declares: "The Communist International made its first success in its work among the people of the East. The Baku Congress of the peoples of the East was undoubtedly of a great historical importance. The coming congress of the people of the Far East will also play its part. The Third Congress will have to discuss the Eastern question not only theoretically as it did at the Second Congress, but also practically. The victory of the World Proletarian Revolution cannot be achieved without a revolution in Asia. Each proletarian communist should know this" and so forth . . .

### The Eastern Peoples

Who are the "Eastern Peoples"? Here Zinoviev uses a Roman mode of expression. In those Roman times the countries situated east of Rome were called Eastern or Oriental People. They comprised all the borderland of the Black Sea and Caspian Sea, all the borderland of the eastern Mediterranean and the Red Sea; they are included in the Balkan peninsula, Southern Russia, Asia Minor, Syria, Palestine, Egypt, Arabia, Mesopotamia, Caucasia, Persia, Central Asia and as far as the Himalaya Mountains, including Hindustan; they were called the Orient, and the land beyond the Himalaya Mountains was known as the Far East.

The Near East always pointing towards the Farther East, was a place of much strategical importance. The power that controlled this highway could dominate over all the East. The peoples of northern Africa, that is of Berberia, Tunesia, Algeria and Morocco, and those of Central Africa, though not situated in the East, have modes of production and ideas much the same as those of the Orient.

These people are also regarded, at present, as part of the peoples of the East. The Eastern People constitute the major part of the population of the earth (1,000,000,000). They inhabit the vast track of land from the Atlantic Ocean in Africa to the Pacific in Japan and from the Arctic to the Indian Ocean.

### East and West

The workers of the West, or Occident, differ from the workers of the East. Their difference is the mode of production. Now Zinoviev informs us that "the victory of the World Revolution cannot be achieved without a revolution in Asia." This is valuable information, a scientific declaration. It reminds us that the revolution already exists full-fledged in the west, but we, the working class of the Occident cannot get the benefits of the revolution as long as we are unable to properly understand it, unable to size up our present position in industry, and are unconscious of the class struggle and indifferent to its world-wide application of revolutionized modern industry.

So long as we refuse to adopt new forms of organization to meet this ever-changing industrial system of production; so long as we support and cling to aged, obsolete, reactionary craft unions; so long as we forget the economic struggle, and instead keep ourselves busy by movies, baseball, churches and the bourgeois patriotic institutions, there is no possibility for the working class to realize the fruit of the Revolution. Our dominating idea should be abolition of the wage system, and to this point alone we should direct all our activity.

Now, what kind of a revolution do the Eastern peoples want to have? What kind of a revolution is it that Zinoviev and Co. over there and all the I. W. W.'s over here are continuously talking about? This revolution is an Industrial Revolution and it starts with the **Machine.**

### The Machine Age

And what is the machine? Everybody in this country knows what the machine is. And this well-known machine is a starting point of revolution in industry and it makes useless the workman who is handling a single hand tool.

All fully developed machinery consists of three essentially different parts (writes Karl Marx): the motor mechanism, the transmitting mechanism and the tool or working machine. The working machine is part of machinery with which the machine-factory, Industrial Revolution, started. And to this day it serves as a center of revolt wherever a handicraft process is turned into an industry carried on by machinery.

On closer examination of the machine tool we find many altered tools used by craftsmen, with mechanical differences from the individual workman's implement. The increase in the size of the machine and in the number of its working tools calls for a more massive mechanism to drive it; and this mechanism requires a mightier motive power than that of man power.

Anyway, man primarily acted as motive power. Later he thought to use a horse in his place. But horse-power was not satisfactory because he had a head of his own and was costly, so the man sought to use other means. Wind power was inconstant and uncontrollable. Water wheel power was independable on account of the change of seasons and was insufficient for the increased size of gearing; and it was essentially local.

Not until the invention of Watt's second and so-called double-acting steam engine was the prime motive power found that begot its own power by consumption of coal and water, the power of which was entirely under man's control, which was a mo-

bile means of locomotion, and which was an agent universally applicable in mechanical industry.

As we have seen, the working machine did not exterminate the tools of many workingmen but organized and incorporated them into groups, a working-machine, which necessitated the transmitting mechanism and that in turn necessitated the motor mechanism.

This radical change in the mode of production in one sphere of industry involved a similar change in other spheres as in agriculture and mining. The means of communication and transportation had to be suited to the modes of production of mechanical industry, this being accomplished by a system of river and ocean steamers and railways, etc. But the huge mass of iron that had now to be forged, welded, cut and bored demanded, for its part, titanic machines. They had to construct machines to make machines. The most essential condition for the production of machines by machines was a prime-motive power capable of exerting any amount of force and yet under perfect control. Such a condition was already supplied by the steam engine. This enabled collective machinery to be introduced and an organized system of groups of single machines became more and more perfect.

### The Revolution in Industry

An organized system of collective machines to which motion is communicated by the transmitting mechanism from a central automaton is the most developed form of production by machinery. Here we have, in place of isolated machines, a mechanical monster whose body fills whole factories and whose Herculean power, at first veiled under the slow and measured motions of his giant limbs, at length breaks out into the fast and furious whirl of his countless working organs.

This is the Revolution of Industrial Production. It is called revolutionary because it has changed completely the economic structure of society. This is a new mode of production entirely different from that of the old. Several thousand horsepower centralized in one automaton moves at once many detailed machines in which are incorporated various kinds of countless tools which work collectively and which are run with but few attendants.

This gigantic operation is in need of immense raw material and so the implements of production, in agriculture and in mines, are revolutionized. This huge production was in need of transportation facilities, so the means of transportation were revolutionized. Did the output of the factories need to be sold at distant lands: railroads and steamers were constructed. Everything was changed to harmonize with this new centralized, revolutionary process of production.

This machinery, the most powerful means in increasing the productiveness of labor became, in the hands of capital, the most powerful means for exploiting the workers.

### Workers Change

But the psychology of the workers is also in the process of a complete change. The individual hand product is no longer the regulating principle of social production. No longer is there vital need for the use of human motive force. The use of natural forces is replacing it. The conscious application of science is the order of the day. Gradually all skill has passed on to the machine. The workman now is only an appendage.

Industry operates by means of associated workers, or workers in common, hence it is of a co-operative character. The working process is, of technical necessity, dictated by the instrument of work itself. The regulating factors of social production are now diverted into the hands of groups of workers the members of which are scientists, industrial technicians, managers and laborers.

### Class Division

Now society is divided into two classes—the employing class and the working class, and they have nothing in common. The employing class owns all the means of production and finance. The position of the workers is different. They produce everything and have nothing. They had not even a real, practical labor union, to meet the ever-deteriorating and degrading conditions.

For many years there had been a dire necessity to launch a labor union. This new union had to be patterned not from the old hand tools and the old detail system. It had to be patterned from the machine, from the revolutionary industrial system, from the new mode of production.

### New Unionism

The industries being international, this new union had to be international, and the position of the working class being entirely different from that of the employing class, this new union had to found itself upon the rock of class-consciousness. This new union should now have an industrial general staff (Industrial Research Bureau) formed of scientists, chemists, mechanics, electricians, technicians, and industrial managers in order to watch the increasing revolutionization of industry and the workings of the social forces, and to give shape to the tactics of the Union accordingly.

With such a labor union proletarians could meet their opponents. It is my opinion that this was the directing factor for the foundation of the Industrial Workers of the World. The Industrial Workers carried on a splendid and far-reaching educational work among the much-oppressed, over-reviled and long-persecuted foreign workers, as well as among Americans. They organized successfully the unskilled or common laborers of the factories. The I. W. W. organized a number of successful strikes at McKees Rocks, Paterson, Lawrence, Ispwich, etc. In this way the message of industrial unionism was given to large numbers of the eastern workers of Europe and Asia. They were the greater part of the strikers. These fellow workers certainly under-

stood solidarity, and under the banner of the I. W. W. they fought bravely and with great patience carried the strikes to a successful end. When these eastern workers strike, they surely shake the whole economic structure to its foundation.

### The I. W. W. and the East

They were mostly Italians, Greeks, Syrians, Armenians, Jews, Bulgarians, Egyptians, Assyrians, Hindoos, Persians, Turks and Caucasians. Through these experiences the Industrial Workers soon found out that though the mammoth machinery is an essential agency of big-scale production, the main strategy lies with basic raw material and market highways for the finished goods. It turned its activity towards organizing the agricultural workers, lumber workers, miners, railroad and marine transport workers, and did quite a bit of organization in all of these fields, not only in North America but in Central and South America as well.

The capitalist class has large fields from which they obtain raw materials and in which they market the finished product. Two of these fields are Asia and Africa. The Industrial Workers tried hard to penetrate into Asia by every possible way. At last a way is created to get in through Soviet Russia. The Red Trade and Industrial Union International has created a connecting link with the Oriental Workers.

### Revolutionary Success in East

The workers of the East did much for the World Revolution. They did their part by helping the Red Army to defeat the army of Denikin, Kolchak and Wrangel. They made the shores of the Black Sea darkest black for the enemy. Not only did they annihilate the enemies without, but they also overpowered and crushed the bourgeoisie within their own boundaries.

While their brother proletarians in Finland, in Esthonia, Latvia, Lithuania, Poland and Hungary were compelled to be separated from Soviet Russia and subjected to untold torture and persecutions the workers of the East established Soviet after Soviet and became an integral part of the glorious workers' republic. Look at the map. Tartaria, Bashkiria, Caucasia, Kirghizia, Turkestan, Bokhara, Khiva, Afghanistan, Persia, Azerbaijan, Armenia, Georgia—all of these vast and productive countries are now Soviet governed by the workers of the East.

Some time ago they held a Trade Union Congress at Baku. 1800 delegates represented them, proclaiming officially their loyalty and solidarity to the working class of all the world. Only a few months ago there was convened another congress of 1200 delegates of the women of the East. They also declared their revolutionary loyalty and solidarity. Thus they became real strength for Soviet Russia.

### Geography of the Near East

Asiatic Turkey is a peninsula washed by five seas. It comprises Asia Minor, Syria, Palestina, Arabia and Mesopotamia in an area of about 650,000 square miles. Its distinctive features are: a series of high plateaus in the interior, sloping from 2000 feet at the western edge to over 4000 feet towards the eastern border; several mountain ranges traverse the region longitudinally rising in the north to over 8000 feet and in the south to over 10,000 feet. There is a deeply indented western coast line with a fringe of protecting islands and with deep gulfs affording plenty of harbors.

In contrast, the bleak north coast on the Black Sea has few harbors and no islands, while the southern coast is marked by a broad bay and a deep gulf and a number of landlocked harbors. The rivers, though numerous, are of no great importance, and only a few are navigable for a short distance from their mouths. Along the course of the rivers vegetation it rich, aided by alluvial deposits to the soil, brought down by the streams as they pass through mountain gorges.

### Lack of Modern Machines

Asiatic Turkey has no transportation facilities. The highways are in bad condition. Only the west has limited railways and the mileage of all existing railroads is not much over 2000 miles. Lack of transportation facilities leaves the country in a primitive agricultural state.

With the introduction of proper methods of cultivation and modern farming implements, the land is capable of producing many times more than that which is now raised. For example, take the Moosh plains. While these plains are wonderfully productive and rich in soil and climate for raising crops of all kinds and every acre is fit for cultivation, yet no more than one-third is cultivated. The method for breaking up the new ground is slow.

A wooden plow on wheels is used to which often eight or ten yoke of oxen or buffalo are hitched, with a man sitting on the yoke of each team and a man behind to guide the plow. Each furrow turns so slowly that the amount plowed each week would not equal a few hours' work with an up-to-date plow and a strong team of horses. Then, the furrows are never very deep.

### Resources

This plain which is located in the Kharput and Moosh provinces is a place of much industrial importance because of great mineral and agricultural resources. The river of Iris (Yeshilimak) and its branches flow through this region and water the picturesque vineyards and gardens which fill up this plain. It is a most fertile plain, densely inhabited, which yields very rich crops of grain and cotton. Besides, it produces barley, rice, tobacco, opium, silk, linseed, fruit, butter, wool and mohair.

Its mineral resources are great. The famous copper mines of Afghan Maaden and the silver mines of Kaban Maaden are in this district. Next is the Cilician plain. This plain is watered by three rivers: Saihun, Jihan and Berdanjaj which spring from the Taurus, Anti-Taurus and Amanus mountains.

It has been estimated that there are in the lower plains of Cilicia 800 square miles of cultivable land, all stoneless, alluvial soil. Between the lower plain and the mountains lies another tract of country composed of shallow valleys and low, rolling hills containing 600 square miles. There is no richer soil in all the world than that of the lower plain, and besides this 1400 square miles there are great tracts of country in the foothills of the mountains at present neglected or covered by forest.

There is a great production of cotton, a large proportion of it, ginned, spun and woven right on the spot, and part in raw products exported to Europe. Besides cotton, Cilicia produces wheat, sugar cane, barley, oats, Indian corn and sesame.

Fruit of infinite variety and fine quality is grown in great quantities. There can be noticed a considerable quantity of modern machinery, such as ginning machines, spindles and weaving looms. Several flour mills and a good many steam and gas engines, also, pumps and a few thousand reaping machines, steam ploughs and threshing machines are to be seen.

### Invasion of Machines Begins

Twenty years ago it was customary for 70,000 agricultural workers to visit Cilicia annually for the purpose of assisting with the harvest. They came from all parts of the northern mountains within a range of 200 miles of Aduna and returned to their homes after three or four months of work with sufficient money to keep them in home necessities for the rest of the year. This annual migration has ceased within the last few years, because the resident population, aided by steam ploughs, steam threshers, and reaping machines are now able to undertake the labor themselves. One horse drawn reaping machine, which can be purchased for 75 dollars is said to do the work of forty men.

Next comes the vast tract of land of Konia, in size about 10,000 square miles, which is irrigated by a canal cut from the Lake of Bayshekir to Shumla near Konia. This land yields huge quantities of wheat, cotton and flax. 40 miles north of the city exists a large salt lake (Tuz-gol) which supplies the necessary salt and on the eastern shore of the same lake in the ridge of Khodja-day coal and iron ore of excellent quality crop up at a dozen points in totally neglected abundance.

### The Cradle of Civilization

Next is Mesopotamia. This land lies between two rivers—the Euphrates and the Tigris. Sir William Willcocks estimates the land which can be irrigated as 6,000,000 acres which will yield annually 2,000,000 tons of wheat and 1,000,000 hundred-weight of cotton and a fabulous quantity of other products. His proposed scheme of construction divides the works into six divisions.

One of the divisions, the Hindu branch of the Euphrates was completed in 1913 and was in successful operation. From Bagdad through Bussora down to the Persian Gulf, the land is very rich—all alluvial. The chief product of this district is dates. It is the general opinion that this product alone is as high as 100,000 tons a year. Other products are wheat, barley, rice, fowls, drugs, wool, dressed lamb skins, hides, gum, bitumen, coal, carpets, ebony combs and saltpetre.

The western and northern part of the peninsula is very fruitful, producing an immence quantity of figs, raisins and tobacco. The province of Trebizond exports nuts, beans and tobacco. Amusia is famous for its apples, Castamoni for its prunes, Tocat for its pears and grapes, Sivas for its honey and Diarbeku for its large melons which attain to so large a size that as a rule two melons form a mule load. Silk cultivation is extensive in the provinces of Brusa, Smyrna, Amasiz, Kharput and Sivas. The province of Brussa also exports opium, gum and grain, but its great staple is the long, silky fleece—first class tiftik or mohair, the produce of a famous breed of goats that feeds the mills of Bradford and Norwich in England.

### The Wool and Mohair

What is known as the Angora clip includes the produce of Beybazar, Argash, Geredeh, Boli, Castamoni, Eski-Shehir, Sivri-Hissar and other neighboring districts. The best hair comes from Bey-Bazar, the second quality from Argash, and only the third from Angora itself. The finest quality is obtained from the first clip of the kid in its second year, the next best from the wether, and the worst of all from the male. Goats fed in woody and mountainous districts lose the best fleece, but the clip of those pastured in the plains, while shorter and less silky, is all gathered at the clipping.

### Fruits and Timber

The western coast contains also olive orchards and vineyards that produce much olive oil and wine. They ship to Europe many goat hides and sheep skins, and as for fur—there are mink, fox, rabbit, wolf and bear skins. The number of date trees at Bussorah and in the immediate neighborhood is said to be no fewer than 8,000,000, all lining the river to a depth of three miles beyond which on either hand the country is desert.

One-tenth of Asia Minor is covered with forests. In the neighborhood of many of the villages of Castamoni, Trebizon and Van districts is found a considerable quantity of Circassian walnut timber, some of the trunks being of enormous size upon which are knotty growths that make them of great value. Cedar trees grow there which are remarkable for the durability and fragrance of their wood. Oak, hickory and similar hard woods are found in large numbers. The lumber workers use the water wheels only in sawing the logs into boards. No steam power is used. Planing, ripping, squaring, joining—all these are done by hand tools with the application of man power.

### Mining

Asia Minor is very rich in minerals, coal, anthracite, copper, silver, chrome, antimony, zinc, sulphur, emery stone, marble, porphyry, amianthus, iron, lignite, manganese, lead, salt, salpetre and meerchaum. Absence of railroads and lack of modern processes of production hinders and in many localities makes the working of the mines impossible, and yet some mines are so rich that they have been working them for thousands of years.

For instance, take the Kaban-Maaden of Kharput—a silver mine which has been worked for a long time and produces 30 pounds of silver daily. Or take the Arghana-Maaden at Taurus mountain—a copper mine which has been worked in a rude way for thousands of years and is known to be one of the most valuable in the world. It produces 750,000 dollars in ore per month. The ore is smelted at Tocat in Iris (Yeshilimak).

The industry of this town is the production of copper utensils wrought out of the metal mined in the Arghana Maaden. Merchaum mines of Eskishir are the largest producers in the whole world. Half way between Diarbekie and Kharput extensive copper deposits are in existence that are being worked in three places to some extent. Other copper deposits are known to exist but they are not developed or have ceased working. For instance, half way between Castamoni and Ineboli is a place called Kuri containing a copper mine which was supplying the workmen at Castamoni for a long time with metal. The workers fashioned copper utensils and shipped them all over the land. In later years, finding the American-made copper cheaper than the local product, they commenced to buy American copper, consequently the miners closed down the mines.

That shows in itself that metal mine workers of America with the modern process of production can produce many times more than their fellow miners in backward localities.

Now let us take in the iron region. It commences in the middle of the Black Sea coast range and extends beyond the lake Van. In some places iron ore of such richness and purity has been struck that the blacksmiths of the villages have been using it for years in their work without having it smelted. In those mountains, there is no end of lead, zinc, and other minerals. It is said that during the insurrection, the revolutionists secured all their bullets from some wonderfully rich lead deposits in the neighborhood of Van.

In the neighborhood of Bitlis is a sulphur mine and two days out of Bitlis is an immense marble deposit jutting out of the mountain—not only white, but dark red, green and black.

### Coal, Salt and Oil

Then take the coal deposits: They are of unlimited extent and can be found everywhere and the quality of the coal is said to be as fine as that of Cardiff. In the province of Castamoni is a coal mine which is called Zongauldak, 30 miles inland. It gives a considerable amount of coal and is easily worked.

In the same province is a place of much importance by its salt mountains, the name of the place being Kiangre. When they are idle, the transport workers of the land (caravans) hit this mountain and load up their freight animals with the salt and distribute it throughout the country.

As for oil—there is a very large oil territory in the neighborhood of Mosul, in the valley of the Tigris, which has been known for centuries. As long ago as the reign of Alexander the Great the people used the seepage for lubricating purposes, for liniments and for fuel. Petroleum is, for the present, the most important of the raw materials. Reconnoissance of the oil fields has been conducted by the agents of the Standard Oil Co., and by British officials. The results have not been made public, but enough is known to lead to the belief that extensive deposits may yet be revealed by deep drilling. The oil fields on the extreme southeast, in or near Persia, have been largely developed by the Anglo-Persian Oil Co. In fact, it may be said that the control of these valuable deposits was one of the many causes of the late European war.

### Eastern Spirit

It is only a matter of time for the people of this rich land to become Industrial Workers. They are the ones who will complete the Revolution. The eastern workers know the blessings of industrial machine production, but, unlike the western workers, they do not tolerate the capitalist. They hate to see the parasitic class rolling in luxury while they, the producers, are at the point of starvation.

This is a thing they cannnot bear. The solidarity of the people of the East does not easily permit them to suffer their fellow man to starve. The guiding spirit is: An injury to one is an injury to all. In case of calamity, or of famine, they starve all, without exception. They possess great patience and long endurance.

### Industrializing the Revolution

One thing they need to learn from the West, and that is how to produce on a big scale, collectively, with the use of modern machinery. This knowledge they do not possess but can gain through Soviet Russia. When these people undertake that, then the abolition of the wage system will be an accomplished fact. The feasibility of this plan depends on the possibility of constructing machine factories owned and controlled by the Workers' Republic. Then the raw material can be switched into workers' factories and supply these people with the finished goods.

It is my opinion that this will be one of the keys which will unlock the gates of the western penitentiaries and liberate our fellow workers from where they have been incarcerated so long.

### Need Skilled Workers

This extension of the machine production cannot be fulfilled by the parasites, nor by the politicians—this is a task for the Industrial Workers of the World. Every rebel scientist, chemist, electrician, engineer, mechanic, and industrial technician—the workers who know something of the management of industries should volunteer and go to the land of Soviets and register his actual service in the construction of the proletarian civilization. For where your work is, there will your heart be also.

Hear what Tom Barker says: "And I tell you that you can fight the American boss from Russia, by building a proletarian civilization that will demonstrate to the workers of the whole world how stupid they are to tolerate the wage system in capitalist countries. Industrial Unionism is coming into its own in Soviet Russia.

"In this country every ton of iron ore and every extra truck of coal is a nail in the coffin of capitalism."

Fellow workers! Let us set aside our selfishness and let us fight for solidarity and welcome every sacrifice for the Union. Let us give comfort to each other and mitigate the severe persecution. Is there any other thing, sweeter, nobler and more honored than service which is rendered for the welfare of the working class? Let us enforce whole-heartedly the edicts and dictates of the proletarian class. Let us have a universal, unified society which will be the result of a standardized system of production all over the world.

### The Modern View

The biggest men of all the East—Socrates, Aristotle, Aristonicus, Eunus, Spartacus, Jesus—were all praying and fighting for the abolition of division lines and were delivering beautiful speeches during their love-feasts, and at their common tables, for the unification of thought and the ennoblement and enlightenment of all mankind. The biggest men of the whole West—Marx, Engels, Lenin, Haywood, Debs, Thompson, McKinnan, Doran and others delivered lengthy speeches and wrote scientific books, above all they fostered and participated in working class action.

Working class action is now the order of the day. Getting the facts of industry and laying out plans for that action is the absorbing task of the moment. That the workers of the east will take up the task of industrial organization is assured. They are already on the job.

Long live the working class of the West! Long live the workers of the East! Long live the Red Trade and Industrial Union International! One world, one mode of production. One great Union of all the workers. Long live the Industrial Workers of the World!

# A Volunteer on the Siberian Front

**By John Korpi**

WE WERE on board the "Rose City" whose destination was Portland, Oregon. We had just pierced the thick wall of smoke, mist and dust from the city of San Francisco and were passing through the Golden Gate. The weather was ideal, such as can exist only in California.

The brownish mountains rising to either side of the ship loomed threateningly like mountain lions watching the unknown dangers of the glowing West. With the exception of one passenger, everyone on the boat was admiring these powerful-looking masses of earth. This one's gaze was fixed on some other distant object.

He attracted my attention for the reason that he appeared very downcast, staring into space, with his hands shoved into the pockets of a dyed United States army overcoat. Then he leaned against the railing. Slowly he raised his arm and pointed toward the brownish-red West. I could plainly see the tears chase each other down his youthful cheeks. Seeking for an opportunity to speak to him, I soon received one.

At once I noticed that he was very reticent, and was slow to speak of himself. It took some time before I gained his confidence. He told me he had been fighting in Siberia.

I inquired how it was that he, being so young, was taken into the army and sent to Siberia. "Like all the other Americans I was the victim of mad patriotism," he answered. "If you had been in Portland during 1917 or thereafter, all that you could have heard would have been cheering for war and patriotism. This spirit prevailed in the churches, newspapers, schools, theaters, on the streets, in the work shops and everywhere."

"I was nineteen when the bolshevik revolution in Russia took place. At that time a systematic campaign was carried on in America in opposition to Soviet Russia. In the winter of 1918 the cry, "The Bolsheviki are the allies of the Kaiser," echoed everywhere and in addition to this there was the general belief that these bolsheviki are brutes and destroyers of all civilization, the corruptors of the family, the annihilators of property . . .

"My blood began to boil against these outlaws, having heard and read this kind of news. I wished that I was older that I might fight.

"It turned out that during that winter volunteers

were called for to go into Siberia. I made application and was accepted."

I asked him to relate what he saw there and what he knew of the bolsheviki.

"Oh, my God, if I could make you and the rest of the workers understand what I saw, suffered and endured on the Siberian front during the twenty months that I was there, it would be sufficient to cause the working classes of the whole world to rise and fight for bolshevism."

Suddenly he stopped speaking, took me by the arm and said, "Come with me to my wife and little son. There I shall tell you more."

Their stateroom was the cheapest they could get. In it sat a girlish Russian mother, nursing the little tot. My friend introduced himself and his wife saying, "I am W. J. Turnbow and this is my wife." I received a hearty handshake and at the same time she put an eager question to me: "Do you speak Russian?" But before I could answer, she continued, "That doesn't make any difference. I have learned to speak English."

"Oh, now I see," I remarked, "You have found a little wife for yourself on the Siberian front. Is she a bolshevik as well as a Russian?"

"Yes, she is the daughter of a peasant in the province of Omsk. It is they whom we should thank for the fact that we remained alive, for they furnished us food and shelter. They became our best friends. Oh yes, my wife is a bolshevik like all the rest of the workers and peasants in Omsk, and I must confess that in spite of the deficient school system of Siberia, my wife possesses more knowledge than I have although I am the product of the American, ultra-patriotic public school."

We talked of schools and the eagerness for learning that is found among the Russian workers. When we got round to the story of Siberian campaigns Turnbow said, "I am sorry that I cannot remember everything in sufficient detail. I think that it was in April 1918 that we were transported to Vladivostok. Upon arriving there we were placed in miserable barracks which had been constructed for temporary use only. The officers reported to us that any moment we might expect an uprising instigated by the bolsheviki. Every imaginable scheme was used to retain and build up in us a counter-revolutionary spirit.

"The Russian workers treated us very kindly. From them we received food and shelter and whatever we needed. They became our good friends who tried to do their all to get us to understand that they had nothing against us and America. This is what they always told us: 'Let us settle our own difficulties in Russia. We do not wish to disrupt the peace of other countries . . . All we want is bread, land and freedom . . . He who does not work should not eat.' They would say, 'You are the sons of American workers, don't raise your guns against your fellow workers . . . Don't shoot us.'

We got hold of leaflets explaining the Russian Soviets. They were printed in many languages. In these leaflets the Russian workers most sympathetically appealed ot the proletariat of the whole world to cease this war against the working class of Russia.

"In June 1918 a detachment of American, Canadian, French and English soldiers arrived in Vladivostok. It appears that there was a common agreement among these different nations that each send 8000 troops, except Canada who sent 3000 men. At this time there were something like 70,000 Japanese soldiers in Siberia.

"The capitalists of the whole world allied themselves to overthrow Russia, and at the same time the revolutionary workers of the world began an open as well as a secret defense in behalf of Soviet Russia. This sentiment spread rapidly and universally. It penetrated even among those soldiers who were taken to murder the defenders of Soviet Russia. Those of us American soldiers who were on the Siberian front became the warmest friends of the bolsheviki, instead of becoming their enemies.

"The first bloody act which we saw was in Vladivostok, during the last days of June 1918. The "white" troops of Semenoff and the "death batallion" of the Japanese horribly murdered people in great numbers. The object of this slaughtering was the disposing of every active supporter of Soviet Russia that was in Vladivostok at that time.

"How well I remember the horrors of that night! I saw how the Japanese soldiers rushed into the homes of the peaceful Russians, tortured and slaughtered them by the hundreds; all were killed whom they suspected of being delegates to the Soviet. The funeral processions of those Russian workers will long be remembered by the surviving Russian workers as the "red funeral."

"This funeral took place on July 4th, 1918. In spite of all the opposition by the military officials, early that morning the peasants and workers were crowding the streets of Vladivostok. Seventeen thousand workers marched in the funeral procession, singing their revolutionary funeral songs.

The Russian soldiers whose duty it was to disband the funeral processions, upon arriving at the cemetery and seeing the large number of workers and peasants there, refused to interfere with the funeral and announced their unity with the revolutionaries. At once a large number of them with their arms and ammunition joined the red army. A new workers' and peasants' soviet was formed at the graves of their fellows.

"This act jarred the prejudiced patriotism of us "American Volunteers." We saw the innocent workers murdered . . . Was it to commit like violence upon those innocent workers that we were taken into Siberia? . . . We talked and sought an answer to this question.

"Kolchak's government was declared the "All-Russian" government in October 1918. Kalmikoff, Rosanoff and Semenoff acted as agents of Kolchak. We Americans were taken there to guard the rail-

roads under the control of the Japanese and Kolchak—therefore indirectly to conduct war against Soviet Russia.

"We were transferred frequently and so, in the winter of 1919, the division that I was in was transferred to Omsk. There we met unexpected suffering and horror. There were no houses for the soldiers and the peasants sternly refused to take any into their homes. Frequently snowdrifts were the beds of the Kolchak soldiers. The American troops were in a favored position. We had good, warm clothes, and the peasants knew that the United States had not declared war against Soviet Russia. (They did not know of the secret scheming), and so these peasants, wherever it was possible, made room for us. I and several other American boys lived at the home of a peasant; here we received whatever he had; but the peasants did their best to inform us what they knew of bolshevism . . .

"Frequently we got into a conversation with prisoners of the World War that were brought to the Siberian front. They were in a pitiable condition. For years they had fought either on the eastern or the western fronts, or on the Italian front, where they had already sufficiently suffered.

"Having been taken war prisoners they had to further experience the horrors of the prison camp ... After all this they were dragged to the Siberian front, where there was little left of them. They were covered with rags held together by bloody, dirty bandages . . . With all our strength we tried to help them. Many of these poor devils were shot by the French because they would not fight the Russian workers.

Turnbow paused, then went on with the recital of his own tale:

"We heard that war prisoners of the various nations that were taken to the Siberian front numbered about as follows: 5000 Germans, 100,000 from the Austrian Empire, 90,000 Hungarians, 15,000 Turks and 2000 Bulgarians. This makes a total of 212,000 prisoners who were distributed to the various parts of Siberia to fight the Soviet Red Army.

The desire for battle, in this kind of an army, was entirely exhausted by misery and despondency, and very frequently there was suicide among their numbers. Many wounded themselves so that they would not be able to fight the red army. In large numbers they surrendered to the red army, as well as deserted their own companies and went over to the reds.

"In the winter of 1919, while I was in Omsk, Kolchak's government began to conscript all the men from 18 years up. At the same time it also conscripted all the cattle, grain and means of transportation. This was the death blow to the bloody government of Kolchak, for it caused all the peasants throughout Siberia to plot for the overthrowing of the Kolchak government.

"Instead of the young men and the workers surrendering themselves to the Kolchak government, they formed red guard divisions throughout the whole of Siberia, and began secretly to plan with the Soviets for the overthrow of Kolchak.

"The Omsk government was overthrown in the fall of 1919. The armies of Kolchak, the allies, and Japan retreated to Irkutsk. My wife and I were moved with them. There we saw the red

A Group of Siberian Students Under Protection of American Troops

army display unparalleled bravery. Much inferior in arms and numbers to the Japanese forces, the red army attacked the Japanese and drove them out of Irkutsk and took possession of the whole territory.

"The American soldiers were taken prisoners by the reds, but we were set free because we did not take part, nor did we desire to take part in the slaughtering of the workers. The officers of the red army gave us their protection.

"Because of the advance made by the red army, we were forced into Habarovsk where, on the 31st of January, 1920, took place that famous Tripitsin attack upon the Japanese. Tripitsin was a young, learned and powerful Russian revolutionist who was among the last of the exiles of the Czar's government.

"He became probably the best known and most able leader of the Siberian red army. He chose for his staff five young revolutionists, none of them over 23 years of age, who, like himself, had been banished from Russia because of their revolutionary ideas. One of them was a young writer who later became one of the commissars in the province of Chita, Nina Lebedeva. I have a picture of her in which she appears to be still a young girl.

"The red troops carried on surprising guerilla warfare in which individual bravery and strength were manifested which created fear and horror in the Japanese ranks. A large number of Japanese troops fell here. In this manner they seized a bit at a time until they had cleaned out the Kolchak army and the Japanese for 500 miles north and west of Amur, and until they finished their work by capturing Vladivostok.

"Upon our arrival at Vladivostok, the reds had captured the city and were in power there. The workers sent their committees to the American army officials to learn their attitude toward the workers' socialist republic.

"These officials were unable to give a definite answer, for were not the plans of the Morgan trust for the exploitation of Russia defeated? Siberia was now in the hands of the peasants' red army; and besides, the red army had become a favorite of the American soldiers.

"The representatives of the workers told us: 'We are not hostile toward America, nor toward the American workers; nor do we wish to disturb the American soldiers. We want peace and we want to settle our own affairs here in Siberia. We know that the Japanese army is preparing for an attack upon Vladivostok. Do not join them.' Our officers promised neutrality as before.

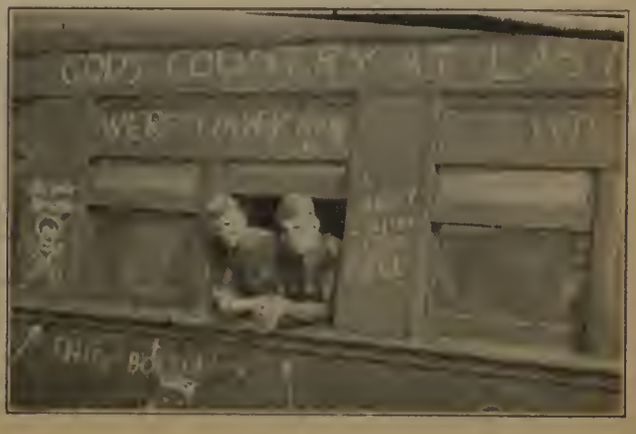
"It was in the first days of February 1920 that the Japanese again captured the city. They had about eight or nine thousand men which greatly outnumbered the red army. The red army was literally mowed down. In the harbor were the battleships of the Allies and the Japanese, and opposite to these, on a distant hill, were the cannon of the Japanese. The reds fought on the streets to prevent the Japanese from entering the city. During this struggle there was a minor demonstration put on by the American soldiers. Some fled with their arms to the red army, to fight the Japs.

"Be that as it was, the Japs took the city. Over a thousand red soldiers fell in this battle. The Americans received permission to return to their camp. None of them were punished for this military crime which they had committed. This was due, possibly, to the fact that there could be found no one to pass or execute a sentence. The American "volunteers" had become "reds," and were ready to prevent this sentence . . . But not one newspaper mentioned one word about this.

"At the same time that the American invasion of Siberia ended, also ended the activity of the expeditionary forces in Murmansk and Archangel. On Fegruary 15th we were taken aboard ships and were informed that we were on our way home. We surely were in our glory, and shouted for happiness. We did not care to see any more of the miseries of Siberia. There were 1200 of us, of whom 80 were negroes. Many besides myself had made the acquaintanee of Russian women. We had along with us over a hundred women who were the wives of soldiers.

At this time of the year the harbor of Vladivostok is frozen over with thick ice, therefore it was necessary for an icebreaker to make a passage for us, and we made slow progress. The heating system of the ship was in bad order, so the women were forced into closed holds without any bedding to sleep on, without heat and with very little food, thereby suffering from cold and hunger. Bitterly we discovered that the hatred for bolshevism still existed in the officers, even on our supposed homeward journey. We were not permitted to see or care for our wives. We were told: 'What do you care for these d— prostitutes. Let them rot in their vomiting and dirt in the hold of the ship. Then the bolsheviks will make a good feast for the fish.'

"But we had suffered enough to take steps to protect ourselves and our wives. Quickly an allianee was formed, many of the negroes joined. We took the following notice to our officials: 'If the wives



**Homeward Bound**

of the soldiers are not given better care, more food and heat before 10 A. M., we shall be prepared to take control of the ship ourselves.' We got what we asked for, and the officials did not dare to start any kind of investigation regarding this demand.

"The soldiers and their wives had to be satisfied with thin broth, beans and bones, and poor bread, while the officers ate chicken, fruit and wheat bread. We made another demand and were successful in this also. We got better food, but now we were near the landing place.

"But instead of being taken to the United States, we had been taken to the Philippines. When we were taken on land at Manila, we were separated into small groups and each group was under a guard, and these groups were returned to the United States one at a time. The group to which I belong was placed on board for San Francisco in August 1920.

"It happened that during the whole trip from Manila to Frisco, I was permitted to stay with my wife. Upon landing at Frisco, I asked for transportation to Portland, Ore., where I enlisted, but I was denied this. From my back pay $1.50 per day was charged for the board of me and my wife, during the journey from Vladivostok to Manila—for the thin broth and bones. The officials ate chicken and dessert—it is probably for this reason that they were charged only $1.25 per day.

"After this service of two years as a volunteer in the army of the United States, I stepped into the streets of San Francisco with my wife—penniless, ragged, without money and without work. Three weeks later, my wife gave birth to a child. Now and then I had work for a day—then further hunger and despair.

"If ever I shall get another fever for war, it will be only when I can "volunteer" into the red army of the workers."

# Gary, the Home of Steel and Efficiency

**By Steel Workers' Press Committee**

GARY, Ind., presents to the highest degree a picture of what modern industry really is. In Gary from the time the big iron ore carriers pull alongside the docks till the finished product, steel is ready for the rolls and factory work of different machine shops, there is coordinated industrial effort.

The steady stream of material from Clamshell to Bunker through the bull dog crusher to the belt elevator and on to the charge bunkers and into the roaring greedy blast furnaces is one interdependent operation.

Each man and each department is dependent on proper functioning, on the efficient work, of all the rest. This is modern industry with its basic principle.

No one process can get along without all the other processes working in harmony. The workers in the industries have developed this vast industrial machine. The expert workmen with the aid of the unskilled have built up this wonderfully productive thing which the capitalists own and control.

### Exploitation Means Misery

The reason for the misery and unemployment among the workers of Gary as well as elsewhere is because they do not control and operate the industry they have built on the same lines that they built it on. They constructed the machine from plans for the purpose of increasing efficiency and coordination in production. Today the steel trust does not allow efficiency and coordination in production because it does not bring them profits to do so.

The workers of Gary are not concerned with the profits of the steel trust. They are only concerned with getting the big working apparatus to moving so that they may work and gain the returns from honest work.

How can this be done? The Industrial Workers of the World have a plan for the operation of industry so that each industry will do its part by fitting in and working in harmony with all the rest for just one purpose—efficient production.

This plan can only be carried out by doing away with the unnecessary capitalists that only keep back production. This plan demands as a first step the formation of industrial unions.

### Craft Unions

Why are craft unions useless as fighting machines against the boss in Gary? Every worker who was through the big steel strike in Gary knows why the strike failed. Craft unionism depends for its success on being recognized by the owners of industry. It depends on the power of the craft unions to make the boss recognize the union.

The steel trust is stronger than any craft unions can ever be, even when they go out on strike together. The failure of the steel workers' fight was because of insufficient support by the rest of the unions. There was no coordination of effort on the part of the A. F. of L. to help the striking steel workers.

### The I. W. W. Way

In union methods as well as in industrial processes we must have each part coordinating its action with all the other parts in order to get re-

sults. Craft unions do not do this. There is no true centralization.

Gary must organize itself along the same lines that the industry functions on. All the workers in the steel mills must be organized in one union. The technical men, the chemists that test the ore and determine what amount of each sort of material should go into the charge, all of the useful workers in the plant, whether salaried or paid by the hour, should be worked on to join the union.

Gary alone cannot beat the steel trust. The workers in the whole industry must be organized on the same industrial lines as Gary before anything can be done that spells success. We do not have to fight for recognition from the boss. We don't want the recognition of the boss. We are concerned with getting enough power on the job so that we can get along without recognizing the boss ourselves. We organize the men on the job whether the boss likes it or not.

If a strike fails to get results we go back to work and carry the strike right on to the job with us. A fifty per cent organization in any industry by the I. W. W. gives us control of that industry so far as the boss is concerned.

Controlling one industry is not sufficient. We must control and centralize all the industries into one big union of the workers. Then when steel workers strike there will be behind their efforts enough power not only to win concessions from the boss but to put him out of business altogether.

### Gary Today

Today the workers of Gary are working two and three days a week. This is the record of the men who have jobs. The ones without work have not even this much occupation. Capitalists won't allow the industries to function. They won't open up the plant because they cannot make profits from the work you want to put in. They will cheerfully let you starve rather than run the plant without profits.

Checks issued August tenth showed that the average wage for two weeks for those employed was from fifteen to twenty dollars. The prices of commodities necessary for life are maintained at a high level. Rents are exorbitant. Food bought by parasites from toiling farmers as cheaply as possible is sold at high rates. Gary is in the strangling grip of capitalism.

There is but one way out of the misery that is bearing down on every steel worker. That way is to organize the steel workers whether they are employed or not and when the organization is strong enough lock out the bosses in the biggest and last steel strike in the history of the world.

### Dangers in Disorganization

To attempt this before the organization of the workers is complete would be the greatest folly. We must have enough of the working class organized and enough industries under our control so that there need be no break down in the industrial life of the country. The great danger to the working class in this industrial country is in being unprepared. You know that when the giant cranes are broken down the process of the making of steel is interrupted.

So if in the whole industrial process of the country one of the parts of the productive machine breaks down and the workers are not prepared to fix it the entire machine is liable to go to ruin.

### Industrial Unionism

An industrial union, however, is the best method for fighting the daily battles with the boss. It is the best method of making unemployment less bitter for the workers. It is in the final struggle the only weapon that can be used in industry to insure the carrying on of the work of the country so that men can live.

Let us organize the steel mills of Gary worker by worker so that, when the hour of battle comes again, we will know our strength and the masters can be set out in the cold.

Let us make Gary a stronghold of steel and industrial union efficiency.

**Gompers' Reward**

# MUST IT BE EVER THUS?

THE people of this world are generally accredited with growing a forelock of wool for the special use of spell binders, who continuously pull it over their eyes. As the world has progressed along its devious route to its present glorious wage slavery this little shock of wool has been of exceptional value, first to tom-tom beating medicine men, then to numerous successive clans of mystic salvation makers, from the barterers of celestial bliss to the peddlers of protective tariffs, full dinner pails and a "workers' friend" policeman.

Among the more recent apostles of the bleached wool blinder are those sanctioning gentlemen who kept us out of war, sugar and work, but not for an instant out of jail. And the workers have fallen for it. The working class has again and again proved to be the most susceptible of all animals to the gentlemanly art of the spell hinder. It voted for one Woodrow Wilson, because he kept us out of war, and sang psalms of praise for him six months later at the delight of prospects of being plunged into the slaughterfest, to battle for the lords of creation: the money lenders.

During the war the workers adopted the war cry, "All power to the politicians," on the theory that giving the politicians power to run everything their own way without criticism would make it easier to "win the war." (?) Any form of criticism was denied as an attempt to commit treason. Even the charge that the millionaires were fattening at the public expense was greeted with crys of "pro-Germanism." Now, when these same charges of graft have been proved, the grafters weep on the shoulders of the press and get absolution, in true medieval style, for the price of a campaign contribution. But the workers, they have not been absolved. The charges which the workers put forth, against the war, against the profiteers, who mulcted the workers and soldiers, have been proved, but the workers who dared make the charges have not been set at liberty.

The workers, arrested for "obstructing the war" by telling the truth about that gigantic revel of murderous imperialism, are still in jail: not all of them, but many. Arrested and held for months, incommunicado, at the behest of spies and perjurers, they were finally tried and convicted, on specious charges, by unfair judges and jurors who boasted of their prejudice, they still lie in jail.

Fifty-five men were arrested in an unwarranted raid on the I. W. W. hall in Sacramento. Forty-four were convicted on charges which were so empty and contemptible that the workers could find no better defense against them than a contemptuous silence. They are still in jail, though there is none today who would care to try to prove their guilt.

Seventy of the victims of the Chicago trial are still in jail, on charges of obstructing the war, charges, which were hardly considered in their trial. The trial was decided on the question of the right of the workers to organize into a union whose ultimate aim was the establishment of a new form of social intercourse. Their arrest and conviction was based on the belief (so we are told) that they were dangerous to the prosecutors of the war.

Six of the workers, arrested over four years ago in the Kansas oil and harvest fields, on technical charges, are still held in Leavenworth.

There are many hundreds arrested in this same era of war hysteria who still lay rotting in the jails of this "free country!" The profiteers who have been proven guilty of plundering the government, of hindering the progress of the war for their pockets' sake, have never been threatened with jail. The spies and dynamiters, proven agents of the enemy of the government in the war have been turned loose. Only the industrial prisoners remain. It is time some effort was made to get them out. A general drive for amnesty must be made, and made so effectively that it will take effect.

The smug, capitalistic politicians who have hoodwinked the workers with promises, must be made to realize that their promises have some binding value. The republicans promised a restoration of civil liberties. Let them restore these men to the outdoor air, let them restore the right of the people to free speech and freedom of opinion. If they do not, let us make them realize that there are some people in the world who believe in those rights. Let us make them see that we can take those rights, those rights that have been fought for before now.

The capitalist politicians are liars, spell binders, hypocritically seeking power to do the will of capitalism, and the only way to secure the restoration of those fundamental rights for which our forefathers fought, is to bring pressure, effective pressure to bear, till the workers are released and the rights of the workers are restored.

September 4th is amnesty day. Organize to make demonstrations on that day which the bosses will remember. On that day manifest the strength of the movement for amnesty, and let the masters see that we want our people out of jail, and want no more put there. It is high time the hypocrites were called, and some definite assurance obtained that the workers have the right to live, and carry on their plans for the future in this country, and in all countries.

**All together, fellow workers! Make September 4th the day for amnesty to all who suffer for us in prison!**

# The Railway Situation

By F. McKinley

AS ONE of the most important questions before the workers today is the impending railway strike let us review the situation and see to just what extent it will affect us as railroad workers.

In 1916 we saw the same comedy acted with which we are being entertained today. We all remember how a strike vote was taken, the Rails voting almost unanimously to walk out if their demands were not granted. The most important of their demands at that time was the eight hour day. Congress hurriedly passed a law known as the "Adamson Eight Hour Law." Most of the rails threw their hats in the air and shouted in celibration of the victory and have been working from ten to sixteen hours ever since.

Then again early in the summer of 1918 the brotherhood leaders began collecting figures on "Average Wage" and "Cost of Living" to present to the Railway Administration in support of their argument for an increase in wages for railroad men. The men got tired of living on "coffee and" and promises, and a few weeks later the shopmen went on strike in different parts of the country. Of course they were "outlaws", so in order to be respectable union men they obeyed the orders of their "leaders" and returned to work.

In the meantime Pres. Wilson promised to appoint a Labor Board to listen to the pleadings (not demands) of the "labor leaders." A few more months of promises (but no Labor Board) and the switchmen tried to force the issue by walking off the job. The labor market was pretty well crowded at that time so it was an easy matter to find scabs to take the places of the "outlaws."

As a railroad worker myself I have had a good opportunity to see the effect of all this disorganization and have thought a great deal as to the cause. When we take into consideration the fact that there are sixteen different craft unions concerned in the present controversy we can readily see the cause. Although 98 per cent of the Brotherhood of Railway Trainmen have just voted in favor of a strike, "King Lee" has washed his hands of the affair and has put it squarely up to the general chairmen of each railroad to call the strike. In other words, if the general chairman of one system calls a strike he is liable to find himself alone as the chairmen of other roads are under no obligation to follow suit. Then again the shopmen are waiting for and are suspicious of the roadmen and vice versa. When we stop to realize that an engine in a railway shop is worked on by nine or ten different men representing the same number of craft unions and that a train and engine crew of five men are divided into four different organizations, we have some more light as to the cause of the disorganization of the railway workers. How much different it would be with all of us in One Big Union standing side by side all fighting the common enemy.

If the average railroad man fully realized the importance of the industry in which he works and would organize accordingly it would eliminate the prospects of so many lost battles with the railway managers. By controlling a few of the most important railway centers it practically means control of the entire industry and also the allied industries.

For example, control of the Pittsburg, New York, Chicago, St. Louis, Kansas City, Omaha, and Twin Cities terminals would mean control of the industrial life of the nation. Most of the anthracite coal is mined in the vicinity of Pittsburg. Also a large per cent of manufactured steel is handled at this terminal. Most of the country's exports and imports passes through the hands of railroad men of New York terminals. Chicago is to the nation what the heart is to the human body. A continual stream of live stock, grain, and raw material is being shipped in and meat, flour, and manufactured products going to all parts of the country are being shipped out. St. Louis, Kansas City, and Omaha are important live stock and packing cen-

ters. As most of the grain raised in the U. S. and Southern Canada is made into flour in the Twin Cities the railroad men of those terminals virtually control the bread of the nation.

From the fact that the steel industry needs the raw material and coal to operate, the packing industry needs live stock in order to turn out fresh meat, and the millers must have the grain before they can manufacture flour we can readily see what the railway industry means to the industrial life of this country.

Now, as the workers are part of an industry, if the industries are interdependent the workers must be also. It is useless for the coal miners to strike if the railroad men continue to haul scabs to take the place of the strikers, and company gunmen as well as arms, and ammunition with which to intimidate them. That has been demonstrated in West Virginia in the last few weeks where the railway workers (in order to protect their sacred contract) have done more to break the miners' strike than any other factor. Then again in the steel strike of 1919 there was more or less discussion among railroad men as to whether or not it would be a violation of "Labor Union Etiquette" to haul scab steel. There were a great many arguments among the rank and file and occasionally the remark "Contract" and "Not a railroad strike" was heard. But the grand lodge officers didn't leave them in doubt very long. An official circular letter was sent to all subordinate lodges calling their attention to the fact that their contracts must be protected and that if a railroad man wanted to refuse to help break the steel strike he must look to the steel strikers' committee for protection.

In other words, in order to be a good craft unionist you have got to be a scab. That has been the history of all craft union strikes. The only non-scab organization is the I. W. W. An organization where all the workers in a particular industry are in an industrial union regardless of their occupation. When the Railroad men are organized along industrial lines with the power in the hands of the rank and file then and only then will these strike votes cease to be a joke.

# Stumping the Stump Ranches

**By C. E. Payne**

THE stump industry in the heavily timbered sections of the northwest is a very lucrative one, but the stump ranchers who make it successful have never yet been organized. Whether the Industrial Workers of the World can take it up with any degree of success will depend largely on future developments.

The stump industry flourishes when properly conducted. The first requisite is natural preparation of the soil for several thousand years, then a heavy growth of marketable timber on that soil. These, of course, must be attented to before ownership is attempted. For owners to prepare the soil, then plant the timber and protect it until marketable, would make serious inroads on the profits of the industry—a crime not to be contemplated.

The second step is to obtain ownership of the land and timber in large bodies. The methods of doing this are not subjects for public discussion. Scores of men have been, and are now in penitentiaries in many states for even making reference to some of the methods. An even larger number have been incarcerated (that means penned up, or jailed) for suggesting that corrections should be made after ownership had been obtained.

In many parts of the Northwest ownership of the land is not attempted, as that would also have made inroads on the profits. Where large bodies of timber are located, forest reserves have been established. In those places the land itself is not owned, in the sense that ownership is commonly understood. The timber, however, goes to owners by various devious methods.

But it should not be thought for a moment that ownership of the timber is the object of the stump industry. That is merely preparatory for the great philanthropic purpose of the owners. The ownership is only for the purpose of removing the timber and getting it out of the way of the stumps. Nature has not been sufficiently considerate of the wishes of owners in this respect. There was never yet a stump that had not had a tree growing atop of it. The purpose of ownership is to remove the tree so the stump will be accessible.

Of course there is, even in the charitable act of owning, some small returns for such arduous toil. Ten years ago the cost of cutting the trees and taking them to a mill was less than six dollars per thousand board feet. The cost of running the logs through the sawmill, the yard, the dry shed and the planer was less than another six dollars per thousand. As the lumber was selling for only a paltry twenty dollars on an average, F. O. B. the mill, it can easily be seen that ownership of the timber was not the ultimate purpose of the owners. Not so!

Promotion of the stump industry was the purpose. But no one should run away with the idea

that the profits on the capital stock was two-thirds. That rate of profit was kept down to five per cent or less. Profits on expenditures is never talked of except in the most select circles.

Having removed the trees from the stumps, the next thing is to promote the basic industry—the stump industry. There are numerous promoters and each promoter has his own particular method, but all lead to the one end: **Get some stump ranchers.** The qualifications for stump ranchers are very high. They are much higher than for being a Mason, a Baptist or a United States Senator. There are innumerable neophytes—but few ever attain the superlative degree of entering the simon pure and unalloyed, stump owning class.

The first requirement for a stump rancher is great strength, excellent health and a firm belief in the divinity of ownership. He should have a little money—not much—to trade in on an agreement for some stumps. The less money he has the more firmly will he be convinced that the owners will provide him with a job in mill or woods till he has made ultimate payment for the stumps.

The second requirement is that the stump rancher shall have a wife who is tougher than a brindle steer. She must be able to live alone all week and comfort her worn-out husband on Saturday night when he comes home for a twenty hour stay. She must be able to do her house work, clear some land, raise a garden each year and a baby each two years, yet never be sick or require more than $17 worth of clothes in any one year. Keeping a flock of chickens and a cow are merely side lines to keep her from flirting with other lumber jacks than her husband. Of course she does not pull the stumps. She does the clearing and gardening between them. The stump rancher himself will pull the stumps—"sometime, when I get around to it." The owners are furnishing him with work and he must 'tend to his job.

The price the stump rancher agrees to pay for the stumps he lets his wife live among, varies greatly, according to the number of stumps per acre and the location. Like food, cotton and other things which have been destroyed by wholesale to keep the price up, so with stump land. The fewer stumps per acre the higher the price the stump rancher agrees to pay.

The owners of the stump industry (often miscalled lumber companies) frequently let the stump ranchers remain at home for several weeks during a year. Some stump ranchers devote the time to pulling stumps and have been known to have vast tracts of five or six acres cleared of them at the end of ten years. This, however, is done only in exceptional cases. When the stump rancher comes home he is generally so tired that he can do nothing but hunt, fish, rest and tell his wife how to run a farm. But in ninety per cent of the cases both courses lead to the same result—a different stump ranch in less than ten years.

It is necessary that the stump ranchers eliminate some stumps. Firewood cannot be obtained otherwise than from timber, and this necessitates some clearing. Also, the stumps will rot in time—tamarack and cedar in about one hundred years' time—if the brush is kept cut down between them. Add to this the fact that most stump ranchers or their wives have some ambition when they start in and are buoyed up by hope (Hope, not Dope) and you arrive at the fact that some clearing and plowing will be done between the stumps.

If some stumps are pulled before a rancher leaves a place, he may be sure he has been of some value in the world. The place will then be bargained to the next stump rancher for a higher price than to the one who first tackled it, making the possibility of final payment on the stumps just that much more remote. The bargaining and first payments are thus made endless, with ownership still in the hands of the masters of the Stump Industry.

Some eight or ten years ago the announcement was made by the Forest Reserve officials of the government that as fast as the timber matured from the Kaniksu Forest in Northern Idaho and Northeast Washington the land would be offered for homesteading. But someone with more authority than any government official at once put a quietus to that notion. It would never do to have it suggested that the homesteader should have the timber to get a start in the stump ranching industry so that he could have some assurance of winning title to the land.

It should be noted in passing that the stump ranching industry is not the same as the stump industry. The stump industry presupposes ownership. The stump ranching industry means hard work, with ownership at the food of a rainbow.

When soldiers were started on the return journey from France early in 1919 there were some suggestions that the soldiers of Washington and Idaho should be given each a cut-over tract of land in the Kaniksu Forest. But even the soldiers who fought to make the world safe for democracy knew an impossible proposition when they saw it and the proposition died a-bornin'.

There have been a few stump ranchers lined up while they worked in the woods and mills. But men who work in the woods and mills are not much inclined to line up while chained to a bunch of stumps. Like horses in a blizzard, they are too badly bewildered by conditions to seek a way out. They drift with the storm and unless they can be turned from their course they will go over a cliff to destruction. The blizzard of conditions is growing worse; can the stump ranchers be turned toward safety?

# Tieing the Shot on the Corpse

**By Upton Hold**

THE bosses with benign stupidity were the ones to put the poison in the icewater for the International Seamen's Union. With the Imperial Ukase, issued from the United States Chamber of Commerce, to the effect that the open shop shall be the uniform American plan, went the chance of the International and the other craft unions of the sea trades maintaining an existence.

The poison worked well, almost as well as some of the salt horse mulligan that is given to the marine workers at times instead of real food. The marine craft unions were forced on strike and because of their lack of organization went down to a heroic defeat that was ignominous only because of the lick spittle tactics of the officialdom.

There then remained for these officials but one job to do and they have done it very well. They have black bottled the remnants of the organization that was left to them by antagonizing the only fighting groups of workers in the organization. Then wrapping the shroud of reactionary patriotism around the corpse they tied on the shot by issuing a most astounding piece of literature as the official organ of the International Seamens Union. This insult to the intelligence of the worker of the sea contains not one word of constructive advice. It gives no hint of the social catastrophe that is facing mankind. It has no encouraging note to the workers of the organization. Instead it is a direct tirade against all class conscious members that are yet to be found in the ranks of the union and reports silly lies as to the I. W. W. being **a paid tool of the Steel Trust.**

The pitiful terror of the pie cards who are responsible for all the articles that appear in this orgasm of hate betrays nothing so much as their fear that they may have to get out and work on the job with their much scorned rank and file. We recommend a copy of this periodical which is known as "The Seamen" for the members or past members of the Union it is supposed to represent. Consider well the lack of a program of action put forward to fight the boss. Consider even the lack of a real program laid down to fight the I. W. W. which it is evident to the reader must be the purpose of the officials of this one time organization.

Without a word of cool consideration of the situation either as regards the attitude of the boss or the necessity of industrial unionism that the rank and file now so plainly see, this tirade only exhorts the sailors to pay their dues and obey the official mandates.

This would not be so bad provided that the official mandates were issued to deal with the concrete situation of unemployment and hostility on the part of the employers. Instead however the only command is that the sailors shall hate a member of the I. W. W. like rat poison and distrust any fellow worker that uses his head for anything except a hat rack.

There is no denying the fact that the situation of the marine transport industry is as badly off or perhaps even worse off than the rest of the broken down industries of capitalism. Thousands of unemployed workers of the sea crowd every port. A berth is as hard to secure as a gad fly in mid ocean. The employers are fixing to make it harder. All California yards that are under control of the Steel Trust have been or are being converted to the production of the Diesel type of motorships. These vessels operate with crews cut from two-thirds to a half of the original size.

The turbine-electric drive equipment for bigger tonnage lops off from ten to seventeen per cent of the fuel expenses and with cargo space economies also cuts down the amount of labor time needed to transport a given amount of material.

There can be but one answer to the situation that is facing the marine worker today. He must so improve his own conditions of work and hours as to be able to make room for those that are unemployed at present. In order to do this the workers of the entire industry must be organized in one industrial union. This union must be a fighting union and not a dues collecting agency only. It must accept the fact that the employers on land and sea are united in their determination to crush out every form of unionism and reduce the workers of the world to the position of industrial serfs.

Therefore there must be a close affiliation with the rest of the militant workers in One Big Union. The I. W. W. has always stood for such a union. It still is the nucleus of such a union and the rapidity with which the workers of the sea are lining up in the Marine Transport Workers' Union of the Industrial Workers of the World indicates that the realization of the mission of the I. W. W. will soon be achieved.

# Panama and Marine Transport Workers

**By Tom Barker**

JOHN Benjamin King, the greatest I. W. W. exponent that ever popularized the industrial unionist ideas in Australasia, used to say that the two greatest things in the modern world in compelling the workers to organize internationally and industrially were the Panama Canal and the Diesel motor. Time is proving that, even though J. B. has served seven years in an Australian jail for having two I. W. W. stickers in his possession, since making use of the above statement, he has been a true prophet.

In the marine transport industry these effects are already noticeable, as these two outstanding features are transforming every phase of shipping, and also revolutionizing the ideas and the lives of the men who work on ships and in ports. In my book "The Story of the Sea" I deal particularly with both matters, and point out all the labor that they will displace. In regard to Panama I say: "The recent opening of the Panama Canal was another great event in the shipping world and also had its effect upon the men who man ships. It shortened the sea distance between San Francisco and New York by more than one half. Instead of the long trip around the South American continent, it is now possible to travel through the locks in Central America. This gigantic enterprise cost millions of dollars,and hundreds of lives —working class lives. It also shortened the distance between Europe and Chile, Australia and New Zealand, and thus abolished the risks incurred by sailing in the low latitudes off Cape Horn. It has made a large difference in the sea distance between the Northern Pacific coast ports and those of the River Plate, and also between the Atlantic Coast ports and the nitrate ports of Chile. It strengthened enormously the position of the United States economically and politically. It has transferred the carrying of cargo from the U. S. railroads to the ships, for it is now cheaper to send a ton of cargo from Seattle to Philadelphia via Panama than to send it by freight train. Panama has strengthened the octopus of shipping, the autocracy of merchant shipping."

At the end of the fiscal year for 1920 the Panama canal authorities have issued their report. In their report they have proven that this immense canal is going to displace thousands of our class in the marine transport industry. During the past fiscal year 11,599,214 tons of cargo passed through the Panama, without mentioning a minor item of 453,769 tons of government cargo that did not pay dues. This represents an increase of 23½% over the previous year. Of this, United States ships carried 45%, British ships 32% and Japanese ships 7%. During the year 2,892 ships passed through the canal, including 1,212 U. S. ships, 970 British, 140 Norwegian and 136 Japanese. The total income was $11,276,890, an increase over the income of the previous year of 32½%.

At a conservative estimate deep-water, long distance freights are costing about $2.50 to $3.50 per 1,000 miles. Calculating at $3.00 per 1,000 miles we find that the income at Panama is equivalent to the saving of over 3,500,000,000 cargo miles, or 1,000,000 miles for a ship with 3,500 ton cargo capacity. Reckoned at the most reasonable figure, Panama is equivalent to 300 voyages. But in considering that an average amount of $1.00 per ton cargo represents compared with pre-canal days a saving to the ship-owner of anything from $1.00 up to $10.00 a ton, it will be easily seen that Panama must dispense with the need for thousands of ships, particularly when the readjustment of war disorganization is completed. We cannot compute with any degree of exactness the number of ships that will be permanently put out of business, nor the number of our fellow workers who will be scrapped. But the fact is as J. B. King prophesied that nothing can meet the needs of the marine transport industry today, except the immediate creation of ONE union on the sea, capable of developing the power to take charge of the industry, and running it for the working class. Again, we must remember that the ships that are scrapped are the more costly, old fashioned ships, which usually carried big crews, particularly in the engineers' department. The oil-burning ships with their small crews will carry the greatest part of the cargo in the future. Panama, like Suez, is saving millions of ship miles, as its annual report proves, and what is more important it is displacing thousands of mates, skippers, firemen, sailors, cooks, stewards, oilers, galley boys, etc. It has almost as great effect in Great Britain as in the United States.

Now we come to the crux of the question, you sons of the ocean. What can Andy Furuseth and his yellow outfit do under these circumstances? What did the International (?) Seamen's Union ever do, except leave its chiefs hanging around Washington, pushing along by intrigue and soft-soap, that old Seamen's Act that doesn't mean anything to anybody? Did all the lobbying stop the cutting of Panama, or will it alter one of the effects of Panama? It is a question whether Andy and his crowd have yet heard that Panama has been opened. It is up to someone to tell them that Queen Anne is dead, and send them to Baffin Land to chloroform the walruses with nice talk.

If you think you can get the best of the U. S. Shipping Board, the Chamber of Shipping of the United Kingdom, Panama Canal and Diesel motor with sentiment, sweet reasonableness, the Seamen's Act, and an obsolete agreement signed in war time, you have another think coming.

The M. T. W. is the only way to get out of things as they are. Every class-conscious man on a ship if he is sick of capitalism, poverty, prison-cells, loggings, hard work and nothing to show for it, must join up with the I. W. W. in the ranks of the Marine Transport Workers Industrial Union No. 510. Unionism of the right kind, with every-one from the bridge to the firehole in the ONE union regardless of the workers' nationality or the flag of the ship, or the port in which you happen to be. Andy Furuseth and dear old senile Havelock Wilson have got to go. They are wooden ship men, with iron heads. They learn nothing, know nothing, and the world has gone past them. Mustard plasters are no good for our modern complaints. Panama is good. It drives us to organize, and to organize right. We must have class organization, and develop sense enough to run ships for ourselves. Say, fellow worker, they are getting wise overseas. In Australia they are doing this thing. Why? Well, just because the I. W. W. showed them the need some years ago. In all the ports of South America they are coming into line, and in Germany, England and Scandinavia. Join the M. T. W., read the literature and fit yourself for running the industry. Do it now!

## BREAKERS AHEAD

TO THE craft unions there never appeared such a time of trouble as the near future promises. Unemployment has made paupers of the membership and defeats have broken their morale. Now on top of this comes the consistent and orderly campaign of the employers for the open shop.

The steel workers, the seamen, and the packing house workers have been broken up by the lock-out by the owners and the craft tactics of the unions made defeat sure. Now next on the list according to the well laid plans of the Wall Street Strategists come the railroad workers.

The big unions having economic power are to go. The United States Chamber of Commerce balloted on the subject and it was so ordered. The cringing, whining tactics of the brotherhood chiefs will not avail them now. The bullying and bluffing will gain them no concessions or better terms. The issue will be one of fighting ability. The railroad workers can depend but little on their leadership in such a case.

Fight or die! That is the ultimatum before the crafts. They have refused to organize so as to fight. Will they now also refuse to fight and go down into that inglorious death which they are directly headed for? The future will tell.

## UNITY

THE greatest factor in a working class or other social undertaking is to have united effort behind one. Today we have the greatest opportunity in the history of labor unionism to build up the fighting machinery of the workers.

The General Executive Board has decided to exert the full pressure of the organization machinery on two of the most important of the basic industries. In order to carry out the program of organization it will be necessary to secure the unified action of the entire rank and file. The two industries that present the greatest possibilities of organization at this time are the marine transport industry and the oil industry.

The big harvest drive has been carried through. The carrying on of the agricultural organization work throughout the final harvests will take but a few weeks more. Then the splendid machinery of delegates with all their enthusiasm and pep from months of hard work victoriously done will be over. It is the desire of the G. E. B. to urge these active and class conscious workers to concentrate when practicable on the two industries mentioned above.

All the footloose workers everywhere are urged to get in touch with the M. T. W. and the general office and get ready for the big campaign that will organize the marine workers into the I. W. W. for all time. Those who have no knowledge of dock or marine work and are capable of oil work are asked to get down into the oil fields of the mid continent territory and start the organization drive in this industry again.

The other industries important as they are will not be neglected. The industrial unions that are carrying on the work in these industries will continue with redoubled vigor spurred on by the knowledge of the success in the other fields.

Get into these two industries and carry the agitation to the jobs. Write in articles and give us facts and news items so that our entire press can be turned to featuring the news of the big new drives. Unity will win. All together now and the One Big Union will retrieve the ground lost by craft unionism's failure, for the fighting working class.

# Dual Unionism and the Closed Shop in Italy

**By Angelo Boni**

THERE is no open shop fight in Italy. The squabble over jurisdiction and dual unionism is undreamed of. The reason for this fact lies not in the submergence of all minority unions in the larger Confederation of Labor but in the inherent nature of the labor movement.

In Italy there need be few arguments made to convince the average worker that he is better off organized than he is in paddling his own canoe. From the days of the Guild battles against the nobility and the church the solidarity of labor and the class struggle have been living facts accepted by the rank and file of the organized workers.

No idea of a community of interest between the workers and the owners of the means of life has ever perverted the minds of unionists and made them scheme for agreements with the master class so that their union could close the doors of any shop against other members of the working class with the aid of the boss.

All the real labor unions in Italy are fighting unions who have in no instance made closed shop agreements with the owners. Even the Catholic Workers' Union which numbers close to 150,000 members and is composed of peasants and farm laborers are actuated by ideas of class interests and have waged battles against the farm conditions. During strike periods they cooperate with their more revolutionary fellow workers wherever points of contact exist.

There has never been such a thing in Italy as the closed shop in the sense which the A. F. of L. applies the term. So far as securing the job from the employer the only advantage that the union man has over his non-union fellow, or the worker that is organized in another union, lies in the fact that the union members give notice to their unemployed fellow workers of openings and opportunities. Mutual aid is not a vapid theory but a living practice.

There is no attempt made by the unions say of the big Socialist Confederation of Labor with its 2,000,000 members to keep off members of the Italian Syndicalist Union with its membership of 600,000 from a job where Federation members dominate. But let a traitor to the working class come on the job and, while they do not apply pressure on the boss to get rid of this man, the traitor finds himself in such a miserable situation that he feels lucky in escaping with his life.

All jobs are closed in the Italian industries for the real and conscious members of the working class not because of agreement with the boss but because of militant class conscious action on the part of the workers both on and off the job.

Jurisdictional fights and closed shop advantages are the very backbone of American craft unionism. In order to maintain the bosses permission to force dues from every worker on the job concessions are made by the officials of the union to the owner.

During strikes and labor battles with the owners of industry the craft union officials nearly always line up with the owners so that they can continue to force dues from the workers, and can have the aid of the boss in the process.

In Italy such a process is of course unthought of. Labor treason in that country is in the hands of the politicians. Labor battles are handled and under full control of the striking workers themselves who use the efficient method of strike committees. Funds are rapidly mobilized to the sections where need is greatest by appeals to the different chambers and divisions.

American militants may sigh for the Italian spirit among the workers of this country but the Italians fighting ability does not come from anything inherent in his race but from the advantage that revolutionists have taken of the economic and social situation.

From the first to the last the Italian labor movement has been frankly based on the real class struggle. None of the methods of class cooperation have been intruded on the economic field that have emasculated the political socialists. The ideals of class revolution have been the foundation from which it was possible to build unions that made no quibble about duality and the closed shop.

The glorious spirit of the Italian workers is a thing created and maintained by tremendous effort on the part of the different organizations. In every city and town and country village the workers hold incessant meetings. Dramatic clubs, study classes, singing societies, athletic associations, open forums, and above all the press, consume the energy and time of thousands.

The result is the winning of the workers from the control of the middle class institutions. The workers never read the capitalist sheets unless it is to point out the lies and rottenness of such organs. They have their own theatres and their own sorts of recreation and the necessity of these things is shown in the resultant spirit of class solidarity.

With this spirit of class consciousness the capitalistic minded worker is surrounded on all sides. His social life directs him into the battling unions. When he goes on to a job at once the organized pressure of the workers' union is brought to bear on him so that he joins the union as the easiest way out of the difficulty.

That does not complete the process of organization. This member forced to join the union by his associates' persuation and action is also forced to

read and think of the social problems. It is a slow hard process but in the end it spells success in the labor battle.

The Italian movement was once wiped completely out of existence and again after a new start was made, was so weakened by the repression of the reactionary ruling class as to be able only to survive in fragmentary groups. But the process has been carried on. The emphasis on the class nature of the struggle has prevented any such atavism as Gompers or Lewis from dominating the movement. It has prevented any attempt at class cooperation which makes possible the craft union closed shop, and the idea of dual unionism has been smothered in the demonstrations of class solidarity. This same class spirit has made possible the reorganization of craft and local unions into industrial units fitted into the industries. The continued process of change will some day make of all the Italian Unions real industrial unions capable and trained to run the industries for the benefit of the workers themselves. Their spirit of direct action will overcome the resistance of the bourgeoisie and usher in the workers rule.

**PROPPING THE SICK MAN.**

# The Red International of Labor Unions

By George Hardy

AT LAST we are able to speak authentically of the resolutions and decisions of the congress of the Red Labor Unions held at Moscow in July. The congress itself, from the angle of unions and minority delegations surpassed all expectations. With 17,000,000 organized workers represented, can there be anything but enthusiasm for the future of this virile new Economic International?

At the birth of all new movements there has always been some slight difference of opinion until things get "ironed out" a little. Possibly there will be some varying ideas on this movement, but it is safe to say, judging by the thesis at hand, that the I. W. W. members will be gratified to know the outstanding features of the program are their ideas and tactics. For sixteen years we have been advocating factory or shop committees to care for, not only the ultimate but the immediate demands of the industrially organized workers. These committees and their functions are to be brought into being and internationally recognized by the International Bureau of Red Labor Unions, as the decisions show these were decided upon by the Congress.

### I. W. W. TACTICS.

Recognizing the above, it naturally follows that the congress had to be in favor of industrial unionism as opposed to craft divisions as they exist in the A. F. of L., therefore, revolutionary tactics had to be endorsed. The **Intermittent Strike.** (or irritation strike) is one method the workers are urged to adopt. The membership of the I. W. W. has had this as their tactic from the very inception of the organization. The Lumber Barons of the Northwest learned in 1917 how quickly our members struck and got back on the job, when the eight-hour day was denied, only to find another boss who also refused to give the shorter work-day. **More irritation by another strike!**

International Solidarity is to be an actual fact instead of a mere phrase The Bureau of the Red International of Labor Unions (this is the official name) has decided—with the authority of the Congress—to create an **International Strike Fund,,** to give aid to any part of the working class who may be engaged in a life and death struggle with the capitalist class. They also decided on the General Strike in place of local or district, but the congress recognized the lack of international solidarity, at present, hence the above fund to give immediate aid as soon as possible.

The Blockade of Russia has given us a real idea of the practical weapon—the **Boycott.** The blockade is only another form of strike. The capitalist class had an international strike on against Soviet Russia for three years, they refused to give goods or trade with the revolutionary working class who had shaken themselves clear of wage slavery. The Red International of Labor Unions now says the **Boycott** is one of our weapons. We will not support a capitalist country that refuses to settle a wage dispute. We witnessed the American ships arriving with coal in British ports during the recent coal miners' strike. These incidents must and will, stop with the growing strength of the new Economic International.

### CLASS SOLIDARITY NECESSARY.

There is no question of the necessity of coming together in a **strong, class-conscious** International. We have before us an example of master-class solidarity. As soon as the railroad workers voted to strike, the Illinois Manufacturers' Association, which is only a part of the national organization—the One Big Union of the master-class—sent out a letter to all members to "**use their influence and enlist the aid of their employes in sustaining the position of the railway executives.**"

The railway executives combined, make up the executive council of the industrial union of the railway bosses—another part of the O. B. U. of Employers. The same solidarity the masters show nationally in U. S. A. will come by adherence to the tactics of the Red International of Lobor Unions.

### RECIPROCAL EXCHANGE OF DELEGATES.

There is one resolution which calls for departure from the policy of the I. W. W. We are asked to support a resolution carried to have an exchange of delegates on the 3rd Communist International executives. There are to be three on each bureau with a decisive vote. This resolution caused more debate than any other one at the congress. Many were afraid that too much domination might be attempted by the political international. On the other hand, it was pointed out that the Executive of the Red International of Labor Unions had an equal number on the Communist Executive, and that owing to the three delegates being hopelessly in the minority, it was impossible for "domination" to exist on either side.

Supporters of the exchange of delegates also claim as their cardinal paint: that an exchange will ensure an unanimous opinion during a revolutionary crisis. They point out international documents drawn up satisfactory to each executive will avoid at all times contradictory statements, being issued from the two internationals, thus avoiding friction and unnecessary discussion, which would avert action at a time when decisive, quick action wins. Against this resolution is the traditional policy of neutrality towards all political parties. This is not surprising, because the yellow reformistic socialists have given good grounds for this attitude.

## POLITICS AND ECONOMICS INTERLOCKED

Notwithstanding everything that has happened in the past, most of the delegates knew we are about to make our own political institutions and that every strike of any importance today takes on a political phase even when it is only a question of resisting the downward tendency of wages the masters are so anxious to give impetus to. President Sproule of the Southern Pacific Railway brings politics into the rail-strike by stating:

"I cannot conceive that the employees of the Southern Pacific will strike when the matter of fixing wages and hours of labor is in the hands of the United States government. If the men do strike, they will be practically striking against the government. The United States Labor Board and not the railroad have the power to fix the wages of railroad employees."

The above, we know, is not true. The railway executives are the controllers, with their political institution existing in the form of the United States Railway Labor Board. The government of all countries reflect the interests of the ruling class. Who owns America? Rockefeller Morgan and the Vanderbilts, etc., own America. The Chicago, Milwaukee & St. Paul Railway is created out of the profits of the Standard Oil Co. —out of the hide and carcass of the workers. This system covers 10,000 miles, so "J. D." together with the Steel Trust and meat packers, who also own railways, have their political machine to look after their interests and to fool the workers into the belief that it is a public board, hence the supposed impartiality.

As the workers become more and more class-conscious, strikes will become determined attempts at upsetting the capitalist system. This will bring them into conflict—whether they like it or not—with the established institutions. Witness the recent miners' strike in England—mobilization of the army and navy to deal death to the workers had they challenged the right of the coal owners to control the mines. Look at the speedy array of the state against the American miners. So the International of Red Labor Unions believes that there is a political or civil side to the labor movement. This side will show itself as we become more determined and assertively organized. We will meet the masters by throwing our economic pressure up against them, but as soon as we feel their pressure which is not economic we have to manoeuvre our forces so as to bring our own social pressure into action.

Strictly speaking, the two phases cannot be separated. Politics does not commence inside of parliaments, but outside and about the social system. Any act that upsets the social arrangements comes within the category of politics, because it is a communal affair. Of course, the I. W. W. has never denied this, we believed that we could take care of this phase by creating communal councils. However, no serious attempt has been made to do so. The internationals now say the communist parties throughout the world should be the communal councils.

### An International Policy

What should always be remembered is: that the policy of the Red International of Labor Unions is a world's policy, and the decisions are based on the revolution and working class control of industry which might come sooner than we realize. They will, according to the congress decisions—maintain control by the dictatorship of the proletariat. This was recognized as essential during the transitional period from capitalism to a workers' communistic republic.

An almost super-abundance of the world's workers being organized into the old unions, especially in Germany and England, where approximately eight millions are in the central and trade unions respectively, compelled the delegates at the congress to vote in favor of recommending revolutionists to stay in the old unions where they are indisputably in control of an industry. This means the I. W. W. will be asked to concentrate its efforts on industries where we are in control and on the unorganized fields. This will build up revolutionary unionism in spite of the fact that some would have us liquidate ourselves completely. The congress recognized that independent unionism outside of the craft unions was a problem and calls on us to do exactly what we voted for in our own general convention last May—unite all independent unions.

### Unity the Clarion Call

If we can carry out this unity movement by calling a conference as soon as possible, we will be doing a real service for revolutionary class-unionism. I feel conscious of the fact that we are at the turning point in the history of the labor movement of America. We want the message of direct action put into every place where labor congregates. This is the super-slogan of the Red International of Labor Unions. The American workers will be as susceptible to real unionism as are any other part of the world's workers, because they will be forced into action, owing to the inability of capitalism to maintain itself and provide jobs.

If we believe what we have taught: "That capitalism carries within itself the germ of its own destruction," let us be up and doing, lest we miss an opportunity of proving our assertion that we are capable of rising to meet all changed conditions and tactics from time to time.

The new unified movement in America will be one of the greatest driving forces and inspiring features to the old craft unions. It will lend impetus to the revolutionary minorities inside the A. F. of L., and will create a new appeal to the unorganized.

### Moves Towards Industrial Control

The Italian workers had possession of the factories, and **will always think in terms of control of industry and how to hold that control.** Every day that passes brings out more determined action on the part of the syndicalist unions of Italy. They remonstrated before the American embassy on behalf of Sacco-Vanzetti. The Communists and revolutionary syndicalists have curtailed the activities of the Fascisti to a great extent by retaliative measures resulting in death to many of the illegal nationalist elements, who did similar deeds to those committed at Centralia, Butte, and Tulsa, etc.

The German situation is somewhat similar to Italy, with two millions represented by the minority groups at the first congress of the R. I. L. U. The Free Arbeiter Union which is led by anarchistic elements was represented at the Moscow congress. All know some day unity must come in Germany. The upper Silesia question has produced an unprecedented drop in the currency, causing the cost of living to rise to a hopeless level in comparison with wages. Thus we see strikes and demonstrations and a demand for the control of industry which is bound to come.

The English minorities and workers' committee movement is well known to the I. W. W. members. Tom Mann, this indefatigable warrior, has been elected on the executive of R. I. L. U. We see in him and his kind a policy which will put to flight the yellow Amsterdam International as qickly as the death blow given the Second International put it into oblivion. The French left wing—the Revolutionary Committee of Syndicalists—put forward a resolution at the recent congress of the C. G. T. for affiliation to the R. I. L. U. which came within a couple of hundred votes of carrying. They are out to oust Lonquet, Jouhaux and the Thomases from control and reactionary power.

The slogans of the new movement have been formulated—unity, discipline, centralization, revolutionary action instead of words, death to Amsterdam International, general strikes to prevent future wars, to protect the Russian Revolution, and to forward the working class generally.

It looks like with these militant tactics the I. W. W. might well adopt the slogan of "All power to the Red International of Labor Unions and on with the workers' society."

# WORDS OR WEAPONS

**By John Hammer**

THE struggle for life is about to be staged between the new, virile, well organized and disciplined ranks of the bosses' One Big Union and the only industrial union in the A. F. of L.; the coal miners, of the United Mine Workers of America.

### The Employers' New Weapon

The employing classes of America have been quietly and efficiently forging their weapon, which appears today in the form of the United States Chamber of Commerce. This body, dominated by and subservient to the financial oligarchy, yet goes through the motions of democracy amongst its capitalistic members.

The Steel Trust and the Oil Trust with their machinery of finance and banking are the absolute dictators of the financial power of the country and are well in the saddle in the Big Chamber of Commerce that has taken to itself all the duties of the old Merchants and Manufacturers' Associations and other partially organized anti-labor groups.

This body exerts systematically all the economic power of the country through their control of industry and finance, they exert all the political power of the country because having the economic power, they own and operate the political machinery of the state. They are in a position to control opinion and ideas by means of the control of the avenues of information, the press, the schools, the libraries, the churches and the host of public and private lecturers and speakers that they can and do route.

### The Open Shop Program

Five years ago there was no efficient machinery to dictate and direct this social power. Today the United Chamber of Commerce with its sub-committees, looks into and formulates active plans for the successful control of every phase of our social life.

It was about the time of the completion of this organization that the policy was laid down to carry out the open shop idea in the entire list of industries in the country. The only hope of the workers of America then lay in so organizing themselves immediately that they would be invincible in the storm of repression and battle that was to sweep over them.

### The Blind Staggers

In convention after convention the different craft unions met and threw into the discard, plans for amalgamation, plans for federation, plans for fighting agreements, and alliances. Every progressive move was scorned and flung out by the compromise loving officialdom that wanted nothing but to continue feasting at the tables of the masters.

There is the crux of the whole position. The

working class representatives have become hypnotised with the machinery of arbitration and class compromise and agreement that they have been dabbling in so long. The class war is a dream to them. They refuse to know that it exists and so they have gone down because they would not cast off their old outworn weapons and rearm with sharp and decisive fighting tools of industrial and social unionism. The only way to fight the bosses' powerful One Big Union is with one more powerful.

### The New Workers' Weapons

The weapons to use in such a case lie directly to our hand. They are the tools that we work with each day. Our jobs give us the power that we need to battle the boss with. We need but to organize that power to be able to replace the bosses' control of finance with workers' control of the industries. His political power can be superceded by our civil power which we can generate by intelligent holding up and distribution of the products which we create. His ability to control opinion can be taken over by us by developing the press for the workers, developing working class plays, working class speakers and letting the workers' study hall supersede the palaces of ignorance and superstition that abound.

### The Coal Miners' Position

How are the coal miners fixed to go into the big battle that they cannot avoid and which is already in some districts being forced on them? Why is it that the first skirmishes where the open shop has been declared in the midst of a 100 per cent organization in Washington state have not aroused the entire organization to aid and lend fighting spirit? Why is it that the battles of the miners in Kansas under the leadership of Howatt who can neither be bullied nor beaten into submission have brought down the anger of the Lewis machine which controls the general office? Why is it that the Illinois miners' strike to enforce some terms from the employers, and which was so successful as to speed up the arbitration awards from an eternity to a few months were opposed and denounced by the last convention? The answer to all of them is the same—they desire to conciliate the employers.

These questions and their answer do not point to success in the coming battle with the employers' well organized machine unless there is a different system used by the miners to counteract the false ideas that prevail.

### Miners' Fighting Qualities

On the other hand we all know of the heroic and self-sacrificing spirit of the rank and file of the mine workers. We know the long list of splendid battles that they have fought and fought well, but in the coming battle we do not hesitate to say that unless they start in now to arrange for different action than any which has distinguished their organization in the last few years they will be up against some bitter defeats.

### Neglect of Education

The greatest and most criminal neglect that can be traced to the doors of the compromising officialdom is the lack of attempted class education. The sickening bunk filling the pages of the United Mine Workers' Journal has brought tears to our eyes

(*Continued on page* 18)

**HOME FROM THE GRAVE YARD SHIFT.**

# Our Heritage

THE gray clouds of November again sweep across the cheerless skies. The aging year in callous wantonness tears savagely at the lingering blossoms of its earlier promises. The stacked up grain, the filled warehouses mock sneeringly at a propertyless and toil weary working class. It is a time of reaction, of disillusionment, and of despair amongst the weak ones. It is a time that brings to mind those brave souls who have in the past unflinchingly paid the supreme penalty to the greed of tyrannical oppressors.

Chill November winds whistled about the barred windows of the Cook County jail as one by one the victims of the Haymarket riots were placed on the gallows and with words of defiance to their masters and of good cheer to their struggling fellow workers gave up their lives in the strangling grip of the noose.

The eight hour day was the object of their fight. The working class movement was the cause they served. They were forced out of this life by the greedy brutality of capitalism but the eight hour day has swept on and on till now it has been won by most of the organized workers in America.

The cruel torture and death of Fisher, Spies, Lingg, Parsons and Engels stopped no forward tramp of progress. The cause of labor marched on. The martyred ones were kept in memory, an inspiration and a sign that brave souls were yet ready to carry on the age old battle and to suffer the age old crucifixion.

* * *

November drabs and browns colored the earth and sky when Joe Hill with understanding eyes faced the firing squad that sent the bullets into his singing heart. His great message sent to his fellow toilers rings now with louder, clearer call than when first he uttered them. "Don't mourn. Organize," he cried, and today the cry is echoed from every quarter. Utah state added one more name to the long list of the immortals.

The tossing evergreens of the Northwest dripping with the drizzle of November rains were given a day of sunshine and of respite from the gray pall of Autumn. A rain of bullets from a cowardly mob of human fiends swept down on the massed ranks of visiting workers crowded on the decks of the little steamer Verona.

The gunmen of Everett snuffed out the lives of Felix Baran, Hugo Gerlot, Gustav Johnson, John Looney, and Abraham Rabinovitz in their fusilade. Others unknown and unnumbered were done to death in the chill waters of the inhospitable bay. The traditions of November were upheld. Violence and reaction spread their fearful message of despair and death.

The loggers of the lumber barony were organized. They fought the battle of the working class against the slavery of degrading conditions and hours of work. They forced the master class to compromise but those November victims took but a silent part in the great fight. The five rest under the sod of mother earth. The unknown are under the waters of Puget Sound.

* * *

Then came an after taste of the great slaughter of young manhood that has glutted the maw of the modern Molochs. Hirelings of the Lumber Trust seized on a day which was to be used to commemorate the Peace that was no Peace and with cynical abandon stormed the workers' union hall in Centralia, Washington.

The intended victims of a tar and feather party defended themselves. The majestic law at once intervened. But when the brave upholders of the cause of labor were thrown into the prison unarmed and helpless, the law forgot its majesty and gave aid to the nefarious purpose of the crazy mob.

Under cover of the unlighted November night Wesley Everest was dragged from the floor of his blood smeared cell, bound in ropes by his inhuman captors and dragged behind automobiles until the foul fiends tired of the sport. Then they enjoyed themselves in true heroic style by unsexing the mangled but still defiant, half dead body.

Hung from the girders of a trestle the sport of seeking spot lights, that gloated on the swaying calmness of his gory body Wesley Everest gave his life. He was the most recent of the great list of American November victims.

November has come to us again. A November full of tense possibilities, a November of sodden days and intense repression and we, the Industrial Workers of the World, are reminded of our heroic dead. It is not for us to mourn their loss. They would scorn to be the objects of sentimental maunderings, of griefs and useless cryings.

They died fighting and with no regrets. Their scorn of the restraints and instruments of torture flamed forth to the very last. They told us then and their deeds tell us now to organize so that labor may be invincible.

## WORDS OR WEAPONS

(*Continued from page* 15)

because of the tragedy of the circulation of four hundred thousand copies of harmful and misleading piffle. The only redeeming feature to the whole magazine was that no one ever was known to read it seriously in my history as a coal miner, at least.

### To Arms!—Reorganize

Today before the battle breaks, the coal miners must, if they intend to win, go at the business of rearmament, of reorganizing. It is too late now to expect to gain an official agreement from the railroad workers not to haul scab coal. But it is not too late to propagandize the rank and file of the railroad workers urging them to give active aid in time of need.

The sight is quite usual to see railroad men buying union shoes and overalls because of threatened fines and then going to work on their union job hauling scab coal, setting in cars on scab sidings and giving aid and comfort in every way to the employing class in their battle on the workers. There has been no determined effort on the part of the coal miners to carry on agitation for a change in this policy.

Then they must prepare working class literature and education for themselves. The damnable rot put out in the Journal is no mental food for the creation of a fighting spirit. And it is that spirit that must be created and maintained.

### Prepare Our Committee System

We all remember the betrayal of our strike by the officialdom refusing to function because of fear for their cowardly bodies in 1919. They have that same fear today. The miners now as then must arrange for carrying on their own fight. They must be prepared to get strike committees into action on a moment's notice. They must prepare to exercize discipline amongst the wavering groups of weaklings that are in every local.

These are the instruments of battle that the miners must adopt at once if they intend to give fight to the giant octopus who has determined to crush out the manhood and courage from the working class of America. They, the bosses, have thrown down the challenge. They have done away with the policy of class cooperation. There remains nothing for the miners and the rest of the working-class organizations to do but to fight or die. Courageous battle means victory and intelligent victory by the miners will mean the bringing out of that dark abyss of cringing, fauning boot lickery the American labor movement as exemplified by the policy of the A. F. of L.

On to victory!

THE MINERS' SHELTER.

# METAL

WHEN we see metals fashioned and assembled into the purring motor or the panting engine we seldom take into consideration all the stages they have passed through, nor do we lay much stress on their importance or the necessary function performed by the workers whose labor is involved. Did you ever consider for a moment that modern life is almost entirely dependent upon steel or other metal and that it would be impossible without it?

The metal industry is a unit made up of thousands of parts and each part in turn has its many departments. Sections of the metal industry are institutions in themselves. The automobile industry is a good example for illustration. Here is but a part of the metal industry. In a few places whole cities are dependent and are responsible almost entirely for their million population mark upon the automobile plants. Detroit is a city of this nature. Its growth, its workers and its millionaires and shops covering hundreds of acres are all dependent on the automobile industry. This giant, producing millions in profits yearly is only a part of the metal industry.

Also there are the electric manufacturing plants such as the Western Electric located in Chicago, the Westinghouse in Pittsburg, the General Electric in Schenectady and all their branches which are all great metal working establishments. Each of these employ thousands of workers.

Another section of the metal industry includes the plants manufacturing farm machinery, such as the International Harvester, etc., manufacturing binders, reapers, mowers, tractors, etc.

Then there are the locomotive shops such as the American, Baldwin and Lima, as well as the firms manufacturing electric locomotives. In these great locomotive shops the jobs are done on a contract basis for the different railroads. Besides these, there are the firms building rolling stock, such as steel passenger coaches, coal cars, oil tanks, etc. This is another part of the metal industry which is a kingdom in itself.

Then there are the arsenals at Rock Island, Washington and other cities along with the mints located in Denver, Philadelphia and Washington. All of these are parts of the metal industry. It must be remembered that each part of the industry, such as the automobile, electric, farm machinery, locomotive, etc., carry along with them, in normal times, thousands of small shops who produce special parts, tools, dies, etc. In Detroit there are at least five hundred shops of this nature employing from five workmen up to five thousand. Small manufacturing and repair shops come under this classification.

When added together the workers in these shops and plants outnumber the workers in the remainder of the industry. Every city of 5000 population, north of the Ohio and east of the Mississippi has at least one shop or foundry of this nature and many small cities have ten and twenty.

Then there are the plants producing machine tools, milling machines of different descriptions, lathes, planers, drilling machines, lumber mill and mining equipment, saws, knives, etc.

Most important of all are the great steel mills. Here the steel is produced to be used in all of the manufacturing and assembling end of the industry.

When you think of metal, you have also to think of steel, of mills and stacks, of smoke and strong men. They are a part of it and cannot be separated.

In the small hours of the night when you and I and the average onlooker are resting comfortably in our beds the steel worker is putting in the 14 and 16 hour shift in front of the hot furnaces, or tending and watching the great machines. The machines are great, are big, are strong. The men seem but pygmies, small and weak in comparison. They are but the tenders and watchers of the machines.

The steel mills of the United States are located largely in an area from Pittsburg, Pa., west to Gary, Indiana. A few other mills are located at such points as Pueblo, Birmingham, Duluth, etc., but are not equipped as well for modern production as are the mills in the steel district proper, in Pennsylvania, Ohio, Indiana and Illinois.

In the mills of this district are employed a quarter of a million workers in normal times. They speak as many tongues as the nations of the world have produced. They have as many religions as the superstitions of men have created. Their customs are the customs of the world. They are the most important part of the greatest of industries.

When the steel mills are busy, the rest of industry flourishes. When the mills are slack, industry closes, workers are thrown into the army of the unemployed.

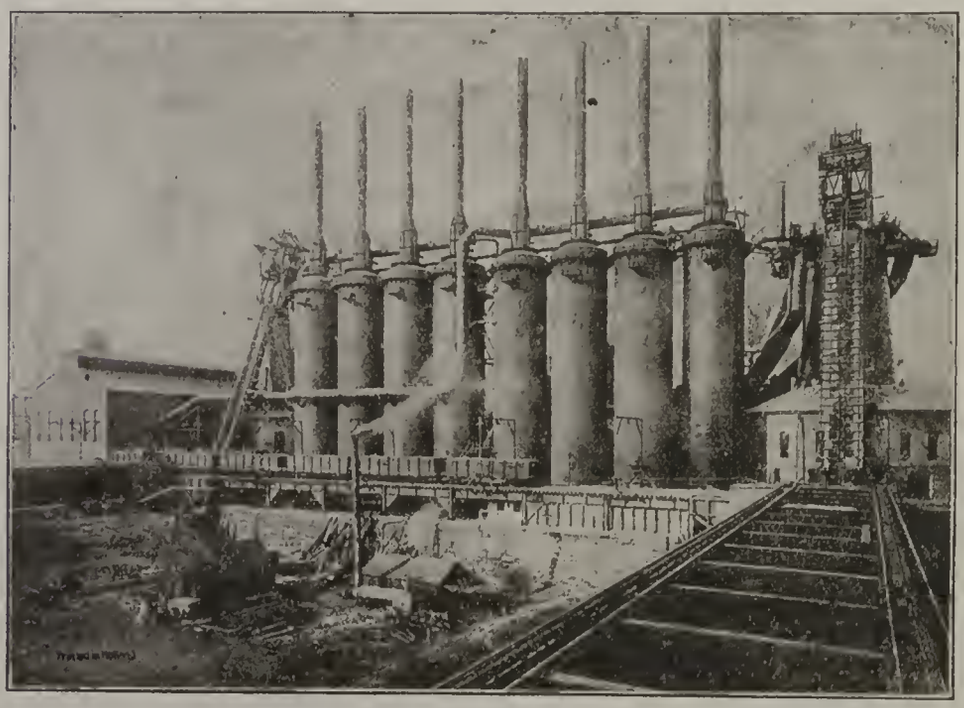
Just why is Steel king of modern industry? Without steel and other metals all industry as we know it would be impossible. Industrial progress was made as man down through the ages learned to use metal. Look about you and every article which meets your eye has been contributed to by metal. Metal has cut, planed, sawed, spun or transported it. We of the Industrial Workers of the World are industrialists and that which contributes to industry holds an interest for us. Without metal we would be pulling our food from the branches and from the earth by hand, instead of using our modern tilling, planting and harvesting machines. We would still be propelling ourselves on the crude raft pushed about by wooden poles. Our oceans and rivers would still be uncharted, and our steam-

ships would be unknown and undreamed of. We would still travel by food or astride the burro, instead of crossing the country transported by the aid of the steam engine. We would be naked savages, having a scanty existence on but little of the fundamentals of human life—food, clothing and shelter.

This is the machine age and machines are dependent on iron, copper and steel. That is the reason that Metal is King. It makes all possible. That is the reason that the United States Steel Corporation is the most powerful of trusts or combines. It stretches out like the arms of an octopus into all industry. It is the governing lever on all society. Metal will remain the master of modern industry and those who control metal will have power to act. For the present it is controlled by the few at the expense of the many. It is the purpose of the working class to gain control of all industries including steel and use and develop them for social benefit.

Metal like every other commodity, useful to American society, requires the labor of man. It takes the effort and energy of miners on the Mesaba to remove it from the earth. It takes the labor of the workers on the Great Lakes to transport the ore from the mouth of the mines to mills at Pittsburg, South Chicago or Gary. You workers on the railroads help to haul the ore into Youngstown and help haul the finished steel sheets, bars and rods to the manufacturing plants to be made into metal products. And it is you, the workers in the mill, who give it birth in your furnaces. Out of your white hot hells come many kinds of metal, copper, lead, zinc, brass, silver, gold and aluminum. Without your labor all this could not be. It is you who have forged our present civilization. It is you who have brought it into shape.

**You are not even assured a living wage. You are allowed just enough pay to purchase the cheap food to fool your guts.** Just as long as you have strength to drag yourself back to the next shift and produce more steel and profits, the boss considers that he is using you justly. Sundays have been taken from you. **Your hours have been long and irregular, and you have left the bed and family at all hours of the night to answer the call of the mill. You and your wife have gone without proper clothing. You have worked such long hours that your children did not know you as a father but saw you as one of the boarders who slept and ate at the house. The masters of steel have driven you such a pace in their great frenzy for profits and riches that the brain in you has not had time to look about and see all the wonders you were creating.**



PART OF THE MILL.

It was during the rush period that the steel industry boomed. Now it is different. You have plenty of time on your hands because the boss has decided to close down the mill. During the war you were speeded up and you produced enough by overtime to do for quite a while. You were called patriots and 100 per cent Americans then. You were the sons of Democracy working to make the world a fit place for the bosses to live in, and by the looks of things a pretty good job was made of it. The wages were made and exchanged for pieces of paper called liberty bonds and war saving stamps. But the market price for paper has decreased since the armistice.

It was only a short time ago that you decided to take a lay off and go on strike. Then you were called dirty foreigners and the gunmen of the steel trust came and shot you down. Nothing was too low for these leeches in human form to stoop to, to defeat you in that strike. The owners calling themselves 100 percenters and waving the flag called upon the citizens in general to stand behind law and order and then sent their policemen to drag you from your beds to the jails of Gary, Youngstown and Pittsburg. Congressmen made speeches and the senate sent an investigation committee, talked about Americanism and sent General Wood and the soldiers to break up your meetings. They threw your sincere fellow workers into the stockade at Gary.

Now the mill owners have decided to go on strike and close down the mill until the price and demand for steel rises. You make the living of your family in the mill but that does not make any difference to the owners, the fat congressman, the gunmen or the soldiers. They are well fed.

The boss or his friends are not worrying whether you freeze or starve this coming winter. All will not starve at once and the workers who do not starve will breed more to take your place. Labor is cheap now, like steel. Of course the boss thought about your welfare during the war, but labor was scarce then.

Unorganized, the majority of you are helpless at present. The A. F. of L. and its fat leaders have gone to where the terrors of jail are not so great and you are left to meet the coming winter and unemployment. You have been fooled and tricked by the steel owners and the A. F. of L. leaders until after all the mess you are worse off than before. It has been proven beyond a doubt organizing in 24 different unions is no way to prepare for battle. It was foolish to go up against the united forces of the Steel Trust with your forces divided. But you won something out of the strike at least, and that was a world of experience. Now will you benefit by that hard-earned experience?

While you were on the picket line, the union men who belonged to the Railroad Unions were hauling in scabs by night and hauling out steel by day. On the lakes, the A. F. of L. men were hauling ore into the mills for the scabs. Just as the steel strike was lost, so was the railroad and the miners' strike lost, a short while later. American labor had yet to learn its lesson of solidarity.

Those among you who are working have had your wages cut in half and they will be cut again and then again. Whether you will be working, or without a job, you will all be crushed down at the command of the steel owners. Pittsburg, Rankin, Youngstown, Gary, South Chicago, Duluth or Pueblo; everywhere the unemployed are starving in the streets and the workers on the job are feeling their savings slip to make the low wages meet the high prices.

Now is the time to act. Alone we are helpless. We can do nothing so long as we remain unorganized. The private ownership of the steel mills must go, giving way to something better. The mills must reopen at the command of the workers, for production for use instead of private gain. The Industrial Workers of the World is an organization composed of wage workers, organized by the workers in the interests of the workers. We bid you join with us and help put an end to this damnable system which dragged us into the slaughter of the last war and now drags us on to low wages, unemployment and starvation as a reward.

The masters have controlled long enough. Too long have we bowed at their frown. They have exploited us as blacks and whites, religious and non-religious, Americans and foreign-born, and have kept us divided on these lines. It is time now that we begin to organize as workingmen and workingwomen. It is time that we organize as a class to battle our masters who are already organized to protect their interests. Let all the workers who work in the automobile factories, the foundries, the steel mills, etc., organize together into the Metal and Machinery Workers' Industrial Union of the I. W. W., and the tables will be turned.

Let all the other workers on the railroads, in the mines, in the woods, everywhere, build up their industrials unions and help crush out the parasites. Together we are a mighty tide. Divided we are broken waves. Let us build our strength by organizing industrially and bringing all our industrial unions together under the banner of the I. W. W., the One Big Union of the Workers. If we all do our part, no one will have to do it all. The initiation fee which is $2.00 is within the reach of all, and the dues are $1.00 a month. Many workers throughout the steel mill district have already made the start. Branches are being organized in many of the cities. Literature is being printed and distributed among the workers. Carry on the message of industrial freedom. Will you join? Yesterday is gone forever. Now is the time to act.

Fred Bowerman,
Sec'y-Treas. of I. U. No. 440.

# As to Lubrication

**By Nick Wells**

SOME distance south of the exact center of California there is a barren desert stretch of land that to the casual observer bears promise of being a haven for hermits and rattlesnakes. Dame nature with her overgrown sense of humor saw fit to endow this section of the Devil's table top with a wealth of the most important of all the materials that are included in the list of essentials for modern industry. Crude oil underlies the barren wastes.

### Trust Control

Far underground are the oil bearing sands and towards these sands the hands of the octopus have been driving wells. The hands were hired ones. The octopus himself would never, of course, think to soil his garments of broadcloth nor ruin the rotundity of his figure with the commonplaces of labor.

Rather has the oil trust studied the finesse of social manipulation and to great advantage it seems for the privileged characters that make up the number of beneficiaries of the more than questionable operations. These oil lands of California are mostly under government reserve. No one can exploit the resources except by the consent of the mighty powers at Washington. This relieves the Trust from worry over the big field being overdeveloped and the price of oil being forced to drop. Whenever the company gets through with one lease they are supplied with another and so the game goes on. It is a steady system giving permanence to the work and transforming to some slight extent the boomer oil worker into a home guard that confines his wanderings to fifty and hundred mile jumps instead of thousands. It is called oil conservation. It conserves all the oil and all the profits—to the octopus.

### The Workers

These oil workers that drill the wells, lay the pipe lines, construct the tanks and tend to the refineries are a queer group, different from other workers and with characteristics of their own. So much so that in this respect they are exactly like other groups of workers who put in their time in one industry to the exclusion of others.

The workers in the section of California that we have just mentioned are even more different than usual. They have even completely astounded the boss by their difference. They have had the audacity to organize and go on strike to enforce the government award in the matter of hours, wages and conditions.

### The Identity of Interests

They have been on strike since September the first, and great is the anger of the tools of the octopus thereat. The chief prostitute of a publication known as The Oil Age excremates editorially in the September issue as follows:

"If it were not for the fact that tar and feathers are quite plentiful commodities in some of the Mid Continent and Gulf fields, there is a possibility that there might be a union and some well paid leaders among the oil workers of those districts. Apparently California is one of the few if not the only oil state in the union where there was a shortage of tar and feathers at the time the I. W. W. element and the so-called labor union leaders were carrying things with a high hand while the war was at its height."

Thus is the dignity of law and order appealed to by the Oil Trust.

### The Strike

The hour and minute of the strike was set by the organization which is known as the International Oil & Gas Well and Refinery Workers' Union. When the clock struck the minute on the first of September all tools were dropped in the Sunset, Midway, McKittrick, Lost Hills, Beldridge, Coalinga and Kern River fields. Drills were left in the wells sometimes as deep as 1800 feet, surface tools were dropped, refineries were deserted, and labor folded its arms as far as producing oil was concerned.

The Shell Co. met the terms of the strikers before the strike was pulled. The Pan American signed up immediately after the walkout. The loss of production is estimated at 100,000 barrels a day by the operators, who are chiefly worrying about the casings which in most of the leases will "freeze in" and make the wells partly completed, impossible of further driving. Water infiltration on pumping wells also presents a danger that the bosses can think about but can do little else than that, until they kick through with the government award.

### Outrageing the Trust

The striking oil workers further outraged the idealistic proprietary notions of the financial heavyweights by the way that they behaved towards the constabulary. Some hundreds of strikers were sworn in immediately that the strike broke out as constables and were issued arms and ammunition along with the regulation shiner.

Swearing in deputies in time of a strike is a time honored procedure with the oil companies but never before have the strikers been the ones to go on special duty. Guards of constables were at once thrown out around the property of the absent masters. The sworn declaration was extracted from each new constable that they would see to the protection of private property. This oath has been so far rigorously lived up to. Too much so, it seems. For when some of the companies sought to send in gunmen and scabs to operate the refineries and drilling rigs and to cause trouble, the constables, realizing that the scabs would but damage the ma-

chinery that they knew nothing about and that the gunmen would only create riots and loss of life, excluded them from the strike zone.

### Protecting Property

Near Maricopa the constables took possession of a train bearing 250 scabs and gunmen and sent it back out of the county. Because of these tactics there has been no loss of life nor damage to property. In fact the peacefulness is even irksome, especially around the store fronts of certain cockroach business men in the towns of Maricopa, Taft, Fellows, McKittrick and Coalinga. The spider can well spin his widely known web across the doors of some of these establishments without fear of injury to his happy home. All of this of course lends enchantment to the scene and the sabbatical calm appears to spread even to the minds of those 100 per centers that persisted in scabbing on their class to the feeble extent of wandering aimlessly about the deserted towers and pump houses.

### Using Tactics

For this strike has been well planned in certain ways that should bring joy to the heart of the wobbly, as he can see that his teachings in the past sixteen years of strife have not been entirely overlooked. The strike agitation was so well centralized in the outfit that supplies the Southern Pacific with fuel that out of 1000 supposed to be loyal slaves there remained but 65 on the payroll when the clock said strike. Most of these were supers and younger sons that only came in contact with oil when pulling up to a filling station.

The electric power plant at Coalinga was also concentrated on and was closed on October 3, the electricians walking off the job and picketing the plant. The power to operate most of the rigs in the fields is thereby cut off and the owners would be powerless even if they could get a few scabs into the refineries or onto the towers.

### Industrial Consciousness

The Union though only organized locally in California with any strength is purely on industrial lines. The organization extends even among the clerks, warehousemen, checkers, stenographers and telephone girls. The bosses are so dumfounded over this fact that they can hardly control themselves through the columns of their journals.

We will probably see some of these telephone girls neatly gowned in winter coats of tar and feathers if the ravings of some of the law and order squad are carried into effect.

No doubt the Union has committed some errors as to tactics. It could hardly be expected that an organization that had applied for a charter from the A. F. of L. would pull off a strike without doing so. Yet in the peculiar situation in which they find themselves they seem to have acted with remarkable precision and clear headedness so far. It must be remembered that California is the only section of the entire country where the government award was ever put into effect for the simple reason that they were the only oil workers who were organized. As our honorable editor of the Oil Age has said there is no foolish talk of unionism in the Mid Continent fields. Tar, feathers and hemp rope has gotten the best of the oil workers' organization started by the I. W. W. in this section.

### The Rest of the Industry

Everywheres except in California the twelve hour tower is in effect on the wells and the ten hour shift is supposed to be the rule on the pipe line gangs. In California where the union has hold the eight hour shift is universal. So it can be seen that with only one section of the industry organized local battles must be well managed or they are liable to redound to the detriment of the organization that attempts to fight. The oil workers that belong to the union in the southern and coast fields have not been called out.

This on the face of it appears to be a breach of I. W. W. tactics. Yet there may be some excuse for the strikers' attitude in this matter. This remains to be seen, however. The strikers maintain that they cannot enforce the discipline in the southern and coast fields that they can where the strike is on. The strikers are, however, drawing heavily for support on those members who are at work in these fields and as the operators have not attempted to violate the terms of the government award here it is claimed that it is better to fight it out locally where the award has been violated.

### Strikers Recognize Themselves

On one point particularly have they to be commended by the I. W. W. They have told the bosses that they do not want recognition nor the closed shop. They have demonstrated their ability to close the shop to scabs without any aid from the boss. The threat of blacklist has not alarmed them and it need not as long as they can retain the discipline and spirit that has been shown so far.

### The Background and the Future

Looking into the background upon which this union has been formed we can easily trace the effect of I. W. W. education and organization work. Today the entire industry is ready for organization into one big industrial union. If the I. W. W. so makes up its mind to tackle the oil situation as it has just finished tackling the big harvest drive the organized oil workers of California need not worry long over having no support from the Mid Continent field. With one big union organized in the whole industry the I. W. W. would be in position to weild more economic power than any other organization in America barring none.

The oil workers can never be organized from halls or soap boxes. The job is the place to organize these workers from. Lets get on the job and get started. Let's lubricate the bosses' skids.

# PAUL FREEMAN

A Russian inventor had perfeeted an engine and car that running on an ordinary railroad traek could make speed up to a hundred and fifty or seventy-five miles an hour.

Many trips and experiments with the type of air propelled motor had eonvineed the authorities of it's practicability. On July 24th in Moseow a number of delegates to the Congress of the Third International (Communist) embarked with the inventor to Kursk for a trip, to inspeet the eoal fields.

The machine left the rails before the eoal mines were reached and of the passengers six were killed. Among those killed was Fellow Worker Paul Freeman of whom Tom Barker, his old friend in the battles of Australian labor, writes below. (Editor.)

I HAVE known Paul Freeman since August, 1916. I had just come out of prison and was on a propaganda trip to the famous desert mining eamp of Broken Hill. Paul was, like myself, a member of the Industrial Workers of the World, the most universal industrial organization in the world. I have a lively recolleetion of a wild ride on the baek of Paul's motoreyele from the Broken Hill prison—where we were visiting an I. W. W. prisoner—to the eemetery to attend the funeral of another member who had died from injuries reeeived in a mining aecident. I little thought as I stood side by side with Paul by the graveside in a howling desert blizzard, that we should meet again in a far eountry where an old eorrupt autoeracy was about to erash, and where Paul himself would rest among, and as a worthy assoeiate of, mighty heroes of a revolutionary epoch, and beneath the walls of a wonderful, ancient eity. But so it is!

I do not know where Paul was born or when. In the I. W. W. we did not worry about these details. Only the Australian government did that. In the eyclonie eareer of the Australian I. W. W. Paul played his part. After the savage sentenees upon Glynn, Larkin, Reeve and their other nine fellow workers, came the outlawing of the organization. Paul was then mining on his own claim in Queensland but he was arrested in eompany with about seventy others.

Most of these men, ineluding myself, after nearly a year in prison were deported to all the eorners of the earth. Paul was a problem to the government as there was doubt about his nationality. They deported him to the United States but the administration of President Wilson returned him with thanks. Onee again he was sent aeross the Pacific and onee again he was returned. His mine was sequestered in the meantime.

The Australian government was neither satisfied nor particular. They then deeided that he was a German, although he did not speak a word of the language, and plaeed him aboard a prisoner transport and sent him to Germany as a war prisoner. On his arrival he spent some time there and made many friends. He eame on to Russia and attented the sessions of the seeond congress of the Third International. Here he modified his industrialist views and joined the Communist Party. Afterwards, he returned illegally to Australia—a very long and dangerous journey over many eountries—where he worked underground in the establishment of the Australian Communist Party. He then returned via Japan, Vladivostok and Siberia to the third congress.

I met him in Moseow after five long years and he was the same ardent spirit that I had known in Broken Hill. He eonfided to me in the sessions at the Duma Soyozov that he intended to stay for the future in Russia. We never thought of the dreadful catastrophe that was about to happen at Kursk, which was to put an end to the usefulness of a brave, unselfish and generous proletarian.

Paul Freeman was one of that great army of the tireless, world-tramping, universal I. W. W. He passed from land to land and eontinent to eontinent with as little eare as some men eross the street. Down in the eoal-bunkers of ships, passing frontiers seeretly in the dead of night with the World Revolution ever foremost in his mind, ever guiding his footsteps. His death will be deplored in the deep levels of the mines of Broken Hill, and thousands of workers in the great Australian eities will stand in silence to honor his name. Out under the light of the eonstellation of the Southern Cross, far out on the Western Plains, the lonely shepherd and the migratory worker will visualize the Kremlin Wall, the world-striding Freeman who sleeps beneath its shadow.

Paul Freeman was one of an army who were ejeeted from one continent to bestride other continents and leave behind them a fiery trail of work for their class. He will rest well in goodly company, as true a man as ever stood in shoeleather, one of the old guard of the hated, outlawed, deported I. W. W.'s of the Southern Hemisphere. Men with greater names, of world eelebrity may sleep beside him under the Kremlin Wall, but they will never honor it one iota more than all that is mortal of Paul Freeman.

# A THOUGHT

**By Nuf Ced**

DOWN through the ages men and women have struggled, with the problem of how to free themselves from oppression.

During all the periods of strife they realized, that there were but two methods, by which they could solve the problems of slavery, that confronted them.

Organized force, that recognized Violence, and destruction.

Organized force, that recognized Education, as the constructive, and enduring weapon.

The struggle of labor in the past has concerned itself more with securing an increased amount of the product.

The struggle of labor today is to secure more and more of the product, a shorter workday, and to banish the thought from the minds of the people of the world, that it be just, for the few to live from the effort of the many.

It is almost inconceivable, that an enlightened people can and do ask the assistance of a Divine Providence, to enable them to live in ease, idleness, luxury, and riotous living, at the expense of the blood, and lives of the mothers, and little children of the working classes in society.

The late European war has demonstrated that private property rights are more sacred than human rights; the latter to be considered only as a means to preserve, and extend the former.

These conditions must of necessity continue, until labor, the sleeping giant, is awakened to the need of combined action and with its super intellect, and physical forces—if need be—take possession of the ... machinery of production, distribution and transportation, socializing, and democratically administering the same for the common good of all.

Then will human rights be held more sacred than private property rights, and not until then.

Poverty, the world's almoner, is stalking through a land of plenty, some alone with the dogs are living on bones, others on hope, kindling each morning, dying slowly each night.

However, philosophy brings home its stores to the lone man. Money is not in his hand, but knowledge is in his brain, and from that brain he draws faster, as he draws more slowly from his pocket. He remembers and on remembrance he can live for days and weeks.

He crowns himself with glorious memories, of labors directing units; if he nights it under the star lit heavens, he dreams heaven sent dreams of the prisoned, and martyred heroes of labor; men, women and children who gave their lives, so that mankind should progress to the goal sought, Emancipation, and economic freedom.

He muses with his soul of reason, and laughs at the world; for the world, thank heaven has left him alone.

Keep your money, old profiteers, your industrial and political control for the present, for upon the horizon, in crimson letters, are the words emblazoned: **Abolition of wage slavery.—Victory is near!**

THE STAR BOARDER GETS HIS.

# Planned Action in the Industries

By Jas. H. Larsh

THE working class is now face to face with a pressing problem—one which cannot be sidestepped indefinitely. This problem is the present unemployment situation and the misery and poverty that is increasing amongst the workers from day to day.

Regardless of the fact that we are not ready either technically or with well developed industrial unions, the workers are going to be forced to help themselves. Their first actions in the direction of helping themselves can be directed by members of the working class that understand the class struggle. The action taken must be simple yet positive.

When conditions warrant, the workers should be appealed to by industries. Mass meetings of the workers and unemployed from each industry should be called and other means used where ever possible so as to reach the entire working class and get them to act in coordination.

For example the railroad industry's workers and unemployed together should meet and be reached by definite propaganda. They in connection with the workers of other industries should formulate plans of action which can put the workers into the industries with industrial control of society.

The food industry and the transportation industry are of prime importance. It is highly important that the new workers regime should be started out on filled stomachs.

The great requisite is the coordination of plans and action. Things must be so arranged that the hour and minute of the taking over of the factories, mines and other industries should be understood and agreed upon. With the start of well filled warehouses and by means of keeping the wheels of industry turning we would soon be able to perfect a system of management by the institution of the well known and ancient institution of industrial councils.

These councils will include of course the best of technical and practical workers or the new system will fail, but there is no good reason why the greatest epoch in human history cannot come swiftly, efficiently, wholeheartedly.

The working class of this country are today getting keyed up for just such a program, simple yet revolutionary, direct and far-reaching. We have nearly all of us felt that we were not prepared for the next great change in our lives. Somehow the changes have a way of coming in spite of our timidity. Surely we can manage industry right frim the start in a way so as to receive a greater return than capitalism ever gave us. We have always known hardships under its mismanagement. With time and opportunity we will perfect the workers' control so that every form of human life will be better off than at present.

From the hour and minute that the workers' program of taking over the idle and half empty factories and shops goes into effect the **bosses** paychecks shall play no important part in our lives. The boss may remain on the jobs with us, and welcome, as a Fellow Worker, but from the time we change our methods of production our products belong to us, to be used according to the needs of the working class, as proper co-ordination of the industries and as the workers' industrial councils direct and determine.

When we control the means of subsistence we will control everything. Bourgeois political institutions will automatically lose power. We will hold out the hand of fellowship to any and all who WORK with us. To the parasites that refuse to produce we will give treatment accordingly.

Capitalistic power (the power of finance) will have to show inherent powers of self-sacrifice and voluntary effort to cope with this sort of situation. When we have generated our own power we need not fear them. Time would solidify the workers' industrial and social victory.

Fellow workers, this is not an elaborate plan but is simple and direct as action itself. It may be the germ of other plans that are more complete and may be more easily put into practice.

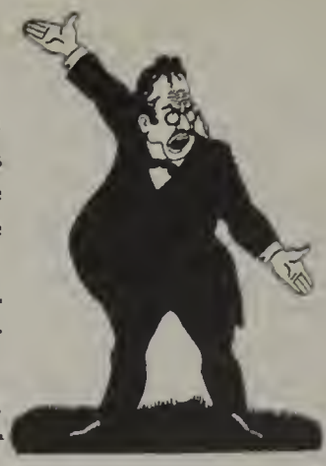
The taking over the industries should be our near aim. Let us consider the facts and go ahead with our actions accordingly. Let us get ready to start the ball rolling, the game will be good, the players enthusiastic and the goal certain.

# The Great Kataklysm

**AN HISTORICAL REVIEW of Latter Day Capitalism Covering the Wondrous Era Extending From Smith's Discovery of Radium in the Human Eye to the Devitalization of the Supermen by Radiosity in the Hands of Revolutionists.**

**Being a series of lectures delivered by Snow Allbrayne at the University of Timbuctoo in the Year of Our Lord 9799.**

**Edited and published by Stanislaus McGee in the year 9800.**



## Lecture II.

I am surprised that there is a tendency, grown more common since I myself published the "Life of Dr. John Smith," to critisize this great man for appropriating to his own use the eyes of those who died within the precincts of his asylum and the remains of whom he had gone to great trouble to preserve.

It has gone so far now that some self-acclaimed authorities declare that Smith, under the laws and the morals that prevailed at that time, had neither a legal nor a moral right to such appropriation.

It is to be pointed out that this view arises from a wholly superficial knowledge of conditions which prevailed in that epoch, and accentuates the truth of that ancient remark to the effect that a little learning is a dangerous thing.

Smith was engaged, to be sure, as State physician, but he also was occupied with far nobler pursuits, and was wont to indulge in commercial speculations which were followed by all who were finest and best among the noble spirits of that age.

The idea of profiteering, the huger the better, was one that filled every mind worth while; and I rejoice to think that Dr. Smith, a man for whom I have more than usual veneration, was not behind hand in this pursuit. It added zest to life. It whetted the intellect as well as the appetite and rewarded those who followed it with handsome prizes, not the least of which was an increased margin of leisure and a very satisfactory security against the uncertainties of life and the vicissitudes of time.

You know, too, that men laid claim to and held the land and machinery whereby things necessary to human life were produced. These they then called "their own" and their right to hold these things exclusively from the rest of mankind was known as the right of "ownership," the most precious, the most respected and the most venerated of all rights.

It was a very beautiful conception; and to it we owe some of the most glorious pages in all human history. In those days of old, when wars were fought and whole nations were overwhelmed in an august butchery of men by men, I must positively aver with admiration, this property or ownership idea was the main incentive to all such heroic and noble and valiant conduct.

Naturally, as the human race insisted upon increasing, it increased beyond the capacity of available property and this right each year grew to be an exclusive right possed by the more favored in brains or physical capacity.

It is one of the most reassuring facts in all history that those who owned the resources, the land, the machinery and wealth of the world did not allow their less favored brethren to die. On the contrary, true types of Good Samaritans as they were then recognized to be, they permitted them in gracious fashion to labor in the fields, the factories, the mines, the ships and the shops, so that from the labor of the propertyless, those who owned the

property might increase the wealth of the world and certainly the poor could eke out a sufficiency from the remuneration which was most generously allowed them.

From the products of this labor the Supermen were able to enjoy the great and good things of life and to cultivate a superior wisdom that was most remarkable in that era.

They also with charity lavish and really beautiful, built huge libraries, hospitals and churches. They established Foundations to which I have already referred, and by the ramifications of their extensive charities and fine philanthrophy they controlled newspapers, schools, courts and government in a most efficient and masterful manner.

Now I want to point out (as a justification for the course of Dr. Smith in appropriating the eyes, and the radium from the eyes, of the deceased within his asylum) that the rich invariably annexed this labor of the poor under the scheme of things that in those days so happily prevailed. They annexed the labor of the poor, and if an employer had an ethical right to do that, which strictly speaking meant the annexation of the flesh and blood—for flesh and blood were necessary to the functioning of labor, so also had they a right to annex the eyes of the pauper dead.

Before I have concluded these lectures, I hope to be able to quote from a decision by the great Abinadab Fudge, Chief Justice of the United States Supreme Court, which fully justifies my position on this interesting question. My point of view in this is upheld throughout.

But to resume: For a long time Smith seems, for some occult reason, to have kept quiet concerning his great and interesting and epochal discovery. I observe that the public did not become acquainted with this momentous fact until he published his monumental treatise: "On the Classification of the Pauper Insane." It is really a notable work.

Dr. von Balderdash, the noted German pathologist, took occasion, in the Berliner Scientist, to ridicule the methods and conclusions of Smith. In the stress of the international controversy that followed between these two eminent men, Smith was goaded to mention the secret that radium existed in commercial quantities in the human eye. Balderdasch impetuously and very rashly replied to this assertion with open ridicule and most unacademically characterized the distinguished physician of Kalamazoo as both a mountebank and a liar.

I was really amazed at a man of the attainments of von Balderdasch indulging in such vulgar expressions.

Smith's reply, perhaps naturally enough, was equally emphatic and startling, commenting freely on the ancestry, and the future destination of the soul, of Balderdasch, hinting that had he (Smith) time to go over to Berlin, or had Balderdasch time to come to Kalamazoo, the American would have extreme satisfaction in mending the manners of his opponent and in teaching him how to conduct a controversy like a genteleman and a scholar.

I shall not dwell upon the very unpleasant acerbity that followed this discussion execpt to say that the National Futurity League cited it before a Senate Committee to show that the navy program should be enlarged and that universal military training was essential to the safety of the nation. . .

Professor Shawtbeek asserts that animated controversies of this kind were not unusual at this period and declares his belief that the method was deliberately pursued for the sake of attracting attention.

This assertion is very unjust and as inaccurate as it is unfair. Even when disputes of this kind did arise, as they often did, the parties thereto were usually careful to speak of one another in the highst terms of respect. In academic circles, in politics, in newspaper controversies, clerical polemics, the most graceful methods were pursued and moderation was so common that a breach of decorum was a nine days' wonder. I have examined thousands of political speeches and controversies and in not a single one have I been able to discover the use of what was then called the short and ugly word.

# THE POETS CORNER

## My Country

**By Robert Whitaker**

My country is the world! I count
  No son of man my foe.
Whether the warm life currents mount
  And mantles brows like snow,
Or whether yellow, brown or black,
The face that into mine looks back.

My native land is Mother Earth,
  And all men are my kin,
Whether of rude or gentle birth,
  However steeped in sin,
Or rich or poor, or great or small,
I count them brothers, one and all.

My flag is the star-spangled sky,
  Woven without a seem,
Where dawn and sunset colors lie
  Fair as an angel's dream.
The flag that still, unstained, untorn,
Floats over all of mortal born.

My party is all humankind,
  My platform brotherhood.
I count all men of honest mind
  Who for common good,
And for the hope that gleams afar
My comrades in this holy war.

My country is the world! I scorn
  No lesser love than mine,
But calmly wait that happy morn
  When all shall own this sign.
And love of country as of clan
Shall yield to world-wide love of man.

## To the Unemployed

(With apologies to Walt Whitman)
On "Captain! My Captain!"

O Workers! All workers!
Rise up and hear the bells;
For you six million vagabonds,
For you six million trampers,
For you six million unemployed,
For you the bugle trills,
For you the crimson flag is flying,
For you we call all in a mass
Our eager faces turning,
Our hearts so keenly yearning.

Ex-soldiers! All Workers!
Rise up and hear the bells;
Rise up and see the Torch,
This torch that leads ahead!
It is no dream that for this Cause
So many have fallen dead.

Our ship has weathered many a storm,
But our fearful trip's not done,
We must not anchor! On, we warn!
Until the prize we sought is won.

Burn, O torch, and ring, O bells!
While the workers onward tread,
To join the hands of those
That have pioneered ahead.

Violet Kaminsky.

### SPECIAL NOTICE

All the readers of this magazine that have received tickets for the I. W. W. picnic held at Floral Park, West Hoboken, N. J., Sept. the 4th, 1921, are kindly requested to return either tickets or money as soon as possible for we have to close the books and give account to the organization and to the public in general.

Return tickets or cash to the Picnic Committee, 23 Carroll St., Brooklyn, N. Y.

# *For the First Time*

THIS appeal is a maiden attempt for the Industrial Pioneer in the field of donation soliciting. Realizing full well that we are filling a decidedly essential position in the revolutionary movement, we have at this time of need, no hesitancy in explaining to our readers our exact position and issuing this call for aid.

Never was there a time when the idea of revolutionary industrial unionism was so acceptable to the working class of this country. In the marine transport industry thousands are ready and anxious to line up in an industrial union with fighting organs. The ranks of the A. F. of L. are being smashed section by section by the planned onslaughts of the open shop movement. Now is the time when such a magazine as the Industrial Pioneer with its constructive policy and wide range of material is absolutely necessary to crystallize and get into action the fundamental ideas that the Industrial Workers of the World have fought and even died for these last sixteen years.

In the attempt to meet all the sudden drains on the organization because of the demand for speakers, organizers, and free literature the general office has had to retrench.

For this reason we have been forced to come out with this issue of thirty-two pages. The price of the magazine has been cut as you have already found out.

The Industrial Pioneer has been getting on its feet for the last three months. The subscriptions from our agents in the field have been coming in, in a larger and larger stream. Our usefulness is now being established firmly as the workers are commencing to recognize in the Industrial Pioneer a constant and constructive force well worth supporting.

A big deficit was carried over to the Pioneer from the old One Big Union Monthly. The early struggle to introduce the magazine piled up the deficit to large heights. Just now are we commencing to get down to a bed rock basis. The August issue showed a deficit of $194.23. The October issue showed a deficit of $77.49.

These figures show that we are pulling through and will eventually come on top if we are not crippled and have to suspend because of the inability of the general office to continue to carry us for a few months longer. The total deficit amounts to $4,201.24. This amount has to be liquidated as soon as possible. As soon as we can show substantial progress in paying off our debt to general headquarters we will increase the size of the magazine again.

Fellow workers, the future of the magazine depends directly on you. Fifty cents from each reader of the Pioneer would pay off our deficit and permit us to at once enlarge and make more readable the entire magazine besides permitting the engraving of better cartoons and photographs direct from the scenes of action. We realize that there are many readers of the magazine that cannot respond. Others will not take this appeal to heart and will pass on the burden to you, fellow worker.

So we are asking you to dig down deep and send us as much as you really think the magazine is worth. We realize full well the time of unemployment that has swept across the country and invaded the very stomachs of the readers with emptiness. Yet this hunger has set thousands to questioning and we must not fail to keep all our propaganda organs alive with special articles and with pictures of the latest developments of working class action.

Unless our readers come to the aid of the magazine financially at this time we will be compelled to continue in our restricted form. The field of industrial action is so large that nothing short of a sixty four page magazine gotten out with the cooperation of a competent staff of writers will suffice to cover the terrific events that are to come.

There is at present no other magazine in the country that attempts to cover the field

# THE PREAMBLE

OF THE

INDUSTRIAL WORKERS OF THE WORLD

The working class and the employing class have nothing in common. There can he no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can he changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must he organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown... By organizing industrially we are forming the structure of the new society within the shell of the old.

---

of the Industrial Pioneer. Hundreds of testimonials from every walk of life show that our readers appreciate our value. Now that we are appealing to you direct to show your appreciation by concrete action we feel certain that you will give us aid to the limit of your ability.

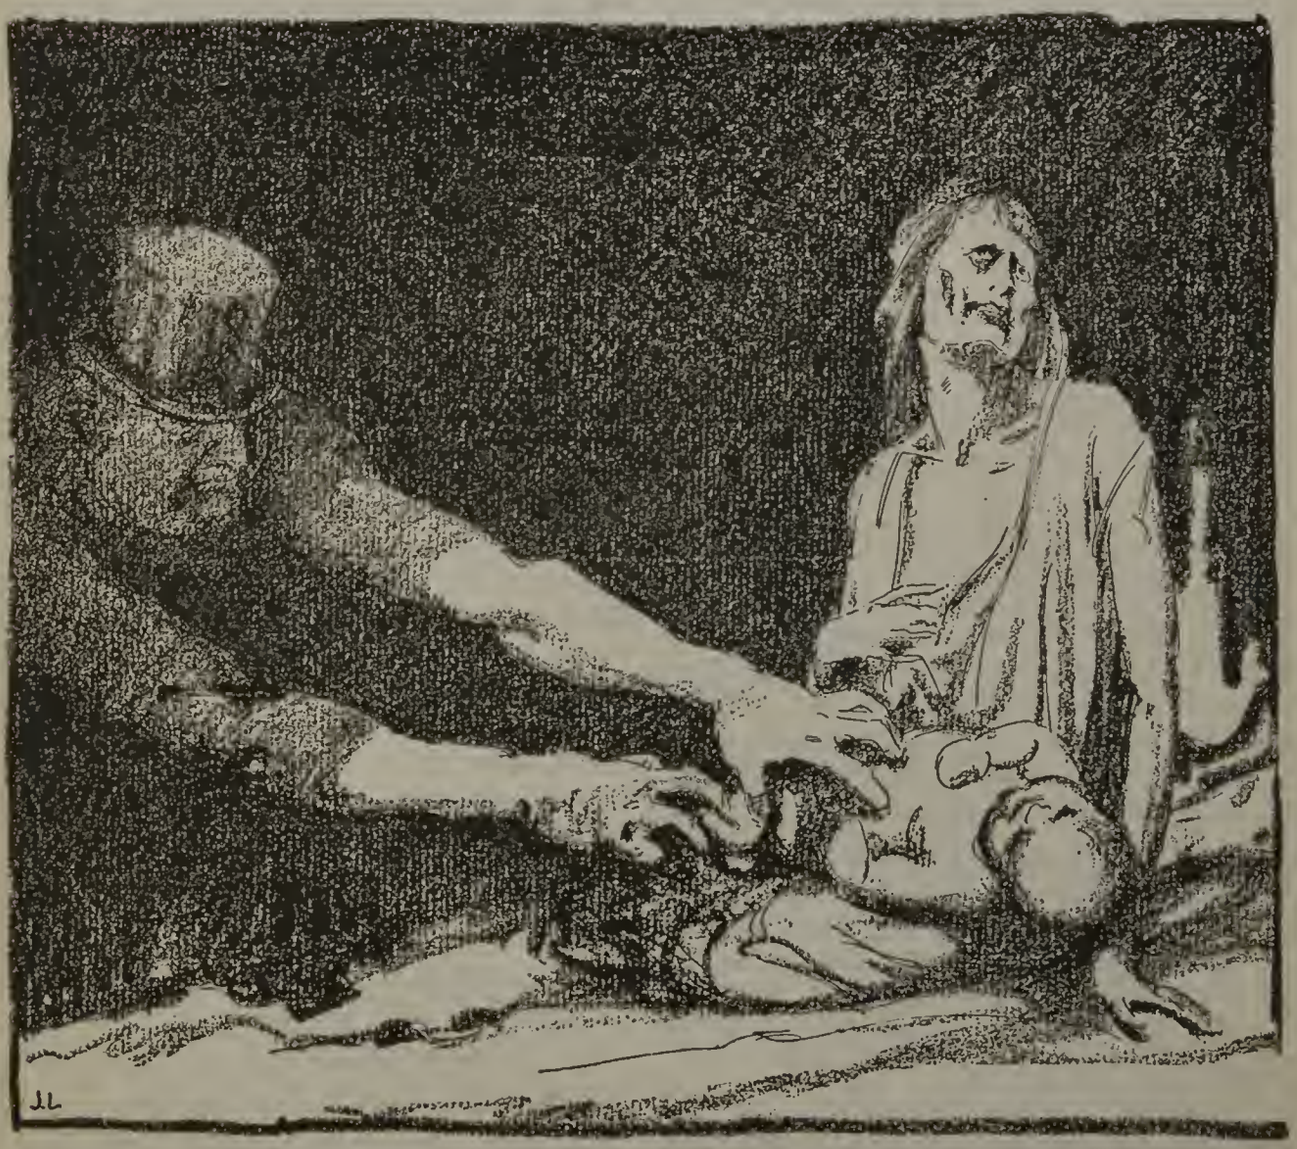
## Working Class Education Demands That You Subscribe NOW !

# INDUSTRIAL PIONEER

DECEMBER 1921



UNEMPLOYMENT

PRICE 15 CENTS

# Fuel for the Revolution

The response to the appeal for aid for the Industrial Pioneer which appeared in the November issue is most gratifying. With the splendid support that the workers in the field are showing, and the efficiency that the business office is maintaining in sailing close to the wind on printing expenses, we will be able to pay off our debt to headquarters gradually and increase the size of the magazine within a month or two.

The business office reports that the sixty-four page edition of October brought in a net gain of $314.18 for us. This decreases the debt to $3,835.17.

The November books of course are not yet closed. But our appeal has met with gratifying response. Already the following workers have dug down into their scant supply of cash to help us out of our difficulties:

| | |
|---|---|
| J. Gillis | $10.00 |
| Card No. 822337 | 1.00 |
| Workers' Club of Hancock | 15.00 |
| M. Raddock | 1.00 |
| J. Kennedy | 9.00 |
| A. Reader | 1.00 |
| Total | $37.00 |

In addition to these direct contributions Bishop Brown, author and publisher of the book, Communism and Christianism, which is reviewed in the book review columns elsewhere in the magazine, donated to our sustaining fund 1000 copies of his new enlarged sixth edition just off the press.

These copies were delivered to us free of charge and are to be sold at the regular rates from this office, retail price 25c and wholesale 12c per copy. The full proceeds go to the Pioneer sustaining fund. We will be glad to take your order for as many copies as you can use.

Then the Chicago Branch of I. U. No. 330 has arranged for a Surprise Party and Dance for the benefit of the Pioneer and Solidarity. This event is to take place on Dec. 3rd at Verdandi's Hall, 5015 N. Clark St., Chicago, Ill.

The share of the proceeds for the Industrial Pioneer should still further aid us in attaining our object of a bigger, better magazine free from the burden of debt.

Fellow workers! It is gratifying to know that the value of the Industrial Pioneer is realized by its readers. In order to make our liquidation campaign a success we need still greater efforts from all concerned. Here is your chance to help. If you have a few dollars to spare or even a few cents send them in as a donation. Take up a couple of subscriptions from your acquaintances, sell a bundle order or influence some one else to do so if you are already doing your bit.

If you have not read Bishop Brown's Communism and Christianism, write in for a copy from us. Get your branch to lay in a supply for the literature table. If possible bring up the proposition before the branch of holding an entertainment for our benefit, as the Chicago branch of No. 330 has done.

As another educational feature the Pioneer is making arrangements to supply a long felt want in the ranks of the workers of this country. We are going to pick out a long list of revolutionary books for children so that their minds may not be poisoned by the damnable rot put out by the bunk peddlers for the little ones to read. Our book department will run reviews of these books as fast as they can be handled and orders for them will be filled from this office. We will have books for all ages from six to sixteen.

Fathers, mothers and friends cannot do better when selecting a present for the children than in getting a good book interesting as well as educational.

The Pioneer intends to branch out into other helpful fields. We are going ahead. Get behind us and push and the Industrial Pioneer together with the Industrial Workers of the world will be a factor of tremendous value in the coming revolution.

Editor—The Industrial Pioneer.

The Industrial Pioneer

Vol. 1, No. 11 DECEMBER, 1921 Serial No. 11

# Unemployment

THE national conference on unemployment has met and adjourned and great are the effects thereof. The idea that the pitifully ignorant business men have of economics makes their brother parasites, the crumbs and bedbugs, blush with shame for their trade. The bugs at least know that a dry bone gives no juice.

Christian science is to be practiced on the unemployed. All over the country the papers are making display head lines to the effect that times are getting better. One paper shattered the truth and the King's English at the same time with the enormity: "UNEMPLOYED FEWER BY TWO MILLION."

### As a Man Thinketh

Therein lies the program of the brains of this country. The only thing necessary is to get everybody hypnotized to the extent of believing that business is good and that unemployment is decreasing and these wicked bolshevik slaves who have simply gone on strike against buying things will start in to buy again.

Having by means of newspaper headlines and coordinated exhortations succeeded in making people think they were fighting for democracy and were taking part in the "war to end war," it is not to be wondered at that the idea presents itself that the same tactics can make the hungry worker think he has a job and is well fed. One lie is not a bit bigger than another, they say.

They have a real system, however, in trying to put across the hypnotic stuff. An article, for instance, in the Marine Review, dealing with the deadest industry of all the lot, starts out in this encouraging fashion, "Just at a time when American ship-building is beginning to show some signs of increased activity," etc., etc.

### Philantrophy

G. E. Emmons of the General Electric Co. of Schenectady, N. Y., seeks free advertising of his generosity by the following wise counsel to his slaves: "The Navy Department has authorized the resumption of work on electrical equipment for one battle cruiser, with the understanding, however, that shipments will not be required until next summer and no payments for materials and labor are to be made until the next government fiscal year, which begins July 1, 1922.

"This necessitates the company locking up capital for material and labor until next July, but it gladly does it in order to provide employment to those who would otherwise be out of work during the coming winter." Not to mention the profits from said locked up capital taken from the workers in the first place.

When this job is completed then the innocent gullibles, bless their hearts, can read about the terrible Japanese atrocities and rise in democratic wrath to eliminate forever such a formidable competitor of the American plutocracy from the world markets. They can go out and plow the seas in the electric equipment.

Even our esteemed British contemporaries ladle out the Mrs. Eddy compound at times. Cuthbert Maugham, who is shipping editor for the London Times, glides jazzily by the facts as follows: "When we recall the magnitude of the upheaval caused by the war no surprise need be felt that the settling down process has been prolonged."

What is really worrying these gentlemen is how long the settling up process can be delayed.

### The Real Issue

The cause for unemployment is just one. It is the same cause that creates wars, child labor, prostitution, ignorance and poverty. That cause is the system of private ownership and control of the means of production, for the purpose of making profit.

The unemployment conference cries to the communities of the continent to open up public works so that they can employ the workers. This is the purest bunk. They know full well that the communities are all alike and that they will not "open up" unless there is a profit in it.

Every social constructive effort started by "high minded" statesmen, students, philanthropists and what nots, runs up against the same snag. The owners of industry are out for the swag and if there is no swag they are organized to see that you don't play with the machinery on which their profits and our lives depend.

### The Source of Power

Crack brained editors throughout the land sigh wildly for a plan that will work to start the wheels of industry turning. That constructive plan has been advanced on paper for fifteen years by the

Industrial Workers of the World. Today this same organization is starting out to put the plan into effect in real earnest. Two big new drives are going to start the organization of a section of the working class into industrial unions, that can develop industrial power.

Organization gives the emperors of finance their power to close down the factories, and create unemployment. They have control of the industries. It is true that the working class really runs the industries and in actual fact controls them. Every operation is dependent on the workers. In the final analyzes the working class has now and has always had the industrial power.

But we have never organized that power. We let the boss do it. Now is the time to REORGANIZE. Now is the time to build our industrial unions into the structure of industry in such a manner that we, and not the boss, will have the economic power. Then, and then only, will the curse of private property operated for profit be lifted.

### The Big Drives

The Industrial Workers of the World are starting two big organization drives. One of them in the oil industry has been mapped out and is under way. The other, in the marine transport industry, will be swinging along according to plans in the near future.

Are you unemployed? Do you want to remove the causes of unemployment? If so get into action and add the force of your presence in these two basic industrial organization campaigns that will build up an industrial force invincible if carried out NOW.

### No Hope from the Boss

The bosses' petty employment schemes cannot help either the workers or the bosses. The inexorable laws of economics provide that unless the workers receive the full product of their toil they cannot buy back on the market the things that they produce.

Ten thousand conferences between Sam Gompers, Charley Schwab and the whole crew cannot change this fact. The organization of economic and social power can change it, by giving to the worker the equivalent to the full product of his toil on the job.

Germany has found a scheme whereby the dope is being administered to the business corpse of that country. There are only 400,000 unemployed there. Of course, the workers are toiling on the same old basis or worse. Their wages now only buy enough to keep their own bellies supplied with soup. The reproduction of children to take their places is not figured on. But the American worker can't get even this much unless he gets a job. For the German capitalists are committing suicide. They are existing by means of manufacturing tons of paper money.

This paper money acts like cocaine on the life of the nation. It creates a false glow of health. In the end it means the elimination of the little business man. It means the destruction of the German capitalism. For instance, a little stock holder owns 100,000 marks of stock in a company. The printing press turns out so many paper marks that it takes, at the present rate, over a hundred and thirty to make a dollar. That means that a mark is worth less than a third of a cent apiece. The cockroach that formerly lived well on his income of 8,000 marks a year, now only gets the equivalent of about 25 dollars a year in interest. He is being wiped out as a parasitic factor.

### Organize the Job

Unemployment in Germany is decreasing but the price that the workers are paying for work is more terrible than can be described. The only extenuating circumstance is the wiping out of the petty bourgeoisie. The necessity for job organization exists in Germany as elsewhere, because the industrial control will in the final analyses determine whether the working class or the industrial over lords will win.

There is no country that has solved the unemployment question. Russia alone is taking steps to do so. She is starting to build up state capitalism so that industry may be developed to a high degree of productivity. Her problems are not our problems now.

We have the machinery perfected. We are an industrial country. Today the solution for the unemployment of the working class can only come from the working class themselves. We must organize industrially in every industrial country and in every industry and prepare to take over and operate the production of the means of life for use and not for profit.

## *The Workers Funeral Hymn*

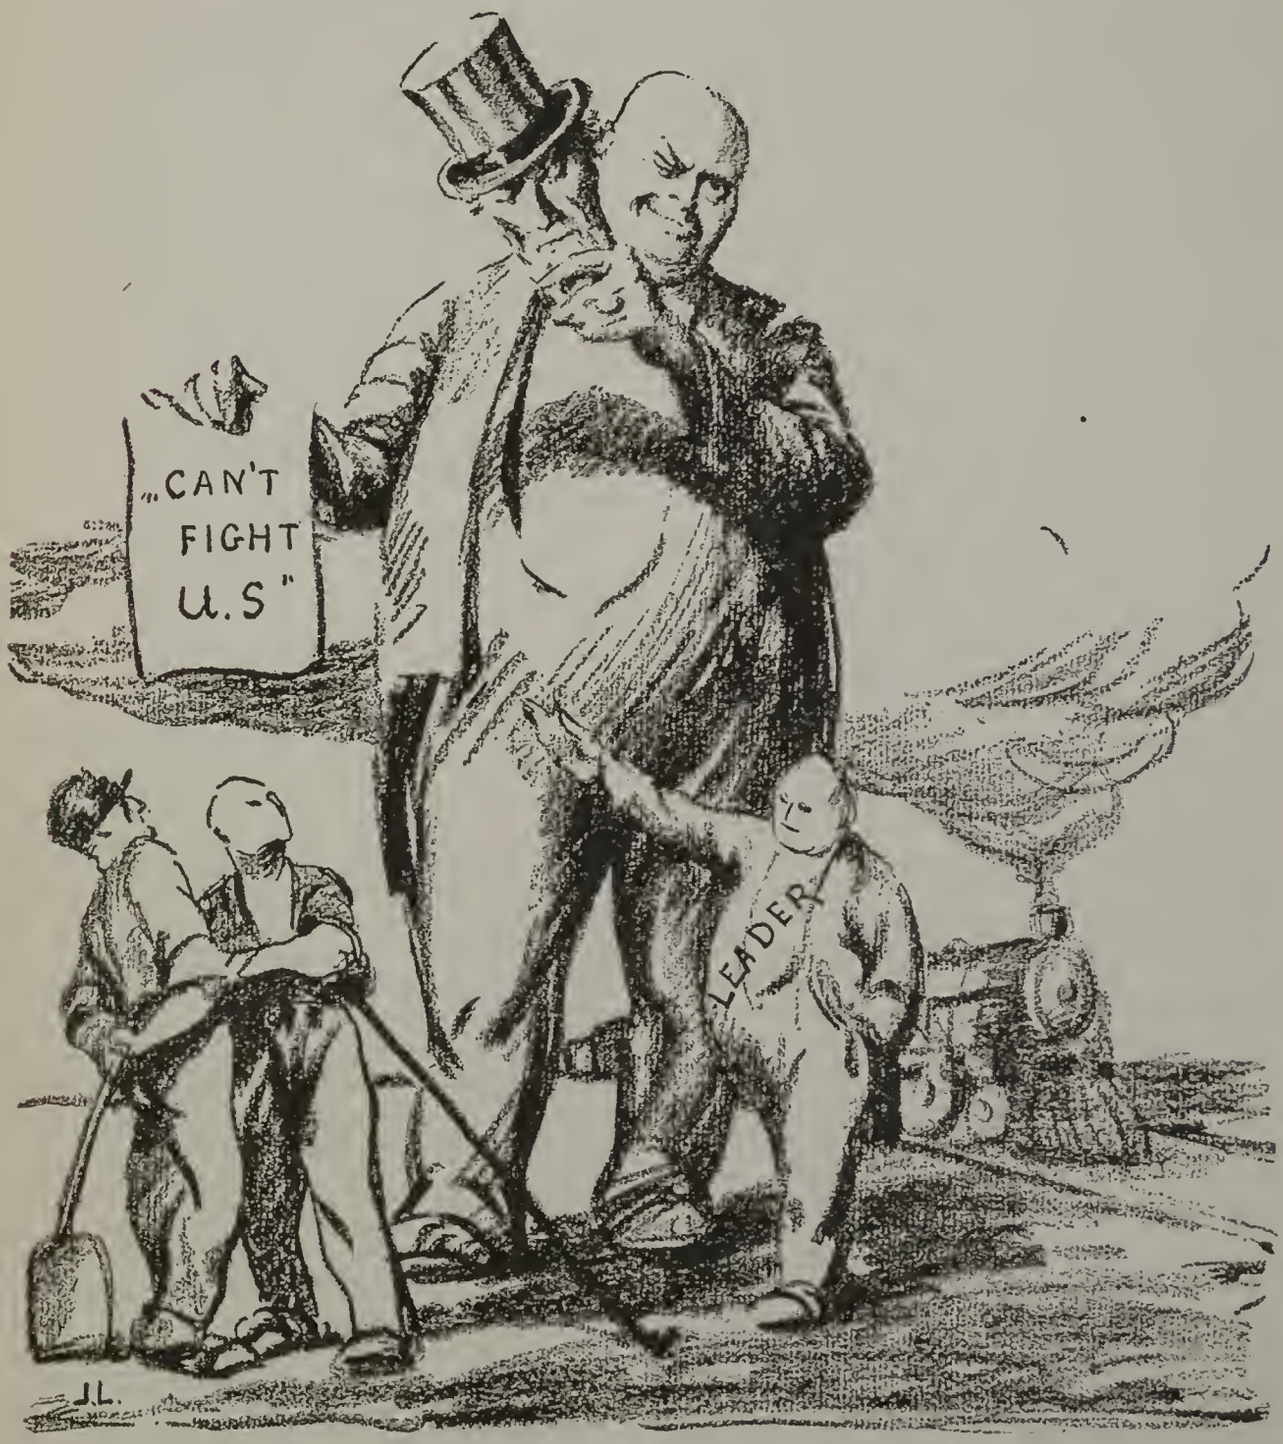
(Air: Abide With Me.)

Heart that was brave in Freedom's holy train,
Striving to break the master's cruel chain!
Here by your grave, we pledge ourselves anew
Never to rest until your dreams come true!

Sleep, Worker, sleep, strong hearts the watch will keep,
Till through the darkness Earth's new dawn shall creep.
Flowers we lay in silence where you dream,
Soft as the snow that feeds the mountain stream!

Under the red carnation and the rose,
Sleep sweetly on, the sleep no waking knows;
Soldier of toil, a tribute here we bring,—
Love's last farewell in broken song we sing!

J. E. SINCLAIR.



THAT SETTLED IT

# Moving the Dirt Movers

**By the Waterboy**

PAT McGOOGAN was an old time dirt-mover, knew all of the old time skinners and contractors, and was known to be competent and efficient in his line, for he had played all parts of it. For years Pat blew in and blew out, and put up with the conditions which he often wondered about changing.

Not so many years ago Pat was among those present when the bunch were sitting around in the old rag-house on a construction job up in the state of Washington. The camp conditions were rotten, the bossman was pretty "hard-boiled" and you had to pound the stock on the tail from morning till night, or your pork chops were cut off.

It had been a case of being meek and get in a few days for Pat. He was laying down in a top bunk, paying very little attention to the conversation of his fellow slaves, although there was a new hand in camp, and he was bawling about something. Finally the new skinner started a story which brought Pat back to his present environment. He had been thinking of how he could frame on the Bossman when he came to town, but this story offered a new idea.

The new arrival was telling about a big "hard-boiled" Swede Bossman in a camp down the line. "It was this way," he said. "I came into camp as the boys was coming out from 'chuck" and seen the Walker. As he was short-handed, had no trouble setting in. Well, I went into one of the bunk-houses and the bunch all seemed to be hostile about the way they were used by the 'Big Swede.' So, after explaining the benefits of a little job organization in cases of this kind, the bunch agreed to try it the next morning.

"Well, on the works with the old Fresno the next day it wasn't long before the Big Swede was giving me the crooked arm and yelling, 'Come with 'em, Shorty.' I went all the slower and the rest of the skinners fell in with the slow gait.

"This got the boss wild-eyed, and he came over and yelled, 'Get out of that runway! Stand 'em out! Go and get it!

"I told him to go and get himself a stick. and sit up on the bank and whittle, be a good Bossman and keep his clam shut or we'd run him down the line.

"This was an awful shock for him, something he had never heard of before, but the boys stayed with me and we told the contractor we would move his dirt, but we were not going to pay no mind to that big ape bossing. We also made the contractor understand it he didn't want it this way, why, him and the Swede could have the outfit to themselves and the rest of us would go to town. It broke the Big Swede's heart when he heard the contractor say, 'All right, boys, go right ahead with your work and pay no attention to Gus.'

"The Big Swede went to the bunk-house and was sick with the shakes for three days over the effects of loosing his dignity."

The new hand set in, and Pat looked forward to the evening, when the interesting conversations regarding working and better camp conditions took place. It seemed funny that not all of the rest of the hands could see this thing as Pat did.

Was it not a fact that the contractors were organized? Wouldn't it be much better for the dirt-movers if they were organized? Could the workers have any power to combat the contractors, unless they organized in one union? Well. Pat saw the need of organization, so when he went to town he looked up the delegate and lined up.
